Friday, January 16, 1998

Today is the first day of the Masters Program. It is an auspicious day because it corresponds to the day on which Jetsun Chokyi Gyeltsen, the founder of Sera Je, passed away. It is good to begin this program on such an auspicious day. We are beginning the Masters Program which will go on over a long period of time and just as Lama Tsongkhapa says in one of his texts, to train one needs to hear many teachings, then one should reflect repeatedly on them, and then meditate on them. In this way one should dedicate all one’s energy to preserving the teachings of the Buddha.

In regard to listening or studying the teachings, there is an expression by the Kadampa lamas, who were meditator practitioners, that says “meditating without listening to teachings is like someone who tries to climb a rock face with his hands closed.” The actualization of this program is something very important because it was a wish of Lama Yeshe’s when he was still alive. Although it took some time to realize it now it has come about. Actually here in this place the Ornament, the Middle Way, and the Abhidharmakosha teachings have already taken place in the past. But now we are going to do them more elaborately and more extensively. This is because for this specific program there are many people from many countries and therefore it is very important. I would like to thank you for coming to this program from different places and from long distances. From my heart I wish to thank you and say welcome to all of you.

It is common that sometimes when people try to study, to do something well, problems, financial, physical, and so forth, happen but what is important is to confront and defeat these difficulties. We often talk about patience and in our case this is a good occasion to practice it. Patience is to be practiced when the conditions are present. What I am asking of you is that when problems arise that you fight them, challenge them, and go on with trying to realize that which you wish to accomplish.

I recently met Lama Zopa Rinpoche in India and had a chance to talk with him about the possibility of providing a diploma at the end of each subject. Rinpoche asked me to speak to the Gelugpa Society who could issue such a degree. I did so and it is likely that they will grant such a title to us when we pass the examinations. They will set up examinations which we will have to do to receive a title at the end of a particular subject. I want to mention some words about what this degree consists of so as to avoid confusion. In conversation I had with people from the Gelug Society, I mentioned that Westerners need this kind of degree and that it would be necessary to do these examinations in English and not in Tibetan. There would need to be written and oral examinations in English. They suggested that people receive the acharya (lobpon) degree. They said that it would be difficult to grant the geshe degree but they could consider granting the acharya degree.

From my side I hope that you complete the whole seven year program if possible. In the case that this is not possible people should at least commit themselves to finishing one subject, such as the first two years during which Abhisamayalamkara will be taught. At the end of it, there will be an examination and a title or degree will be given qualifying people to teach this subject. Just as in the case of the first subject, people can also just study the Middle Way or the Treasury of Knowledge. What is fundamental is that people finish at least one subject. It was also the wish of Lama Yeshe that whether one studies Abhisamayalamkara, Madhyamaka, or Abhidharmakosha that one research it well and then teach this subject so as to propagate the Dharma in other places.

Concerning the text which we will study, we will mostly deal with the Ornament for Clear Realization and, in addition, the Commentary Clarifying the Meaning by Haribhadra. Besides these two we will use an elaborate commentary by Gyeltsab Dharma Rinchen which is like a clear map showing the whole Ornament for Clear Realization. To start off the subject matter we should first know that when Buddha taught the Perfection of Wisdom he explicitly taught emptiness but, at the
same time, in a hidden way he taught all the practices of the stages of the path leading to enlightenment.

The meaning of the *Perfection of Wisdom Sutras* is condensed into eight clear realizations which are also called eight categories. These eight clear realizations are also explained in terms of seventy topics. These are the main topic of the *Perfection of Wisdom*. In this respect we should understand that there are two lists, or two ways, of looking at these eight: one is in terms of eight categories and the other is in terms of eight clear realizations. There is a reason for this. The reason is that when we count eight categories the eighth is the resultant truth body but when we count eight clear realizations, instead of being the resultant truth body, it is the resultant wisdom truth body. Why we [cannot] say that a truth body is a clear realization is because a truth body includes a body called the nature truth body which is not an exalted knower (this will be explained in more detail later on). The nature truth body is permanent and cannot be a clear realization. The other bodies, the enjoyment body and emanation body, are also not exalted knowers.

Right from the beginning the first of the eight categories which is the omniscient mind, or exalted knower of all aspects, is discussed. The first of the eight categories has ten topics which represents omniscient mind: the first is mind generation; the second precept or oral instruction; the third the limbs of definite discrimination which refer to the path of preparation; the forth is the support for achieving; the fifth is the referent/object of achievement; the sixth is the purpose, or object of intent, that which we are going to achieve as a result; the seventh is achievement through armor; the eighth is achievement through engaging; the ninth is achievement through accumulation; and the tenth is achievement through definite emergence. These are the ten topics representing omniscient mind or the exalted knower of all aspects. These can also be said to be the ten topics leading to omniscient mind. This is because when one goes through these topics one becomes able to understand omniscient mind, this is the meaning of representation, and it is through this that we see the real object. It is also said that they lead to omniscient mind because by realizing the ten topics we will be led to omniscient mind. So we can say that the ten topics lead to or represent omniscient mind. [There are cases of] an object representing a subject and a subject representing an object, this is a case of an object representing a subject.

If these ten were set out in order of cause and effect then precepts would have been the first followed by the others. However, the list is made in a different way since it begins with mind generation and goes on to precepts. However, now we can say that it should begin with precepts because whenever one does something one first receives instructions on how to do it and then one goes on to do the work. This means that with the help of oral instructions one goes on to develop renunciation (or definite emergence), the mind of enlightenment, and then correct view, the right understanding of emptiness. Only having received instructions on these can one develop them and then enter the path of accumulation which is the first of the five paths. This is in general how things happen. However, here for another reason, mind generation is the first of the ten topics. Mind generation is set out as the first topic because the subject belongs to the Great Vehicle and so one needs this motivation from the beginning. For this reason the text first explains the motivation and then what is to be meditated on and developed to become the Great Vehicle.

I have passed briefly on the transmission of the name of the text which indicates that I have received the oral transmission on the *Commentary Clarifying the Meaning* from other masters. Now we begin the actual text.

The first outline is the ‘Meaning of the title’ and the second the ‘Meaning of the text.’

1 Meaning of the title
2 Meaning of the text

1 Meaning of the title
A Actual
B Ancillaries

1A Actual
1 Translation of the title
2 Explanation of the title
Translation of the title

In the Indian language: Abhisamayalamkara-nama-prajnaparamita-upadesha-shastra-vriti.
In the Tibetan language: She rab kyi pha rol tu phyin pa'i man ngag gi bstan bcos mngon par rtogs pa'i rgyan ce bya ba'i 'grel ba
In the English language: Commentary on the ‘Ornament for Clear Realization, A Treatise of Oral Instruction on the Perfection of Wisdom’

[The outline “the meaning of the title”] discusses the name of the text, why it is called so. The title comes first in the Indian language. It is presented so because in the past there were four languages, one of which was Sanskrit. We do not need to go through the four languages, but will go straight to the actual meaning.

Explanation of the title

The actual text is called Abhisamayalamkara-nama-prajnaparamita-upadesha-shastra-vriti. We will go through the Sanskrit words. Abhi alone can mean different things in different contexts but here together with the word samaya it means clear realization. Although there are various meanings of abhisamaya here clear realization has been chosen because this text explains the paths, the clear realizations, and how they should be developed. Because the text explains this, abhisamaya in this context means clear realization. Alamkara means ornament. Alamkara, or ornament, is of three kinds, the natural, the beautifying, and the clarifying. For instance, when a young girl has a beautiful shape this is said to be a natural ornament. The beautifying ornaments are earrings, bracelets, etc., anything that women wear to beautify the body. Then there is the third, the clarifying ornament, which refers to the fact that the young girl who has all these ornaments then needs a mirror to show how [beautiful] she is and whether something is missing or not. The mirror is an ornament clarifying or reflecting the previous two ornaments. We then have to relate these three ornaments which are illustrations, to the meaning of [the name alamkara]. The natural ornament is the three mothers, the extensive, middling, and brief Perfection of Wisdom Sutras. The beautifying ornament refers to the eight categories and the seventy topics. Then in this case the clarifying ornament refers to the text the Ornament for Clear Realization. In this way, there are the natural, beautifying, and clarifying ornaments. The text the Ornament for Clear Realization is said to be like a mirror in that it shows or reflects the whole meaning [of the Perfection of Wisdom] and makes trainees happy to have the previous two ornaments.

Then comes the word nama which means so-called or in English can be represented by the quotation marks at the beginning and end of a title. Then comes prajna, which is divided into two syllables. Pra has various meanings and can mean first, excellent, principal, and foremost. Jna means wisdom. Therefore, the combination of these two means exalted wisdom.

After this there is paramita which means gone beyond or transcended. When we put the meaning of prajna together with paramita it comes to means the perfection of wisdom. Why is the Ornament called perfection of wisdom? Because the Ornament contains the meaning of the Perfection of Wisdom; it contains the eight categories and seventy topics. Explained in another way, it is called perfection of wisdom because it presents the resultant perfection of wisdom. There are different types of perfection of wisdom, one being the resultant perfection of wisdom. This is contained in the Ornament.

Upadesha is the next word, it means oral instruction. The word upa literally means close, near, or secondary. Desha means seeing something clearly, seeing an object. So when the meaning is gathered together upadesha means oral instruction. With the help of someone else we can see things clearly; in this case, the object is the different types of practice, this is what is to be seen.

Then shastra means treatise. We call it treatise because it is a pure speech possessing two excellent qualities: it cures from the illness of the afflictions and protects us from the two fears, that of abiding in cyclic existence and that of remaining in solitary peace for a long time. This treatise helps us to be free from affliction and protects us from the two fears. The syllable by itself tra means to liberate or to protect. Together the two syllables of shastra mean a method or
instrument which provides security. By meditating on the treatise one becomes free from cyclic existence and remaining for a long time in solitary peace, the two fears.

In the text by Haribhadra it then says *vriti*; in brief this means commentary.

What we have done here is a straight translation according to the order of the Sanskrit words. There are different types of translation, one of which is called literally a reversed translation. This is without depending on the order of Sanskrit words to put them in an order in which one can understand them in one’s own language. This is another way of doing the translation of the meaning. The translation [of the title into English as] *Commentary on the ‘Ornament for Clear Realization, A Treatise of Oral Instruction on the Perfection of Wisdom’* is a reversed translation.

We have finished the meaning of the title. In the commentary by Gyeltsab Je it talks about the meaning of the title, etc. just as we have done. Maybe in the future this text can also be translated into English.

1B Ancillaries
1 Enumeration of the parts
2 Translator’s homage

1B1 Enumeration of the parts

First part.

Why we talk about part is because Sanskrit texts consist of part (*bam-po*). *Bampo* or part is a great number of stanzas put together. The *Commentary Clarifying the Meaning* has five parts. There is a system of counting one part as three hundred stanzas. This means the *Commentary Clarifying the Meaning* has 1500 stanzas which is divided in five parts consisting of 300 verses each. Then there is a second way of counting in which it is said that twenty-five verses are one part (*bampo*). The *Heart Sutra*, the condensed *Perfection of Wisdom*, has twenty-five verses and is one part. People have used this system of dividing texts into parts to show that in terms of the contents of the text there are no additions or omissions to the text.

1B2 Translator’s homage

Homage to all buddhas and bodhisattvas.

This homage is paid here because translators of the past had to abide by a rule made by a Tibetan king. This rule was that whenever a text was translated the homage was to reveal the subject matter of the text. If the subject of a text is the sutras, or discourses, homage is to be paid to the buddhas and bodhisattvas. If the subject is phenomenology, the science of phenomena, homage is to be paid to Manjushri. If the subject is vinaya homage is paid to the all-knowing, the omniscient.

The subject matter of the *Ornament* is concentration so homage is made to the buddhas and bodhisattvas. This shows that the buddhas and bodhisattvas are those who possess concentration and that we too have to meditate a lot.

Monday afternoon class, January 19, 1998

We have already covered the following outlines:
1 Meaning of the title
   This is divided into:
   1A Actual
   1B Ancillaries

‘Actual’ is divided into:
1A1 Translation of the title
1A2 Explanation of the title
Reverently I pay homage to the Perfection of Wisdom in order to thoroughly reveal the stanzas of its ornament as being an ornament of all.

First we need to understand to whom the author is prostrating. We need to identify the object of the homage. Here there are three, the scriptural perfection of wisdom, path perfection of wisdom, and resultant perfection of wisdom. These are the three objects to which homage is paid.

Then it is important to know why homage is paid. The reason for this is that the Ornament is an ornament of the three mothers, the extensive, middling and brief. Therefore, the three mothers are an object of worship. Since the Ornament is so important and valuable Haribhadra composed his Commentary Clarifying the Meaning.

The words ‘thoroughly reveal’ show that Haribhadra pays homage before explaining the stanzas of the Ornament. In this way, he promises to compose the text. Here the promise is also made for an important reason, it is because Haribhadra wants to complete the work. This is natural because whenever someone promises to do something they generally try to fulfill their words. Haribhadra has two purposes for making the expression of worship, one is temporal and one is ultimate. The temporal purpose is to finish composing his text while the ultimate purpose is to attain the omniscient state. There is a scriptural citation that says that speech should be related to a purpose; this means that a statement has a purpose. In this case the statement refers to the Commentary Clarifying the Meaning. There are four important factors, one is that it has a subject, two that there is a purpose, the third is the purpose of the purpose, and the fourth is the relationship. In this case, the subject, the first of the four factors is the three mothers and the Ornament. These are the subjects to be explained by Haribhadra’s commentary. The second, the purpose, is to make people understand that the Ornament is an ornament of the three mothers, the extensive, middle, and brief. This is to be realized by relying on Haribhadra’s commentary. The third factor, the purpose of the purpose, also called the essential or ultimate purpose, is that by composing this text one will eventually attain high status, definite goodness, and the state of omniscience. The fourth factor is the relationship. With respect to the three previous factors we need to understand that the essential purpose is related to the purpose and the purpose is related to the subject. The relationship shows how these three factors are related to each other in a logical way. The essential purpose is related to the purpose in a causal relationship. To clarify this causal relationship: the result, smoke in the kitchen, and the fire, the cause, exist in a causal relationship. Smoke arises through a causal process in that it arises from the fire; without the fire there would not be any smoke. This is called a causal relationship.

There is another type of relationship between the purpose and the subject; it is a natural relationship. To make this relationship clear we can take the example of a cup which is impermanent. The cup is a particularity of impermanence, it is not the generality, impermanence. The cup’s impermanence and impermanence itself are one entity. The cup’s impermanence and
impermanence are one entity. Without the existence of impermanence, the generality, the cup, a particularity, could not be impermanent. We, for instance, are born from our mother’s womb, we are naturally impermanent because we are related to the impermanence which is a generality. This means that as soon as we are born we are naturally transitory, we have a transitory nature right from the beginning of our existence. We do not need to depend on external objects to have this transitory nature, we are just naturally transitory. This will come again in Collected Topics.

When discussing the object to which we pay homage in Ornament of Essential Explanation it talks about how the Triple Gem is related to the three perfections of wisdom. There is the Buddha Gem who is included in the resultant perfection of wisdom. The buddha himself is the resultant perfection of wisdom. There is a Dharma refuge, Dharma Gem, which is included in the path perfection of wisdom, which is the path perfection of wisdom. The arya sangha, the third refuge object, are those beings who have put the Dharma Gem into practice correctly. In this way, by way of this homage one is actually taking refuge in the three refuge objects, the Triple Gem.

In brief, we need to have a strong belief or trust in the Triple Gem that they have the complete ability to protect us from suffering and that they can save us from the two fears. With this belief and understanding one should take refuge in the Triple Gem from the depths of one’s heart. As is usually said, the Triple Gem have the ability or power to protect and save us from sufferings. With respect to their ability to help us we should take them as a refuge in order to become free of suffering and fear. The practice of taking refuge is very necessary and important even in our day to day life, not only when we are going to compose a text. Before we do any Dharma practice or any virtuous activities it is good to take refuge. In order to make this clear Haribhadra makes this expression of worship to the Triple Gem and the perfection of wisdom. There is a sutra which says any white action, positive activity, should be preceded by making offerings to the victors. There is a connection between what the sutra says and the subject here. Especially in our case where we will be studying profoundly we need to take refuge. We should know that in order to have success in our studies we should generate three wisdoms, the wisdom arising from hearing, the wisdom arising from reflection, and the wisdom arising from meditation. This means that we first need to listen to teachings, then we need to reflect on what we have heard, and then we need to meditate on the meaning. When we are in the process of generating these wisdoms there comes a moment in which we generate them. When we generate the wisdoms arisen from hearing and reflecting we enter the path of accumulation. Through listening and reflecting on the teachings we accumulate merit, so these belong to the path of accumulation. The path of accumulation is the clear realization of dharma, here dharma means the accumulation of lots of merit. But besides this merit one needs the wisdom arisen from hearing and the wisdom arisen reflecting. These together become the path of accumulation.

When we develop the wisdom arisen from meditation we are on the path of preparation, the second path. The path of preparation is defined as a clear realization of the meaning. This definition corresponds to the wisdom arisen from meditation, one meditates and realizes the meaning, for example the meaning generality of emptiness. One hears teachings on it, meditates on it, and realizes it by way of a meaning generality. This is the clear realization of the meaning.

The path of seeing is a clear realization of the truth. This means at this level one clearly realizes the object without a meaning generality, rather one sees the object directly. The realization is direct, for example, the direct realization of emptiness. When we posit the definition of the path of seeing as the clear realization of the truth, the truth is the reality of an object.

The fourth path is the path of meditation which is defined as a subsequent clear realization of any reality that has already been realized before. This means that having already realized something, one subsequently continues to meditate on it.

Then there is the fifth path, that of no more learning, its name shows its meaning. It means that it is a state in which one has completely finished training or learning. When this state is reached the path of no-more-learning is attained.

We will go through things slowly to make sure that we do it well, like walking on both feet, or like a turtle.
2A2  Proving that [Haribhadra] is suitable to compose the commentary
This is divided into:
A  Proving that [Haribhadra] possessed the outer condition: the oral instructions of virtuous friends
B  Proving that [Haribhadra] possessed the inner condition: the wisdom which realizes the meaning of the treatise
C  Thereby [Haribhadra] is suitable to compose the commentary

2A2A  Proving that [Haribhadra] possessed the outer condition: the oral instructions of virtuous friends

1  The way Arya Asanga thoroughly explained [the Perfection of Wisdom]
2  The way Vasubandhu unraveled [the Perfection of Wisdom]
3  The way Arya [Vimuktisena] revealed [the Perfection of Wisdom]
4  The way Venerable Vimuktisena thoroughly explained [the Perfection of Wisdom]

2A2A-1  The way Arya Asanga thoroughly explained [the Perfection of Wisdom]

Yearning for migrators, he yearned deeply. Arya Asanga, himself a refuge, having listened to the Invincible Protector, thoroughly explained the great treatise.

‘Just as Arya Asanga himself a refuge listened’ shows that Asanga listened to the teachings of the Invincible Protector who is Maitreya. This should have been mentioned before in the last class but we skipped over it. Arya Asanga meditated a lot in order to understand the meaning of the sutra but was unable to understand it. In order to do so he needed to depend upon the help of Maitreya. He listened to the oral transmission and the teachings from Maitreya and then realized the meaning. In order to receive the help of Maitreya he had to undergo a period of retreat to achieve a vision of Maitreya. He spent three years meditating upon Maitreya in a cave alone. He put much effort into it but did not receive a vision of Maitreya. He eventually got tired of meditating and left the cave. On leaving his meditation cave Asanga met a man who was trying to make a huge iron rod into a small needle by rubbing it. Arya Asanga asked him what he was doing. The man responded saying that he was trying to make a needle. Asanga upon receiving this answer was quite amazed to think that someone would try to make a huge iron rod into a needle and decided that he needed to make more effort. He returned to his cave and again meditated for three years. But even during these three years he did not receive a vision of Maitreya and, tired, left the cave once again. He then saw that there was a bird’s nest above the rock entrance to his cage. By its coming and going the wings of the pigeon who lived in the nest had worn away the rock next to the nest. When Arya Asanga saw that this could happen he thought to himself that if even a rock can be worn away by the touch of a feather he should try again. Once again he did three years of meditation but again tired left the cave. This time upon leaving his cave he saw a big rock near his cave upon which a pool of water had formed. This water came from water dripping slowly from above the entrance to his cave which had worn such a large hole into the rock that it could now hold a pool of water. Again by seeing this amazing sight he said to himself that if this were possible then why is not possible to see Maitreya. Nine years had passed by then but again he returned to his cave for another three years. Also during this fourth period of three years he meditated with great effort but did not have a vision. Tired, he left the cave thinking definitely not to return.

On leaving the cave Asanga came across an old female dog, sick and dying, her left leg rotting and covered with maggots that were eating her flesh. Asanga was shocked and felt great compassion for the dog. Asanga generated intense compassion wishing to help the bitch to become free from the suffering caused by the maggots. But he also had to consider how to help the maggots so that they would not die. To save the life of the maggots he cut a piece of flesh from his leg and put it on the ground. It would have been easy to pick up the maggots with his fingers but he would have hurt them so he thought to pick them up one by one with his tongue. To overcome his nausea he closed his eyes and bent down to lick up the maggots. However as he did not touch anything with his tongue he opened his eyes and their saw Maitreya standing directly before him. At the moment of seeing Maitreya Asanga cried out, “You are lacking in compassion. I have been trying to see you for a long time but you did not appear.” Maitreya explained that it was not because he lacked compassion but that Asanga had been obscured by his karma. From
Maitreya’s side he had been with Asanga right from the beginning of his meditation. Maitreya said that if Asanga did not believe him to have a look at my robe which was stained by Asanga’s spit. Maitreya said that Asanga should take him on his shoulders and walk into town and when meeting people ask them whether they could see anything. Asanga did so but almost everyone said that they did not see anything on his back. No one could say they saw anything except one old woman who said that she could see a big leg of meat. Maitreya told Asanga that no one could see him due to their karmic obscurations, only the old woman who had less karmic obscurations was able to see the meat.

Maitreya then told Asanga to take hold of his upper robe and took him to the Joyous Land. Here Maitreya gave him teachings for one morning in terms of the time of the gods, but in terms of human time Asanga passed fifty years in the Joyous Land. During these fifty years Asanga listened to Maitreya’s teachings. When returning Maitreya gave him five texts to take with him, one of which was the Ornament. Another was Sutra-alamkara, the Madhyanta-vibhanga, the Dharma-dhatu-vibhanga, and Uttaratantra, which talks about the potential of the mind. These five texts were given as presents by Maitreya to Asanga. Asanga returned to this world with these five texts and gave commentaries on them.

The lineage of the oral transmissions is that they came from Asanga to Vasubandhu, who in turn taught Arya Vimuktisena, then to Venerable Vimuktisena, and down to many other great scholars. Then the teachings came down to Haribhadra.

‘Yearning for migrants, he yearned deeply’ means that Asanga desired to help migrating beings. There are five types of migrating beings, hell beings, hungry ghosts, animals, human beings, and gods. These beings are circling in cyclic existence. They are called migrating beings because due to karma and afflictions they continue to circle or migrate from one realm to another.

The word ‘yearning,’ although it can mean attachment here it does not mean being attached to beings but refers to compassion in general. When it says ‘he yearned deeply’ it shows the specific compassion that Asanga generated as explained above in reference to the female dog.

‘Arya Asanga’ refers to Asanga. Arya in English can be translated as superior being and indicates one who has gone above or transcended the ordinary level of beings such as ourselves. The name Asanga is in Sanskrit and means ‘without obstruction.’ A in Sanskrit is a negation particle/prefix that means ‘without’ or ‘free from,’ while sanga means obstruction or obstacle. This is additional commentary not present in the text.

Arya Asanga is a refuge for all the miserable migrating beings. To help others he received teachings from Maitreya and then performed this work of composing the treatise. ‘Having listened to the Invincible Protector, thoroughly explained the great treatise’ - here the great treatise refers to the whole literature on the three mothers, the extensive, middling, and brief. When we say that Asanga thoroughly explained it refers to a commentary he wrote on the Twenty Thousand Stanza Perfection of Wisdom, the middle Perfection of Wisdom. That this commentary is on the Twenty Thousand Stanza Perfection of Wisdom is questionable. The middling Perfection of Wisdom is usually said to be a pile of a twenty thousand stanzas but it actually has twenty-five thousand. The extensive pile actually has a hundred thousand stanzas. The brief Perfection of Wisdom has eight thousand stanzas. These three piles are called the three mothers, they have one hundred thousand, twenty or twenty-five thousand, and eight thousand stanzas respectively.

Asanga received teachings and commentaries directly from Maitreya and is therefore a suitable person to compose a commentary on the Perfection of Wisdom. In fact it was in this way that he was authorized to compose his commentary called the Thorough Explanation. When we say that he was the right person to make this commentary this is from the point of view of his being the right person to expound [the Perfection of Wisdom] according to the Chittamatra school. Asanga is said to be the great classifier of the Chittamatra school. Literally he is said to be the right one to clarify,
or open, the track of the chariot of the Chittamattra. The Chittamattra has specific assertions concerning three characteristics and he explained them saying that other powered phenomena and thoroughly established phenomena are truly existent while imaginary phenomena do not truly exist. Asanga is said to be someone who clarified this system but he also clarified the Madhyamika system on the basis of Uttaratantra.

2A2A-2 The way Vasubandhu unraveled

Vasubandhu, a friend benefiting migrators, taking his belief as foremost, thoroughly unraveled through fully relying on objects of knowledge as being internal.

Saying that Vasubandhu unraveled refers to the fact that he unraveled the medium Perfection of Wisdom, that of twenty-five thousand stanzas. In this scriptural commentary he explained that all phenomena such as forms, sounds, odors, and so forth, are the entity of the mind. He explained the middle Perfection of Wisdom in this way saying that everything is of the entity of mind.

‘Taking his belief as foremost’ refers to the fact that Vasubandhu explained that non-duality is truly existent. This means that he took the Chittamattra position and explained how this non-duality is truly existent. ‘Taking his belief as foremost’ shows that Vasubandhu took the Chittamattra view as foremost; however, this does not mean that the Perfection of Wisdom is actually to be understood like this. The real meaning of the Perfection of Wisdom is that of the view that is free from the two extremes, that of the Middle Way. But Vasubandhu takes the Chittamattra view as foremost and explains the Perfection of Wisdom from this point of view.

‘Friend benefiting migrators’ shows that Vasubandhu was someone who helped others. It is said that Vasubandhu was an amazing being in that he was able to recite 999 volumes of scriptures by heart. Here it is good to mention that in the early part of his life Vasubandhu propounded the tenets of the Vaibhashikas. When he composed the Abhidharmakosha he did so from the point of view of the Vaibhashika school. But when in the ninth chapter of the Abhidharmakosha he left the Vaibhashika point of view and explained things according to the Sautantrika tenets. He then went on to study the treatises of Maitreya and came to hold the views of the Chittamattra school. After becoming a Chittamattra he composed eight texts called ?Takarana.

2A2A-3 The way [Vimuktisena] revealed

Also, he who is called Vimuktisena, who is included among the superiors, having seen that done by [Vasubandhu] as not done [in accordance with the accepted view], revealed with a mind abiding in the middle way.

This stanza signifies that Arya Vimuktisena explained that the commentary by Vasubandhu was not correct and composed his own commentary in accordance with the Middle Way school. Arya Vimuktisena composed a commentary that combined the Ornament and the Twenty Thousand Stanza Perfection of Wisdom called the Light for the Twenty Thousand Stanza Perfection of Wisdom. Asanga and Vasubandhu only composed commentaries based on the Perfection of Wisdom sutras and not based on the Ornament.

There are twenty-one commentaries composed by Indian pandits on the Ornament. These twenty-one commentaries are divided into two groups, twelve are based on a combination of the Sutra and the Ornament and nine are based solely on the Ornament. The commentary by Vimuktisena called the Light for the Twenty Thousand Stanzas is included among the twelve. I will explain this in more detail later on.

2A2A-4 The way Venerable Vimuktisena thoroughly explained

While abiding on the ground of faith the Vimuktisena after him, not finding [complete presentations in] all the treatises, made a thorough explanation in accordance with his own [findings].
It is said that Venerable Vimuktisena was a person who was on the path of accumulation and for this reason the text says ‘abiding on the ground of faith,’ [this being another name for the path of accumulation].

‘After him’ indicates that Venerable Vimuktisena also composed a commentary on the *Perfection of Wisdom* in combination with the *Ornament*. It is said that Venerable Vimuktisena composed a commentary on the *Sutra* combined with the *Ornament* but without finding the meaning of all the words of the *Sutra*. He composed a commentary according to what he had understood. Although he had not found the meaning of all the words he composed a commentary in accordance with his understanding. He composed this commentary not to increase his pride but to improve his intelligence. Some of the points which indicate how Venerable Vimuktisena did not find the meaning of the words of the *Sutra* are mentioned under certain topics such as mind generation, the path of preparation, and the twenty sangha. Venerable Vimuktisena composed a commentary called Thorough Commentary because it thoroughly comments on the middling *Perfection of Wisdom* sutra.

In this way, we understand that these four masters, these scholars, each composed their own commentary on the *Perfection of Wisdom* sutras.

It is amazing that although three of these scholars did not attain a complete understanding of the *Sutra*, Haribhadra did so. Asanga did not find the right meaning of the *Sutra* because his explanation was made from the point of view of the Chittamatra school. Vasubandhu and Venerable Vimuktisena did not find all the meanings of the words of the *Sutra* due to having limited intelligence. On the contrary, Arya Vimuktisena did find the meanings of all the words.

2A2B Proving that [Haribhadra] possessed the inner condition: the wisdom which realizes the meanings of the treatise

Likewise, other scholars elucidated [the word meaning of the *Perfection of Wisdom*]. Only some found [the full meaning] of the treatises. It is amazing that I found it likewise.

We have already gone through the meaning of the stanza but mainly it shows that Haribhadra recognizes that he is fortunate to have found the meaning of the *Sutras* which was not found by others. This is what is amazing. Haribhadra says that although he too composed a commentary there is no fault of repetition. The fact of his making a commentary is not redundant with respect to other commentaries.

2A2C Thereby [Haribhadra] is suitable to compose the commentary

Very difficult to find by [scholars] like them what this profound path is like, found through the power of the [blessing of] Buddha - is suitable to be analyzed by scholars.

‘Found through the power of the [blessing of] the Buddha’ refers to Maitreya. Haribhadra had a direct vision of Maitreya and through receiving his teachings and blessings he was able to compose this commentary.

In order to compose a treatise one needs to have specific conditions. The first is to have received the oral transmission or oral instruction from one’s spiritual teacher; this is considered to be an outer condition. The second condition is an inner one; it is to have the wisdom realizing the meaning of the treatises. The third condition is to have had a vision of one’s meditational deity and to have received permission from the deity to compose the text. Haribhadra had all these three conditions. The outer condition is present because Haribhadra received the oral transmission from the four former masters. He has the inner condition because he has the wisdom realizing the meaning of all the texts. Thirdly, he had received a vision of Maitreya and had received permission from him to compose the text.

While Haribhadra had received the transmission from all of them he had not received it from them directly. He had received it through receiving the transmission passed down through other lamas. Haribhadra’s principal master was a great scholar, Shantarakshita, who is also called
Nangnamdze (Excellently Radiating Light). Haribhadra lived together with this master for seventeen years.

In the outline it says ‘Haribhadra is suitable to compose the commentary.’ Here commentary refers to Commentary Clarifying the Meaning. This commentary is made only on the basis of the Ornament, it is not based on the Perfection of Wisdom sutras. Therefore, in this commentary there are not found the words of the Sutras. It discusses the eight categories and the seventy topics which are the subject of both the sutras and the Ornament.

2A3 Subduing pride and the reason for generating delight

Although not the object of my experience in all ways, because it accords with achieving merit, I generated delight [in composing this commentary] as I desire to benefit myself and others.

Haribhadra says that he composed this commentary not out of his own ability but only because he received the oral transmission from Buddha Maitreya. Haribhadra says that although everything came from Maitreya he delights in making this commentary. He has composed this commentary to make positive imprints on his own mind and as notes for himself. In addition, he has done so with the hope that it will be of help to coming generations who are the right vessel for the Mahayana path. This commentary was composed to be of service to coming practitioners of the Mahayana path who will need to practice the six perfections, generosity and so forth. They will need a basis to do so, this basis is his commentary. For example, we ourselves are sentient beings training in the path toward the omniscient state. To achieve this goal we have to purify negativities and accumulate merit.

With this we have finished the preliminary part of the text. Now I will elaborate on the twenty-one commentaries.

Included among the twelve commentaries composed on the basis of a combination of sutra and the Ornament are four related to the middling sutra, the Twenty Thousand Stanza Perfection of Wisdom Sutra. Three of the remaining eight commentaries were composed on the basis of the brief sutra, the Eight Thousand Stanza Perfection of Wisdom Sutra. Three of the remaining five commentaries were composed on the basis of the Compendium of Sutra. One of the two remaining commentaries was composed on the basis of three sutras: the Hundred Thousand Stanza Perfection of Wisdom Sutra, the Twenty Thousand Stanza Perfection of Wisdom Sutra, and Eighty Thousand Stanza Perfection of Wisdom Sutra.

There are four scholars who composed commentaries on a combination of the Ornament and the Twenty Thousand Stanza Perfection of Wisdom Sutra, these are Haribhadra, Arya Vimuktisena, Venerable Vimuktisena, and Shantipa. In terms of the three composed on the basis of the Eight Thousand Stanza Perfection of Wisdom Sutra they were written by Haribhadra, Shantipa, and Abhyakara.

Tuesday afternoon class, January 20, 1998

The name of these twenty-one commentaries comes from the Ocean Playground of the Lord of the Nagas (rol-tso). This morning I mentioned that twelve commentaries were written on the basis of unifying the Sutra and the Ornament and nine without doing so. The meaning of this is that when the commentary has quotations from the Sutra and quotations from the Ornament then this commentary can be said to be one composed on the combination of the two. Although the Commentary Clarifying the Meaning has some quotations from the Sutra but it is not a combination of Sutra and the Ornament. What is required is that there has to be a block of meaning from both the Sutra and the Ornament. We are dealing with one of the twenty-one commentaries, that by Haribhadra. It is considered to be the best because it contains the meaning in few words.
2B Positing the explanation itself
This is divided into three:
1 Expression of worship
2 Having revealed to persons of faith in the extensive, to explain
3 Explaining other summarized meanings

2B1 Expression of worship
This outline shows that the object to whom we express worship is the three exalted knowers.

2B2 Having revealed to persons of faith in the extensive, to explain
This outline deals with the explanation of the eight categories to those who would like to have an extensive explanation.

2B3 Explaining other summarized meanings
This has many divisions one of which is into six: the three exalted knowers are counted as one unit, the four trainings as one unit, and the resultant truth body which is one. Another is to explain the same subject in three divisions: the three exalted knowers being counted as one, the four trainings as one, and the resultant truth body as one.

I am telling you this now to give you some understanding of these three outlines right from the beginning.

2B1 Expression of worship
This is divided into three:
A Making a connection
B Root text
C Commentary

2B1A Making a connection
A connection is often made between different sections of the text. There are many of these in the Commentary Clarifying the Meaning. For example, the present section:

Arya Maitreya thoroughly presents himself as one who accords with holy conduct. By means of his exalted wisdom of individual analysis, he came to understand that the principal cause of attaining all goodness is very lucid faith in the subject of the Perfection of Wisdom. In order for others to generate very lucid faith and engage Bhagavati—the source of unsurpassable and unfathomable precious qualities—shortly, at first, he pays homage to the mother with the preceding [stanza], expressing her excellent qualities just as they are.

Maitreya makes this homage at the beginning of composing the Ornament to show that he performs activities just as do other buddhas. Making this offering of worship fulfills his own purpose and fulfills the scope of others by causing them to generate irreversible faith. This outline 2B1A is just one paragraph but this is a subject that is discussed in great detail. There is a text called the ?Scriptures about Maitreya in which there is a lot of discussion concerning whether the Maitreya who composed the Ornament is a buddha or a bodhisattva and so forth. There are many scholars, for example, one from Drepung Losel Ling known as Panchen Sonam Trakpa who said that this Maitreya is a bodhisattva. On the other hand, Jetsun Chokyi Gyeltsen, the founder of Sera Je Monastery, said that this Maitreya is a buddha. He says that although on a higher level Maitreya is actually a buddha, on an ordinary level he manifested as a bodhisattva. In brief, Maitreya is a buddha who is an emanation body through birth.

Question: Is there a difference between the usual Maitreya and the one composing this text?
Reply: Different scholars have different interpretations concerning this. For our needs, it does not matter whether Maitreya is a buddha or a bodhisattva.
Maitreya expressed worship to the three exalted knowers before composing his text, the Ornament. In this outline it mentions that the principal cause of attaining all goodness is very lucid faith in the subject of the Perfection of Wisdom. These three exalted knowers are the three mothers while the four superior beings are the four sons: these are the aryā hearer, aryā solitary realizer, aryā bodhisattva, and aryā buddha. The three exalted knowers are called mothers because they give birth to these four sons.

Here we need to begin to talk about the trainee intent upon the Ornament. The trainee or disciple who is intent upon the Ornament is of two types, those with sharp faculties and those with dull faculties. As there are these two types of trainee intent upon the Ornament we need to understand the different ways in which they develop faith in the three exalted knowers. A trainee with sharp faculties does not generate lucid faith just by hearing the expression of worship but does so only after careful analysis. Those of dull faith on the other hand develop faith just by hearing the offering of worship.

The exalted knowers are:
- the knower of bases
- the knower of paths
- the exalted knower of all aspects

These three exalted knowers have their own specific functions. The knower of bases has the function to lead hearers and solitary realizers to their goal, the pacification of all sufferings. The knower of paths leads bodhisattvas to their goal, that of accomplishing the welfare of the three levels of beings: the hearers, solitary realizers, and bodhisattvas. The knower of all aspects, omniscient mind, the aryā buddha, compassionately turns the wheel of Dharma.

The Commentary Clarifying the Meaning says ‘shortly, at first, he pays homage to the mother’: he pays homage to the three mothers who give birth to the four sons. By expressing the qualities of the three exalted knowers one can generate lucid faith as a consequence of which one aspires to practice. One first hears the excellent qualities of the mother, then one generates lucid faith and respect, followed by developing aspiration or a willingness to practice. To have lucid faith in the three knowers is the cause of achieving supreme goodness, the state of omniscient mind.

In terms of making a connection, the connection is made by expressing this particular section of the text which connects the promise to compose the text with the expression of worship. Maitreya sets out his plan to compose the text and then expresses worship.

We should realize the meaning of the subject, the three exalted knowers, with a valid cognition. We should understand what they are. Maitreya with his valid cognition has realized the three exalted knowers. The valid cognition of Maitreya, the exalted wisdom of individual analysis, realizes that faith in the three knowers leads one to the omniscient state. Before I said that Maitreya expresses worship for his own welfare and that of others, but this is disputed by people who say that Maitreya does not do anything for his own welfare. One Sakya Pandit, Rong Tikpa, said that Maitreya does not pay homage to the three mothers who give birth to the four sons. By expressing the qualities of the three exalted knowers one can generate lucid faith as a consequence of which one aspires to practice. One first hears the excellent qualities of the mother, then one generates lucid faith and respect, followed by developing aspiration or a willingness to practice. To have lucid faith in the three knowers is the cause of achieving supreme goodness, the state of omniscient mind.

In order to accomplish the purpose of self one must attain the truth body. Without attaining the truth body one cannot achieve one’s own welfare. If one did not achieve the truth body one would risk staying in solitary peace for a long time. If one were to remain in solitary peace for a long time then one would still have to go on to generate conventional bodhichitta. The conclusion is that Maitreya does have a personal purpose which is to attain the truth body.
The truth body is attained for one’s own welfare but the form body is attained in order to accomplish others’ welfare. In brief, we can say that the meaning of making the offering of worship to the three exalted knowers is to generate lucid faith. To generate faith is fundamental. In fact, faith is likened to a mother. Conventionally a mother is necessary for the existence of the child, in the same way without faith in the mothers, the exalted knowers, there would be no aspiration to work for the welfare of sentient beings. Faith is necessary and precedes all. One should first have faith in the three Perfection of Wisdoms, the scriptural, path, and resultant. Having this faith one develops aspiration and listens to teachings, then reflects on them. In this way, the various wisdoms arise. If there is no faith there is no way to progress in one’s own practice. By the way, one should also have irreversible faith in the Buddha Gem, the resultant Perfection of Wisdom; in the Dharma Gem, the path perfection of wisdom; and in the aryasangha, the Sangha Gem, who follow that path. One needs sincere faith in the Triple Gem in order to succeed in one’s practice. The Dharma refuge is the Dharma which is included in, or is, the three exalted knowers. The topic of faith comes again in more detail when we talk about the five objects.

It is important to know that only by practicing the path can one attain enlightenment. All the buddhas of the past, present, and future have, are, or will attain enlightenment by practicing the path. Faith is like belief or trust in something. The process of faith followed by aspiration followed by sequential practice is similar to the explanation given on calm abiding in which it is said that first one should develop faith in the excellent qualities of calm abiding. With this faith one then aspires to develop these qualities. Then one applies effort to develop them. On the basis of faith and aspiration one puts effort into actualizing calm abiding which then generates physical and mental suppleness. These come about based on faith, aspiration, and effort. In fact this process is something very similar to our daily life experience. For example, when we look at a farmer we can see how these sequential steps take place. First he has faith or belief in the benefits of cultivating his land. With this he naturally aspires to realize a harvest, he then puts effort into actualizing it by getting all the necessities together, the ox, plow, and so forth. In this way he will reap the result of crops, fruit, etc. which he can then sell. Also business people do the same. First they develop interest, faith, or belief in their business. Then this gives rise to aspiration which gives rise to putting effort into actualizing the business and making it successful. Similarly, we too first hear about the three exalted knowers and so forth, then we develop faith in them, then we aspire to achieve the wisdom truth body, etc. then we put effort into meditating and practicing the six perfections, generosity and so forth, and eventually in this way we attain enlightenment.

2B1B Root text
This is divided into
1. Meaning of the words
2. Settling disputes

Some of the outlines are missing from the translation of the Commentary Clarifying the Meaning.

The outline ‘Meaning of the words’ is divided into:
2B1B-1A Praise
2B1B-1B Homage

‘Praise’ is further divided into
2B1B-1A1 Praising by means of the qualities of the three knowers
2B1B-1A2 Praising how they act as mothers of the four superiors

2B1B-1A1 Praising by means of the qualities of the three knowers

The function of the three knowers is now set out:

That which through the exalted knower of all leads hearers seeking pacification to peace,
Which through the exalted knower of paths causes those helping migrating beings to achieve the aims of the world,
And through the perfect possession of which the subduers set forth these varieties having all aspects;

The exalted knower of all leads hearers and solitary realizers to the peace which is free from conditioned suffering. They are lead to the pacification of true sufferings and true origins. They are freed from pervasive suffering. When the text says ‘the exalted knower of all’ this refers to the knower of bases. What is the base? The base is the sixteen attributes of the four noble truths. True suffering is a truth that belongs to the class of thoroughly afflicted phenomena. It has four attributes:

- impermanent
- miserable
- empty
- selfless

This verse presents what a being of small scope should do and what a being of middling scope should do.

Impermanent is that which perishes momentarily. Meditation on the attribute of impermanence is a practice of beings of small scope and is also common to those of higher scopes. If we meditate on impermanence as a practice particular to beings of small scope, we simply meditate on death. This is done by reflecting that death is certain, the time of death is uncertain, and there is no help at the time of death other than from the Dharma. This meditation on death has detailed divisions: three principal reasons which are further divided into nine secondary reasons.

One meditates on true suffering also in terms of the attribute of miserable. This refers to the fact that we experience suffering both in the lower and higher realms. As long as we are born in these realms we will suffer. The meditation on the suffering of the lower realms is included among the practices of a being of small scope. The practice that comes from this is to guard morality. When we only focus on the sufferings of the lower realms this meditation forms part of the practice of a being of small scope but when we meditate on the suffering of the upper realms this meditation belongs to the practices of a being of middling scope. One reflects that even when one is reborn in the higher realms one will still find oneself in a suffering state, then one generates the desire to become free from this. The being of middling scope meditates on the fact that even rebirth in the upper realms is in the nature of suffering.

Then one meditates on the third attribute of true sufferings, empty. Some tenets assert the existence of a permanent, partless, and independent self, we too have this concept. This kind of self is empty, it is empty of being permanent, partless, and independent. Meditating on this shows us that the self does not exist as we generally think. We think it is permanent but it is in fact impermanent. It helps us also to eliminate the thought that the self is partless while in fact it has parts because it depends on the five aggregates, four elements, etc. The self does not exist without parts. We also think the self is independent, but this too is a wrong conception. The self is not independent but depends on many causes and conditions.

The fourth attribute of true suffering is selfless, this refers to the person being free from being self-sufficient substantially existent. The self appears to us to be self-sufficient substantially existent but it does not exist in this way.

Having reflected on true sufferings in terms of its attributes, one goes on to meditate on true origins. True origins are phenomena that belong to the thoroughly afflicted side. It too has four attributes. True sufferings come from true origins, their cause. To meditate on true origins one should understand what they are and that they are characterized by four attributes:

- cause
- origin
- condition
- strong production
When we define the cause of true sufferings it is found to be karma and the afflictions. When we define these further we come down to craving which is the main cause. We can easily imagine how craving is the cause of all suffering in that we know that desire causes us to engage in actions.

The knower of bases that realizes sixteen attributes of the four noble truths including the selflessness of persons leads or helps the hearers to reach the goal of pacification of true sufferings and true origins.

Thursday morning class, January 22, 1998

Last time we talked about the function of the knower of bases. There are many bases which represent pervasive suffering, the suffering of conditioning. All these bases represent this pervasive suffering. Through the knower of bases, hearers and solitary realizers are led to a state in which pervasive suffering is completely pacified. To clarify this point further we can set up a syllogism, which is a process of stating a fact. The arya hearers and arya solitary realizers (subject) it is not true that they do not have a method for attaining pacification of suffering (predicate) because in dependence on the knower of bases they actualize total pacification (sign). This statement shows that arya hearers and solitary realizers are led by the knower of bases to total pacification.

The bases representing pervasive suffering are realized or known by the knower of bases which realizes the selflessness of persons. All these bases are included in the sixteen attributes of the four noble truths, such as impermanence and so forth.

Then there is the explanation of ‘Which through the exalted knower of paths causes...’ This mentions what bodhisattvas do. They help the sentient beings of the three classes, the hearers, solitary realizers, and bodhisattvas, by developing the knower of paths by which they can achieve the aims of the world. We can clearly expose the instruments of the bodhisattvas and how they work. The method of the bodhisattvas refers to the knower of paths. The bodhisattvas themselves meditate on the selflessness of persons by which they can help those who are following the hearer vehicle.

Then comes the question, how do bodhisattvas help beings of the solitary realizer lineage? The bodhisattvas help them by meditating repeatedly on non-duality, this is their object of meditation. In this way they help those of the solitary realizer vehicle. Non-duality is the form and the valid cognition realizing it being empty of different substances.

Then there is a question regarding those of the bodhisattva vehicle. How do bodhisattvas help the beings of the bodhisattva vehicle? Bodhisattvas meditate on the non-generation of the basis, path, and aspect. This means that bodhisattvas meditate on the basis, path, and aspect as not existing truly. In this way bodhisattvas help those following the bodhisattva vehicle.

Just as in the case of the former syllogism we can make a syllogism regarding the bodhisattva. Syllogism: The arya bodhisattva(subject) it is not true that they do not have a method for helping beings of the three classes (predicate) because they have the knower of paths which fulfills the aims of the beings of the three lineages (sign). The commentary just given is much the same as that given in Gyeltsab Dharma Rinchen’s text: ‘Just as the knower of ... accomplishes the need of the three beings ... Bodhisattvas are the one’s who fulfill the temporal and ultimate aims of all migrating beings. With what method is this done? It is with the knower of paths that they fulfill these aims. What is the aim that is accomplished? The aim that is desired by the beings of the three lineages. “

‘And through the perfect possession of which the subduers...’ This refers to omniscient mind, the knower of all aspects. In Essential Explanation it says that this is the means by which praise is made to omniscient mind. Prostration is made to those who turn the wheel of Dharma, these are the...
buddhas. Who turns the wheel of Dharma? It is the Subduer, the aryadhatu. With what method does he turn the wheel of Dharma? The method is by way of the omniscient mind which realizes all aspects as selfless. What is the result? The result is to turn the wheels of Dharma that present the entire paths of the three vehicles up to their end.

A third syllogism can also be made regarding the aryadhatu. The aryadhatu, for example a supreme emanation body, (subject) it is not true that they do not have a method for turning the wheel of Dharma in order to accomplish the aims of the three beings (predicate) because by way of omniscient mind they do turn the wheel of Dharma (sign).

At this point we need to understand the support, method, and result. Support is the person. The three exalted knowers are explained in connection with the beings of the three lineages. In the case of the knower of bases the support is the hearers and solitary realizers, the method is the knower of bases, and the result is total pacification. In the case of the knower of paths, the support is the aryadhatu, the method is the knower of paths, and the result is to accomplish the aims of the world. In regard to omniscient mind the support is the emanation body, the method is omniscient mind, and the result is the turning of the wheel of Dharma.

The subject of ‘turning the wheel of Dharma’ is very vast. There are three turnings of the wheel of Dharma. In the first Buddha exposed all phenomena from form up to the thirty-seven aids, or factors, leading to enlightenment. In other words, we can simply say that Buddha taught the four noble truths. In regard to the first turning of the wheel, Buddha turned it in several parts. The first is a recitation concerning their entity. This means that Buddha expressed the entity of the four noble truths, for example, he said that true sufferings are a truth for aryadhatus, regarding true origins he said that they are a truth for aryadhatus, regarding true cessations he said that they are a truth for aryadhatus, and regarding true paths he said that they are a truth for aryadhatus. This is said to be a recitation concerning their entities.

The next part was an expression regarding their activity. Buddha said that true sufferings are to be known, true origins are to be abandoned, true cessations are to be attained, and true paths are to be meditated upon. The third part was an expression about what has been done or finished. Buddha said that true sufferings had been understood and that there were no more sufferings to be understood, true origins had been abandoned and there were no more origins to be abandoned, true cessations had been attained and there were no more to be attained, true paths had been meditated upon and there were no more paths to be meditated upon.

Buddha taught these three sections or parts regarding their entity, activity/action, and completion, or what has been done. There are four expressions belonging to the first, four to the second, and four to the third. Therefore, there are twelve expressions related to the four noble truths. Buddha revealed forty-eight enumerations in relation to the four noble truths, this is achieved by multiplying the twelve by four. Before multiplying the twelve we need to understand the four. Geshe-la does not remember the order but they are generation of the eye, generation of the mind, and generation of knowledge. This will come again in the future.

These forty-eight are to do with the uninterrupted paths and the liberated paths of the path of seeing. It is necessary to know that there are both uninterrupted paths and liberated paths. These are just mentioned here but will be elaborated upon in the future.

When the Dharma wheel was turned it was turned exactly in accordance with the afflictions of sentient beings. Because sentient beings have eighty-four thousand afflictions Buddha taught eighty-four thousand teachings. These eighty four thousand bundles of teachings are related to attachment, hatred, ignorance, and a combination of the three. Each of these four has twenty-one thousand teachings related to it, therefore there are eight-four thousand bundles of teaching. Then comes the question what are the twenty-one thousand types of attachment? One of you should try to divide attachment into twenty-one thousand types! I have not seen all these divisions specifically enumerated but have some idea about what they could be. In a twenty four hour day we are said to exhale and inhale twenty-one thousand times, so perhaps with each breath there is attachment, hatred, and ignorance, and a combination of the three. In this way there would be eighty-four thousand afflictions. This is my idea. Buddha’s teachings simply say
that there are eighty-four thousand afflictions but there must be a reason for this. Later on we will look at these subjects in more detail.

‘And through the perfect possession of which the subduers set forth these varieties having all aspects’

The word translated as ‘which’ in the commentary here refers specifically to omniscient mind. ‘Which’ refers to omniscient mind because we are making the expression of worship to the three exalted knowers. Each ‘which’ is related to one of these three knowers.

2B1B-1A2 Praising how they act as mothers of the four superiors

To the mothers of the buddhas as well as the host of hearers and bodhisattvas...

Gyeltsab Je says “I prostrate to those mothers who act as a mothers of the hearers and likewise the solitary realizers, the aryavātās, and the aryavas. Since the three knowers act in this way I prostrate to them.” Here we need to discuss the mothers. Here mothers refers to the three exalted knowers. What is the definition in the specific case of the mothers who are the object of the expression of worship? Mothers are exalted knowers which are able to accomplish the aims of their sons: the aryavātās, solitary realizers, bodhisattvas, and buddhas.

2B1B-1B Homage

Respect is shown through expressing worship.

...I pay homage.

2B1B-2 Settling disputes
A Ascertaining the order
B Ascertaining the number
C Meaning of mother and son
D Identifying the three knowers which are the objects of praise

These four outlines are not connected to actual words in the Ornament therefore they are not found in the English translation.

2B1B-2A Ascertaining the order

The order refers to the order of the three exalted knowers, first there is the knower of bases, second the knower of paths, and third the knower of all aspects. This is the order of the exalted knowers who are the mothers and the objects of the expression of worship. The order has to be as above. Praise is paid to them in this specific order because this section presents the actual practice of the graduated path. This order corresponds to the practices of the small, middling, and great scope beings. The reason is that the knower of bases belongs to the practices of small and middling beings since it is a common practice. The knower of paths belongs to the practices of a great being. The knower of all aspects, omniscient mind, is mentioned here because it is the result that comes at the completion of the practice of a bodhisattva.

2B1B-2B Ascertaining the number

The number refers to the number of the three mothers who are the objects of the expression of worship. The number is definitely three. There are two contexts in which number is discussed, one is in terms of pervasion and the second is in terms of purpose. The number here is in terms of purpose. In the first context it is said that if it is an object of the expression of worship it is necessarily the three exalted knowers. In the second context, if there were more than three it would not be correct and if there were less than three it would not be correct. There have to be the three, the exalted knower of bases, paths, and all aspects.
What would be the fault if there were more than three? Three is enough, there is no need for more. If there were less than three it would be a problem because the hearers and solitary realizers could not be helped through the knower of bases, or the bodhisattvas would not be able to help the beings of the three class through the knower of paths, or the buddhas would lack the knower of all aspects. The method of one of these three beings would be missing.

2B1B-2C Meaning of mother and son

First there has to be the knower of bases, then comes the sons, the aryā hearers and solitary realizers. As a consequence of the knower of paths there are aryā bodhisattvas. As a consequence of knower of all aspects there are aryā buddhas.

2B1B-2D Identifying the three knowers which are the objects of praise

This has been discussed but will come again in more detail later on.

2B1B-2A Ascertaining the order (continued)

In the commentary Essential Explanation by Gyeltsab there is some discussion about the order of the three mothers. In this context someone says that the knower of bases is mentioned first because the introduction to the Sutra and the expression of worship are combined. This is not right. Neither Simhabhadra nor Arya Vimuktsena combined these two. This is because Simhabhadra explained the introduction to the Sutra separately. The introduction of the Sutra is explained by Simhabhadra in other texts, but not in relation to the Ornament.

Someone else says that the knower of bases comes first because in this way those following the hearer vehicle can be trained in the three vehicles serially. Our own system says this is not right because trainees or disciples who follow the text of the Ornament are solely people of the Mahayana lineage. If they were a mixture of Hinayana and Mahayana it would follow that there is a sutra or treatise common to both vehicles. A common treatise does not exist. In short, the Ornament is specific to the Mahayana.

Someone else says that the three knowers are in this particular order so as to lead disciples into the three lineages serially. This is not right according to our system because although it is sometimes the case that disciples are led progressively through all lineages this is not always the case. Here we are talking specifically about a disciple who belongs to the Mahayana lineage. Our own system’s response to all these arguments is that the three exalted knowers are in this order to lead trainees of the Ornament according to the order of the path. They are led in this way because first the trainee trains in the practices that are common to both the middling beings and great beings. First one should train in practices common to both middling and great scope beings because without doing the practices of the middling being there is no possibility of generating renunciation as only on this basis can one generate great compassion. If great compassion is developed one can then generate the mind of enlightenment. If one does not generate great compassion one cannot generate the mind of enlightenment. If one does not generate the mind of enlightenment it is not possible to generate the exalted knower of paths. This means that the knower of bases is set out first in order to make it known that before entering in the practices of beings of great scope one should train in the practices of beings of middling scope.

Thursday afternoon class, January 22, 1998

2B1B-2B Ascertaining the number (continued)

In order to lead the beings of the Mahayana from the beginning to the end of the path it is enough to have just three, there is no need for there to be more or to be less. The order of the graduated path is complete within the practices of the three mothers. In order to lead those with the lineage of the hearers vehicle one explains the practices common to the middling and great scope.
short, with the three exalted knowers it is sure that all four sons, the four aryas, can accomplish their goals.

2B1B-2C Meaning of mother and son (continued)

This was already explained this morning but in *Essential Explanation* it says that the mother, the exalted knower, comes first followed by the son, the aryas. For this reason one has to understand that the mother and son are that which generates/give birth and that which is generated/born. The exalted knowers gives birth to the four aryas.

2B1B-2D Identifying the three knowers which are the objects of praise (continued)

According to the *Essential Explanation* the entities of the three knowers will be discussed later on within a dialogue from the *Sutra*. At this time one will come to understand the knower of bases, etc. The knower of bases knows all the sixteen attributes, impermanence and so forth, of the four noble truths. Said in another way, the three knowers have their own entity. The entity of the knower of bases is the knowledge of the selflessness of persons. The entities of the knower of paths and the knower of all aspects is the knowledge of the selflessness of all phenomena. There is a quotation in this regard from sutra which says that wisdom is like a mother and method is like a father. Just as it says in sutra, the *Essential Explanation* says that common causes which belong to the wisdom side are known as mother, while phenomena which are a common cause of the method side are known as father. It is said here that the difference between the Great and Lesser Vehicles is in terms of only the father. The wisdom realizing the selflessness of persons belongs to both vehicles, the difference therefore comes in terms of method, the mind of enlightenment. the method in the case of the Lesser Vehicle is a mind that aspires to achieve total peace for one’s own welfare.

2B1C Commentary
This is divided into four:
1 Summarized meaning
2 Meaning of the purpose
3 Dispelling arguments
4 Meaning of the words

2B1C-1 Summarized meaning

This stanza expresses the outstanding nature of the greatness of [the three exalted knower-mothers].

This phrase means that the former stanza ‘That which through the exalted knower...’ expresses the exalted qualities of the mothers. The *Essential Explanation* in this regard makes a syllogism: the stanza of the root text (subject) expresses the outstanding nature of the mothers (predicate) because it praises the three knowers by means of their qualities (sign). This stanza show the support, method, and result in regard to the three knowers.

2B1C-2 Meaning of the purpose
This is divided into two:
A Extensive explanation
B Summarized meaning

2B1C-2A Extensive explanation
This is divided into three:
1 The manner of generating faith
2 Through that, generating the aspiration of striving
3 Through that, the manner of attaining the result through engagement

2B1C-2A1 The manner of generating faith
This is divided into two:
A The manner of generating faith for those of dull faculty
B The manner of generating faith for those of sharp faculty

2B1C-2A1A The manner of generating faith for those of dull faculty

A short while after having heard about [their greatness], followers of faith quickly generate very lucid [faith] free from doubt in them.

There are two types of beings, those of dull faculty and those of sharp faculty. Those of dull faculty are also called followers of faith because just by hearing about an object’s qualities they generate faith in it. Those of dull faculty generate faith in the three mothers immediately and without doubt through believing that Maitreya is a great being. This is not so correct because we generally say with regard to the Dharma that one should not rely upon the person who is teaching but on what he or she is teaching. In Essential Explanation there is a syllogism: a trainee of the Ornament who is a follower of faith (subject) generates faith in the mother (predicate) because he or she quickly generates an intense faith without any doubt concerning their qualities (sign). In short, those of dull faculty generate faith in the mother just by hearing the excellent qualities of the mother.

Usually a person who is a trainee intent upon the Ornament is one who is of sharp faculty. This is said because with respect to the three vehicles and the beings following them, those who follow the hearer vehicle are of dull faculties, those who follow the solitary realizer vehicle are of middling faculties, and those who follow the Great Vehicle are of sharp faculties. In general, those who follow the Great Vehicle are of sharp faculties. Yet we talk of dull and sharp faculties because there are differences in level among the trainees who are intent upon the Ornament.

2B1C-2A1B The manner of generating faith for those of sharp faculty

Commentary Clarifying the Meaning (page 4):

Also followers of Dharma generate extremely clear faith by means of the valid cognition of [reasonings] such as “because of being free of an entityness of one or many;” not seeing defects in the mother characterized in the meaning of the stanzas, thoroughly understanding the non-generation of bases, paths, and aspects; the entity of the exalted knower of all, the perfection of wisdom which possesses the three modes; definitely apprehending that “the three exalted knower-mothers without doubt give birth to the buddhas” and so forth.”

In terms of the manner of generating faith there are two objects in which faith is generated: one is in the entity of the mothers and one is in the ability of the mothers. Two kinds of faith are generated; faith in the nature of the three mothers and faith in the fact that the mothers have the ability to produce the sons. ‘Not seeing defects in the mother characterized in the meaning of the stanzas’ shows how those of sharp faculty generate faith in the entity of the mothers. ‘The three exalted knower-mothers without doubt give birth to the buddhas and so forth’ shows how those of sharp faculty generate faith in the ability of the three mothers. The followers of Dharma, those of sharp faculty, listen to the stanza which says ‘the exalted knower of bases knows the selflessness of person, the knower of paths and the knower of all aspects know the selflessness of phenomena’ and then check to see whether or not is true. They then establish that the knower of bases realizes the selflessness of persons and that the knower of paths realizes the selflessness of phenomena. Likewise, the basis, path, and result are selfless. Having heard such statements they check to see whether they are in fact true. We can use reasonings explained in other teachings, for example, the reasoning that phenomena are free of being a truly existent one or truly existent many. There are generally five reasonings that establish selflessness. The first is called the reasoning of being free from being a truly existent one or many, which is for analyzing the entity of phenomena. Then there is the ‘diamond slivers reasoning,’ which is used for analyzing causes.
The third is the reasoning for refuting production in terms of ultimate existence and non-existence, which is used for analyzing results. The fourth is the reasoning which refutes the generation or production from four alternatives, which is for analyzing both causes and results. The fifth is the reasoning of dependent arising, which is called the king of reasonings.

First we need to know what we are refuting by way of these reasonings. One needs to recognize the predicate of the negandum which is posited by Simhabhadra.

The manner of generating faith for those of sharp faculty is divided into:

2B1C-2A1B-1 Recognizing the predicate of the negandum
2B1C-2A1B-2 The reasoning which refutes that on other bases

2B1C-2A1B-1 Recognizing the predicate of the negandum

That which exists by its own subsisting mode without being posited by a non-defective mind through appearance: this is what is to be negated. To clarify what is meant by this, we can consider a magician who needs a substance, for example a piece of wood, as a basis for his magic. On this piece of wood he blows mantras and he also affects the eyes of the spectators so that they are tricked. Due to this the spectators see an elephant, horse, etc. where the wood is. A magician can create whatever he likes on the basis of the wood due to the mantras and having tricked the eyes of the spectators. While the spectacle is taking place, whether it is an elephant, horse, or a beautiful women, it appears to be real to the spectators. But the elephant or horse are only seen by those particular spectators, instead if the wood existed from its own side as elephant, etc. it would mean that other people later on would also see an elephant, horse, etc. but they do not. Just as these appearances of horse, elephant, etc. on the wood are not true, in the same way we see all objects as if they were exist truly and then we believe in this appearance, even though it is not correct. Why do we have this appearance of true existence? Only due to the imprints of ignorance. These appearances are not truly existent, if they did exist truly they would remain permanently, concretely, and without changing.

We do not realize that our aggregates are not permanent but change momentarily. If our aggregates were to exist truly they would remain as they are without ever changing. Our body and mind would remain the same without changing. The fact that our aggregates change shows they do not exist truly; if they did exist truly they would not change.

2B1C-2A1B-2 The reasoning which refutes that on other bases
This is divided into two:
A  Positing the sign
B  Establishing the [three] modes

2B1C-2A1B-2A  Positing the sign

In the Essential Explanation there is an argument which says that if something does not exist as a truly existent one or a truly existent many it is necessarily non-truly existent, for example the reflection of a form in a mirror. Likewise, the basis, path and aspect are also free from being a truly existent one or a truly existent many. This kind of argument is called a reasoning where the pervasion is not observed. To make this argument clearer: if phenomena are neither a truly existent one nor a truly existent many, they are necessarily non-truly existent, for example, the reflection of a form in a mirror.

2B1C-2A1B-2B  Establishing the [three] modes
This is divided into two:
1  Establishing the property of the subject
2  Establishing the pervasion

2B1C-2A1B-2B1  Establishing the property of the subject
This is further divided into two:
A  Establishing as free of being a truly existent one
B  Establishing as free of being a truly existent many
Establishing as free of being a truly existent one

Syllogism: the basis, path, and aspect do not exist as a truly existent one because they have parts. The basis, path, and aspect have parts because they are existents. Partless and having parts are directly contradictory while the partless does not exist at all. In this way, the property of the subject is established and the freedom from being a truly existent one is established.

Establishing as free of being a truly existent many

Then we go on to establish that basis, path and aspect are free from being a truly existent many. To establish this there is a syllogism: basis, path, and result do not exist as a truly existent many because they do not exist as a truly existent one because the truly existent many is posited on the basis of a truly existent one. Even without saying ‘truly,’ in general when we talk of many it is based on the existence of one. If one does not exist there cannot be many.

Establishing the pervasion

If something does not exist as a truly existent one or many it necessarily does not exist truly. This is a pervasion. Since there is neither a truly existent one or many there is no true existence at all. Three valid cognitions should proceed the ascertainment of the subsequent pervasion in proving the three as not truly existent one by the sign ‘having parts.’ The three valid cognitions are:
- a valid cognition ascertaining an illustration of a sign
- a valid cognition ascertaining that the predicate of the probandum and that of the negandum are directly contradictory
- a valid cognition refuting a common basis for the sign and the predicate of the negandum

A valid cognition ascertaining an illustration of a sign is a valid cognition realizing that something neither exists as a truly existent one or many as in the previous syllogisms.

The predicate of the probandum is ‘do not exist truly.’ Then to make our understanding more clear we can talk of the predicate of the negandum. Until now we talked about basis, path, and aspect in a positive sense but if we say ‘exist truly’ this would be the predicate of the negandum. This is the second valid cognition which realizes that the predicate of the probandum and that of the negandum are directly contradictory. It realizes that they do not have a common basis or locus; there is no other possibility. They are just two things that are completely opposite.

The third valid cognition is a valid cognition refuting a common basis for the sign and the predicate of the negandum. The sign is the third part of the phrase ‘because they do not exist as a truly existent one or many.’ This cannot have a common basis with the predicate of the negandum which is that they ‘exist truly.’ If one goes through these three valid cognitions it becomes easy to understand the establishment of the pervasion. This means that if a phenomena does not exist as a truly existent one or many it is not truly existent.

Friday morning class, January 23, 1998

QUESTION AND ANSWERS
Sherab has one small thing to clarify concerning the outline ‘Establishing as free of truly existent one’. To establish phenomena as being free of being a truly existent one there is a syllogism: the basis, path, and aspect do not exist as a truly existent one because they have parts. The basis, path, and aspect have parts because, while a partless phenomenon does not exist within objects of knowledge, they do exist. That which has parts and that which is does not have parts are contradictory.

Question: Why are the three mothers called a natural ornament?
Reply: For example, when someone has a beautiful or handsome body, this beauty itself is said to be a natural ornament. On top of this natural ornament, a beautiful body, we usually add something more, for example women put on bracelets, necklaces, earrings etc. in order to become even more beautiful. When Buddha taught the Sutra the words he used were very noble and pleasing. Because the words, the composition etc. are good, the Sutra is considered to be a natural ornament. For this simple reason of the nobleness and quality of the way in which the Sutra was expressed it is said to be a natural ornament.

Last time we talked about three ornaments but in fact there are four. There are the natural, beautifying, and clarifying, plus the joyful ornament. First there is the beautiful body born from the father and mother, then there are the beautifying ornaments, then a mirror; as a result of all these ornaments one becomes joyful. The metaphor of the joy being a ornament can also be applied to the case of the Sutra etc. The natural ornament is the three mothers, the beautifying ornaments are the eight categories and the seventy topics, and the clarifying ornament is the Ornament. The joyful ornament is that when a disciple reads and understands the Ornament and sees that everything is complete he or she becomes very joyful. This is explained in the Ornament.

Question: Why are the other Perfection of Wisdom sutras not called an ornament?

Reply: In relation to the Ornament we consider its principal subject matter which comes from the three Sutras, the extensive, middling, and brief. The eight categories and seventy topics come from them, therefore they are said to be the natural ornament. As a base to the Ornament there are only these three sutras, no others are involved. But when one talks about the commentaries made on a combination of the Sutra and the Ornament there are more sutras, there are four or five, not just the three. If we talk about four sutras, four mothers, the fourth is the Eighty Thousand Stanza Perfection of Wisdom. In this case the Compendium of Sutras (sutra-sangraha) is included in the Eighty Thousand Stanza Perfection of Wisdom. The Compendium of Sutras is the eighty-fourth chapter of the Eighty Thousand Stanza Perfection of Wisdom. Instead of positing four sutras, five can be posited. In this case the Compendium of Sutras is set out separately. Therefore there can be three, four, or five sutras or mothers. When they are discussed in terms of commentaries based on both the Sutras and the Ornament four or five can be posited.

In terms of the Perfection of Wisdom Sutras there are said to be a total of seventeen by counting the mothers and the sons. There are six main sutras, or mothers, and eleven secondary sutras, or sons. If a sutra presents all eight clear realizations it is considered to be a mother. If it presents only some of the eight clear realizations it is considered to be a son. The six mothers and eleven sons are listed in Ocean Playground of the Lord of the Nagas (rol-tso).

Question: Is it true that before generating the mind of enlightenment one must generate definite emergence, or renunciation?

Reply: Yes, that is right.

Question: Does that mean that the person who has generated renunciation but not the mind of enlightenment enters the Lesser Vehicle path?

Reply: No. There are two types of renunciation, an artificial and a genuine or non-artificial. Renunciation means that one wants to emerge from suffering, this is genuine renunciation. In the case of a Great Vehicle practitioner one not only wants to free oneself from suffering but one also wants to free others from suffering. When one wants to free others from suffering renunciation is already included here together with the generation of compassion. In defining renunciation or definite emergence we need to understand that liberation itself is definite emergence. One has to understand from what one has to emerge. What does one need to renounce? One has to renounce or emerge from cyclic existence. How does one do this? One emerges by thinking about the shortcomings of cyclic existence: there are so much sufferings, one is unable to obtain desired objects, one encounters undesired objects, and so forth. By thinking in this way one generates a desire to become free. Who wishes to emerge? It can be oneself or others, whoever meditates and generates the wish to become free from cyclic existence.
Question: From whom did Venerable Maitreya receive the transmission of the Perfection of Wisdom sutras?
Reply: Maitreya was in the retinue of the Buddha, therefore when Buddha taught the Perfection of Wisdom Maitreya received the transmission directly. There were eight close bodhisattvas in Buddha’s retinue. When Buddha came to this world in the aspect of a supreme emanation body, he was surrounded by eight bodhisattvas, one of whom was Maitreya. At that time Maitreya took the aspect of being a bodhisattva but in fact he was already a buddha.

In the Great Stages of Tantra it says that although one is an enlightened being there is no pervasion that one has to act like a buddha. Why is this? The answer is because, for example, Maitreya is an enlightened being but he did not show the aspect of being a buddha, he only showed the aspect of being a bodhisattva. There is no contradiction when an enlightened being does not show himself as an enlightened being and does not show his actions as being those of a buddha. Maitreya simply manifested as one of the eight bodhisattvas in Buddha’s retinue.

Question: In the text it mentions the four factors of subject, purpose, essential purpose (purpose of purpose), and relation. The relation between the first and second is said to be a natural relation but what is the generality and what is the particularity in this case?
Reply: The purpose is the particularity. In terms of the causal relation between the purpose and the purpose of purpose, the purpose is the cause and the purpose of the purpose is the result. Even if we talk about one individual it is a causal process because that person reads and understands the Ornament, then realizes the eight categories, and later on eventually attains the omniscient state. The point here is that the purpose and the purpose of the purpose are explained in terms of a single person putting them into practice.

Question: We heard that one has to have three condition in order to compose a text, if this is true did Vasubandhu have all three conditions? If he did, how could it be that he did not completely realize the meaning of the eight categories and seventy topics?
Reply: In general one needs these three conditions but anyone can make a text without having even one of the three. It looks like Vasubandhu slightly lacked the second condition. However, Simhabhadra had all three conditions while Vasubandhu slightly lacked one of the conditions. Therefore, you could argue saying that Vasubandhu was not suitable to write such a text. Our system would say that he was a suitable person to compose a text but not a commentary presenting the Ornament as an ornament of the three mothers. To present the Ornament as an ornament of all three mothers then one needs all three conditions.

Question: Could Geshe-la please clarify the three wisdoms, those arisen from hearing, reflecting, and meditating in relation to the five paths?
Reply: The wisdoms arisen from hearing and from reflecting belong to the path of accumulation. While one is abiding on the path of accumulation one hears teachings and thinks about them and in consequence one generates the two wisdoms of hearing and reflecting. Although one meditates on the sixteen attributes of the four noble truths one does not generate a wisdom arisen from meditation while on the path of accumulation. When one progresses to the path of preparation one generates the wisdom arisen from meditation. There are several levels of the path of preparation, the first being heat. When one achieves this, one achieves a wisdom realizing selflessness and the sixteen attributes of the four noble truths. Therefore, the wisdom arisen from meditation belongs to the path of preparation. However, this wisdom or understanding of selflessness is still conceptual; it is not a direct realization. By continuing to meditate one goes on to achieve the path of seeing when one directly perceives the meaning of the truth without any veil between the subject and the object. At this moment one achieves a yogic direct perceiver.
Here I will talk about meditation practice in combination with the Ornament. Although the graduated path (lam rim) is not mentioned directly in the Ornament, the Ornament is in fact the root of the lam rim. The root of lam rim is the Perfection of Wisdom. When we talk about the graduated path, there are two types, one is the profound graduated path and the other is the extensive/vast graduated path. When one meditates on the graduated path one is trying to unify both these aspects. When the Perfection of Wisdom sutras were taught only the profound graduated path was taught explicitly, the extensive graduated path was taught only in a hidden way. That hidden subject that was implied in the Perfection of Wisdom sutras is revealed in the Ornament.

As you know, the Commentary Clarifying the Meaning is a commentary on the Ornament. I will explain how lam rim can be meditated on based on these two texts. For example, in the teachings on the graduated path, first there is a section concerning guru devotion. So here we will also spend some time considering this subject. In the graduated path teachings it says that it is important to have guru devotion and it explains how to train one’s mind when one has devoted oneself to a guru. This also comes in Commentary Clarifying the Meaning. It is said that Simhabhadra had received the oral instructions from his guru, this shows how imp it is to have respect for one’s guru. Just as Simhabhadra received the oral transmission through the lineage of gurus, in the same way the transmission came down to Tsongkhapa. Knowing that Tsongkhapa had received the lineage of these instructions we can consider him to be the embodiment of all the objects of refuge. With this understanding we can actually do our practice visualizing Lama Tsongkhapa above our crown. In order to have a clear visualization we can rely on an image or drawing of Lama Tsongkhapa in the aspect of a monk, with one face, two arms, etc. When we visualize Lama Tsongkhapa it is important to feel his presence as if he were actually here, not just as an image, statue, or tangka. When one has a clear visualization then one should begin to develop faith in him. This development of faith is a way of training the mind. By training one’s mind one makes one’s practice more effective. Then one should feel that one receives nectar from Lama Tsongkhapa. From Lama Tsongkhapa comes forth five-colored light and nectar which enters us and fills our body. By the force of these rays of light and nectar all our negativities and obscurations are purified and our body becomes clean and clear. We achieve all positive things, such as a long life, wealth, merit, etc. The negativities and obscurations can be understood as our ignorance that does not understand the meaning of the Perfection of Wisdom and the Ornament. As a result of ignorance we are unable to understand something, or we understand it wrong, or we have doubt. All this is purified by the meditation. It is good to begin your meditation in this way and then proceed to the subject of the meditation.

When we practice we take something in our hand – we take the Dharma in our hand and try to unify it with our minds so that it becomes useful for our minds. Generally when one meditates on this visualization, one visualizes all the lineage gurus above oneself but here we can just visualize Lama Tsongkhapa thinking that he embodies all the lineage gurus. In this way we practice guru devotion.

Guru devotion has two divisions, that of devoting oneself by way of thought and that of devoting oneself by way of actions. That of devoting oneself by way of thought includes the development of faith and reflection on the kindness of the guru. With respect to the meditation on the kindness of the guru we can reflect on how important the guru is, for example without the transmission of the lineage from Lama Tsongkhapa we would not have this opportunity to listen to the teachings. In this way we develop more faith. Then we should also try to stop our impure appearances; we have karmic obscurations which although the guru is without faults we see faults. So we should train in seeing the guru as a buddha, as Lama Tsongkhapa or as another buddha. In this way we will avoid seeing faults, mistakes, and so forth in him. Many of you have probably heard lam rim teachings so you already know how to do this meditation. This is just additional information.

While we think about the importance and kindness of the guru we can consider the following metaphor: sunlight itself is powerful and wood can be burned but in order for sunlight to cause the wood to burn one needs a magnifying glass. Without the magnifying glass the sun
could not burn the wood. Likewise, in order to receive the blessings and knowledge of the buddhas we need a virtuous spiritual friend, a guru, who can help us subdue our minds.

We can also visualize our relatives, friends, and other sentient beings around ourselves. All of us receive blessings in the form of five-colored nectar which fills our bodies and washes away our negativities. Then think that as a result of receiving these blessings we ourselves and the other sentient beings come to understand the Perfection of Wisdom and the Ornament. This leaves a strong imprint. In this way we fulfill the two sub-divisions of the meditation on guru devotion by way of thought, that of training one’s own mind by developing faith and that of remembering his kindness.

After this meditation usually one goes on to think about the precious human rebirth, how lucky we are, and the value of this life. We, of course, know that the meditation on the precious human body and its value is not explained in the Ornament directly. However, it is implicit because when it talks about disciples intent on the Ornament it shows that all of them have a precious human rebirth as only with this basis can they be trainees in the Ornament. It is almost impossible that a being would be able to hear and think about the meaning of the Perfection of Wisdom without having a human body. The word ‘almost’ is said because there are some exceptions, such as some gods who may have heard the Perfection of Wisdom. However, they are exceptional. We are not one of those exceptional beings but we do have this opportunity to study and meditate on the Perfection of Wisdom.

It is important to know why such a precious human body is necessary. In the Ornament we talk about the mind of enlightenment and say that trainees in the Ornament belong to the Great Vehicle. It is rare to have a rebirth in which one can generate the mind of enlightenment. It is usually said that only male and female human beings of three continents and the six gods of the desire realm can do so. We find ourselves within these three continents and these six god realms, therefore we have the perfect support for meditating and realizing [the meaning of the Perfection of Wisdom]. We should rejoice in having obtained this precious human body with the eight freedoms and ten endowments. This is difficult to obtain therefore we should feel very happy. We are free from the eight leisureless states which would prevent [Dharma practice]. These eight leisureless states are divided into two groups of four: four related to non-human states and four to human states. The four non-leisures with respect to non-humans are those of being been born as an animal, hungry ghost, hell being, or a long-life god. The four non-leisures with respect to humans are being born in an period in which no buddha has descended, being born in an uncultured land, being deaf and mute, and holding wrong views. We should feel very happy that we have all eight freedoms from the leisureless states and possess all ten endowments.

To meditate on the ten endowments we rejoice in possessing them. They are divided into two groups of five, one personal and one impersonal. The personal endowments are to be born as a human being, to be born in a central land, to possess complete sense organs, to not have committed the five criminal actions, and to have faith in the law of cause and effect. We can also meditate on the five impersonal endowments: a buddha having come, a buddha having taught, the teachings still existing, there being people who preserve the teachings, and there being people who are interested in helping the Dharma. In this way, we can meditate on how lucky we are and how important it is to have these eighteen attributes. We can think that at this present moment we have all eighteen attributes but there is no guarantee that we will obtain them again. We need to realize that we have this opportunity just this once.

Then we can meditate thoroughly on the difficulty of finding such a precious human body. There are three factors that show that is difficult to obtain: these are in terms of its nature, its cause, and an illustration.

MEDITATION
Visualize light coming from Lama Tsongkhapa washing away all your obscurations to understanding the Perfection of Wisdom.
Monday afternoon class, January 26, 1998

To continue our subject, last time we were on outline 2 and the reasoning which refutes that on other bases is nearly completed. We have discussed the outlines ‘Establishing as free of being a truly existent one’ and ‘Establishing as free of being a truly existent many’ by looking at the five reasonings. In the *Essential Explanation* by Gyeltsab it says that among the five reasonings, the one that is presented here is that of being free of being a truly existent one or a truly existent many. In the *Commentary Clarifying the Meaning* it mentions this particular reasoning saying (page 4) “such as being free...” This commentary only mentions this reasoning.

Whether we use this reasoning or one of the remaining reasonings the point here is to recognize the object to be negated, the predicate of the negandum. The view presented here is according to the Yogachara Svatantrika-Madhyamika school. The object to be negated is ‘that which exists by its own subsisting mode without being posited by a non-defective mind on its appearance.’

Here we mention the term the object of negation, this can be of two types, that to be negated by reasoning and that which is to be negated through the path. This second means that with the realization of the path one is able to negate certain objects. In the text *Great Graduated Path* (*lam rim chen mo*) it says with regard to this point: “The object to be negated has to be something that exists among the objects of knowledge, for if it did not exist at all there would be no reason to negate it. Therefore, that which is to be negated by a path is necessarily an existent. The object to be negated through a path has to exist either negatively or affirmatively. If it did not exist there would not be any point to abandoning it.” This text also says, “The object to be negated by reasoning (subject) does not exist among the objects of knowledge because if it did exist it would be impossible to negate it.” There are two types of objects to be negated, one is related to the object-possessor, or subject, while the other is related to the object.

Since here we are talking about an object to be negated by reasoning, it is something that does not exist. Also in the ninth chapter of the *Bodhisattvacharyavatara* it says that if one does not even have a rough idea concerning what the object of negation is it will be difficult to negate it. Therefore, one needs some idea of what the object to be negated through reasoning is. Having recognized it, one can negate it and then come to realize selflessness. When we discuss emptiness we are talking about a state of being empty of something. Here the object of negation should be understood to be something that does not exist. If we do not recognize the object of negation we will not be able to negate it and come to realize emptiness.

Now I will briefly present the other types of reasonings. First there is the ‘diamond sliver reasoning’ which is used for analyzing causes. To elaborate on this we should first understand the point of this reasoning. The lower Buddhist schools posit wrong conceptions saying that a sprout, which is a result, exists ultimately. The sprout can be generated from self, others, or without a cause. To negate that a self is generated from self, others, or without a cause one applies the diamond sliver reasoning. To make this clear we need to understand what the lower schools posit. They say a sprout, a result, is generated ultimately because they generated from self, others, both, or without a cause. Our system refutes this because none of these can produce or generate a sprout, the result, ultimately because the assertion that something exists ultimately is wrong. We can say that a sprout does not exist ultimately because it is not generated from self, nor from others, nor from both, nor without a cause.

In his *Fundamental Wisdom* Nagarjuna applies the same reasoning to establish selflessness. One stanza says, “Causes such as self, others, or both and without a cause can never bring about a result. This does not occur anywhere. Therefore, production from them does not exist.” The diamond sliver reasoning for analyzing causes is mentioned in *Fundamental Wisdom* and is used to establish selflessness.

Yeshe Nyingpo, in his text the *Two Truths of the Middle Way* (*Uma Den Nyi*), explains the reasoning of ‘production from the four alternatives’ which is used for analyzing both causes and results. This reasoning refutes production from the four alternatives. The four alternatives are discussed because some people assert ultimate production. To refute this Yeshe Nyingpo says a
sprout does not exist ultimately because many causes do not generate one result, many causes do
not generate many results, one cause does not generate one result, and one cause does not
generate many results.

The reasoning which refutes ‘production as existents and non-existents’ is presented by
Kamalashila in his Lamp for the Middle Way. He says: a sprout (subject) is not generated ultimately
(predicate) because it is not generated as an existent at the time of its cause and it is not ultimately
generated as a non-existent at the time of its cause (sign). When we say it is not generated at the
time of its cause this means that it does not exist at the time of its cause. With respect to the
second, we can say that it is not ultimately generated as a non-existent at the time of its cause.

The fifth reasoning, the king of reasonings, says that a sprout does not exist truly because it is
a dependent arising. This reasoning asserts that a sprout does not exist truly existent it arises in
dependence on other phenomena. Because it depends on other phenomena it cannot exist truly.

In his Ornament for the Middle Way Shantarakshita says, “Phenomena asserted by the other
schools and some Buddhist schools (subject) do not exist truly (predicate) because they are free of
being an ultimate one or an ultimate many, for example, like a form reflected in a mirror.” This
text explains the reasoning that proves that phenomena are free from being a truly existent one or
a truly existent many. Shantarakshita wrote a root text and a commentary, then later on
Kamalashila wrote an extensive commentary on them in which he proves that phenomena are free
from being a truly existent one or many.

2B1C-2A2 Through that, generating the aspiration of striving

Also through very lucid faith in those [exalted knower-mothers], both persons who actually
desire its excellent qualities develop great respect for the purpose, such as apprehending in
all ways [the Perfection of Wisdom] and the scriptures which depend upon it.

One who has lucid faith in the mothers aspires to the excellent qualities of the three exalted
knowers and develops respect for the scriptures. The Perfection of Wisdom is contained in three
piles of texts. When one develops respect for them, one will be interested in them and
consequently put effort into learning these texts. Theses texts present many subjects: the eight
categories and seventy topics. One develops interest in learning them in their entirety, in
memorizing the root text, etc.

‘Both persons’ refers to the trainee of dull faculties and the trainee of sharp faculties. One
first hears teachings on all the subjects of the texts, then reflects on them, and then meditates on
them. In this way the three wisdoms arise. After generating these wisdoms one will eventually
attain the supreme object of goodness, meaning that one will attain the state of omniscience.

The wisdom arisen from hearing is the wisdom that arises through listening to many
teachings. The wisdom arisen from thinking is the wisdom that arises from thinking about the
meaning of the teachings one has heard. The wisdom arisen from meditation is the wisdom that is
gained on developing the first concentration on upward.

These wisdoms are generated sequentially, first that of hearing, then that of thinking, and
then that of meditation. With these three wisdoms one can realize the four noble truths, including
the selflessness of persons. When these four noble truths are realized one attains the path of
seeing. Having realized these truths directly without a meaning generality, one goes on to
meditate on them, a subsequent realization, and enters the path of meditation. From this one then
proceeds to achieve supreme goodness.

Why does one need to hear teachings? By hearing teachings one generates faith. This faith
serves to generate respect in the subject one is studying. Then one develops aspiration and interest
to learn the subject.

2B1C-2A3 Through that, the manner of attaining the result through engagement

Thereafter, through the stages of generating the wisdoms which arise from hearing
and so forth, supreme goodness will be attained.
This has already been explained. Here there comes a question: does one attain supreme goodness immediately after generating interest? The answer is no, it is attained only after generating the wisdoms arisen from hearing, thinking, and meditation. The Essential Explanation says that the wisdoms are presented in this order because this is the order in which Maitreya realized them.

2B1C-2B Summarized meaning

Therefore, very lucid [faith] in the Bhagavati is the principal cause of attaining all goodness.

Here bhagavati does not refer to a person but to the three exalted knowers. This word Sanskrit ‘bhagavati’ is translated into Tibetan is chom-den-de, which is explained in a particular way. Chom, destroyer, indicates that the exalted knowers have destroyed all enemies. Den, meaning endowed, indicates that the three exalted knowers are endowed with the six fortunes.

When we define ‘destroyer’ further it is said to show that the four devils (maras) have been destroyed. The four devils are the aggregates, the afflictions, the lord of death, and the sons-of-the-gods (lustful cupid). The devil of the aggregates refers to the fact that we continually circle [in cyclic existence] due to karma and afflictions. The aggregates are said to be a devil because they always cause us problems. When our aggregates are hot we suffer, when they are cold we suffer. As long as we have these aggregates we are bound to suffering. This shows that the aggregates are a devil.

The second devil is that of the afflictions. The afflictions are a devil because we are continuously afflicted by them. This devil is even worse than that of the aggregates.

The devil of the lord of death harms us in that it separates body and mind thus ending our life. This is the worse thing that happens to us since other problems can be solved but not the arrival of the devil of the lord of death.

The fourth devil is that of the lustful gods/sons of the gods. They are included among the desire realm gods. They are a devil because from their abode they shoot down five arrows, the five afflictions, and thereby harm us. Whenever we are struck by these arrows we experience the suffering of the affliction which corresponds with that arrow. These arrows strike our minds causing us to become ignorant and to lose control, thereby causing us suffering.

Den, meaning endowed, means to be endowed with six types of fortune. These are: a perfect or noble body, glory, control/power, perfect wisdom, perfect effort, and merit.

In short, supreme goodness is achieved through hearing many teachings, reflecting on them, and then meditating on them, whereby, we generate the three wisdoms, as well as faith in the Perfection of Wisdom, respect for the Perfection of Wisdom, and aspiration to achieve the result. In this way we will eventually achieve omniscient mind.

2B1C-3 Dispelling arguments

With regard to [the mother], the three exalted knowers of all include the eight categories. Those [eight] are also the Perfection of Wisdom. Through the way they are explained, they perfectly fulfill all aims. Keeping the aforesaid in mind, [Maitreya] praised the Perfection of Wisdom in terms of [the qualities of] the three exalted knowers of all.

Someone raises the question: “When you, Maitreya, praised the three exalted knowers did you praise all three mothers or only one of them? If you reply that you praised all the mothers it would be incorrect because you would have left out the four trainings and the truth body, so there would be the fault of praising too few. If you reply that you praised only one mother it would have been enough to praise the omniscient mind. There would have been no need to mention all three mothers.
When Maitreya praised the *Perfection of Wisdom* did he praise all three mothers or only one of them? The first argument has already been refuted. There is a reason and purpose for the second, that of taking only one of them as an object of praise. In brief, taking the three exalted knowers as the object of praise is correct since there is no fault of three being too few or too many. Three is correct because just by mentioning these three exalted knowers all eight categories are also included. Therefore, by praising the three the remaining factors are also praised.

Although the remaining factors are praised indirectly why did Maitreya mention the three exalted knowers directly as objects of praise? Because he wanted trainees to know that with these three exalted knowers the aims of the four sons are accomplished. It is simply because by meditating on the three exalted knowers one also accomplishes the eight categories.

What is the meaning of practicing the three exalted knowers? It means to meditate on the three exalted knowers on the basis of a union of calm abiding and special insight. Any meditation on the three exalted knowers on the basis of a union of calm abiding and special insight is the practice of the three exalted knowers.

The three exalted knowers are praised directly because Maitreya wanted us to understand that these three include the eight categories. Also by directly taking the three exalted knowers as an object of praise it shows that the three exalted knowers are able to accomplish the aims of the four sons. The way in which the three exalted knowers enable the four sons to accomplish their aims will be discussed in detail later on. We should understand that the eight categories are also an object of praise since by praising the three exalted knowers the eight categories are also praised.

The meaning of saying that the three exalted knowers ‘include’ the eight categories needs further explanation. According to one explanation the fact that the three include the eight is because the three exalted knowers are very vast and include the four trainings and the truth body which are more limited. This is one interpretation. This is said because the three exalted knowers are related to the continua of all aryas of the three times while the four trainings and truth body are only related to trainees intent on the *Ornament*. Our system does not accept this assertion.

Another interpretation of the three including the eight is that it is so because the three exalted knowers are one nature while the eight categories are occasional/temporary branches. To illustrate this the hand can be likened to the nature, the four fingers to the four trainings, and the thumb to the truth body; when we make a fist all five are included as in the case of the nature of the three exalted knowers. Also some say that the three exalted knowers are the subjects that include and the objects that are included. However, this is not acceptable.

Our own system says that the three including eight is an inclusion in terms of practice. One practices all eight categories by practicing the three exalted knowers. Here ‘including’ means this: by practicing the three exalted knowers one practices the eight categories, or by practicing the eight categories one practices the three exalted knowers. Another interpretation says that ‘include’ means that the three exalted knowers are the principal while the five remaining are the retinue, so the principal is said to include its retinue. However, this too is not acceptable. Another interpretation says that ‘include’ means that the eight categories are like a section of the three, therefore the three includes the eight.

The *Essential Explanation* goes through these points. If one practices the three exalted knowers thoroughly all the eight categories are automatically practiced. Is one sees the three exalted knowers as an object of aspiration it is not possible that the eight categories are not seen. In other words one simultaneously sees and practices the eight categories. Therefore, by praising the three exalted knowers the eight categories are also praised. The reason that the three exalted knowers are mentioned directly is to show that they accomplish the aims of three classes of beings and the aims of the four sons. If one meditates on any one of the eight categories one necessarily meditates on one of the aspects of the three exalted knowers.
This is divided into two:
A Praising them by means of their individual qualities
B Having summarized, to pay homage

2B1C-4A Praising them by means of their individual qualities
This is further divided into three:
1 Exalted knower of bases
2 Exalted knower of paths
3 Exalted knower of [all] aspects

2B1C-4A1 Exalted knower of bases
This shows how hearers and solitary realizers are led to their aims.

Hearers and those of like category, the solitary realizers whose life activities are slightly superior as shown by one line [in the Ornament], wishing nirvana, by thoroughly understanding all bases are without birth [of self of persons], attain the two types of nirvana that are characterized by being with aggregates and without aggregates.

Only hearers are mentioned as beings to be led to pacification while solitary realizers are only alluded to. When we talk of the knower of bases we need to know which people (the support) are led to total pacification, the method, and the result. The people to be led are those who wish to attain their own welfare. In the Commentary Clarifying the Meaning it says ‘those of like category, the solitary realizers whose life activities are slightly superior’; this shows that although solitary realizers and hearers are the same in looking for pacification, solitary realizers are slightly superior to hearers. Solitary realizers are superior because in their last life before they attain their aim, the result, they teach Dharma to others without speech. In other words, they use non-verbal means to teach. In this life they also do not need to depend on instructions of spiritual teachers in order to attain their aim. Another reason that solitary realizers are superior to hearers is that they abandon the conception that apprehends forms as external objects. In other texts it is said that hearers accumulate merit over three lifetimes while solitary realizers accumulate merit over a hundred eons. In terms of the object of attainment, nirvana, there is no difference between solitary realizers and hearers, they differ only in their activities.

By what means do solitary realizers and hearers attain nirvana? By way of the knower of bases. The knower of bases is a wisdom that realizes all bases are without a self of persons. By way of this wisdom they attain the state of gone beyond sorrow.

Here there is some discussion concerning the meaning of nirvana. In general nirvana is said to be an analytical cessation that has abandoned the obscurations to liberation/afflictive obscurations Nirvana has four etymological or nominal divisions:
- natural
- with remainder/residue
- without remainder/residue
- non-abiding

Natural nirvana refers to emptiness. Emptiness is called a nirvana because it is a state that has transcended the sorrow of true existence. In this context true existence is said to be sorrow; since emptiness has gone beyond this sorrow it is said to be nirvana. Nirvana with remainder refers to a nirvana in which the aggregates are still possessed. Nirvana without remainder is a nirvana in which the aggregates are no longer possessed. Non-abiding nirvana is buddhahood. It is so called because buddhahood is free from the two extremes of cyclic existence and solitary peace. This explanation accords with the Svetantrika-Madhyamika school. The view differs in the Madhyamika Prasangika school which says that a nirvana with remainder is a nirvana which still has the remainder of true existence, while a nirvana without remainder is one without the remainder of true existence. According to the Vaibhashikas, Sautrantikas, and true-aspectarian Chittamatrins, who accept three final vehicles, when someone attains nirvana without remainder the consciousness ceases. However, the Svetantrika-Madhyamika school says that when a nirvana
without remainder is attained only the aggregates that are true sufferings and true origins cease, while the uncontaminated aggregates continue to exist.

2B1C-4A2 Exalted knower of paths
This shows how the exalted knower of paths achieves the aims of the world.

The bodhisattvas, those who benefit migrating beings as long as cyclic existence lasts, act to bring about the welfare of all migrating beings by the very entity of realizing the birthlessness of all paths.

(This is still explaining the root verse on page three of the translation of the Commentary Clarifying the Meaning.)

In the context of the exalted knower of paths the support is the bodhisattvas. The bodhisattvas work for the welfare of sentient beings as long as cyclic existence is not emptied. The bodhisattvas are the support for doing this work, their method is to realize all paths as non-truly generated/born, and with this they achieve the aims of the world. ‘All paths’ refers to the fifteen paths which are divided into three groups of five: the five of hearers, five of solitary realizers, and five of bodhisattvas. These five paths are the path of accumulation, the path of preparation, the path of seeing, the path of meditation, and the path of no-more-learning [of the three vehicles].

With regard to the preceding commentary on the knower of bases ‘all bases’ refers the four noble truths and their sixteen attributes.

2B1C-4A3 Exalted knower of all aspects

When one possesses the realization of the birthlessness of all aspects, one possesses the perfectly restrained body of a buddha. Those principal lords of yoga turn the wheel of Dharma in all aspects as an antidote to [afflicted] behavior.

‘The realization of the birthlessness of all aspects’ refers to omniscient mind. ‘One possesses the perfectly restrained body of a buddha, those principal lords of yoga’ shows the arya buddha as a person. ‘Turn the wheel of Dharma in all aspects as an antidote to [afflicted] behavior’ indicates the result. In the Essential Explanation it shows the support, method, and result. The support is a principal lord, a buddha, who possesses a restrained body and many excellent qualities. The method is omniscient mind. This is of two kinds: one that realizes all aspects of all objects of knowledge without exception and one that realizes cause and effect including the seventy topics, here it refers to the latter. The result is to turn the wheel of Dharma that is the antidote to the eighty-four thousand afflictions. That ‘omniscient mind realizes all aspects of cause, result, and entity’ means that omniscient mind realizes them in a specific way; it realizes the entity of phenomena as not truly existent, it realizes the cause as without any sign of true existence, and it realizes that there is no aspiration for a result that truly exists.

The wheel of Dharma is of two types: scriptural and realization. The wheel of Dharma of realization is any clear realization in the continuum of one who has entered the path. The Dharma wheel of scripture is any excellent quality included in the words of Buddha.

The scriptural wheel of Dharma is divided into three: the first, second, and third wheels of Dharma. The first is called ‘the Dharma wheel of the four noble truths,’ the second ‘the Dharma wheel without characteristics,’ and the third ‘the wheel of Dharma of the thoroughly discriminating/distinguishing,’ which means that it clarifies the former two. We use the term ‘wheel of Dharma’ for a reason. Universal kings have a wheel that is used to transport them here and there and to gain victory over antagonists, likewise the wheel of Dharma goes from one person to another and defeats the discordant side, such as attachment.

With respect to [the definition of] the wheel of Dharma there are different assertions. Vaibhashikas say that the wheel of Dharma is the path of seeing because only the path of seeing has qualities that correspond to the qualities of the wheel of a universal king. Others say that the
wheel of Dharma is only the eight-fold noble path. A wheel is composed of certain characteristics: a hub, spokes, and a rim. When the eight-fold noble path is condensed it comes down to the higher trainings in morality, concentration, and wisdom. The higher training in morality is likened to the axle of the universal king’s wheel; the higher training in wisdom to the spokes of the wheel; and the higher training in concentration to the rim. The wheel of the universal king is very special in that is also able to jump over objects and continue on; the jumping of the wheel is likened to the path of seeing which observes objects existing in the upper realms. The wheel of the universal king can also roll downward, this is likened to the path of seeing which observes the lower realms. The wheel of the universal king also moves from place to place and likewise the wheel of Dharma, the teachings, pass from one person to another.

A universal king functions to defeat antagonists, likewise the uninterrupted paths of the path of seeing defeat their respective objects of abandonment. When the objects of abandonment have been abandoned one achieves a liberated path which is likened to the universal king who, having defeated his antagonists, is then able to relax.

Tuesday afternoon class, January 27, 1998

We will spend some time discussing ‘wheel of Dharma.’ In Essential Explanation it says that there are two explanations concerning this, one from the Sutra Unraveling the Thought (Sandhinirmochanasutra) and the other from the Questions of King Dharanishvara Sutra (Dharanishvararajapariprchchasutra).

In terms of the eight-fold noble path, three of the eight, correct speech, correct action, and correct livelihood, are included in the higher training in morality. These three are represented by the axle of a wheel. Three of the remaining five, correct view, correct thought/conception, and correct effort, are included in the higher training in wisdom. They are represented by the spokes of the wheel which have the function of cutting. The remaining two, correct memory/mindfulness and correct concentration/meditative stabilization, are included in the higher training in concentration and represented by the rim of the wheel. Therefore, we can understand the wheel of Dharma in terms of how the eight-fold noble path and its function are symbolized by a wheel.

In the Unraveling the Thought Sutra it explains the three wheels of Dharma. The first, that turned in Deer Park in Varanasi, and the second, that turned at Vulture Peak, are interpretative teachings. The third wheel of Dharma is a definitive teaching. When Buddha turned the wheel of Dharma in Varanasi he addressed his teaching on the four noble truths mainly to those who follow the hearer vehicle. If we talk about the first wheel of Dharma philosophically we can say it was turned for trainees intent upon the Vaibhashika and Sautrantika schools. The subject upon which Buddha elaborated was the four noble truths. Buddha turned the wheel of Dharma on the four noble truths in Varanasi. Who turned the wheel? The great lord Shakyamuni. When did he turn it? He turned it for the first time. Where was it turned? In Varanasi, but in terms of the exact location it was between the two rivers Vara and Nasi, therefore the teachings are said to have been given in Varanasi. The condition in which Buddha gave teachings is that the beings who listened to his teachings were sages, literally the upright (drang-song), who can be thought of as having been like the present day saddhus. The teachings were taught in a park. Although the disciples included many beings, the principal among the humans were the five great ascetics and among the gods the principal were Brahma and Indra. From the point of view of the schools the first wheel of Dharma in Varanasi he addressed his teaching on the four noble truths mainly to those who follow the hearer vehicle. If we talk about the first wheel of Dharma philosophically we can say it was turned for trainees intent upon the Vaibhashika and Sautrantika schools (see teachings on Tenets - Drupta). The principal subject was the four noble truths. The teachings on the four noble truths were taught in twelve rounds, three rounds for each of the four noble truths. The first round was the teaching expressing the entity of the four noble truths, the second was the teaching expressing the action (?what is to be done), and the third was the teaching expressing what had been done. For example, first Buddha said: “O bhikshus, such are true sufferings; second, ’O bhikshus, true sufferings are to be understood; third, ’O bhikshus, true sufferings have been understood and there are no more true sufferings to be understood.” When the first round of
these teaching expressing the entity of each of the four noble truths was completed, the disciples attained the path of seeing; when the second round expressing the action was completed, they had attained the path of meditation; and when the third round expressing what had been done was completed, they attained the path of no-more-learning.

[The teachings on the four noble truths] are further divided in terms of the generation of the eye, the generation of the consciousness, and so forth resulting in forty-eight divisions. First there is the generation of the eye; when Buddha said this he meant that an uncontaminated wisdom had been generated. The second is the generation of consciousness; when consciousness is generated as a consequence of uncontaminated wisdom one has no more doubt, the consciousness is very clear about the subject. The third is the generation of knowledge (rikpa). Knowledge is generated because when oneself has uncontaminated wisdom all one’s actions become correct and positive, all one’s activities have correct meaning. The fourth is the generation of mind which is a pure or immaculate mind. When we say the mind is generated it means there is no more mistaken mind. A mistaken mind will never rise again and at this point all minds are correct.

The next characteristic of the first wheel of Dharma is that it is ‘surpassable’. If it were unsurpassable there would be nothing higher than it however there is a sutra that is superior to it. The first wheel of Dharma is also said to have the characteristic of ‘occasion.’ If one accepts all the words exactly as Buddha said it is possible that [on some occasions] the words could be refuted by others since all the words are not suitable to be accepted literally. The next characteristic is that the first wheel of Dharma is an interpretive teaching, meaning that it is a teaching which is to be interpreted. The fourth characteristic is that the first wheel of Dharma is a subject/object for argument. It is subject to argument because the words of the first Dharma wheel do not clearly say this is so and that is so. For example, although Buddha mentioned three characteristics he did not explain what they are.

The second wheel of Dharma was turned at another time and it is called ‘without characteristics.’ The principal subject was the three characteristics/natures [of phenomena]: other powered, thoroughly established, and imaginary. Buddha said that all phenomena that are included in the other powered and thoroughly established are truly existent, while all phenomena included in imaginary are not truly existent. The second wheel of Dharma was turned for disciples of sharp faculties intent upon the Mahayana. There are specific characteristics taught indirectly in the second wheel of Dharma. Indirectly Buddha said that other powered phenomena have the entity of not being generated truly, all imaginary phenomena have the entity of being without characteristics, and thoroughly established phenomena are ultimately without entity. When emptiness was taught Buddha explained it in terms of four characteristics: the first is that of being non-generated, this means not truly generated; the second is that of not ceasing, this means not ceasing truly; the third is that of being peace right from the beginning (peace refers to lacking true existence); and the fourth is that of being a naturally passed beyond sorrow, i.e., a natural nirvana. Emptiness has these characteristics. Although this is the subject [of the second wheel of Dharma], the whole second wheel of Dharma has the same characteristics as the first: it is surpassable, occasion (there are occasions in which it can be defeated philosophically), interpretive, and a subject for argument.

The third wheel of Dharma was turned for the followers of all three vehicles. In this wheel Buddha said that all phenomena included in imaginary phenomena do not exist by their own character/by their own nature, and that phenomena included in other powered phenomena exist by their own character. In terms of the disciples here there are both Hinayana and Mahayana followers. This wheel of Dharma is called ‘fine discrimination’ meaning that all discriminations were made very clearly. In terms of the four attributes or characteristics of the third wheel of Dharma it is: unsurpassable because it is the definitive meaning and there is nothing higher than it; no occasion, meaning that if one asserts the third wheel of Dharma it cannot be defeated by others; the definitive meaning because one can accept all the words; and it is not an object/subject of argument because as the three characteristics are explained clearly there is no reason for it to be refuted.
These explanations of the first, second, and third wheels of Dharma are from the point of view of the Chittamatra school. In the commentary by Gyeltab Je it says that this way of interpreting the three wheels of Dharma is according to the charioteer Asanga and in accordance with the views of the Chittamatra school. The true-aspectarian division of the Chittamatra school asserts three final vehicles, that is, it says there are the three final vehicles of the hearer, solitary realizer, and bodhisattva. All three vehicles lead to their specific goal which would mean that some sentient beings never become buddhas. According to the Chittamatra view the extensive, middling, and brief Perfection of Wisdoms are examples of the second wheel. In the Perfection of Wisdom it says ‘all phenomena from form to omniscient mind do not exist by their own character/by their own nature,’ Chittamtrins say this is correct because it means that all phenomena included in imaginary phenomena do not exist by their own character while phenomena included in other powered and thoroughly established do exist by their own character. In the first wheel of Dharma, Buddha said all phenomena exist by their own character and then that they do not exist by their own character. The Chittamatrins say when buddha said all phenomena exist by their own character he was referring to phenomena included in other powered phenomena and when he said phenomena do not exist by their own character he was referring to imaginary phenomena. In this way the Chittamatra interpret the first and second wheels of Dharma using the third wheel.

Vaibhashikas, Sautrantikas, and Chittamatrins say that if it is a sutra whose meaning is not to be accepted literally it is interpretative, but if it is acceptable just as was said then it can be considered to be a definitive meaning sutra. From the point of view of Svatantrika-Madhyamika the interpretive and definitive are defined differently: if a sutra presents ultimate truth or is acceptable literally it is definitive, while if it presents conventional truth or is not acceptable literally it is interpretive. There are two aspects or divisions of interpretive: a sutra that represents conventional truth and a sutra that is not acceptable literally. A sutra that is not accepted literally by the Svatantrika-Madhyamika school is, for example, the Heart Sutra in which says that the eye, etc. do not exist by their own character.

The distinction between interpretive and definitive according to the Madhyamika Prasangika school is different. This school says that if a sutra presents emptiness as its principal subject it is definitive, but if it presents conventional truth as its principal subject then it is interpretive. This means that a sutra that presents conventional truth as its principal subject is acceptable yet its meaning is to be interpreted as long as it does not explicitly take emptiness as its main subject. Emptiness is the definitive meaning because it is the reality of all phenomena; it itself is the definitive meaning and no interpretation is needed.

From the Svatantrika-Madhyamika point of view the first and third wheels of Dharma are interpretive while the second is definitive. The reason is because the second wheel of Dharma presents emptiness as its principal subject. This means that the huge pile of the Perfection of Wisdom sutras are definitive. From the point of view of the Madhyamika Prasangika school the first wheel of Dharma is said to have one part that is definitive and one part that is interpretive. This is because when Buddha was teaching the first two truths, true sufferings and true origins, his words were interpretive but when teaching the coarse and subtle selflessnesses his words were definitive. The Prasangika school says that the second wheel of Dharma is definitive while the third is interpretive. Even that asserted by Chittamatra, such as that other powered and thoroughly established phenomena exist from their own side while imaginary phenomena do not exist from their own side, is proven wrong.

The disciples present at the first turning of the wheel included five human disciples and eighty thousand gods. It is said that all of them realized subtle selflessness. In the texts the Sixty Reasonings on the Middle Way and the Precious Garland of the Middle Way it says that in Hinayana
texts a subtle selflessness is in fact presented. So even the Hinayana presents a subtle selflessness of phenomena by which they realize their own goal of becoming an arhat of their vehicle. The purpose of talking about a subtle selflessness of phenomena is to show followers of the lower vehicle that they too must realize a subtle selflessness of phenomena in order to attain the state of an arhat of their respective vehicle.

Wednesday morning class, January 28, 1998

When the Chittamatrins say that the third wheel of Dharma is a definitive teaching they do not mean that the entire teaching is definitive but only the Unraveling the Thought Sutra (Samdhinirmochanasutra). However, even not all of it is considered to be definitive, only the Chapter of the Request of Bodhisattva Parmartasamyakarya. Later on this will be clarified further.

We are still on outline 2B1C-4A3 Exalted knower of all aspects. This has two sources, the Unraveling the Thought Sutra and the Questions of King Dharanishvara Sutra (Dharanishvararajapariprchchhasutra). Although in the Questions of King Dharanishvara Sutra the wheel of Dharma is not mentioned explicitly this sutra interprets Buddha’s teachings saying that just as a person who is an expert in finding jewels has his own way of doing so, likewise Buddha taught three means or three levels for guiding disciples. The first level was to teach impermanence, suffering/misery, selflessness, and impurity. Impermanence was taught in the first means/level to make the disciples depressed about the nature of cyclic existence. Impermanence and so forth were taught by the Buddha on the basis of pervasive suffering which is our aggregates. They are impermanent, suffering, selfless, and impure. As a result of understanding this, disciples become depressed with/repulsed by cyclic existence.

Also as part of the first level teachings Buddha caused disciples to enter the practice of the vinaya, in other words he caused sentient beings to practice the three higher trainings of morality, concentration, and wisdom. Buddha gave teachings to different levels of disciples, to those of lower scope and middle scope he taught impermanence, suffering, selfless, and impurity, and that cyclic existence is to be emerged from. These were mentioned in the first level.

On the second level Buddha presented emptiness, signlessness, and wishlessness to lead disciples. These three are called the three doors of liberation. Signlessness is so-called because there are no signs of truly existent causes, while wishlessness is so-called because there should be no wish for truly existent results. As long as sentient beings do not realize that causes do not have a sign of true existence and that there is no truly existent result, they will wander in cyclic existence.

In the third level Buddha taught ‘the irreversible wheel of Dharma.’ What is contained in this teaching? It is a discussion concerning the three spheres which lack inherent existence. The three spheres are part of each activity: the action, the agent, and the object. All of these lack inherent existence, this is to be realized by the disciples. Disciples should combine the method side with this realization of emptiness and thereby advance on the path. The emptiness of these three spheres is just one example of emptiness, there are countless emptinesses to be realized.

These three levels can also be interpreted in different ways. For example, with respect to a disciple who is initially a Hinayana practitioner the first level was taught to ripen his continuum. The second level was taught to help him emerge from cyclic existence, and the third level was taught to lead him to the Mahayana. However, if we talk about these three levels in relation to a Mahayana practitioner the first level ripens his continuum, the second level makes him practice and generate the wisdom realizing emptiness, and the third level makes him combine wisdom and method and thereby complete his practice.

The selflessness that was discussed at the first level is gross selflessness, while that taught at the second level is extremely subtle.
This interpretation [of the three levels] is based on the second source, the Questions of King Dharanishvara Sutra, and is based on a single individual: it explains how his continuum is ripened, how he is to practice, and how he combines method and wisdom.

The text Ornament of the Middle Way says that a disciple of sharp faculty first realizes emptiness and then generates the mind of enlightenment. Such a disciple does this because before making a promise he first checks whether he is able to achieve that which he wants to achieve. In other words, he first uses a logical process to understand everything thoroughly. In order to attain liberation or buddhahood he knows that first he must eliminate the wrong conceptions grasping at true existence. When he realizes that the conceived object of self grasping does not exist, he comes to gradually realize emptiness. Then he realizes that liberation and buddhahood are possible and so works to abandon the obscurations to liberation and the obscurations to omniscience.

According to the Questions of King Dharanishvara Sutra, an example of a sutra belonging to the third level is the Tathagatagarbha Sutra. An explanation of this is given based on this sutra in Uttaratrantra.

2B1C-4B Having summarized, to pay homage

I pay homage to the mother who acts to bring about [the desired aims] of the buddhas and their retinue of hearers and so forth.

In the Essential Explanation it does not say much more than it does in the Commentary Clarifying the Meaning. It says, ‘I prostrate to the mother who accomplishes the aims of the buddhas and those who surround them, the hearers and bodhisattvas.’ Solitary realizers are not included here because they do not attend teachings. For this circumstantial reason the retinue only includes hearers and bodhisattvas.

2B2 Having revealed to those persons with faith in the extensive, to explain This is divided into three:
A The meaning of the purpose of the treatise
B The condensed meaning
C The meaning of the words

2B2A The meaning of the purpose of the treatise

This has two divisions:
1 Having individually resolved doubts concerning a lack of purpose in composing the treatise, to explain the general presentation
2 Having rejected the fault of repetition of the sutras, establishing the existence of a purpose

2B2A-1 Having individually resolved doubts concerning a lack of purpose in composing the treatise, to explain the general presentation

This has two divisions:
A Arguments
B Responses

2B2A-1A Arguments

Regarding that, the treatise, the Ornament for Clear Realization, with the preliminary of homage and praise, if [someone] were to ask, “If [the Ornament] were to include either the bases, antidote, or aspect: if it were the first case (base), it would be a meaningless endeavor [to compose it] because there does not appear in the treatise on the Perfection of Wisdom any base which is not mentioned in other philosophical treatises. If it were the second case (antidote), because it includes only [the class of] purified phenomena and does not include [the class of] thoroughly afflicted phenomena, one would not know what [the treatise] is an antidote to. If it were the third case (aspect), because it includes only the aspect [of all objects of knowledge] without the base there would be
no realization of the meaning since it does not explain [the base] even slightly. Wouldn’t others think this meaningless?”

The commentary begins with a discussion as to whether there really is someone who makes this argument or just an invented doubt. If we say that there is actually someone arguing then we need to ask whether he is arguing about the mother, which is the sutra, or the treatise.

When Maitreya composed the *Ornament for Clear Realizations* he made an expression of worship. The doubt here concerns whether Maitreya’s text takes the bases, antidote, or aspect as its principal subject. Someone says that if it were the case that Maitreya takes the bases as the principal subject of his *Ornament* this would not be correct because composing this text would have been meaningless because the bases are already explained in other texts such as *Treasury of Higher Knowledge* (*Abhidharmakosha*). In this text there is a presentation of the five bases, so, since they are explained elaborately here, there would not be any meaning to repeating them in the *Ornament*. On the other hand, if Maitreya were to take the antidote as the principal subject of the *Ornament* this too would be incorrect because the *Ornament* does not explain the objects to be abandoned and consequently there would be no reason to talk about their antidotes. To do so would only cause confusion as one would not understand to what they are antidotes.

If it were the case that Maitreya’s *Ornament* takes only the aspect as its principal subject then this too would be incorrect because discussing aspects without discussing their bases would be meaningless. If an aspect were to be taught without being based upon a base one would not understand to what that aspect refers. If one argues that although aspects are the principal subject of the *Ornament* they are explained together with the bases this would also be incorrect because there would be the same error of the bases having already been explained in other texts.

These are doubts that are invented; they are brought up so that when this subject is presented in the future and doubts arise the answers are already given.

The main basis of argument has thus been presented, although there are other arguments in the commentaries.

2B2A-1B Responses
This is the response to the argument above that there is no mistake. It has four subdivisions:
1 Actual response
2 Stating quotations that prove this
3 Explaining the meanings of the quotations
4 Summarizing the meanings

2B2A-1B1 Actual response
No, it is not. Why? Since all clear realizations are included in the three exalted knowers of all, in the order of hearer, solitary realizer, bodhisattva, and peerless buddhas, they also include all three cases.

The response is that if the *Ornament* takes one of the three, the base, antidote, and aspect, as its subject to be explained there is no mistake. This is because all three are established in the *Ornament*. These three, the base, antidote, and aspect, include the three exalted knowers (that which is to be included). The way in which the three exalted knowers are included in the base, antidote, and aspect, is by way of representation. The base represents the knower of bases, the antidote represents the knower of paths, and the aspect represents omniscient mind which realizes all objects of knowledge, or realizes entity, cause, and result.

We can summarize this by saying that there is a reason for presenting the three exalted knowers because, by presenting them, all the clear realizations of the aryas are also presented. The clear realizations of however many aryas there are can be classified among the three exalted knowers. Therefore, all clear realizations are included in the three exalted knowers. Since the presentation of the three exalted knowers has this purpose there is no fault of repeating what was said in the introduction to the *Sutra* and it also has the benefit of clarifying what is said. The bases, ?path/antidote, and aspect represent the respective knowers. The bases include the four noble
truths and their sixteen attributes; the knower of paths includes the five paths of hearers, the five of solitary realizers, and the five of bodhisattvas; and aspects includes all the objects of knowledge which are realized by omniscient mind, the knower of all aspects. The aspect can be elaborated to include the 173 aspects of the three exalted knowers which are explained in the fourth chapter of the Ornament.

2B1B-1B2 Stating quotations that prove this
A Stating the proof of the intermediate/middling mother
B Stating the proof of the brief mother
C Stating the proof of the extensive mother

2B2A-1B2A Stating the proof of the intermediate/middling mother
This has two divisions:
1 Shown in brief
2 Extensive explanation

2B2A-1B2A-1 Shown in brief

Thus, in the intermediate Mother of the Victor: “Subhuti, the very knower of all [bases] are the [clear realizations] of hearers and solitary realizers. The very knower of paths are the [clear realizations] of bodhisattvas. The very knower of all aspects are the [clear realizations] of those thus gone, foe destroyers, perfectly complete buddhas.

The knower of bases is the clear realizations of hearers and solitary realizers, the knower of paths is the clear realizations of bodhisattvas, and the knower of all aspects is the clear realizations of buddhas. How is the knower of bases the clear realizations of hearers and solitary realizers? Here we need to consider the person, the support or basis, which is of two types: one is the basis upon which they are generated and the other is the basis upon which they are posited. The basis upon which the knower of bases is posited is the hearer and solitary realizer learners. The basis upon which it is generated is all the aryas: arya hearers, arya solitary realizers, arya bodhisattvas, and arya buddhas. With respect to the knower of paths the basis upon which it is posited is only arya bodhisattvas while basis upon which it is generated is the buddhas and bodhisattvas. The basis upon which the knower of paths is posited is the arya learner bodhisattvas and the basis upon which it is generated is all Mahayana aryas. With respect to omniscient mind both bases, that of upon which it is posited and that upon which it is generated, are the arya buddhas.

Wednesday afternoon class, January 28, 1998

2B2A-1B2A-2 Extensive explanation
A The manner in which the clear realizations of the hearers and solitary realizers are included in the knower of bases
B The manner in which the clear realizations of the bodhisattvas are included in the knower of paths

2B2A-1B2A-2A The manner in which the clear realizations of the hearers and solitary realizers are included in the knower of bases
1 Question
2 Reply

At this point there is a question posited in a sutra:

[Subhuti asks:] “Bhagavan, why is the realization of all [bases] the [clear realizations] of hearers and solitary realizers?”

[Buddha replies:] “Subhuti, all [bases] are merely the various inner and outer phenomena. Besides those, hearers and solitary realizers know [their sixteen aspects].
However, all [three] paths do not have definite arising achievement. Because of that, hearers and solitary realizers are said to be the very knower of all [bases]."

All bases are the inner and outer phenomena. All bases are known, that is all inner and outer phenomena are understood, by the hearers and solitary realizers. There are six inner phenomena, or inner sources (ayatana), and six outer phenomena, or outer sources. The six outer sources are forms, odors, sounds, tastes, tangible objects, and phenomena. The six inner sources are the eye, ear, nose, tongue, body, and mental sources. By means of the six inner sources the six outer sources are perceived. Both the inner and outer sources are known to hearers and solitary realizers. Hearers realize the selflessness of persons of these twelve bases. The fact that only hearers are said to realize the twelve sources as lacking a self of persons does not mean that solitary realizers do not realize this but that, in addition to realizing the selflessness of persons, they also realize the gross selflessness of phenomena: that the form and the valid cognition realizing it are empty of being different substances. Hearers and solitary realizers do not realize the selflessness of persons and the gross selflessness of phenomena through the knower of paths and the knower of aspects because they do not possess these two knowers.

Slowly we will define all these terms better, for example, we can take the knower of bases. Roughly speaking, the knower of bases is a wisdom realizing the bases as lacking a self of persons. More specifically a knower of bases is (1) an exalted knower belonging to the continuum of an aryā which is conjoined with the wisdom realizing the selflessness of persons and (2) abiding in the class of Lesser Vehicle realization. ‘Abiding in the class of Lesser Vehicle realization’ is said because the Lesser Vehicle learners meditate on an object with the knower of bases similar to that of higher beings. The selflessness of persons is to be taken as the principal object of meditation because one needs to take the grasping at a self of persons as the principal object of abandonment. This is done in order to abandon the obstructions to liberation. What is liberation? What is nirvana? Liberation or nirvana is a state where the obscurations to liberation have been completely eliminated.

The obscurations to liberation are of two types: the intellectually acquired afflictions and the innate afflictions. The intellectually acquired afflictions are abandoned by the path of seeing. The innate afflictions continue to exist on the path of seeing but are eliminated by the path of meditation. The path of meditation is divided into nine levels; each level abandons a particular innate affliction.

In general there are six root afflictions and twenty secondary afflictions. The six root afflictions are attachment, hatred/anger, ignorance, pride, doubt, and view. There are five views: the view of the transitory collection/transitory view, extreme view, view holding a wrong view as supreme, view holding wrong morality and wrong conduct as supreme, and wrong view. Of all these five views the worst is the view of the transitory collection. View of the transitory collection is the cause of many negative actions and the reason we circle in cyclic existence. This view is (1) a deluded wisdom, (2) observes the I and mine of one’s own continuum, and (3) conceives of I and mine as being self-sufficient substantially established. To know the function of the view of the transitory collection is important because it is due to it that we commit negativities. When we think “I” there is the beginning of negative actions. Then we think ‘mine’ which leads to the arisal of many afflictions such as thinking “I like him” or “I hate him,” etc. Due to these afflictions we take care of and protect some people and harm others. Since many afflictions arise from the view of the transitory collection, these afflictions as well as the view of the transitory collection are to be abandoned. The only method to do so is to realize the selflessness of persons. For this reason, hearers and solitary realizers meditate on the selflessness of persons, then realize it, and become free.
[Subhuti asks:] “Bhagavan, why are the realizations of the aspects of the [three] paths [the clear realizations of] bodhisattvas?”

Buddha replies: "Subhuti, bodhisattvas should generate whatever are the paths of the hearers, whatever are the paths of the solitary realizers, and all the paths which are paths of the buddhas. They should [directly] know all paths. They should also fully complete those [three paths]. They should also perform the activities of the [three] paths. [However], having not fully completed prayers, having not fully ripened sentient beings, or not completely purified [their own] buddha realm; they should not actualize the perfect end. Because of that, [the clear realizations of the bodhisattvas] are called the very knowers of the aspects of paths of the bodhisattvas."

A bodhisattva learns all the paths including the knower of bases which is common to hearers and solitary realizers. A bodhisattva not only realizes the selflessness of persons but also generates the wisdom realizing non-duality. By this means the bodhisattva can help the hearers and solitary realizers. A bodhisattva should also realize the paths of buddhas, in other words he should realize all phenomena are not truly generated. According to this school the wisdom realizing the selflessness of persons is a path of the hearer vehicle; the wisdom realizing non-duality is a path of the solitary realizer vehicle; and the wisdom realizing non-true generation is a path of the bodhisattva vehicle. Is it enough for a bodhisattva to generate all three paths? No, they should generate and realize them. Is this enough? No, a bodhisattva should complete all three paths, the hearer, solitary realizer, and bodhisattva paths. In addition, a bodhisattva should also perform the activities associated with the three paths. Performing the activities of the three paths is in general what they should do but more particularly a bodhisattva should also ‘actualize the perfect end.’ To do this certain conditions are needed: to fully complete prayers, to fully ripen sentient beings, to completely purify one’s own buddha realm. If these three are not complete a bodhisattva should not actualize the perfect end.

‘Perfect end’ in general and ‘perfect end’ in this specific case need to be differentiated. Perfect end in general is emptiness, this means that one absorbs into a concentration/trance on emptiness in such a way that one no longer arises. However, the perfect end in this specific case is the total extinction of pervasive compounding suffering. There are different ways of absorbing into concentration/trance; one is without intention and one is intentionally. For the bodhisattvas it would not be correct to absorb into the contemplation on emptiness without fulfilling the three conditions since only by doing so can they actualize the perfect end.

What is meant by fully completing prayers? This is of two kinds, one being in relation to the emanation body through birth and the other being in relation to the complete enjoyment body. Buddha Amitabha is an example of someone who fully completed prayers in relation to the emanation body through birth. This is because he made a prayer, a promise, or a strong determination, in the past saying, “I will not actualize the perfect end as long as all the retinues of my future emanations are not ensured to attain the five clairvoyances.” Having made this prayer he then had to accumulate a great store of roots of virtue to achieve it. Fully completing prayers in relation to the complete enjoyment body is the prayer or strong determination thinking, “I will not attain enlightenment until all the roots of virtue necessary to ensure the disciples in my future retinues are Great Vehicle aryas have been created.” In other words, the wish is that when he emanates in the future that the disciples in his retinue will be only aryas. This commentary is also found in Essential Explanation where it says that the Buddha of Infinite Light made prayers and collected merit so that his future disciples would possess the five clairvoyances, and only when these causes where complete did he attain enlightenment. Also buddhas in the
complete enjoyment body pray thinking, “As long as all the causes are not complete for my future retinue to be aryat parinirvanlas I will remain as an ordinary being. Only when these causes are complete will I attain enlightenment.”

Fully ripening sentient beings is not easy. Only when one is able to emanate a billion emanations in a billion worlds and is able to lead all sentient beings to the aryat parinirvan state by giving them a few words of teachings is the second circumstance, that of fully ripening sentient beings, achieved.

The third is to completely purify one’s own buddha realm. This is to have completed all the roots of virtues that are needed to actualize a buddha realm of the enjoyment body and a buddha realm of the supreme emanation body.

Only if one sees that one is able to complete all these three conditions should one think to actualize the perfect end. In Lama Tsongkhapa’s Golden Rosary it says something like “purifying one’s own buddha realm in the future does not involve cleaning an external place, it means to purify one’s own mind.” One looks at oneself to see whether one has accumulated enough roots of virtue to fully complete prayers, to fully ripen sentient beings, and to completely purify one’s own buddha realm, and only then does one actualize the perfect end for others’ purpose. Only at this point should one enter the absorption of emptiness on the perfect end.

These three conditions need to be fulfilled in order to fulfill others welfare. If one enters the absorption on the perfect end without these three conditions there is the danger of remaining absorbed for a long period of time without working for others, as happens to the hearers and solitary realizers. Completing these three conditions ensures one’s ability to return to work for sentient beings. In other words, these three conditions ensure that one continues the bodhisattva activities for others even after becoming a buddha.

To summarize, a bodhisattva should perform the activities of all three paths. To actualize the perfect end which is the principal activity of the three paths one must prepare the three conditions, when these are complete one is ready to actualize the perfect end.

There are however arguments in regard to these teachings; for example, one can ask, “Do all the disciples in the retinue of Buddha Amitayus possess the five clairvoyances?” “Do all beings abiding in the pure realm of Buddha Amitayus possess the five clairvoyances?”

It looks like we are going through the subject matter very fast but if we look at the Ornament you will see that we have not yet even reached the body of the text. We are still covering the introductory part. I am going fast now so that when we reach the main part of the text we can go through it more slowly and thoroughly.

Thursday morning class, January 29, 1998

Sherab (the translator) has something to clarify: there are two kinds of perfect end, the general and that specific to this case. In this context perfect end refers to the pacification of all pervasive compounded sufferings.

To review the sections we covered yesterday:

2B2A-1B2A-2A The manner in which the clear realization of the hearers and solitary realizers are included in the knower of bases

The clear realizations of hearers and solitary realizers are included in the knower of bases. Bases refers to the twelve sources, the six outer and six inner sources. These bases are realized in terms of the sixteen attributes of the four noble truths. That which realizes this is a knower of bases. This knower of bases exists in the continua of hearers and solitary realizers, but hearers and solitary realizers do not possess the knower of paths and the knower of all aspects.

These twelve sources are called bases because they include all phenomena without exception. The twelve are the six outer sources of form, odor, sound, taste, tangible object, and phenomena, and the six inner sources of the eye, ear, nose tongue, body, and mind.
If we look at how we pass our daily life in terms of the twelve sources we can understand them better. When we see forms, the object of the eye, attachment rises for those that are beautiful, anger rises for those that are ugly, and ignorance for those that are neutral. When we hear sounds, attachment rises for those that are pleasant and anger for those that are unpleasant. We also spend our time praising good smells and complaining about bad smells. If we were just to see forms, hear sounds, smell odors, and so forth, but did not create actions as a result this would be fine but in general afflictions arise and we commit negative actions. These twelve sources are the cause of all our daily experiences. Instead of arising afflictions and creating negative actions in relation to the twelve sources we need to realize them in terms of the sixteen attributes of the four noble truths, such as impermanent, misery, selfless, empty, etc. In other words, we should realize the reality of how these twelve actually exist.

2B2A-1B2A-2B The manner in which the clear realizations of the bodhisattvas are included in the knower of paths
Here again there is a question posed by Subhuti and Buddha’s reply. The reply is divided into two divisions:

The second outline ‘Examining the borders’ is not related to any explanation given in the Commentary Clarifying the Meaning but only to that given in Essential Explanation which is the source of the outlines.

In brief, the path of the hearers is a wisdom that realizes that a person is empty of being self-sufficient substantially established. The path of solitary realizers is a wisdom realizing that form and the valid cognizer realizing it are empty of being different substances. The path of buddhas is a wisdom that realizes all phenomena are empty of true existence.

In order to fulfill the aims of the world a bodhisattva needs to generate and realize these wisdoms and abandon all the afflictions and complete all the realizations.

There is a syllogism in Essential Explanation: aryabodhisattvas (subject) possess perfect wisdom because they are skilled in completing all the abandonments and realizations in their continua.

Another syllogism is: aryabodhisattvas (subject) also possess perfect method because they are skillful in knowing the right and wrong times for actualizing the perfect end. The wrong time for actualizing the perfect end refers to actualizing it before the three conditions are complete. The right time is when the three conditions are complete. These three are completing prayers, ripening sentient beings, and purifying one’s buddha realm.

This is not explained by Simhabhadra but is discussed in Gyeltsab Je’ s text. It has three divisions:
1 Identifying the manner of acting in general and of exceptions
2 Explaining the reasons for teaching that bodhisattvas complete the abandonments and realizations of hearers and solitary realizers
3 Having identified the perfect end, explaining the manner of actualizing it

The manner of acting in general means that bodhisattvas are advised by Buddha to do all the activities of the three vehicles. They should generate and realize these realizations and complete them. Although this is recommended in general there is one exception as to what they are permitted to do. They are not permitted to actualize the perfect end without completing the three conditions. When these three conditions are explained the word ‘completed’ or ‘fully’ is used as in ‘completed prayers,’ ‘fully ripened sentient beings,’ and ‘completed purification.’ Without having completed these three conditions a bodhisattva is not permitted to actualize the perfect end.
The words ‘general’ and ‘exception’ in terms of a bodhisattvas actions does not imply that he should do this and that and is not permitted to do something else. The meaning is that bodhisattvas are given a recommendation as to the fact that they should generate and realize all paths and to not actualize the perfect end without having completed the perfect end. This explanation is also present in the Commentary Clarifying the Meaning.

Someone says: The realizations of the hearers and solitary realizers are said to be completed upon attaining the first ground and all the abandonments are completed upon attaining the eighth ground. Completing the abandonments at the time of the eighth ground means that at this time deluded mind no longer exists but has been completely transformed. In addition, all the obscurations to liberation have been completely abandoned at this time.

The response to this by our system is that it is incorrect. In his text Great Commentary Simhabhadra says that a bodhisattva possesses the obscurations to liberation until the tenth ground, therefore saying that they have been abandoned already at the eighth ground is incorrect. The afflictions of the three realms that are to be abandoned by the path of meditation are of sixteen types. These sixteen afflictions are posited as follows: six in the desire realm and ten in the upper realms (five in the form realm and five in the formless realm).

The six afflictions of the desire realm that are to be abandoned by the path of meditation are:
- attachment
- hatred
- pride
- ignorance
- view of the transitory collection
- extreme view

The five afflictions of the form and formless realms that are to be abandoned by the path of meditation are the same except that hatred is not included as it does not exist in the upper realms.

Then we need to understand how the ten grounds and the sixteen afflictions are related. To take attachment as an example: it is to be abandoned by all ten grounds [therefore it must be of ten types]. Attachment is divided into big, middle, and small attachment. These three are further divided into three: the big big, big middle, big small, middle big, middle middle, middle small, small big, small middle, and small small. In this way there are nine attachments to be abandoned by the path of meditation. For there to be a total of ten attachments, the big big attachment is further divided into gross and subtle. These ten attachments are abandoned by the ten grounds.

It is important to understand these divisions of attachment and how they are related to the ten grounds because the same divisions can be made for the remaining five afflictions. Just as we posit the afflictions in terms of these divisions, so do we posit the ignorance grasping at true existence as big big, big middle, etc. and then further divide the big big into gross and subtle to get a total of ten divisions.

Having gone through the ten grounds one reaches the tenth whereupon one eliminates both types of obscurations together with their imprints and thereby becomes an enlightened being. At this point there are ten uninterrupted paths, the last of which is called ‘the uninterrupted path that is the end of the continuum of a sentient being.’

Until now we have only considered the afflictions to be abandoned by the path of meditation but the path of seeing also abandons specific afflictions. In fact, it abandons a total of 112 afflictions. These afflictions abandoned by the path of seeing are posited in relation to the four noble truths, true sufferings, true origins, true paths, and true cessations, [and the three realms, the desire, form, and formless realms]. The path of seeing in relation to the four truths of the desire realm abandons ten afflictions which are divided into two groups of five: one group is the five non-views and one is the five views. The five non-views are attachment, hatred, ignorance,
pride, and doubt, while the five views are view of the transitory collection, extreme view, view holding a wrong view as supreme, view holding bad morality and bad conduct as supreme, and wrong view. As there are ten afflictions to be abandoned by the path of seeing in relation to each of the four noble truths of the desire realm there are a total of 40 afflictions to be abandoned. Then there are 36 afflictions to be abandoned in relation to the form and formless realms; this is calculated by omitting hatred. In short, $40 + 36 + 36 = 112$ afflictions that are to be abandoned by the path of seeing.

The path of seeing in relation, for example, to the true sufferings is divided into the four: dharma forbearance, subsequent forbearance, dharma knowledge, and subsequent knowledge. There are these four in relation to each of the four noble truths. Therefore there are sixteen divisions of the path of seeing.

Someone says: That other person is incorrect but I say that all the abandonments and all the realizations are completed at the time of attaining the first ground. At this point one has eliminated the obscurations to liberation that bind one to cyclic existence but has not abandoned the dormant obscurations to liberation. Our system replies that this is absurd.

This person then says: hearer and solitary realizer arhats possess the imprints of ignorance. Because of possessing these imprints of ignorance they take a mental body. Both the abandonments and realizations are completed at the time of the first ground.

Our system replies that this is incorrect because the way in which you present the afflictions and the means of abandoning them is incorrect. It was never mentioned by the two great charioteers, Asanga and Nagarjuna, that the hearer and solitary realized arhats do not abandon the seeds of the obscurations to liberation. This is also not acceptable in terms of reasoning. Therefore, what you say is readily refuted by both scriptural authority and by reasoning. If what you say were the case it would mean that a hearer on the path of seeing does not abandon the seed of the intellectually acquired afflictions. Therefore, it would follow that superior learners would not be suitable as the Sangha Jewel. Immediately upon achieving the path of seeing they would still possess a seed of doubt concerning the perfect source of refuge and therefore they themselves would not be a sangha object of refuge. A person on the path of seeing who still has doubt about the perfect object of refuge cannot be a perfect object of refuge for others. On the other hand, if you say that someone on the path of seeing has abandoned the seed of doubt this would contradict your statement that hearer and solitary realizer arhats have not completely abandoned the obscurations to liberation. While the hearer and solitary realizer arhats possess the obscurations to liberation it is meaningless to say that they have the imprint of ignorance due to which they take a mental body. To clear up this doubt our system says that hearer and solitary realizers do possess a mental body and the imprints of ignorance, but that these are not obscurations to liberation, rather they are obscurations to omniscience. The two charioteers say that the imprint of ignorance is only an obscuration to omniscience and not an obscuration to liberation.

That ‘someone’ now changes opinion and says that the obscurations to liberation that are dormant are obscurations to omniscience. Our system replies saying that this is absurd because your statement about completing the abandonments at the eighth ground only referred to the obscurations to liberation and not to the obscurations to omniscience.

These are different ideas regarding the elimination of obscurations. To be clear we need to understand that there are afflictions that are obscurations to liberation which are to be abandoned by the path of seeing and there are those which are to be abandoned by the path of meditation. We need to know that the afflictions that are intellectually formed are abandoned by the path of seeing while those that are innate are abandoned by the path of meditation. We should understand that these afflictions are found within ourselves. We therefore need to work on gradually eliminating them so that we can achieve enlightenment.

Thursday afternoon class, January 29, 1998
A quotation from our own system found in Lamp to the Twenty Thousand Stanza Perfection of Wisdom by Arya Vimuktisena says: “The realization of a bodhisattva abiding on the path of seeing on the dharma forbearance related to true sufferings encompasses all the functions of the wisdom realizing selflessness in the continua of hearers and solitary realizers.” In other words, the dharma forbearance of this bodhisattva includes all the abandonments and realizations of the hearers and solitary realizers. Our system says that this is the way in which Arya Vimuktisena interprets it, but this does not mean that a person on the path of seeing completes all capacities without exception on realizing the selflessness of persons. A hearer’s wisdom eliminates grasping at a self of persons, while the solitary realizer’s wisdom eliminates the wrong conception that apprehends form and the valid cognition perceiving it as different substances. A bodhisattva differs from them because he possesses the Mahayana lineage, because he possesses sharp faculties, and because of his great accumulation of merit. When we say that bodhisattvas are different it means that they differ from the hearers and solitary realizers in terms of these three characteristics. Here sharp faculties refers to the five faculties of faith, effort, mindfulness/memory, concentration, and wisdom which are superior in bodhisattvas. Therefore, bodhisattvas are quite different from the hearers and solitary realizers.

A doubt is presented by a great lama translator who, had seen that it says in Uttaratantra that the non-conceptual exalted wisdom includes the knower of paths which arises spontaneously on the eight ground. This translator said that if a bodhisattva on the eighth ground begins to have the hearers and solitary realizers realizations in a way that resembles a reflection in a mirror that there would then be the risk of their falling from the bodhisattva vehicle to the hearer or solitary realizer vehicles. His doubt concerns the fact that before the eighth ground the realizations of the two other vehicles do not arise spontaneously but because they do arise spontaneously on the eighth ground there might be the risk that the bodhisattva would fall to a lower vehicle. Our system responds that there is no such risk. This would not happen because when a bodhisattva reaches the middle path of accumulation it is guaranteed that he will never fall to a lower vehicle but will always continue on to enlightenment. The middle path of accumulation corresponds to the gold-like mind generation, when this is developed in one’s mind there is no more risk of degenerating. Our system confirms that it is right that the hearers’ and solitary realizers’ abandonments and realizations are completed at the eighth ground. Although the theory that the great translator posits is acceptable if looked at from the point of view of the Madhyamaka Prasangika school it is not acceptable to the Madhyamaka Svatantrika school. Our own system, the Madhyamaka Svatantrika, says that when a bodhisattva becomes an arhat who has abandoned the obscurations to liberation he simultaneously attains buddhahood which has abandoned the obscurations to omniscience.

If a bodhisattva abiding on the patience level of the path of preparation were to put effort into abandoning the obscurations to liberation it is definite that he would be able to eliminate the obscurations to liberation upon attaining the first ground on the path of seeing. The point is that if a bodhisattva wants to eliminate the obscurations to liberation by the time he reaches the first ground he can do so by putting effort into it when on the patience level of the path of preparation, however they do not necessarily do this. In general getting rid of the obscurations to liberation by the time they reach the first ground is not a priority for bodhisattvas, but if they want to do it they can. Although bodhisattvas still have afflictions they are not harmed by them. For example, if we ingest poison whose energy has been eliminated by mantra it will not harm us, likewise even though there is affliction present in the continuum of a bodhisattva it is harmed by his meditation. There are cases of an arya bodhisattva using attachment as a means to help other sentient beings. A specific example is an arya bodhisattva who transforms himself into a universal king and then through attachment performs actions to help many beings in particular ways. When a bodhisattva becomes an arya it becomes suitable even to engage in the seven unwholesome/non-virtuous actions of body and speech to help others. Although these do not become positive actions, if they are of benefit a bodhisattva will engage in them.
What is the perfect end? How is it actualized? The perfect end is mere thusness. The means of actualizing it is to enter into irreversible contemplation on it. The perfect end is also defined as a cessation whose nature is free from stains, while the attainment of such a cessation is the actualizing of the perfect end. Our system says that neither of these is correct because one cannot actualize the perfect end until one becomes a buddha. There is another opinion that the perfect end is just the mere cessation of suffering but our system also says that this is not correct because a bodhisattva would not actualize the mere cessation of suffering as a perfect end, he only actualizes the perfect end when he completes the three conditions. Someone else says that the perfect end is thusness and to enter into the absorption on thusness in an irreversible way is to actualize the perfect end. He also says that the perfect end is thusness yet there is a discussion as to whether one can or cannot absorb into the contemplation on thusness that is irreversible and stainless. Our system says that either way just the entering into absorption is absurd.

Gyeltsab Je says that this instruction was given only to those who are a Mahayanist right from the beginning. This instruction refers to the recommendation that Buddha gave concerning not actualizing the perfect end until the three conditions are complete. This instruction was given to those who are bodhisattvas right from the beginning. Bodhisattvas should continue from the moment of mind generation up until they actualize the perfect end. To summarize, bodhisattvas should not actualize a perfect end until they complete the three conditions. They should complete prayers, fully ripen sentient beings, and completely purify their own future buddha realm before doing so. It is said that even in the case of hearer and solitary realizer arhats who have completed their vehicle that when one day they arise from their absorption and generate the mind of enlightenment they will still have to complete the three conditions as only after doing so can they actualize the perfect end. If someone is not able to actualize the perfect end at the right time then there is no meaning to giving teachings on the perfect end, in other words some actualize the perfect end at the wrong time. Our own system says that it is true that thusness is a perfect end and therefore it would be right for an aryabodhisattva to actualize such a perfect end and absorb into the concentration on thusness. Although this is generally true the exact meaning of actualizing a perfect end is to attain a total pacification of all pervasive compounded suffering.

There are hearer and solitary realizers arhats who enter the absorption contemplating thusness but when they do so they absorb in such a way that their minds are captivated by solitary peace whereby they think to not rise from this absorption. Absorbing in this way, a Hinayanist actualizes the perfect end.

With regard to ‘the total pacification of pervasive compounded suffering’, this pervasive compounded suffering is not generally perceived to be suffering since it is not manifest. For example, at a glance we do not realize that our physical aggregates, which are made of flesh and bone, are in the nature of suffering. This suffering is called ‘compounded’ because our aggregates are compounded, and it is called ‘pervasive’ because suffering pervades all the realms from the Peak of Existence down to the hell of Unceasing Torment. We can also apply the term pervasive to our aggregates which are pervaded by suffering from the crown of our head to the soles of our feet. We can check this out by pricking ourselves with a needle in various points, wherever we do so we will feel pain. The word ‘compounded’ refers to the fact that our body is compounded by afflictions and action/karma. Although our body is a result of karma and affliction it is also a result of our parent’s sperm and ovule which is the beginning of our physical structure. Although karma and affliction are the first cause even at a physical level our body is compounded by our parent’s sperm and ovule. As a result of our parents having had sexual intercourse there was the union of a sperm and an ovule which gradually gave rise to a human body. Although this body is extremely valuable, precious, and irreplaceable, it is still a compounded phenomena in the nature of suffering. We need to use this human body, which is impure and in the nature of suffering, as a means for attaining a mental body or the perfect end, buddhahood. The fact that we have this opportunity to achieve buddhahood with this human body shows that we have buddha nature or a special potential. For this reason we have a rebirth that is superior to other sentient beings.
Mentally we are more clever than animals and physically our body is also superior to that of other sentient beings. On this basis we should strive to attain the perfect end, however there are differences in regard to doing this. If we follow the hearers and solitary realizers we attain the perfect end intentionally by thinking, “I will absorb and not arise again,” while in the case of a buddha it spontaneously happens when the three conditions are complete. There is a big difference between a buddha and [the arhats of] the lower vehicles since for a buddha there is no difference between meditative equipoise and post-meditation. The fact that these two are of the same entity is unique to buddhas; for hearers and solitary realizers meditative equipoise and post-meditation are very different.

This concludes the teaching on the perfect end, what it is and how it is to be actualized.

Friday morning class, January 30, 1998

QUESTIONS AND ANSWERS

Question: With respect to the object of the expression of worship it is usually said that there are two ways in which a number is definite: through pervasion or purpose. Here why is are there definitely only three?

Reply: This number is definite because of ‘purpose’ in that three exalted knowers are right number needed to accomplish the aims of the four aryas. The knower of bases is enough to fulfill the aims of the hearers and solitary realizers, there is no need for anything else. The knower of paths is enough to fulfill the aims of the bodhisattvas which is to work for the world. ‘World’ in this context specifically refers to those following the hearer, solitary realizer, and bodhisattva vehicles. Omniscient mind, or the knower of all aspects, is enough to enable the arya buddhas to turn the wheel of Dharma. Therefore, three exalted knowers is enough.

However, we can argue that the object of an expression of worship is not necessarily always the three knowers. For example, the Mahayana path of accumulation is an object of expression of worship but it is not one of three knowers.

Question: Is it necessary to realize the selflessness of persons before realizing the selflessness of phenomena?

Reply: No, it is not. However, in the Middle Lam Rim by Lama Tsongkhapa, in the section concerning the Madhyamika Prasangika point of view, it says that with regard to the bases of realization, persons and phenomena, it is easier for the yogi to realize the selflessness of persons than to realize the selflessness of phenomena. When a yogi realizes selflessness on the bases of persons he realizes that the self does not exist from its own side but exists in dependence on the aggregates. Without depending on the aggregates there would be no self. When this is realized selflessness is understood. He understands that the self is not independent, but is dependent and under the control of something else.

However, in certain cases it may be possible that someone realizes the selflessness of phenomena first followed by the selflessness of persons. According to Madhyamika these two selflessness are differentiated only in terms of their respective bases and not in terms of the object to be negated. Svatantrika-Madhyamika talks of two levels of selflessness of persons, the gross and the subtle. Gross selflessness refers to the person being empty of being permanent, independent, and partless. By negating these three one realizes the gross selflessness of persons. Subtle selflessness of persons is the lack of a self-sufficient substantially existent person. Here the object of negation is the self-sufficient substantially existent person, when it is negated one realizes the subtle selflessness of persons. According to Svatantrika the selflessness [of phenomena] it that which exists by its own mode of subsistence without being posited by a non-defective mind on the appearance. When this is negated one realizes the selflessness of phenomena.
In short, usually people realize the selflessness of persons first and then the selflessness of phenomena but this does not have to be so.

Question: What is ‘the mother’ that is mentioned on p.3 in Commentary Clarifying the Meaning when it says ‘to the mothers I pay homage’?
Reply: The three mothers are the three exalted knowers. They are called the three mothers because they give birth to the four sons: arya hearers, arya solitary realizers, arya bodhisattvas, and arya buddhas. However the word mother here is a subject of some debate. The debate starts: if something is an object of an expression of worship is it necessarily one of the three mothers? If something is an object of an expression of worship does it have to be an exalted knower? If someone answers yes, the reply would be that it would follow that great compassion is it an exalted knower because it is an object of an expression of worship. To this one would say that the reason is not established. Is great compassion not a mother? If someone replies that it is a mother, one would then argue that in *Madhavyamakavatara* is not great compassion taken as the object of the expression of worship? The reply comes that it is a mother that is the object of expression of worship in the case of Madhavyamakavatara but it is not necessarily an object of an expression of worship. Then one asks does this mean that a mother to which the object of expression of worship is made is necessarily that of the *Ornament*? If the reply is yes the question arises as to whether the mother, the object of expression of worship in Madhavyakavatara, is it not object of an expression of worship? It would follow that the mother that is an object of that expression of worship is not necessarily an object of expression of worship.

Someone could also reply saying that great compassion is not a mother. If this is the response then we say this it not right because through great compassion the bodhisattva accomplishes the welfare of others. Then we can recite a quotation from *Uttaratantra* in which it says something like “through the state of happiness a mother-like compassion is born.”

Reply: In general if one actualizes the perfect end it is the same as actualizing buddhahood. This is because perfect end refers in general to emptiness, while actualizing the perfect end refers to entering an irreversible meditative equipoise on emptiness, i.e. one enters this meditative equipoise but never again arises from it. This is particular to an arya buddha. However, if one actualizes the specific perfect end mentioned here it is not necessarily the attainment of buddhahood. The perfect end in this case is an analytical cessation in which all pervasive compounded suffering has been extinguished. Even hearers and solitary realizers actualize this state by thinking ‘I will not arise from this state for eons’ and then entering into it. However, there is a difference between the perfect end actualized by a buddha and that actualized by hearers and solitary realizers. If one actualizes the perfect end of hearers and realizers one cannot attain buddhahood. In other words, if one goes to the perfect end of hearers and solitary realizers one remains absorbed for eons until one receives help from a buddha. This happens when light radiating from the palms of a buddha’s hands touches the hearers and solitary realizers and arouses them from their absorption. When they rise from this absorption they wonder how long they have been in that state and the buddha replies that they have been there for eons. So waking from their total absorption on cessation they realize that an enormous amount of time has passed. At this time they still have their old physical body. However, when they move from this place of meditation they leave behind their old body and achieve a mental body with which they can act. It is for this reason that there is the expression ‘a sage has fallen in the forest’, which refers to the fact that when hearers and solitary realizers leave their old bodies they appear to fall down, while actually what is happening is that they are moving on with a mental body.

Question: How is it possible to establish non-true existence by the sign ‘having parts’?
Reply: Something that has parts is not a truly existent one. A truly existent one would be totally independent and would not reply upon parts or anything else. However, everything relies upon something. Whether the subject is the three exalted knowers or a vase they possess parts and
therefore cannot be a truly existent one. Having understood this, one can go on to understand that they are not truly existent at all.

Syllogism: the three, the bases, path, and aspect, do not exist truly because they are not a truly existent one or a truly existent many. To prove this we first say that the three are not a truly existent one because they have parts (with parts and without parts are contradictory and partless does not exist among objects of knowledge). Therefore, the bases, path, and aspect are necessarily with parts and are therefore not a truly existent one. The three are said to have parts because they can be divided into parts, for this reason they cannot be a truly existent one.

Question: What is a non-defective mind
Reply: It is a mind which is not mistaken with respect to the appearing object and the conceived object in terms of their existing from their own side or as specifically characterized phenomena. When we posit conventional existence it has to be posited by a non-defective mind. A non-defective subject, mind, can be of two kinds, a direct perceiver or an inferential cognizer. When we talk about an inferential cognizer it is mistaken with respect to its appearing object (nang yul) but it is not mistaken with respect to its conceived object (shen yul). This means that conceptual thoughts, including inferential cognizers, are all mistaken with respect to their appearing objects.

The object of negation is not posited by a non-defective mind and exists by its own mode of subsistence. The object of negation is to be refuted with respect to all phenomena. In terms of a non-defective direct perceiver we can take the example of an eye consciousness that correctly sees a form. In terms of a non-defective inferential cognizer we can take the example of seeing smoke on a distant mountain and inferring the existence of fire on that mountain. The understanding of fire is achieved through an inferential cognizer based on a reason. The fire is the conceived object which is posited by the inferential cognizer.

TEACHINGS ON MEDITATION PRACTICE

To combine the teachings on the Ornament with practice we can take the expression of worship that appears in the Ornament that says ‘that which through the exalted knower of all leads hearers seeking pacification to peace.’ This indicates the practices of beings of small and middling scopes which are also common to beings of great scope. Although this is not directly said it can be understood. Here ‘knower of all’ refers to a knower of bases who realizes all twelve sources, the six inner and six outer. The twelve sources include even the four noble truths and their sixteen attributes.

If we try to find for our precious human rebirth we end up pointing to our body, which is a pervasive compounded suffering. We then take this body as a base and establish the attributes of true sufferings. Why is this body impermanent? Because it changes momentarily or because it is produced by causes and conditions. For these reasons it is impermanent. Thinking about impermanence is very important because without thinking about it we will not think about Dharma. As long as we do not think about impermanence we will continue to be totally occupied by worldly activities, such as finding clothes, food, drink, etc. If we were to pass our life in these activities there would be almost no difference between our human life and that of an animal. This is because even animals fulfill the needs of this life, such as finding food and shelter. We should make our life different from that of animals by making it meaningful through contemplating death and working for our future life.

We should further contemplate impermanence thinking that we can die at any moment and in this way we will begin to prepare for our future lives. This meditation on death involves thinking that death is definite, that the time of death is uncertain, and so forth. We begin by thinking that death is certain because the Lord of Death will inevitably come to us and there will be no way to escape. Secondly, death is certain because our life span, which is determined by karma, is diminishing constantly. If we could add to our life span things would be different, but we cannot. With the passing of each moment our life gets shorter and shorter.
Then, although we have come to understand that death is certain and the time of death is uncertain, we may still tend to postpone our practice of Dharma. However, we must avoid doing this and begin to practice Dharma right now before death comes. Otherwise, we will die with regret wishing that we would have practiced Dharma. Therefore, we should resolve to practice Dharma right now.

To meditate on the fact that the time of death is uncertain we can look at the life span of people in this world. Humans of each of the other continents, [there are a total of four according to Buddhist cosmology], have a fixed life span, but we do not know when we will die. The time of death is uncertain for human beings of this continent (Tibetan, Dzambuling; Sanskrit, Jambudvipa) and it is particularly uncertain in this period of degeneration in which the five degenerations are increasing. Therefore, the time of the arrival of the Lord of Death is very uncertain.

The time of death is made even more uncertain because even conditions that are normally conducive to life can become the cause of death. In fact, the conditions for death are more numerous than the conditions for life. In addition, our bodies are very fragile, even though we may tend to think that we are strong. In fact, our bodies are very delicate and can be easily harmed just like a water bubble can easily be destroyed by a slight breeze. When we meditate on the fact that death is definite we determine to practice Dharma, when we think that the time of death is uncertain we determine to practice Dharma right now.

Then we contemplate the fact that only Dharma is of benefit at the time of death. We can consider the fact that although we were born together with this body and have cherish it so much, it cannot help us at the time of death. We have to leave it behind and go on alone. We may have accumulated many material objects, houses, etc., in our lifetime but no matter how many we have we will leave them all behind when we die. Even our parents and close friends cannot help us at the time of death. By meditating in this way we will come to the determination to practice Dharma purely.

In short, this meditation has three main points: (1) death is certain, (2) the time of death is uncertain, and (3) only Dharma can help at the time of death. These three are each further divided into three. This meditation is a practice of both small and middle scope beings, therefore it is said to be a common practice.

Next we think, “Now I have this valuable human body but it is in the nature of suffering, it is completely pervaded by suffering.” However, in spite of this human body being impure in nature, we can render our life greatly meaningful. We have to put effort into giving meaning to our life through the meditation on death and through making sure that we are not reborn in the lower realms in our next life. To make sure of this we need to meditate on the suffering of the lower realms: the hell, hungry ghost, and animal realms. In terms of the hells we meditate on the sufferings of extreme heat and extreme cold. To avoid being born their we meditate on the cause and determine to avoid creating this cause. Then we think of the suffering of hunger of the hungry ghosts, its cause, and the means to avoid this rebirth. Then we think about the suffering of the animals, the big eating the small, groups of the small eating the big, and so forth. In this way we should determine to avoid creating the cause for these rebirths through practicing Dharma.

It is advised to meditate on the suffering of the lower realms in the following way. One should not meditate on these sufferings as though one is a spectator watching a film but should meditate on oneself being born as an actual hell being whose body is being burned up by the fires of hell. In this way the meditation becomes much more effective and beneficial to oneself.

Then one looks for refuge, for protection, to avoid being reborn in the lower realms and experiencing this suffering. We take refuge in the Triple Gem which is the object of the expression of worship in the Ornament. The arya buddhas are the Buddha Gem. The Dharma Gem is the knower of bases, knower of paths, and the knower of all aspects. The Sangha Gem is the arya hearers, arya solitary realizers, and the arya bodhisattvas, they are the ones who possess the knower of bases [and the knower of paths]. We should trust in the Triple Gem as having the complete capacity to protect us and give us refuge. Having developed fear of suffering and trust in the Triple Gem we totally rely on them for refuge. However, when one takes refuge it is not enough just to seek protection, one must also engage in certain practices, such as no longer
committing negative actions. Having taken refuge we need to respect the law of cause and effect. In relation to this, there are ten negative actions to be avoided and ten positive actions to be practiced.

Having understood that the body, the aggregates, are true sufferings, we then meditate on the true origins of these sufferings, karma and afflictions. Both positive and negative karma can be the cause of a body. We meditate on the fact that as long as we have pervasive compounded suffering we will experience suffering. We then come to realize that we need to abandon true sufferings and true origins and achieve true cessations by meditating on the selflessness of persons, true paths. To obtain true cessations we need to meditate on true paths, the knower of bases and so forth.

This is a small introduction to how to meditate on the subjects covered in the Ornament. In relation to the first line of the expression of worship we can meditate on the four noble truths. ‘That which through the exalted knower of all leads hearers seeking pacification to peace’: when it says ‘leads’ it refers to true paths, while ‘to peace’ refers to true cessations. Hearers are lead by true paths to peace, true cessations. True sufferings and true origins are implied here because one is necessarily lead from a state of misery to a state of peace.
Monday afternoon class, February 2, 1998

2B2A-1B2A-2C The manner in which the clear realizations of the buddhas are included by the exalted knower of all aspects

1 Question
2 Reply

2B2A-1B2A-2C1 Question

[Subhuti asks:] "Bhagavan, why is that very exalted knower of all aspects [the clear realization] of those thus gone, foe destroyers, perfectly complete buddhas?"

[Buddha replies:] "Subhuti, phenomena are perfectly expressed by some aspects (entities), some signs (results), and some marks (causes). Those aspects, signs, and marks are realized by those thus gone. Therefore, [the clear realizations] of those thus gone, foe destroyers, perfectly complete buddhas are called the very exalted knowers of all aspects."

The meaning of the question is quite clear so it does not need to be discussed any further. The reply says that phenomena are expressed by aspects, signs, and marks. This means that all phenomena, from form up to omniscient mind, are expressed by the Buddha, who realizes that all of them are not truly generated. The aspect refers to the entity, signs to results, and marks to causes. All these phenomena of whatever class are empty of true existence. Although the second class of phenomena, the results or signs, are generated they are not truly generated. Although marks, causes, do give rise to results they are not truly generated results. Phenomena are said to range from form to omniscient mind; if they are counted their are a total of 108 phenomena. These are further classified into two groups: one consisting of 53, the thoroughly afflicted class, and one of 55, the completely purified class. Each of these two groups is expanded from eight sections.

The eight divisions of the first group, the 53 phenomena of the thoroughly afflicted class, are:

(1) the five aggregates, (2) the six organs, (3) the six objects, (4) the six consciousnesses, (5) the six contacts, (6) the six feelings, (7) the six elements, and (8) the twelve links [of dependent origination].

All the sub-divisions of these eight are counted individually to make a total of 53. ‘Beginning from form’ refers to the five aggregates of which form is listed first: forms, feelings, discriminations, compositional factors, and consciousnesses. The next are the six organs/sources/senses: eye, ear, nose, tongue, body, and mental. Then there are the six objects: visible forms, sounds, odors, tastes, tangible objects, and phenomena. Then there are the six consciousnesses: the visual, auditory, olfactory, gustatory, body, and mental (or eye, ear, nose, tongue, body, and mental consciousnesses). These are followed by the six contacts (whenever, for example, the three conditions, visual consciousness, visual organ, and visual object, come together, there is contact): visual contact, auditory contact, olfactory contact, gustatory contact, bodily contact, and mental contact. Then there are the six feelings that arise from the six contacts: eye feeling, ear feeling, nose feeling, tongue feeling, body feeling, and mental feeling. Then there are the six elements: earth, water, fire, wind, space, and consciousness. Then there are the twelve links: ignorance, karmic formations, consciousness, name and form, six sources, contact, feeling, craving, grasping,
existence, birth, aging and death. These are the 53 phenomena included in the thoroughly afflicted class.

The eight sections of the second group of 55 completely purified phenomena are:

1. the six paths of conduct which are the six perfections: generosity, morality, patience, effort, concentration, and wisdom,
2. the eighteen paths of view which are the 18 emptinesses (each of the realizations of these eighteen emptinesses is considered a path),
3. the seven sections of a yogi’s paths which are the thirty-seven harmonies with enlightenment:
   i. the four close placements of mindfulness, ii. the four thorough abandonings, iii. the four legs of magical emanation/manifestation, iv. the five powers, v. the five forces, vi. the seven branches of enlightenment, and vii. the eight-fold noble path,
4. the six paths of calm abiding: the four noble truths, the four concentrations, the four immeasurables, the eight liberations, and the nine serial absorptions,
5. the paths of superior insight which is meditative stabilization on the three doors of liberation,
6. the three paths of special qualities: the five clairvoyances, the four meditative stabilizations, and the four doors of retention/dharani,
7. the six paths of result: the ten powers, the four fearlessnesses, the four sciences/correct individual perceptions, great love, great compassion, the eighteen unshared qualities of a buddha, and
8. the eight paths of persons: stream enterers, once returners, non-returners, foe destroyers, solitary realizers, the knower of bases, the knower of paths, and the knower of all aspects.

We often hear the expression in the scriptures ‘from form to omniscient mind’, these phenomena include all 108 phenomena.

Likewise, also in the condensed Eight Thousand Stanza Perfection of Wisdom Sutra it is said: "Also those wishing to train in the grounds of the hearers..."

The sutra says, “Also those who want to train in the grounds of the hearers should train in the three exalted knowers.”

Also it is elaborately stated in the extensive Perfection of Wisdom Sutra.

There are no actual quotations from the Perfection of Wisdom Sutra included here but in fact the Sutra says, “Those wishing to train in the grounds of stream enterers...,” which refers to the knower of bases. Since the grounds of the hearers begins with that of a stream enterer we should understand that this refers to the knower of bases.

Regarding that: the very knower of all [bases], with respect to [its observed] phenomena, such as form, having the support of impermanence and so forth, is the result possessing the abandonment of the obscurations with regard to the self.

The very knower of paths is [the wisdom of] definite emergence by all [three] vehicles, [the method which] possesses the support of not manifesting [the realization of] suchness [at the wrong time] and endowed with the result of gathering together those sentient beings who are not gathered. The very exalted knower of all aspects...
possessing the support of [the observed object] of the birthlessness of all phenomena; the result of continuously [working for] the welfare of sentient beings who reach to the limits of the realm of space; realizing the perfect end; and possessing the abandonment of the link of the latencies [of non-afflicted ignorance].

The three exalted knowers are explained as having three attributes each, bases, support, and result. With respect to “The very knower of all bases,” the bases are forms and so forth. These bases have the support of impermanence, while the result is the abandonment of ignorance with respect to a self [of persons] of forms and so forth. This passage, therefore, explains the function of the knower of bases which is to know all phenomena, form and so forth, as impermanent, etc., and to abandon the grasping at a self of persons.

Here we should understand that each of the three exalted knowers has three attributes. The knower of bases has (1) an observed or referent object, form and so forth, (2) an aspect, the impermanence, misery, etc., of form, and (3) a result, the abandonment of grasping at a self of persons.

The knower of paths also has these three attributes. The observed object of a knower of paths is the three paths of the three vehicles (this is said although in theory the observed object should be similar to that of the knower of bases). The aspect of the object, the three paths and so forth, is their non-true generation. The result is to gather sentient beings who have not yet been gathered, to ripen those who are not yet ripe, and to liberate those who are not yet liberated. These three, bases, aspect, and result, are similar to the support/person, method, and result. For the knower of paths, the support is the bodhisattvas, the method is the clear realization of the three paths as non-truly generated, and the result is to accomplish the aims of the three classes of beings.

In Lama Tsongkhapa’s Golden Rosary it says that in terms of the knower of bases the referent object is the five aggregates or the four noble truths, the aspect is that it stands as a subject possessing the support of the sixteen attributes of the four noble truths, impermanence and so forth, and realizes them, the result is the abandonment of grasping at a self of persons. The referent object of the knower of paths is the three paths of hearers, solitary realizers, and bodhisattvas. The aspect is the non-true generation of the three paths. The result is to generate all three paths in one’s continuum, to not actualize the perfect end without culminating the welfare of others, and to gather sentient beings, ripen their continua, and cause them to be liberated and achieve that state higher than liberation.

Then there are the three attributes of omniscient mind. As it says in Commentary Clarifying the Meaning: “The very exalted knower of all aspects possessing the support of... latencies [of non-afflicted ignorance].” The referent object of omniscient mind is conventional and ultimate truths. The aspect is that these two classes of phenomena are not truly generated. The result of omniscient mind, according to Svatantrika-Madhyamika, is to work for the welfare of sentient beings who extend to the limits of space, to enter into the absorption of the perfect end, and to have abandoned all the imprints of non-deluded ignorance, which are the imprints left by the conception of true existence. This means that the omniscient state is free from the obscurations to omniscient mind.

Therefore, the statement: "The Ornament thoroughly presents the clear realizations because it includes all bases, antidotes, and aspects" is acceptable.

This means that there is not the fault that the Ornament presents only bases, or only antidotes, or only aspects. Instead, it presents all three. In short, it means that the three exalted knowers include all the clear realizations. Therefore, when praise is made to the three exalted knowers praise is also being made to the clear realizations because all eight clear realizations are included in the three exalted knowers. How are the eight included in the three? They are included because if one practices all the exalted knowers in a complete way, one will also completely practice the eight
clear realizations. The eight are included in the three in the sense of practice. When it says bases, antidotes, and aspects, the bases refer to the sixteen attributes of the four noble truths, impermanence and so forth, or the five aggregates, form and so forth. One realizes the five aggregates in the aspect of impermanent and so forth. In Abhidharmakosha the bases are presented as being five types of objects of knowledges, the form base as appearance, the mind base as principal, the mental factor base as retinue, the non-associated compositional factors base, and the uncompounded base. These five bases are said in Abhidharmakosha to include all phenomena.

Question: Do the three exalted knowers include all clear realizations or only the eight clear realizations?
Reply: They can be said to include all clear realizations but as this is a subject of debate it is better to say that they include the eight.

Up to now we have been commenting on the root verse on page 3 in italics in the English translation: “That which through the exalted knower of all leads hearers....”

To summarize the above commentary a syllogism is presented in Essential Explanation: [the statement that] the Ornament for Clear Realization presents all the clear realizations of the four sons (subject) is correct (predicate) because it includes all the bases, antidotes, and aspects. This means that all the clear realizations of the four sons are included in the three exalted knowers. Inclusion can be of three kinds: in terms of interrelation or intersection, in terms of it being itself, and in terms of practice. When we say the clear realizations of the four sons are included in the three exalted knowers this is in terms of practice.

The expression of worship presents the whole path from guru devotion up to enlightenment. This does not mean that all the words of the stages of the path are mentioned explicitly, however all of them are presented here indirectly. The wish to emerge from the aggregates and sources of the lower realms and to achieve those of the higher realms is the wish generated by a being of small scope. This wish is generated upon sing the misery of the aggregates, sources, constituents of the lower realms. Having generated the thought to emerge from the lower realms, one then needs to observe the higher training in morality since only by doing so can one complete the causes of higher rebirth. Then one goes on to realize that even a precious human body is conditioned by karma and delusion, thereby one generates the wish to emerge from even states of higher rebirth and achieve liberation. To achieve this one trains in the three higher trainings, [morality, concentration, and wisdom]. Then one comes to understand that even nirvana or liberation, an analytical cessation that has abandoned all pervasive conditioned suffering, is not enough since with this alone one cannot accomplish the welfare of other sentient beings. Thereby one comes to realize that oneself has to achieve buddhahood. For this purpose one trains in the mind of enlightenment and engages in the practice of the six perfections.

In short, we need to relate the commentary here to our [Dharma] practice.

Tuesday morning class, February 3, 1998

2B2A-2 Having rejected the fault of repetition of the sutras, establishing the existence of a purpose
This section shows that there is no fault in composing the Ornament, in fact there is a purpose to it.
This is divided into three:
A Having presented a doubt, making a connection
B Root text
C Commentary

2B2A-2A Having presented a doubt, making a connection

People of lesser intelligence [question]: "Did the Bhagavan, out of compassion desiring to benefit the sentient beings who have faith in the extensive, middling, and brief [mothers], not clarify all the subjects of the Perfection of Wisdom, the order of the eight clear realizations, the mother of the victors? What is the purpose for the Bhagavan, the
People of lesser intelligence think that there is the fault of repetition in composing the *Ornament* because the meaning, such as the eight clear realizations, has already been presented by Buddha in the *Perfection of Wisdom Sutras* and therefore there is no need to present it again. To clarify this doubt there is the second part to the paragraph called ‘making a connection.’ What is being connected here? The expression of worship and the statement of the purpose are being connected. When the expression of worship is made one understands that the exalted knowers have certain excellent qualities and so forth. When the statement of purpose is made one comes to understand the subject, purpose, etc. Then, in order to clarify doubts concerning this, our own system explains the four factors of the statement of purpose. The doubt can be of several kinds: one may think that there is no purpose, that there is no subject, that there is no purpose of purpose, and that there is no interrelationship. To eliminate these doubts the text shows that there is a purpose to composing the text.

The lesser intelligent person says that there is no purpose to composing the *Ornament* because it is similar to the case of the treatise composed by a non-Buddhist that proves that crows have teeth. This treatise proving that crows have teeth is a treatise without a subject and here someone says that the *Ornament* is the same in that it too does not have a subject. The second doubt is that composing the *Ornament* is similar to the case of the treatise by a non-Buddhist about taking one’s own mother as a bride. This treatise is based on the theory that the highest pleasure in the world that one can give one’s mother is that of sexual intercourse. The third doubt is that the *Ornament* is similar to the case of the treatise that proves there is an essential purpose (purpose of purpose) to taking the jewel crown from the head of the naga Jogpo. If one could possibly take this crown from him there would be a purpose to talking about how to do it but it is not possible to do so therefore there is no purpose of purpose. Our system responds that the *Ornament* is not like these treatises since it does have a subject, a purpose, and a purpose of purpose. When our own system states this then people of lesser intelligence begin to think that maybe they do exist; this is called a concordant or meaningful doubt since it tends toward concurring with reality. As a result of generating this doubt a person of lesser intelligence begins to engage in the study of the *Ornament*. On page 9 of *Commentary Clarifying the Meaning* the phrase “with regard to the meaning as a branch [method] for entering into the treatise” shows how such a person enters into the treatise. This accords with what is said in a treatise on grammar: when one has aspiration and generates a doubt there is the possibility that one will engage in studying a particular text.

According to Gyeltsab’s commentary the person of lesser intelligence has a doubt concerning the composition of the *Ornament*. This person does not know the uncommon purpose of the *Sutras* and the treatise so he thinks that there is no purpose to Maitreya composing the *Ornament*. He also thinks that there is no purpose because the Bhagavan has already presented the order of the eight realizations in the *Sutras*. Since this is so there would not be any point to Maitreya, the Victor over the Non-victorious Superiors, composing the *Ornament* and explaining the eight clear realizations. In the three mothers, the extensive, middling, and brief *Perfection of Wisdom Sutras*, the eight clear realizations have already been explained in accordance with the needs of both the sharp and dull facultied.

What is the statement related to the purpose? It is that there is a purpose, a subject, etc. in the *Ornament*. In this way the doubts of those of lesser intelligence are eliminated.
The path of the exalted knower of all aspects itself, explained by the Teacher in these [mothers], is not experienced by others. In order for the intelligent to behold the meaning of the sutra which is the entity of the ten Dharma practices, through establishing mindfulness [on them], the so-called 'easy realization," is the purpose of [my] composing [the Ornament].

"The path of the exalted knower of all aspects itself, explained by the Teacher in these [mothers]” shows the subject. “Is not experienced by others” shows that the subject is special in that the eight clear realizations and the seventy topics are not thoroughly known by the hearers and solitary realizers. “Others” also includes non-Buddhist philosophers. Bodhisattvas do know the eight clear realizations and the seventy topics.

“The so-called ‘easy realization’” indicates the purpose. The rest of the verse indicates the essential purpose (the purpose of the purpose). The purpose to composing the Ornament is to make us realize the meaning of the Sutras, the eight clear realizations and the seventy topics. Since these are clearly taught in the Ornament they are easy to understand.

“Through establishing mindfulness on them” indicates that we should keep the ten Dharma practices in mind. In this context, the ten Dharma practices are the ten topics representing omniscient mind. These are what are to be kept in mind since they will enable us to understand all the meaning of the Sutras. In the phrase “in order for the intelligent to behold” the word intelligent refers to the trainee or disciple intent upon the Ornament. Such a disciple has to be an ordinary bodhisattva. However, a disciple in general is not necessarily a bodhisattva, but can be people such as ourselves who are trainees intent upon the Ornament.

In Gyeltsab Je’s commentary it says the first two lines of the Tibetan translation of the root verse by Maitreya talk about the subject, the third about the subject being special, the next three about the essential purpose, and the last two about the purpose. “The entity of the ten Dharma practices” “in order for the intelligent to behold the meaning” indicates the essential purpose while “the so-called easy realization” indicates the purpose.

2B2A-2C Commentary
This refers to the commentary by Simhabhadra (Haribhadra). This is divided into three:
1  Subject to be explained
2  The essential purpose
3  Purpose

The order in which Gyeltsab Je explains the purpose, etc. is different from how it is set out in Haribhadra.

2B2A-2C3 Purpose

The purpose of composing the treatise is the easy realization of the perfection of wisdom, the nature of the mind of enlightenment, achievement, and so forth, by the trainee.

The purpose is to easily realize the meaning of the Sutras in dependence on the Ornament. Gyeltsab Je’s commentary says that what is easily realized is the meaning of the Perfection of Wisdom Sutras which include the eight clear realizations. The first of the eight clear realizations is omniscient mind which is represented by ten topics. Gyeltsab Je says that the purpose is to realize these ten, mind generation, precepts, and so forth. He says that an object of aspiration on the basis of the purpose is the essential purpose. In other words, we can ask where does the essential purpose come from? It comes from the purpose. One attains a realization called ‘realization of dharmadhatu pervading all phenomena’ on the first ground. The realizations from here up to omniscient mind is the essential purpose. Although from here up to omniscient mind is realized, with what method can one realize the essential purpose? The method is to keep all this in one’s mind and then develop the various types of wisdom: those arisen from hearing, thinking, and meditation. Another question then arises: What do we have to keep in mind? We have to keep all
the meanings of the *Sutras* without exception in our mind beginning with the topics that represent omniscient mind, ranging from mind generation, precepts, upward. Once one has them in one’s mind then one should practice the six perfections, etc. The result to be obtained will then be achieved.

The *Ornament* explains the meaning of the *Sutras* in eight chapters. Why are there eight chapters? There are eight chapters because there are eight clear realizations.

What is the memory/mindfulness that we are talking about here? It is a memory which arises from an imprint. This imprint is left by an extremely clear experience of meditation upon the order of the clear realizations. In terms of a causal process, first one listens or studies, then reflects, and then practices the subject. In this way, one is able to induce a clear ascertainment or clear knowledge in one’s mind as one wishes.

2B2A-2C2 The essential purpose

That [which is not experienced by outsiders and others is experienced by] the bodhisattva, who has set forth alone, and without depending upon any others accomplishes the complete welfare of himself and others. [The bodhisattva] is established well in the practices of all the meanings of the *Perfection of Wisdom Sutras*, the entity of the eight clear realizations, mind of enlightenment, and so forth, through the mindful consciousness which arose from the latency deposited by the extremely vivid experience. Then, through their sequentially realizing the grounds of the Very Joyful, characterized by the realization of the expanse of phenomena progressing everywhere, and so forth, it is said that they will realize all aspects. The strong desire intent upon that is the purpose of the purpose.

2B2A-2C1 Subject to be explained

The exalted knower of all aspects itself, the path of the very buddhas, is taken to illustrate well all the clear realizations. The Bhagavan acts to show [the paths of the three vehicles] to all sentient beings by means of three types of miracles. Whatever was to be explained in all three types of mothers of the victors was taught by that very means, [the three types of miracles]. That which explains and that which is to be explained are related by way of the method and that which is to be achieved by the method. Outsiders and insiders, [such as hearers and solitary realizers], who are free of attachment, etc., not having familiarized themselves with the selflessness of phenomena, do not experience in stages [the subject to be explained in the eight clear realizations, etc.] by means of the knowers that arise from hearing and so forth.

The subject is omniscient mind, etc., in other words, all the topics set out in the *Sutras*. Gyeltsab Je, in regard to “the subject to be explained,” says that the subject is the meaning of the three mothers, the extensive, middling, and brief. How did the Bhagavan, Shakyamuni, present them? He presented the meanings by way of three miracles. These are the miracle of body, the miracle of mind, and the miracle of speech. Miracle of his body refers to Buddha having emanated hundreds of thousands of forms or bodies. The miracle of mind is his great mental capacity to realize and express all. The miracle of speech is that Buddha presents all the meanings verbally with skillful miracles. Through the three miracles of his body, speech, and mind Buddha leads the three classes of beings.

What makes the subject special? It is special because the subjects include omniscient mind with its ten representations, mind generation up to achievement. On the basis of these ten topics, etc. the *Ornament* is divided into eight chapters. The subject is special because the eight clear realizations explained in eight chapters are not thoroughly realized by non-Buddhist philosophers, hearers, and solitary realizers.

Gyeltsab Je says that there is a difference between that which is to be explained and that which explains. That which explains are the *Sutras* and the *Ornament*, while that which is to be
explained is the eight clear realizations. These two, that which explains and that which is to be explained, are to be understood as a method and that which is to be achieved through the method.

Hearers, solitary realizers, and outsiders do not realize the meaning thoroughly because they do not study the *Sutra Unraveling the Thought* and other texts related to the *Sutras*. Gyeltsab says that the Great Vehicle is superior because it has a great referent.

In the *Ornament* the subject, purpose, and purpose of the purpose (essential purpose) are laid out clearly. However, the interrelationship is not set out explicitly but is shown by Simhabhadra in his commentary. In brief, the statement related to the purpose has the four factors, subject, purpose, purpose of purpose, and interrelationship:

- the subject is the eight categories and seventy topics which are the meaning of the *Perfection of Wisdom Sutras*
- the purpose is to realize the eight categories and seventy topics through the *Ornament*
- the purpose of the purpose is to achieve omniscient mind
- the relationship is the fact that the above three are related, the third to the second, and the second to the first. The relationship can also be said to be the fact that the subject depends upon the treatise and the treatise upon the *Sutras*. This means that realizing the subject depends upon the treatise. This is another kind of relationship. Here in this context there is debate about what is the treatise, the *Sutras*, etc. This is the reason for giving the definition of the treatise, etc. earlier on in the text.

Tuesday afternoon class, February 3, 1998

This morning we were talking about the statement related to the purpose, in this context there is a discussion as to the difference between the words of Buddha and the treatises. This discussion does not arise in Gyeltsab Je’s text but does appear in other texts. Buddha’s words and the treatises both originate with Buddha. What are the words and what are the treatises? Any words or any treatise that comes from Buddha necessarily has the four attributes of subject, etc. According to the higher tenets there are 84,000 bundles/collections of teachings taught by Buddha while the Vaibhashikas say that are 80,000 bundles of teachings. When these teachings are summarized there are said to be the 12 branches of Buddha’s scriptures. However, some say that there are 9 branches, not twelve.

Buddha’s words are defined as a scripture that has four attributes: (1) it must have two subjects, high status and definite goodness, in other words a high rebirth and liberation, (2) it must possess excellent qualities, (3) it must express free from all faults in the words, and (4) it must abandon the delusions of the three realms. The purpose of any scripture of Buddha is to abandon delusions. To authenticate the scriptures as such we refer to *Uttaratantra* in which there is a passage that says: “The scriptures or words of Buddha must have four qualities: subject, faultless, function, and benefit. These teachings were given by a sage/upright person. All Buddha’s scriptures have two qualities: they cure the sickness of delusion and protect from fear. Non-Buddhist scriptures do not have these two qualities.”

There are 12 branches of scriptures: (1) the collection of discourses/sets of discourses/sutra (*mdo de, sutra*), (2) songs/intermediate verses (*dbyangs kyis bsgnyad pa, geya*), (3) prophecies/prophetic scriptures (*lung du bstan pa, vyakarana*), (4) verses/versified scriptures (*tshigs su bcad pa, gatha*), (5) purposeful statements/specific scriptures (*ched du brjod pa, udana*), (6) hagiography/parables (*rtog pa’i brjod pa, avadana*), (7) legends (*de lta bu byung ba, itivntaka*), (8) summaries/introductory scriptures (*gleng gzhi, nidana*), (9) vast texts (*shin tu rgyas pa, vaipulya*), (10) birth stories (*skyes pa rabs, jataka*), (11) delineations (*gtan la phab par bstan pa, upadesha*), and (12) miraculous teachings (*rmad du byung ba’i chos, abdhutadharma*). These twelve branches of Buddha’s scriptures are clearly mentioned in the verses of Simhabhadra’s text *Lamp of the Ornament*, also called the Great Commentary.

These twelve can be summarized in three baskets/canons/pitaka: the sutra (discourses), vinaya (discipline), and abhidharma (phenomenology). When these 12 are summarized in three, the first five, the collection of discourses, songs, prophecies, verses, and purposeful statements,
are included in the Hinayana sutra basket. Four, hagiography, legends, summaries, and birth stories, are included in the vinaya basket. The vast texts and the miraculous teachings are included in the Mahayana sutra basket. The delineations are included in both the Hinayana and Mahayana abhidharma basket.

We can also talk of nine branches of scriptures by combining four of the twelve into one: in this case the summaries include three texts in their retinue, hagiography, legends, and birth stories. This one group plus the remaining eight make a total of nine; these are the nine branches of scripture.

The words of Buddha have a certain function, etc. and are divided into 12 branches which can be further condensed into nine. Buddha’s words can also be understood in terms of the three wheels of Dharma. In addition, they can also be understood in terms of the three: words that have come from Buddha’s mouth, i.e. words that Buddha said directly; words authorized by Buddha as in when Buddha told one of his disciples to teach; and words through blessings. An illustration of words from Buddha’s mouth is the Sutrasangraha and also the part of the Heart Sutra in which Buddha actually speaks saying, “Excellent. Excellent.” and so forth. A part of the Heart Sutra also illustrates words through blessing. This is when Buddha is in meditative equipoise but inspired by Buddha Avalokiteshvara and Shariputra engage in a dialogue. There is also an illustration of authorized words in the Heart Sutra when it says, “Thus I have I heard at one time...” up to “at that time.” This part of the Heart Sutra is the introduction; these words are authorized/permitted.

Words through blessings are of three kinds: blessing by means of Buddha’s body, speech, and mind. Words that came about through the blessings of body is illustrated by the sutra called Sutra on the Ten Grounds (Dashabhumikasutra). An example of words that came about through the blessings of speech is a sutra in which Buddha reassures King Ajatashatru. This king was very sad about having killed his father and Buddha spoke to him in order to get him over his regret. Buddha said to him, “Father and mother, brahmins and their retinues, are to be killed.” Ajatashatru thought about the meaning of Buddha’s words, which had been said specifically for his benefit. Slowly he came to realize what Buddha had meant in saying that the father and mother who give birth to me are to be killed; father and mother represent karma and delusions which give birth to contaminated aggregates. Then he understood with respect to “the Brahmin who lives in pure conduct is to be killed” as meaning that oneself is to abandon grasping at oneself as pure. He also understood that if one gets rid of grasping at oneself as pure, etc. and also abandons its retinues, the delusions, one can be free. As a result, King Ajatashatru was able to attain the state of a foe destroyer.

Words that are a result of blessings by mind are of three kinds: blessing by the power of concentration, blessings by the power of the truth, and blessings by the power of exalted wisdom. Words that are a result of blessings by the power of concentration are the part of the Heart Sutra that says, “Form is empty, emptiness is form,” etc. An example of words that are a result of blessings by the power of truth is the sound produced by the great drum of the gods. When this drum is beaten it produces the sound of the teachings on the four seals, or totals of Dharma: all compounded phenomena are impermanent, all contaminated phenomena are misery, all phenomena are empty and selfless, and nirvana is peace. An example of words that are a result of the blessings by the power of exalted wisdom are the teachings of a yaksha [inspired by Buddha].

Here Sherab asked Geshe-la to clarify the three miracles of Buddha’s body, speech, and mind that were discussed this morning. Buddha’s mind knows all phenomena and his motivation is so great that he has the capacity to give teachings at all times. The miracle of Buddha’s speech is shown by a disciple who spoke a particular language to whom Buddha said “The eye is impermanent” but at the same time other sentient beings heard the teachings in their own language and in different ways, for example, one heard, “The eye is misery, while another heard “The eye is empty.” In Gyeltsab’s commentary it says that the miracle of the mind is expressing all, this includes the blessings by the power of concentration, the power of truth, etc. Referring to the miracle of speech we can say that it refers to Buddha’s marvelous speech with its sixty-four melodious qualities that can fulfill all desires. For example, one of the qualities is that Buddha’s speech is always pleasant.
He can also simultaneously teach for different sentient beings. In the Keeps of Prayers it says that Buddha gives teachings in the language of the gods, demigods, nagas, yakshas, rakshas, etc.

A treatise is defined as: pure speech possessing the qualities of healing sentient beings and protecting them. In Namshe Rikpa by Acharya Vasubandhu it says that a treatise is a pure speech having two attributes, one is curing sentient beings from the disease of delusion and the second is protecting them from the fear of the two extremes. Any speech possessing these two qualities is a treatise.

Now we need to discuss Buddha’s words in regard to distinguishing between “the pair of Buddha’s word and treatise” and the treatises. All the words of Buddha are treatises because all the words of Buddha are pure speech that has the qualities of healing sentient beings from the disease of the two delusions and protecting them from the fear of the two extremes. A treatise that discusses Buddha’s words must have been composed by an undistracted sentient being. Such a treatise should discuss a subject that leads sentient beings from their ordinary state to liberation. Simhabhadra’s Commentary Clarifying the Meaning is both a treatise and a treatise distinguished from “the pair of Buddha’s word and treatise.” This commentary is both because Simhabhadra is a sentient being, a bodhisattva, who composed it without distraction, and because his text discusses the eight categories and seventy topics which lead sentient beings from their ordinary state to liberation. This description of treatise is mentioned in the text Uttaratantra by Maitreya. Treatises that are composed by sentient beings are still valid and are holy objects that we should keep on the top of our heads.

The Eight Thousand Stanza Perfection of Wisdom Sutra is Buddha’s word distinguished from “the pair of Buddha’s word and treatise.” There are two types of treatise, one that unravels general words of Buddha and the second is one that unravels specific words of Buddha. Treatises unraveling Buddha’s general words are of two types. Clear expression of words are, for example, words related to rhetoric, words of texts consisting of epithets for any single thing, for example, the moon, and words of poetic texts. With the help of clear expression of words one expresses better. Examples of treatises in which the subject to be expressed is clear are the seven treatises on valid cognition by Dharmakirti. These texts are said to have a clear subject because with the help of these texts one is able to investigate other subjects. In the texts on valid cognition it talks about the various kinds of valid cognizers which helps us to check up things very accurately. For example, manifest phenomena are realized through a valid direct perceiver. Slightly hidden phenomena are realized through a valid inferential cognizer through the power of fact; in this case the inferential cognizer does not see any defect in respect to that phenomenon. Extremely hidden phenomena are realized by a valid inferential cognizer through the power of belief. These three steps are mentioned because they are as important as analyzing gold by burning, cutting, and rubbing it, since only by these three steps can it be determined to be real. Likewise, the three, a valid direct cognizer, a valid inferential cognizer through the power of fact, and a valid inferential cognizer through the power of belief determines whether a statement is correct or not.
in Chinese and has been translated from Chinese to Tibetan some 70-80 years ago). An example of a treatise that unravel the conduct in relation to the four noble truths is a text called Fundamental/Root Sutra of Monastic Discipline by Gunaprabha which is a commentary on vinaya.

There are also two divisions of treatises in relation to the second wheel of Dharma, one in terms of view and the other in terms of conduct. Treatises that unravel the view related to the second wheel are the six treatises on the Middle Way and the Ornament, which unravel the hidden meaning. A treatise that unravels the conduct side of the second wheel is Bodhisattvacharyavatara by Shantideva, which explains how a bodhisattva should behave. The six treatises on the Middle Way are: Fundamental Wisdom which mainly negates true existence of phenomena, the object of negation; Finely Woven which negates the sixteen reasonings of the lower schools, such as the Vaibhashikas; Seventy Stanzas on Emptiness which derives from the seventh chapter of Fundamental Wisdom that is about investigating birth, existence, and perishing; Refutation of Argument which discusses negative and affirmative phenomena as an elaboration of the first chapter of Fundamental Wisdom on investigating conditions; Sixty Stanzas of Reasonings, which comments on the necessity for realizing emptiness in order to achieve liberation; and Precious Garland, which comments on the necessity of realizing emptiness in order to achieve omniscience and thoroughly presents both method and wisdom. There are also other commentaries by Nagarjuna which reveal the view side of the second wheel; these are the Six Collections of Praise in which one is a praise to the sphere of phenomena (dharmadhatu).

With respect to the third wheel of Dharma, ‘fine discrimination,’ there are also treatises that unravel the view side and those that unravel the conduct side. Examples of treatises commenting on the view are the Discrimination of the Middle Way and the Extremes (Madhyantavibhanga) and the Discrimination of Phenomena and the Nature of Phenomena (Dharmadhatuvibhanga) by Maitreya. Treatises revealing the conduct side are Ornament for Sutra (Sutra-alamkara) by Maitreya and the Five Treatises on the Levels by Asanga. These five treatises by Asanga discuss the five grounds. In addition, there are the two treatises by Asanga called the Two Compendiums. The Five Treatises on the Levels are the Actuality of the Levels/Grounds of Yogic Practice, Compendium of Bases, Compendium of Ascertainments, Compendium of Enumerations, and Compendium of Explanations. The Two Compendiums include the Compendium of Knowledge (Abhidharmasamuccaya), which is common to both Hinayana and Mahayana, and the Compendium on the Mahayana (Mahayanamasgraha) which is specific to the Mahayana. Besides these there are other treatises composed by Acharya Vasubandhu, the eight Prakarana: Commentary on Ornament for Sutra, Commentary on Discrimination of the Middle Way and the Extremes, Commentary on the Sutra of Dependent Relation, Thirty Stanzas on Chittamatra, Twenty Stanzas on ?Bimshika, Chapter on the Five Aggregates, Thorough Expositions, and Chapter Establishing Karmic law.

This is a rough idea of the different treatises commenting on individual words of the Buddha.

Thus there are a total of twenty treatises: the Five Treatises by Maitreya, the Five Levels and Two Compendiums by Asanga, and the eight commentaries (Prakarana) by Vasubandhu.

Up to now we have been talking about treatises that unravel Buddha’s words in general and those that unravel individual words. In addition, treatises can also be categorized into three: (1) a treatise that is a collection taken from here and there, for example, the Compendium of Valid Cognition by Dignaga, this is so-called because it was composed by taking pieces of information from here and there; (2) a treatise that puts the disordered into order, in other words it puts certain subjects, that were previously mixed up, in order; and (3) a treatise clarifying the hidden. An example of a treatise that puts things into order is Root Sutra. When Buddha gave teachings on vinaya he did so on different occasions, these were then put together in a specific order. An example of the third type, clarifying the hidden, is the Ornament which clarifies the hidden meaning of the Sutras.

Scriptures can also be classified in nine divisions: one group of six inferior treatises and one group of three superior treatises. The first treatise is one without meaning, for example, that on crows’ teeth. The second is a treatise with wrong meaning, such as one that says there are no past or future lives. The third is a meaningful treatise such as the Ornament for Clear Realizations.
The fourth is a misleading treatise, for example, a treatise composed by non-Buddhists on how to make a tank, catapults, knives, etc. The fifth is a merciless treatise which says that the sacrifice of animals and human beings leads one to liberation. The sixth is a correct treatise which talks about abandoning sufferings, for example, the Bodhisattvacharyavatara and the Ornament. The seventh is a treatise that posits liberation upon hearing, such as the four Hindu Vedas which say that one attains liberation just by hearing them. The eighth is a treatise of arguments from non-Buddhists, such as Treatise of Dispute (Tok gye ten cho). The ninth is a treatise which includes practice, such as the Ornament. These are the nine kinds of treatises that are explained in Thorough Exposition by Vasubandhu. In this text it says that there are six treatises with a negative meaning and three with a positive meaning. [The third, sixth, and the ninth are treatises with a positive meaning.]

Treatises can also be explained in relation to the five sciences. These include treatises that mainly present arts and crafts, such as Measurement Text by Shariputra which explains how to make things on the basis of measurements; treatises on medicine, for example, Branches of Treatment in Eight Parts by Acharya Vira which discusses how to cure illness; treatises on grammar such as those by Kumarakirti called Kalapa and Chandrapa; treatises on reasoning, such as the seven texts on valid cognition by Dharmakirti which are divided into two groups, three that are like a body and four that are like limbs (the three like a body are Commentary on Valid Cognition (Pramanavartika), Discernment of Valid Cognition, Drop of Reasoning on Valid Cognition, while the four like limbs are Drop of Logical Reasoning, Analysis of Relationship, Establishing Alternative Continuum, and Science of Debate); and treatises on inner science, such as Abhisamayalamkara, Madhayamakavatara, Abhidharmakosha, and others, which are so-called because they all deal with an inner object, the mind and the 51 mental factors, their entities, functions, etc. These are generally known treatises but there are many others. It is important to learn these five sciences because two, the science of crafts and the science of medicine, are the best means for helping other sentient beings. In addition, the science of grammar and the science of reasoning are also to be learned in order to destroy debates and arguments raised by non-Buddhist philosophers. The inner science is also important because with it one can develop one’s own mind. In Sutra-alamkara it mentions that it is important to know the five sciences when in one stanza it says that even an aryat being cannot attain omniscience if he is not expert in the five sciences. Therefore, one should definitely study these five sciences.

There is a clarification in relation to what was said yesterday with respect to a treatise having two attributes. A Buddhist treatise has two attributes: one is to cure the disease of the delusions and one is to protect from the two fears; these attributes are particular to Buddhist treatises and are not found in other treatises.

This discussion on Buddha’s words and treatises came from the statement related to the purpose.
purpose. This briefly explains the corpus/body of the Perfection of Wisdom. Why is the body of the text explained briefly? This is for two reasons, one is from the side of the teacher and one is from the side of the listeners. If it is explained briefly it avoids confusion on the part of the listener and for the teacher it is like having a map that makes things clear. The fact that the body of the text is explained briefly also has the purpose of causing a listener to engage in the extensive explanation on this basis. This also sets the mind of the person who is explaining at ease. This system of a brief presentation followed by an extensive explanation is similar to a leading a horse to the place of a race the day before as a preliminary to the actual race. If this is not done the horse will not know the track well and will hesitate, whereas if they are shown the place they will be able to run fast. This brief presentation and the extensive explanation are done in fifteen stanzas.

The outlines:

2B2B-2 Arranging the words appropriately
   A Showing the body in short
   B Extensive explanation

2B2B-2A Showing the body in short
   1 Briefly showing the objects of explanation and that which explains
   2 Enumerating the contents of that which explains

2B2B-2A1 Briefly showing the objects of explanation and that which explains
   A Meaning of the words
   B Examining the borders

2B2B-2A1A Meaning of the words

The Perfection of Wisdom is perfectly explained by the eight categories.

The Perfection of Wisdom is explained in the Ornament in eight chapters which explain the eight clear realizations. When Maitreya composed the Ornament he did so in eight chapters because there are eight clear realizations.

2B2B-2A1B Examining the borders
   This is further divided into two:
   1 Positing the assertion of the Acharya
   2 Refuting the wrong explanations of others

2B2B-2A1B-1 Positing the assertion of the Acharya

The definition of the Perfection of Wisdom is: a final exalted wisdom characterized by three attributes. Nominally there are four kinds of perfection of wisdom: the natural, scriptural/textural, path, and resultant. The natural perfection of wisdom is emptiness; it is called a natural perfection of wisdom because by meditating on it one will be able to exhaust all the stains of the conception of true existence and attain the resultant perfection of wisdom. This is a case of giving the name of the subject, the resultant perfection of wisdom, to its object, emptiness. The textural perfection of wisdom is so-called because it contains the subject of the perfection of wisdom. In this case the name of the object to be explained is given to the text that explains it. The path perfection of wisdom is so-called because its result is called perfection of wisdom, therefore its cause is also called this. In other words, the name of the result is given to the cause.

Wednesday afternoon class, February 4, 1998

There is a reason for saying ‘the body’, it is called body or corpus because it is a collection of many branches/limbs. The Sanskrit word for body is ‘kaya.’ There are texts in which the body is taken as a synonym for ‘collection’ (tsok) and ‘gathering’ (du pa). Here the body is of two types, the body of words that explains and the body that is explained. Expressing the corpus of words refers
to the 15 stanzas in the *Ornament* while the subject to be explained in them is the eight categories and the seventy topics.

The etymology of ‘corpus/body’ is that it is so-called because it is an accumulation, because it pervades all the limbs, and because it is that which is established as one entity. Thus, the word body not only refers to the physical body but can be the subject matter of a text.

Simhabhadra says that the Perfection of Wisdom means that first one has to listen to certain scriptures and then generate a wisdom arisen from hearing, then reflect on the words and develop a wisdom arisen from reflecting, then meditate and develop a wisdom arisen from meditation. When these are wisdoms are fully developed one attains omniscient mind. The word ‘perfection’ indicates that one goes to the end of excellence. Simhabhadra posits this as the way in which wisdom is developed and omniscience achieved. ‘Wisdom’ is that which discriminates all phenomena, while ‘perfection’ means one has gone to the culmination of it, therefore it is ‘the perfection of wisdom.’ The Sanskrit word *paramita* is composed of *para* which means beyond and *mita* which means gone, therefore together they literally mean gone beyond.

There is a non-dual exalted wisdom in the continuum of an arya buddha. This exalted wisdom is the actual resultant perfection of wisdom. To get there, there are texts that are collections of speech/words that present the path to get to that goal, this is called a textural/scriptural perfection of wisdom. Then there are paths that are characterized by seeing; these are the path perfection of wisdom. The path characterized by seeing refers to the path of seeing and the path of meditation. The textural perfection of wisdom and the path perfection of wisdom are etymologically/nominally perfection of wisdoms. Dignaga in his text the *Compendium of Meaning of the Eight Thousand Stanza Perfection of Wisdom* says that textural and path perfection of wisdoms are so-called because they contain the subject that leads to the real perfection of wisdom. Is the textural perfection of wisdom a perfection of wisdom? The answer is no, it is not. Why is it called perfection of wisdom? Because the textural perfection of wisdom contains the subject showing how to get to the omniscient state, the resultant perfection of wisdom. Without depending on such a textural perfection of wisdom, and listening, reflecting, and meditating on it, there is no way to achieve the actual resultant perfection of wisdom. The purpose for labeling the text a perfection of wisdom is because that text is to be studied and thoroughly learned in order to achieve the omniscient state. The textural perfection of wisdom explains the subject which is the real perfection of wisdom. The purpose is to make one understand that one has to study, think upon, and meditate on the textural perfection of wisdom in order to achieve the resultant state. There is a fault in labeling the scripture a perfection of wisdom because the text is not characterized by the three attributes.

Also in respect to the path perfection of wisdom there is a reason for, a purpose to, and a fault in labeling the path a perfection of wisdom. The reason is because the path perfection of wisdom is the method for realizing the resultant perfection of wisdom. The purpose is to make disciples understand that one must practice the path perfection of wisdom in order to achieve the omniscient state, the resultant perfection of wisdom. The fault of labeling path is because the path is not characterized by the three attributes.

The three related to a Mahayanist, for example, the extensive, middling, and brief *Perfection of Wisdom* is the scriptural perfection of wisdom. The three mothers, the extensive, middling, and brief, are the real scriptures while other texts are like reflection of them. Any path that is practiced by a Mahayanist is a real path. ‘Reflection’ refers to the different levels of the learning paths of Hinayanists. The path of no-more-learning that is achieved by a Mahayanist is the actual perfection of wisdom. The path of no-more-learning of the lower vehicles is a mere reflection, something similar, but not the actual.

We have Mahayana scripture, Mahayana path, and Mahayana result, enlightenment, the real teaching, real path, and real exalted wisdom. The Hinayana path of seeing, path of meditation, and path of no-more-learning are like a reflection of a form in a mirror.

Gyeltsab Je’s commentary says the reason for taking the Mahayana as the actual and the Hinayana as a reflection is in terms of the chief and the ordinary. The first three, the scripture,
Masters Program
Commentary to the Ornament by Geshe Jampa Gyatso January 1998 - May 1999

path, and result, are real and the second reflections, because of priority. Although the Mahayana
sutra, path, and path of no-more learning are the principal is does not mean that we leave aside
those of the Hinayana. A bodhisattva before attaining enlightenment has to go through the
Hinayana sutra, path, and path of no-more-learning. In order to achieve the three enlightenments
of hearers, solitary realizers, and bodhisattvas one must depend on the three of Hinayana that are
like a reflection. Gyeltsab’s commentary continues on saying that one who wants to train in the
hearers ground must listen to the perfection of wisdom. Then there is a passage explaining the
meaning of this: a buddha’s exalted wisdom which is characterized by or possesses three or four
attributes is the real perfection of wisdom. This is said because at the beginning of Seventy Topics it
says culminated exalted wisdom possessing three attributes. Later on the text says a culminated
exalted wisdom possessing four attributes is the resultant perfection of wisdom. Then it says that
perfection of wisdom and resultant perfection of wisdom are the same.

The three attributes are: (1) the support which refers to the person. The attribute of the
support is that such a perfection of wisdom exists only in the mind of an arya buddha. (2) The
second attribute is in terms of entity. The entity of the perfection of wisdom is that it is non-dual.
(3) The third attribute is that it is free from the object of negation. In other words, it is empty of
true existence and is like an illusion. If we consider four attributes rather than three they are
almost the same except that the second is divided into two. They are (1) in the continuum of an
arya buddha, (2) exalted wisdom, (3) non-dual, and (4) empty of true existence.

Gyeltsab says the textural and path perfection of wisdoms are not the actual perfection of
wisdom. Dignaga’s Compendium of Meaning of the Eight Thousand Stanza Perfection of Wisdom is
quoted above only as proof of the difference between the real and the designated perfection of
wisdoms. It is not valid in all aspects; i.e., it says a consciousness is truly existent whereas in our
own system it is the opposite, in that it is empty of true existence. We are referring to the third or
the fourth attribute of the perfection of wisdom. The perfection of wisdom is like an illusion for
being empty of true existence in the Svatantrika-Madyamika school. It is important to know that
Dignaga presents the Chittamatrin view in his Compendium of Meaning of the Eight Thousand Stanza
Perfection of Wisdom since he was a Chittamatrin.

Then Gyeltsab says, “In this case are only three topics, the scriptural, path, and result
perfection of wisdom, explained here? It is so but only in terms of the subject that is being
discussed. Here we are talking about the Mahayana scriptures, etc. because they are being
emphasized here while those of the Hinayana are not discussed. We have gone through the
interpretation of the perfection of wisdom according to Simhabhadra.

2B2B-2A1B-2 Refuting the wrong explanations of others

Someone says: Well, when the perfection of wisdom is presented is the resultant perfection of
wisdom presented as the principal?

Reply: This is wrong because according to the Great Commentary not only is the resultant
perfection of wisdom taken as a priority but also the textural and path perfection of wisdoms are
discussed. Our own system says that Dignaga says so because the reflection-like path perfection of
wisdom is an exalted wisdom realizing impermanence that is bound by the conception of true
existence. Already knowing that there is a reflection of a path perfection of wisdom, the scriptural
and resultant perfection of wisdom are free from being reflections. Therefore, these three
Mahayana articles are the principal subject to be discussed here. The others, the Hinayana
scripture, path, and result, are also explained. Within the scriptural perfection of wisdom not only
the three of the Mahayana but also the three of the hearers and solitary realizers are explained.

One comes to this conclusion because in the scriptural Perfection of Wisdom there is a description
of what leads to all three enlightenments. This topic will be discussed later on. When will they be
explained? The subject, the cause for attaining all three vehicles, will come under the topic of the
path of preparation.

In Gyeltab’s commentary it also says why perfection of wisdom is labeled on the
scripture, path, and result. Neither the path or the scripture are a final wisdom with the three
characteristics. In brief, the purpose for giving the label ‘perfection of wisdom’ to the scriptures is
because it is what is to be studied and reflected upon. The label perfection of wisdom is given to the path because one has to practice the path.

Lama Tsongkhapa defines perfection of wisdom in his text *Golden Rosary*. He says a perfection of wisdom is that which arrives at or leads to non-abiding nirvana. When Lama Tsongkhapa says that which arrives at non-abiding Nirvana he includes the resultant perfection of wisdom, when he says that it leads to non-abiding nirvana he is referring to the scriptural and path perfection of wisdoms.

Someone argues that if something is a perfection of wisdom it must necessarily be a wisdom. Our system responds saying that this person does not know the difference between the etymological [perfection of wisdom] and the actual [perfection of wisdom]. For example, with respect to generosity it is a perfection of wisdom but it is not a wisdom. Generosity is not a wisdom, generosity is the intention to give, yet we label it perfection of wisdom etymologically because it is a method for achieving the perfection of wisdom. This specifically refers to the generosity that exists in the continuum of a bodhisattva.

These definitions and divisions are covered in the text *Seventy Topics* but they will also be covered here in the body of the text.

Thursday morning class, February 5, 1998

2B2B-2A2 Enumerating the contents of that which explains
A General presentation of the path
B Explaining the individual entities

2B2B-2A2A General presentation of the path
This is divided into three:
1 Positing the tradition of the former acharyas
2 Examining whether they are correct or incorrect
3 Our own tradition

2B2B-2A2A-1 Positing the tradition of the former acharyas

One acharya says: the three exalted knowers are generalities because they are to be generated in the continua of all the aryas of the three times, while the four trainings and the truth body are particularities because they are to be generated in the continua of present trainees intent upon the Ornament.

Another acharya says: the three exalted knowers are without boundary, like a sword put on the ground (when a sword is putting on the ground it can be put anywhere), while the four trainings and the truth body have boundaries, like taking a sword in the hand.

Gyeltsab Je says that these two interpretations are similar.

A third acharya says: the three exalted knowers are the principal subject to be achieved by hearing and thinking, while the four trainings and the truth body are to be achieved through the wisdom arisen from meditation.

A fourth acharya says: the first three chapters [of the Ornament] present the view, the middle four chapters present meditation and conduct, and the last chapter presents the result.

A fifth acharya says: omniscient mind is to be meditated upon on the path of accumulation and the path of preparation, the knower of paths is to be meditated on from the first to the sixth grounds, the knower of bases is to be meditated on during the seventh ground, the four trainings are to be meditated on the three pure grounds, the eighth, ninth, and tenth grounds, and the truth body is generated only on the buddha ground.

A sixth acharya, Dharmamitra/kalayana, says: A Hinayana person meditating on the path should first meditate on the hearers and solitary realizers path with are presented in the second chapter of the Ornament, this person then generates the various levels of Hinayana paths presented in the third and fourth chapters, then manifests the result of foe destroyer and absorbs in the meditative equipoise of solitary peace. When this person arises from his meditation session on solitary peace he generates the mind generation presented in the first chapter of the Ornament and then naturally...
generates the path of accumulation presented in the second and fourth chapters. In this way he enters the Mahayana path.

These are the six opinions of former aryas.

2B2B-2A2A-2 Examining whether they are correct or incorrect

It is difficult to say that these opinions are correct. It is difficult to posit a continuum of an arya of the three times in which there exists a knower of paths and omniscient mind but not the four trainings and the truth body. In other words, in order to attain the knower of paths and omniscient mind one must also generate the four trainings and the truth body. It is not possible to say that the three exalted knowers are paths of aryas because they are paths of the aryas of the three times. It is not right to say that the four trainings are only a path of present trainees who do not correctly discriminate. There is no valid cognizer that concords with these statements that they are paths of the aryas of the three times or only a path of present trainees. If someone accepts the contrary it would be difficult to point out any faults. If you were to say that the four trainings and truth body are related to the aryas of the three times and that the three exalted knowers are a subject for present disciples intent upon the Ornament to develop their mind, this would be correct. One cannot point to any faults in this assertion. In this way the opinion of the first acharya is negated.

The second opinion related to putting a sword on the ground or taking it in the hand is also not correct. Whenever someone generates any of the eight clear realizations one must be able to say that there is a boundary to them, i.e., one can say that this person is on a particular level. If there were no boundary to the clear realizations one would not be able to say first meditate on this and then meditate on that. If such were the case the one who explains the path and the one who listens to teachings on the path would both be obscured. To say that there is no boundary is not correct, there must necessarily be a boundary to the eight clear realizations.

The third opinion is also incorrect. Our system responds to it saying that if someone were to listen and reflect on one object and then later on meditate on another it would be absurd. With this we refute the idea that the three exalted knowers are to be listened to and reflected on while the four trainings and truth body are to be meditated on. Here there is an example in relation to negating this opinion that says if it were so it would be like someone who takes his horse to a race ground the day before the race but the next day takes the horse to another track. This would be absurd and lack any sense. Gyeltsab says one listens, thinks, and then meditates on the same object. Any object of meditation should first be subjected to hearing and thinking, otherwise one’s meditation will not be correct. If someone were to say the opposite of what this person proposes there would be no fault. In short, it is correct to say that five chapters, the fourth to eighth, present the objects of hearing and thinking, while the first three chapters present the objects of meditation. On the other hand, if the objects of meditation and the objects of hearing and thinking were to be different this would be absurd.

When someone takes the four trainings as a practice he also definitely takes the ten topics of omniscient mind as a practice. In other words, it is not possible to practice the four trainings without practicing the ten topics, mind generation and so forth, of omniscient mind. It is not possible to posit a subject that is only for hearing and thinking and to posit another subject for meditation. Our system says that the person who posits this does not understand things correctly and is like someone who passes all his life in philosophical study of the Dharma baskets but when it comes to practice does not even know what name to give the practice. If someone hears and reflects but does not take care of the object of meditation, it would be a sign of confusion between the one who explains and the one who listens. Eventually such a person would get discouraged and leave the practice.

The fourth opinion is that the first three chapters present view; the middle four, meditation and conduct; and the last, the result. To understand that this an assertion is incorrect is very easy since this acharya does not even understand the general presentation of the treatise.

The fifth opinion is that of an acharya who thinks the eight chapters of the Ornament are to be understood as a path for a single person. This is not correct. This assertion likens the Ornament
to a one way street in which one necessarily goes only one way. However, our tradition says that it is more like a two-way street since it sets out paths for many people. Our own tradition says the eight chapters are like a path with many curves in that a complete path is contained in each curve, for example, the topic of mind generation contains a complete path from beginning to end. The same is true for precepts, etc. Our own system says that the straight path was explained by Simhabhadra in his text *Commentary on Compendium* but here in the *Ornament* he negates this theory. Although Simhabhadra does not explicitly negate this theory right here, he does so later on, perhaps in the fourth chapter.

Gyeltseb says that when one sets out the order of the path certain doubts may come up and when one tries to eliminate these doubts some people might think that it means that the three exalted knowers are only imputed and are not the real perfection of wisdom. This doubt is related to a point mentioned in Simhabhadra’s *Commentary Clarifying the Meaning* that says those wanting to train in the bodhisattva path have to train in the paths of three vehicles and realize them. When this is said someone may think that the three paths which are to be generated are only imputed and like reflections while the three paths to be realized are the actual ones. I think that perhaps this doubt originates in relation to this statement. In *Essential Explanation* it says that this assertion is to be checked up, one cannot say whether it is correct or not.

If one says that a trainee intent upon the *Ornament* engages in the Mahayana path only after proceeding in the Hinayana path there would be the fault that a dull facultied trainee might leave the Mahayana path which definitely brings the attainment of omniscient mind and engage in the Hinayana path. However, a trainee intent upon the *Ornament* necessarily enters the Mahayana path directly without first going through the Hinayana path because such a trainee is necessarily sharp facultied. Therefore this trainee necessarily attains omniscient. Even if it were the case that someone could possibly serially engage in the hearer, then solitary realizer, then bodhisattva paths, it would not make sense in terms of a trainee who is intent upon the *Ornament* who is a Mahayanist right from the beginning. Here the *Ornament* lays out a quick path for such a trainee so this has nothing to do with the subject here.

Another opinion is that the first three chapters only present a path in which Mahayanists engage, the middle four chapters present a yoga which a Mahayanist practices, while the last chapter presents a result. This same person also says that the knower of bases exists only in the continua of hearers and solitary realizers and that a knower of paths does not exist in the continua of buddhas. Our own system says that a knower of bases is an exalted knower present in the continua of all aryas, a knower of paths exists in the continua of all Mahayana aryas, and omniscient mind exists only in the continua of arya buddhas.

Our tradition says that, just as was said in the case of the statement related to the purpose, all eight clear realizations are to be realized easily. This is said in the *Ornament*. In order to easily realize them one must hear and think about them, keep them in mind, and then meditate on them. In this way one goes from where one is up through the ten grounds. All eight chapters set out the objects of hearing and thinking for a Mahayanist and also set out the objects of meditation. It is important to understand how the eight are set out for practice. In brief, the objects of thinking and hearing are presented by all eight chapters as are the objects of meditation. In addition, the manner of practicing them is also set out in all eight chapters.

Thursday afternoon class, February 5, 1998

In the *Great Commentary* it says that the eight chapters are laid out on the basis of the ten topics representing omniscient mind. This commentary says that one first generates the mind of enlightenment. When one does so one promises to achieve enlightenment for the welfare of all sentient beings, then, having done so, one has to go on to engage in practice. Before generating the mind of enlightenment one needs to generate compassion. In the text *Sutra-alamkara* by Maitreya it
says “the root of that is compassion,” here ‘that’ refers to the mind of enlightenment. This is also underlined in *Madhyamakavatara* saying: “the mind of enlightenment is necessarily preceded by great mercy-compassion.” Compassion is so important that it is taken as the object of expression of worship in this text saying, “Mercy-compassion itself is said to be the seed of the perfect harvest of the conquerors; the water for its growth; and the ripe fruit that is a source of lasting enjoyment. Therefore, I praise compassion right at the beginning.” This means that compassion is also necessary for turning the wheel of Dharma, the result.

Before developing this compassion one needs to meditate on the sixteen attributes of the four noble truths which are presented in the third chapter of the *Ornament*. This means that one has first to train in the path common to middle and inferior beings. Having trained in this path one will then be able to enter the Mahayana path, in other words, having trained in this way, one will be able to generate the mind of enlightenment. Such a bodhisattva then meditates on the selflessness of persons to guide hearers to their goal and on non-duality to guide solitary realizers to their goal. Therefore, a bodhisattva needs to develop both of these realizations. A bodhisattva also needs to meditate on a path that leads to the middle way free from the extreme of cyclic existence and free from the extreme of solitary peace.

At this point we need to understand achievement: it is a practice done supported on method and wisdom. One needs to thoroughly meditate on all the aspects of the three exalted knowers. To do so one need the unification of calm abiding and higher seeing. With calm abiding one has concentration and with higher seeing one can analyze, on this basis one can then meditate. When these two are unified one can eradicate the delusions and conceptions/elaborations.

Here in the text there is the word ‘yoga’ which in Tibetan is *nel jor*, *nel* means a real state of mind, and it shows that when we meditate we have to make our own mind abide in its real state. *Jor* means wealth or necessity, in this context it refers to calm abiding and higher seeing. Once the mind is in its real state one should cultivate calm abiding and higher seeing. This is the interpretation of *nel jor*. When this is achieved one can achieve many positive results. To have such a yoga, or necessity of real state of mind, is the basis or ground on which one can develop the four trainings. These are divided in terms of the manner in which one proceeds/works.

There are other ways of interpreting the four trainings, for example they can be called the four achievements: achievement through armor, achievement through engaging, achievement through collection, and achievement through definite emergence. Achievement through armor refers to a bodhisattva who when he engages in the practice of the six perfections puts on the armor of the six perfections, generosity and so forth. By putting on this armor a bodhisattva prepares himself to engage in practice. This second achievement is then called achievement through engaging. The achievement of engaging requires the accumulation of a great deal of merit and wisdom. This is the third achievement of collection. This is followed by the achievement of definite emergence. These four achievements can be understood with the help of an illustration: when a soldier goes to war he begins by putting on armor to protect his body and then goes off to engage in battle. The collection is represented by the cavalry, infantry, marines, etc. This is followed by definite emergence, the end of the war.

Why is it necessary to practice the four achievements? It is because there is special purpose for which they are needed. The intent, or special purpose, of these four achievements is of three kinds: the special purpose of the great intent, great abandonment, and great realization. When the four achievements are done with this purpose what is their observed/referent object? The observed object of these achievements is of eleven types: instruction and so forth. Examples of observed objects are virtue, non-virtue, the unpredicted/neutral, and so forth.

Then we need to consider the support upon which the achievements are present. The support of the achievements is the lineage. When we talk about the four achievements we also need to consider the path of preparation. The support is the lineage or potential. Then we ask how many achievements are based on that support? There are six: the heat, patience, peak, and highest
mundane dharma levels of path of preparation, the path of seeing, and the path of meditation. This is one way of presenting the achievements that are supported on this but we can also talk of thirteen supports and thirteen supported achievements. Lineage is just being mentioned here, it will be discussed in much more detail further ahead. When we discuss the support we say that before the generation of the mind of enlightenment comes the generation of compassion. Before that there is the need to awaken the lineage or potential which was previously dormant. When the lineage is activated by some means then there are certain signs that can be seen externally. These signs can arise upon hearing the vast and profound Mahayana teachings and by seeing suffering sentient beings. These signs show that the lineage has been awakened and include tears in the eyes and the body hairs standing on end. There is a stanza in a text that says, ‘From the sign of smoke, fire is realized. By the sign of mist, water is realized. By the sign of physical appearance (tears, etc.) one can see that the lineage has been awakened.’ Gyeltsab says that in terms of guiding a disciple one should do this by first teaching compassion. In this way one can lead him to higher levels. Gyeltsab says when the second topic of the omniscient mind is explained there are only ten divisions presented but this does not mean that there are only ten things to be developed; there are many other subjects to be studied, all the three paths of the three vehicles.

The second topic of omniscient mind is precept or oral instruction. Gyeltsab says that since in his text called Setting on the Path of Perfection he explains the order in which the clear realizations are developed, he will not go into detail on this subject here.

2B2B-2A2B Explaining the individual entities

The very exalted knower of all aspects, the very knower of paths itself, then the very knower of all, clear complete realization of all aspects, gone to the peak, serially, clear complete enlightenment in one moment, and the truth body: these are the eight.

This has three subdivisions:
1 Three exalted knowers
2 Four trainings
3 Truth body

2B2B-2A2B-1 Three exalted knowers
This is divided into three:
A Exalted knower of aspects
B Knower of paths
C Knower of bases

2B2B-2A2B-1A Exalted knower of aspects

Definition of omniscient mind: a final exalted wisdom directly realizing all phenomena.

Simhabhadra does not accept that an omniscient mind only knows the two truths. This is because an omniscient mind is an exalted knower that knows the whole subject concerning practice from the beginning up to the end of the practice, and therefore it would not be sufficient just to know the two truths. The objects to be realized by omniscient mind are the ten topics. When a person goes from mind generation through the ten topics to the tenth, all the them are clearly realized. The ten topics are mind generation, oral instruction, branch of definite discrimination, support of achievement, referent of achievement, the special purpose, the achievement through armor, achievement through engaging, achievement through accumulation/collection, achievement through definite emergence.

The definition of omniscient mind is a final exalted wisdom directly realizing all ten topics. The definendum/that which is defined is omniscient mind itself. An illustration of omniscient mind is an omniscient mind realizing all objects of knowledge without exception and omniscient mind realizing mainly the causes and results within the seventy topics. In our case, we will discuss the second illustration of omniscient mind as we are studying the seventy topics. This means that within the seventy topics there are causes and effects and also in the ten topics representing omniscient mind there are causes and effects.
What is the boundary of omniscient mind? The boundary is the buddha ground.

Why is omniscient mind explained first? The omniscient mind, the knower of all aspects, is explained first so that the trainee intent on the Ornament will develop joy in it and see that by putting effort into achieving it he will be able to do so.

2B2B-2A2B-1B Knower of paths

The definition of a knower of paths: a clear realization of a Mahayanist which is sustained by a wisdom directly realizing emptiness in the continuum of the person who has it in his continuum.

Someone else gives the definition: a knower of paths is an exalted wisdom directly realizing the three paths as empty of true existence. This is not correct. The knower of paths knowing the path of hearers does not realize the sixteen attributes, impermanence and so forth, directly. If what this person says were the case, it would follow that when a bodhisattva on the path of seeing realizes emptiness directly he would also realize the sixteen attributes of the four noble truths, impermanence, etc. effortlessly. This would mean that when a bodhisattva gains a direct realization of emptiness he does not have a direct realization of the sixteen attributes. Our system says it would also follow that a bodhisattva does not meditate on the knower of paths knowing the paths of hearers, knower of paths knowing the paths of solitary realizers, and the knower of paths knowing the paths of bodhisattvas. This would mean that a bodhisattva who wants to lead hearers does not generate the knower of paths knowing the paths of hearers. Our own system says that the direct realization of impermanence, etc. also realizes the state free from the fabrication of true existence, therefore on the learning path one abandons grasping at duality. It would follow that the session of meditative equipoise and the post-meditation session would be one entity. Gyeltsab says there are faults in what this person asserts. One fault is that the knower of paths would not have the great compassion which is the method for stopping the extreme of solitary peace. Usually it is said that the knower of paths has the aspects of stopping the extreme of cyclic existence and that of stopping the extreme of solitary peace. In this case there would be the fault that the compassion observing the objectless would realize emptiness directly, but it does not do so. Our system says that compassion does not realize emptiness and there is no pervasion that a knower of path realizes emptiness directly.

The definendum is the knower of paths itself. An illustration of knower of paths is the knower of paths knowing the paths of hearers. Another illustration of the knower of paths is all the clear realizations of a Mahayana arya realizing emptiness directly, such as the knower of paths knowing the paths of hearers.

The boundary of the knower of paths is that it exists from the Mahayana path of seeing up to the buddha ground.

2B2B-2A2B-1C Knower of bases

Definition of a knower of bases: an exalted wisdom that is sustained by a wisdom directly realizing the selflessness of persons in the continuum of a person who possesses it (the knower of bases) and abides in the class of clear realization of hearers.

The definendum is the knower of all, i.e. the knower of all bases. An illustration of a knower of bases is the realization of the sixteen attributes of the four noble truths, impermanence and so forth, and the other realizations that belong to this level.

There are some who give the label ‘antidote knower of bases’ to the exalted wisdom directly realizing the state free from true existence, this is not said in any of Simhabhadra’s commentaries, the small and the great.

The boundary of the knower of bases is that it exists in the continue of all aryas.

Friday morning class, February 6, 1998

QUESTIONS AND ANSWERS
Question: Would it be possible for Geshe-la to go through the important outlines that we have covered up to now?

Reply: Up to know we have just gone through the expression of worship and the statement related to the purpose. Under these two main points many other topics have come up such as a general presentation together with some slight elaboration. The important points are:

(1) The root text of the Ornament is the three piles, the extensive, middling, and brief Perfection of Wisdom Sutras

(2) The explanation concerning the different commentaries composed by Indian masters on the Ornament. There are twelve commentaries composed by combining the Sutras and the Ornament and nine that were composed based on the Ornament alone. In regard the commentaries that were composed on a combination of the Sutras and the Ornament they are based on five sutas: the Eight Thousand Stanza Perfection of Wisdom Sutra, the Twenty Thousand Stanza Perfection of Wisdom Sutra, Compendium of Sutra (Sutrasamgraha), Hundred Thousand Stanza Perfection of Wisdom Sutra, and a combination of the Hundred Thousand Stanza Perfection of Wisdom Sutra, the Twenty Thousand Perfection of Wisdom Sutra, and the Eighty Thousand Perfection of Wisdom Sutra.

What is meant by combining the Sutras and the Ornament? ‘Combining’ does not mean first quoting a passage from the Sutra and then one from the Ornament. Rather it means that the commentary comments on a section from the Sutra and then on a section from the Ornament, followed by one from sutra and then one from the Ornament, and so forth. Among the nine commentaries based only on the Ornament, Simhabhadra’s Commentary Clarifying the Meaning is the most well known.

(3) In connection with Commentary Clarifying the Meaning we talked about the masters from whom Simhabhadra had received the transmission of the teachings on the Perfection of Wisdom Sutras. These were four: Asanga, Vasubandhu, Arya Vimuktisena, and Venerable Vimuktisena, each of whom composed his own commentary text. Asanga is discussed in the outline ‘the way Asanga thoroughly explained’ and his commentary is Thorough Explanation; Vasubandhu is discussed in the outline ‘the way Vasubandhu unraveled. Arya Vimuktisena is discussed in the outline ‘the way Arya [Vimuktisena] revealed’ and his commentary is Illuminating the Twenty Thousand. Venerable Vimuktisena is discussed in the outline ‘the way Venerable Vimuktisena thoroughly explained’ and his commentary called Commentary on the Twenty Thousand. Venerable Vimuktisena did not understand the Sutra thoroughly but based on his understanding wrote a commentary combining the Twenty Thousand Stanza Perfection of Wisdom Sutra and the Ornament.

What these four masters did is not so important but it may be good to know for a quiz! These four masters and what they did are explained in Gyeltsab Je’s commentary.

(4) The next point presents the two charioteers or two clarifiers. How many great clarifiers unraveled the meaning or the intention of the Perfection of Wisdom Sutras? An extensive response to this question is given in the Golden Rosary by Lama Tsongkhapa. Here clarifiers refers not only to persons but also to particular texts. There are four clarifiers that are treatises. The first of these is a group of six, the six treatises on the Middle way. Then there are the Ornament, Condensed Meaning of the Eight Thousand Stanzas, and Scriptural Commentary Destroying Harm. Former Tibetan scholars say that these are the four great commentaries.

The four clarifiers can also refer to four authors of these texts. Nagarjuna the author of the six treatises on the Middle Way, Maitreya the author of the Ornament, Dignaga the author of Condensed Meaning of the Eighty Thousand, and Chiode from Kashmir who is the author of Scriptural Commentary. It is not certain that the author of this fourth text is Chiode, some scholars think that it may be Vasubandhu since he also wrote a text called Destroying Harm.

Among these four texts the third, the Condensed Meaning of the Eight Thousand, is said to not be correct. This text contains thirty-two topics/subjects, one of which is the sixteen types of...
emptiness. With respect to this topic our own system says that the explanation is not exactly in accordance with the root text of the Chittamatra school while in fact Dignaga is commenting on the Chittamatra view. When Dignaga counts the emptinesses, he counts the emptiness of non-observation, instead of the emptiness of non-functioning things and the emptiness of the very entity of non-functioning things.

The thirty-two subjects are: (1) support, which refers to Shakyamuni Buddha, (2) point of view of the disciple, which presents the disciples at the time of Buddha who were hearers and solitary realizers, (3) action, how the hearers and bodhisattvas use the Perfection of Wisdom Sutras (4) sign, which is of two kinds, sign of the action of maras and sign of irreversibility (when a mara takes possession of someone certain physical or verbal signs appear while a sign of irreversibility is the physical and verbal signs that appear in a bodhisattva who is certain to reach enlightenment), (5) downfall, abandoning the Perfection of Wisdom Sutras causes one to fall down to the lower realms, and (6) benefit, by writing, reading, memorizing, explaining, thinking about, or meditating on the Perfection of Wisdom Sutras one receives an quantity of merit that is even greater than that of making offerings to all the countless buddhas by filling up a billion world systems with the seven precious objects. The 7th to the 16th subjects are called meditation because when we meditate there are ten distracting thoughts which have these ten antidotes. The 17th to the 32nd subjects are called classification, these are the sixteen emptiness, which include inner emptiness, outer emptiness, inner and outer emptiness, emptiness of functioning things, emptiness of non-functioning things, and so forth.

The Condensed Meaning of the Eight Thousand is not a correct clarifier of the Perfection of Wisdom Sutras because downfall is explained in the sign of the maras. Also when the sixteen emptinesses are listed there should be the emptiness of existing by its own character followed by the emptiness of non-functioning things and the emptiness of the very entity of non-functioning things, but instead of counting these two Dignaga simply said the emptiness of non-observation. This is in contradiction with the root text of the Chittamatra school, the Madhyantavibhanga (Uta Nam Che) by Maitreya. In short, the text Condensed Meaning by Dignaga is not correct as a treatise clarifying the Perfection of Wisdom Sutras sutra.

Scriptural Commentary Destroying Harm by Chiode is also not right as a clarifier of the Perfection of Wisdom Sutras. This commentary is of two types, one is on the Hundred Thousand Stanza Perfection of Wisdom Sutra and the second is on the Hundred Thousand Stanza Perfection of Wisdom Sutra, the Twenty Thousand Stanza Perfection of Wisdom Sutra, and the Eighty Thousand Stanza Perfection of Wisdom Sutra; however, neither is correct as a clarifier of the Perfection of Wisdom Sutras.

Of the four texts that are clarifiers, we have discussed the last two. The two remaining, that by Nagarjuna and that by Maitreya, are accepted by our system as actual clarifiers. Then in terms of persons our system says that there are three clarifiers: Nagarjuna, Asanga, and Maitreya. Maitreya gave the Ornament to Asanga who opened it to the world, meaning that Asanga explained the explicit and hidden meanings.

If we talk of clarifying the explicit subject of the Perfection of Wisdom Sutras there are only two clarifiers, Nagarjuna and Asanga. These two founded their own systems: Nagarjuna founded the Madhyamika while Asanga founded the Chittamatra. On the Madhyamika side Nagarjuna opened up the chariot track by explaining that all phenomena do not exist inherently but are merely imputed. This which was taught by Buddha and clarified by Nagarjuna. What is the treatise with which Nagarjuna clarified? He did so with in his six treatises on the Middle Way. The Chittamatra explains the three characteristics: that imaginary phenomena do not exist by their own character and that thoroughly established phenomena and other powered phenomena do exist by their own character. Asanga clarified the meaning of this to the world in his texts the Five Treatises on the Levels and the Two Compendiums.

Generally speaking when we talk of clarifier or charioteer we should understand that there are only two. There are two because Buddha prophesied that Nagarjuna and Asanga would found the two systems. These prophecies can be found in various texts, including the Lankavatarasutra, the Root Tantra of Manjusri, and the Big Drum of the Gods.
However, we can also talk of an third clarifier Maitreya, who presented the hidden meaning of the Perfection of Wisdom Sutras. What is the definition of a clarifier or charioteer? The definition is in several parts: (1) a being having a human body, (2) someone who does not need to depend on another person’s commentary, (3) someone who is able to comment on the sutra by his own capacity/force, (4) someone who was prophesied by Buddha himself, and (5) someone who is a Mahayana virtuous friend. According to this definition we can only point out Nagarjuna and Asanga as charioteers, since Maitreya is not qualified because he does not have a human body, but has the body of a god.

(5) When the Ornament is divided into sections, the first is that of Maitreya’s text. This is because Maitreya, in order to behave in accordance with other holy beings, first pays homage to the three exalted knowers. As a result of this section on Maitreya’s text there come sub-divisions about Maitreya concerning his aspiration for his own and others welfare. There is much debate about Maitreya as to whether he is a bodhisattva dedicated only to the welfare of others without thought of himself, or whether he also fulfills his own welfare. Our own system says that he also has an aspiration for his own purpose which is achieved through attaining the truth body.

Then there is a discussion as to whether Maitreya is a bodhisattva or a buddha. There are said to be two appearances, the common and uncommon. According to common appearance we say Maitreya was a bodhisattva; this refers to the appearance shared by the two levels of disciples, the sharp and dull facultied. Uncommon appearance refers to reality; that Maitreya is in fact a buddha. Common appearance is at a gross or ordinary level of appearance, the appearance of Maitreya as a bodhisattva to both levels of disciples. Also in this section there is a discussion as to whether there are two different Maitreyas and if so which one composed the Ornament. Although there are these arguments, the conclusion is that Maitreya is a bodhisattva to the common appearance of the disciples, but in reality or to uncommon appearance he is a buddha. Then, whether he is a buddha or a bodhisattva, he definitely has an aspiration for his own welfare to achieve the truth body. He has the aspiration for this personal welfare because he seeks the truth body and he has the aspiration for others welfare because he seeks the form body. By achieving these two bodies he achieves both his own and others welfare. The truth body is a body that fulfills one’s own welfare while the form body is a body that fulfills others’ welfare. In this same section there is also a discussion concerning if Maitreya is a buddha whether he is an emanation body or an enjoyment body. The conclusion is that he is an emanation body. Emanation bodies are of three types: emanation body through birth, supreme emanation body, and emanation body of an artisan. The conclusion of the discussion is that Maitreya is an emanation body through birth. If we examine Maitreya in terms of the twelve deeds he is said to be at the first one. The twelve deeds are performed by a supreme emanation body, and Maitreya is just about to manifest the twelve deeds. There are two versions about the first deed, one is that the fact that Maitreya took rebirth in the Joyous Land as a son of a god is already the first of the twelve deeds. The second version is the fact that Maitreya’s coming down from the Joyous Land to Bodhgaya is the first of the twelve deeds.

We can talk about a Maitreya in three contexts: as a bodhisattva he is called Bodhisattva Maitreya, as a god living in Joyous Land he is called Venerable Maitreya, and as the future buddha he is called Buddha Maitreya.

(6) Then there is the root text on page 3 of the translation which begins ‘that which through the exalted knower of all...’ In this section there is a discussion of the support, method and result of a knower of bases, the support, method and result of a knower of paths, and the support, method and result of omniscient mind. In relation to each of these there is a particular syllogism. With regard to the three, the support, method and result, of a hearer the syllogism is: arya hearers and arya solitary realizers (subject) it is not true that they do not have a method for achieving total pacification (predicate) because in dependence on the knower of bases they actualize total pacification. These syllogisms were covered before (see January 22nd transcript).
(7) Then comes a section on the three exalted knowers because here Maitreya praises to them at the beginning of his text, Ornament. Then come arguments as to why they are mentioned, whether they include all eight categories, whether there are there definitely only three or whether there is the fault of there being more or less than three, and whether it would have been enough just to praise omniscient mind without mentioning the knower of bases and the knower of paths. The reply is that would not have been enough to mention just omniscient mind. In brief, all three need to be expressed because the three are necessary to fulfill the aims of the four arya sons. They are mentioned sequentially because the knower of bases fulfills the aims of arya hearers and arya solitary realizers, because the knower of paths is the means by which an arya bodhisattva accomplishes the wishes of others, and because the knower of aspects is accomplishes the wishes of arya buddhas. In addition, the three exalted knowers include all eight clear realizations in terms of practice. If one practices the three exalted knowers thoroughly one also necessarily practices all eight clear realizations thoroughly. If one desires the three exalted knowers one also desires the eight clear realizations. In the root text it says ‘that which through the exalted knower of all’ here ‘all’ means ‘all bases,’ the bases being the sixteen attributes of the four noble truths. The four noble truths are an object of practice of a beings of small and middling scope. A middling being meditates on true sufferings which lead to the aspiration for liberation. Without meditating on true sufferings it is not possible to generate the aspiration for liberation. A middling being should also meditate on true origins to understand how karma and delusions are the cause of cyclic existence. Such a person then comes to realize that it is possible to eliminate true sufferings and true origins and achieve liberation, true cessations, and that this can be achieved by way of true paths.

The middling being meditates on the shortcomings of the human realm, in terms of three, six, and eight divisions of suffering. The eight sufferings of human beings are birth, aging, sickness, death, not encountering pleasant objects, encountering unpleasant objects, not finding desired objects, and possessing contaminated aggregates. The suffering of birth starts in the intermediate state when one is looking for a place to be born. This intermediate state being has many hindrances to reaching a place of copulation and even when this being overcomes the interferences he then experiences the sufferings of conception and development in the womb. This suffering in the womb lasts a bit more than nine months. At first there is subtle suffering but later on, when the sense organs are fully developed, the fetus experiences gross suffering. These sufferings include being in darkness, not being able to stretch the limbs, and being enveloped in impure substances. With respect to this suffering there are five wrong perceptions.

Then during the actual birth, once again the child experiences suffering. In fact, the pain of being squeezed between two bones is said to be like pulling a thick piece of leather through a small hole. You can imagine what it would be like to be closed up in a bag or box in which there is a lot of rubbish and dirty water. In this way we will understand that we would not like it and would want to get out of this situation. We should meditate on the suffering of birth like this. Then having been born one experiences more suffering, such as that of being touched by soft cloth which feels as rough as thorns to a newborn child.

Then there is the suffering of aging. Generally aging is understood to refer to an old person with gray hair, wrinkled face, etc. However, aging refers to the subtle changes that take place in the body from the time of conception onward. The body of the new being changes momentarily and with time the flesh ages and one clearly becomes an old person with gray hair, missing teeth, loose skin, sagging breasts, etc. We are very fortunate that the changes happen slowly, for if they were to happen suddenly we would be very shocked and experience much suffering. In fact, if we were suddenly to go from the physical body of a youth of sixteen years to an old person of eighty years we would risk having a heart attack upon seeing ourselves. So fortunately for us aging happens gradually. Even internally the four constituents and the five hollow organs become loose, the blood loses its energy, the bones lose vitality, and the veins and arteries lose their strength. Although the suffering of aging is a fact of life there are people who are afraid of getting old and try to find a method to prevent aging. They try facial and body creams, plastic surgery to stretch
loose facial skin, etc. but whatever method they use it does not last. People apply these methods to stop the appearance of old age because they are unable to bear the suffering of becoming old.

In short, we should meditate on the true nature of our contaminated body, in this way meditation on true sufferings will reveal the nature of our body, the suffering of aging, and we will generate the wish to become free from this contaminated body and attain an uncontaminated body.

END
Monday afternoon class, February 9, 1998

2B2B-2A2B-2 The four trainings
A  Training in all aspects
B  Peak training
C  Serial training
D  Momentary training

2B2B-2A2B-2A Training in all aspects/complete training in the aspects

The definition found here in Gyeltsab Je’s commentary is slightly different from that found in Seventy Topics. The definition of complete training in the aspects is: a yoga of heroic mind sustained by a wisdom meditating on the aspects of the three exalted knowers. In Seventy Topics it says ‘a yoga of a heroic mind conjoined with a wisdom that meditates by gathering the aspects of the three exalted knowers.’ In Seventy Topics it says that complete training in the aspects is a synonym of the exalted knower of a bodhisattva.

In general, there are eight pervasions between the definition and the definendum, the complete training in the aspects. The eight are divided into two groups of four, called A and B. The first group is: if it is A it is necessarily B, if it is B it is necessarily A, if it is not A it is necessarily not B, and if it is not B it is necessarily not A. The second group is: if A exists ,B necessarily exists; if B exists, A necessarily exists; if A does not exist, B necessarily does not exist, and if B does not exist, A does not exist. Here A and B refer to the definition and the definendum.

Then comes the question: if it a complete training in the aspects is it necessarily meditation on the aspects of the three exalted knowers? If someone answers yes, then one can ask: does the exalted knower of a bodhisattva on the path of seeing, which realizes the selflessness of persons, directly meditate on the aspects of the three exalted knowers? In other words, does such a person meditate on the aspects of omniscient mind, the aspects of the knower of paths, and the aspects of the knower of bases? I mention this here to show that there is some discussion in regard this topic. In the same way we can begin to discuss whether the conventional bodhichitta existing in the continuum of a bodhisattva on the path of accumulation meditates on the aspects of the three exalted knowers. If someone answers no, then one can say it should be so because it is a complete training in the aspects. If someone says there is no pervasion, one answers that there should be pervasion because the definition here is a heroic mind sustained by a wisdom meditating on the aspects of the three exalted knowers. Someone may answer that the reason is not established, in other words, that the conventional bodhichitta in the continuum of a bodhisattva on the path of meditation is not a complete training in the aspects. This response can be denied with the question: is it not a complete training in the aspects of a bodhisattva? It is a complete training in the aspects because it is an exalted knower of a bodhisattva. If someone answers “it is not an exalted knower in the continuum of a bodhisattva’ then one can ask: is it not an exalted knower of a Mahayanist? If again the answer is no, then one can ask: are there not two aspects of the exalted knower in the continuum of a Mahayanist? There should be because one aspect is method, while the other is wisdom.

With respect to the two definitions above by Gyeltshab and Chokyi Gyeltsen of a complete training in the aspects we can say that there is a difference in the way they are posited: ‘meditating on the aspects of the three exalted knowers’ and ‘meditating by gathering the aspects of the three exalted knowers.’ There is a difference between these two. For example, if we ‘meditate by gathering the aspects of the three exalted knowers’ we do not necessarily meditate on the aspects of the three exalted knowers. We can posit an example of meditating by gathering the three exalted knowers that is not meditating on the three exalted knowers: the wisdom directly realizing emptiness in the continuum of an aryabodhisattva. This wisdom meditates by including the aspects of the three exalted knowers but it does not meditate on the aspects of the three exalted knowers. Why does the wisdom directly realizing emptiness in the continuum of an aryabodhisattva not meditate on the aspects of the three exalted knowers? Because it does not
meditate on the aspects of a knower of bases. This is because it does not meditate on any of the sixteen attributes of the four noble truths. Furthermore, none of these sixteen attributes appears to this wisdom directly realizing emptiness in the continuum of an arya bodhisattva. That which appears to this wisdom is only the aspect of emptiness.

Then comes the question: does not the wisdom realizing emptiness in the continuum of an arya bodhisattva meditate on a knower of bases? Even if someone says no, we say yes it does, because it meditates on an aspect of a knower of bases. Answer: there is no pervasion. Then we say: it is said in *Golden Rosary* by Lama Tsongkhapa that if a yogi meditates on impermanence he necessarily meditates on the exalted wisdom realizing impermanence, otherwise it would be like throwing away his object of meditation.

Then comes the question: what does ‘meditating by gathering the aspects of the three exalted knowers’ mean? It means that one meditates on all hundred and seventy-three aspects of the three exalted knowers on the basis of a union of calm abiding and higher seeing. Does this mean that when one meditates on the 173 aspects one goes through them serially or sequentially?

There is a second way of explaining ‘meditating by gathering the aspects of the three exalted knowers.’ According to this version it means to meditate on any of the aspects of the three exalted knowers in order to purify the aspects of the three exalted knowers. However, this is a subject of much discussion. The questions and answers mentioned here are only a verbal discussion, they do not appear in the text.

The first of the 173 aspects is impermanence. In *Ornament for Clear Realization* it says ‘beginning from the aspect of non-existence until the 173rd.’ The ‘beginning from the aspect of non-existence’ refers to impermanence, which is the first. The root text means that suffering is not permanent, i.e. one realizes that suffering is impermanent. The phrase ‘the aspect of non-existence’ comes from the transmission of the original Sanskrit. In *Commentary Clarifying the Meaning* it also begins with non-existence, non-generation, isolation, not trampling/oppressing, etc. as in the *Ornament*. In Gyeltsab Je’s text it says that complete training in the aspects has 173 divisions; this is because in the *Perfection of Wisdom Sutras* it says that the three exalted knowers have 173 aspects. This will be discussed in detail in the fourth chapter of the *Ornament* but just to give you some idea of the 173, first comes the 27 aspects of a knower of bases. These are in relation to the four noble truths: four are in relation to true sufferings, four in relation to true origins, four in relation to true cessations, and fifteen in relation to true paths. Then there are 36 aspects of a knower of paths; these too are in relation to the four noble truths: eight are related to true origins, seven to true paths, five to true sufferings, and sixteen to true cessations. Then there are 110 aspects of omniscient mind, the knower of all aspects: there are 37 aspects associated with hearers, 34 to bodhisattvas and buddhas, and 39 only to buddhas. 34 are common to both bodhisattvas and buddhas. The 37 aspects are the ‘thirty-seven factors/aids/harmonies for enlightenment.’ These thirty-seven are divided into seven groups: (1) four close placements of mindfulness, (2) four correct abandonments/thorough abandonings, (3) four legs of magical emanation, (4) five powers/faculties, (5) five strengths/powers, (6) seven branches of enlightenment, and (7) the eight fold noble path. These will be explained later on in detail, this list is just to give you an idea of what the thirty-seven are.

The 34 aspects common to bodhisattvas and buddhas are: the three paths of antidotes, the three paths of emanation, the five paths abiding easily on visible phenomena, the nine supramundane paths, the four paths similar to future paths (on the uninterrupted paths one abandons certain objects of abandonment and then achieves the liberated paths which are similar to the ones that exist in meditative equipoise), and the ten paths of buddhas (the ten perfections). The 39 aspects associated only with buddhas are: the ten powers/strengths (tob shi), the four fearlessnesses, the four correct individual perceptions, eighteen unshared qualities of a buddha, the aspect of thusness, innate aspect or self-produced aspect, and the aspect of a buddha itself. When these groups are added together (27+36+110) there are 173 aspects. Lama Zopa suggested that all FPMT centers study the fourth chapter of the *Ornament* in the Basic Program since this chapter discusses these 173 aspects which are to be meditated on. For example, among the thirty-
seven factors for enlightenment are the four close placements of mindfulness which are to be meditated on.

There are 173 aspects that are objects, known as meaning-aspects (that which is to be known), and 173 knowledge-aspects, or subjects (that which knows). In Gyeltsab’s commentary it says that the boundary of training in complete aspects is from the Mahayana path of accumulation up to the end of a sentient being’s continuum.

The one can ask: why meditate on these? One meditates on or completely trains in the aspects in order to gain control over all three exalted knowers. complete training in the aspects is accompanied by the second training, that of peak training. Peak training is meditation after having gained control over the aspects of the three exalted knowers.

2B2B-2A2B-2B Peak training

The definition of peak training is: a yoga of a heroic mind which is an excellent meditation on the aspects of an exalted knower sustained by a wisdom arising from meditation that observes emptiness.

The definendum is peak training itself. Gyeltsab says that at this point ‘one has gone to the peak,’ which is what is said in the *Ornament*. The definition given here is slightly different from that in *Seventy Topics* which says: a yoga of a heroic mind sustained by a wisdom that is higher than the Mahayana path of accumulation that meditates by gathering the aspects of the three exalted knowers. *Seventy Topics* says ‘peak training’ and ‘achievement through engaging’ are synonyms.

In Gyeltsab’s text it says that when they are summarized there are four divisions of peak training, but when they are elaborated there are 173. The four are peak training on the path of preparation, peak training on the path of seeing, peak training on the path of meditation, and peak training without interruption. The 173 are as in the case of the training in complete aspects. The peak training on the path of preparation is divided into four which are the four levels of the path of preparation: heat, peak, patience, and highest mundane dharma. These four levels are different in terms of name but otherwise are the same in being the path of preparation.

The boundary of peak training is that it ranges from the heat level of the Mahayana path of preparation to the end of a sentient being’s continuum (this is on the tenth ground). When someone is on the peak training one has already gained control over the aspects of the three exalted knowers. What does gaining control over the aspects mean? It means that within a single meditation session one is able to go through all 173 aspects without making any mistake in their order or meaning. This means that someone on the path of accumulation is not able to meditate in the same way as someone on the path of preparation. On the path of accumulation one can go through the 173 aspects but one is not able to go through them correctly in one session because some are left out, etc. However, someone on the path of preparation is able to go through them in one session. This means that we have to meditate on ourselves, checking whether we are permanent or impermanent. We will come to the conclusion that we are impermanent because we are born. If there is birth there is death, if there is gathering there is dispersion, if there is elevation there is falling down, and if there is collection there is exhaustion/end. For example, even if we earn some money it inevitably comes to an end. Through this illustration we should meditate more deeply on impermanence. We should meditate on impermanence when we find ourselves having problems thinking that they will definitely end. This will make things easier for us.

Tuesday morning class, February 10, 1998

2B2B-2A2B-2C Serial training

Gyeltsab’s commentary contains the definition of a serial training: a yoga of a heroic mind/bodhisattva that meditates serially in order to attain stability in the aspects of the three exalted knowers.
‘To attain stability’ means that one can meditate on all 173 aspects of the three exalted knowers in one short instant of a complete action. This short instant of a complete action is the duration of a finger snap. It is called a complete action because a finger snap is a complete action. This finger snap has to be done by a person who is neither extremely strong nor extremely weak. A bodhisattva on the tenth ground is able to meditate on the 173 aspects in this short instant. Then there is the ‘instant of the end of time’ which is one sixty-fifth of a finger snap. Only an arya buddha can go through the 173 aspects in such a short amount of time.

Serial training has thirteen divisions composed of three groups: one group of the six serial trainings in the six perfections, each perfection has its serial training; the six serial trainings in the six subsequent remembrances, these are to remember the Buddha, Dharma, Sangha, generosity, morality, and the gods; and the serial training in the very entity of non-functioning things. This means serial training in emptiness. Saying non-functioning things indicates that no phenomena exist truly. These are just mentioned here but will be covered in detail in the sixth chapter of the Ornament.

The boundary of serial training is that it exists from the Mahayana path of accumulation up to the end of a sentient being’s continuum. Gyeltsab says something slightly different but the meaning is the same. Sometimes definitions differ slightly from one text to another. The definition of serial training in Seventy Topics is: a yoga of a bodhisattva that is sustained by the wisdom that meditates serially on the aspects of the three exalted knowers in order to attain stability on these aspects. Serial training is divided into thirteen: the six perfections, six subsequent remembrances, and emptiness.

In Gyeltsab’s text it says ‘serially’ which appears on the root text.

2B2B-2A2B-2D Momentary training

The definition of momentary training is: a final yoga of a heroic mind/bodhisattva that arises through the force of serial training. The definendum is momentary training itself. In the Ornament it is referred to saying ‘clear complete enlightenment in one moment.’ It has four divisions. The boundary of momentary training is that it exists only at the end of the continuum of a sentient being. This is how Gyeltsab defines momentary training. In Seventy Topics by Chokyi Gyeltsen it is defined as a final yoga of a heroic mind that has gained stability in the aspects of the three exalted knowers. It is a synonym of the exalted wisdom of the end of a sentient being’s continuum.

The four divisions are:
(1) fully ripened momentary training
(2) non-fully ripened momentary training
(3) momentary training without characteristics
(4) non-dual momentary training

An elaborate explanation of these will come in the seventh chapter.

In this way we have gone over the four trainings.

2B2B-2A2B-3 Truth body

The definition of truth body is: a final result that is obtained by the force of meditating on the aspects of the three exalted knowers. The definendum is truth body. In the Ornament it says ‘and the truth body.’ It has four divisions. Its boundary is that exists only on the buddha ground.

The definition in Seventy Topics is slightly different: a final result attained by the force of meditating on the aspects of the three exalted knowers which is the method for attaining it (the
truth body). Truth body and buddha are synonyms. It has four divisions. It exists only on the buddha ground.

The four divisions are:

1. the nature body
2. wisdom truth body
3. enjoyment body
4. emanation body

These four are also counted in another order: the nature body, enjoyment body, emanation body, and wisdom truth body. The reason for counting the four in the second way is simply to present the uncontaminated activities of the wisdom truth body immediately after mentioning it. This too will be explained in detail later on.

All we have done so far is to count the eight categories. These are mentioned in the translation of the root text, the *Ornament*, on page eleven in the translation of the *Commentary Clarifying the Meaning*, saying ‘these are the eight.’

In Gyeltsab’s commentary it says that there are definitely only three exalted knowers because sentient beings have two purposes, that of attaining liberation and that of attaining the omniscient state. For those seeking liberation, the hearers and solitary realizers, it is enough to have the knower of bases in order to achieve this goal. These two Hinayana followers meditate on the four noble truths together with their sixteen attributes. To do this the knower of bases is sufficient. Bodhisattvas also need to generate a knower of bases that meditates on the four noble truths and their sixteen attributes. The knower of bases is indispensable for a bodhisattva. Bodhisattvas need to meditate on the sixteen attributes in order to be able to guide those who follow the hearer and solitary realizer paths. Bodhisattvas also need to meditate on the four noble truths to make their mind depressed about cyclic existence. Bodhisattvas need to know the bases, the sixteen attributes of the four noble truths, in order to develop depression with respect to cyclic existence. They do this to attain enlightenment, therefore bodhisattvas need to know the path that leads to enlightenment. Bodhisattvas also need to know the three paths of the three vehicles in order to accomplish the aims of the world. Without knowing these three paths they cannot act appropriately. This shows why the knower of paths is necessary.

Omniscient mind, the knower of all aspects, is necessary for turning the wheel of Dharma for the three classes of sentient beings.

In addition, from the point of view of accomplishing the aims of the four arya sons, there need to be three exalted knowers. Also in terms of the practice of a Mahayanist three exalted knowers are necessary. It says in a text by Arya Vimuktisena: “A bodhisattva trains in the paths of hearers and solitary realizers indirectly. A bodhisattva on an uninterrupted path of the path of seeing realizes the emptiness of true existence and also realizes all sixteen attributes. Therefore, in post-meditation a bodhisattva has realized not only emptiness of true existence but also the sixteen attributes, impermanence and so forth.” It also says: “The Mahayana path of preparation is a cause for all the realizations of the three vehicles.” The Mahayana path of preparation is superior to the Hinayana for either five or six reasons: object, aspect, cause, tutor, division, and abandonment. Here we are looking at cause. The Mahayana path of preparation is a cause for attaining a hearer’s realization of the selflessness of persons, a solitary realizer’s realization of non-duality, and a bodhisattva’s realization of the emptiness of true existence of the three paths. The Mahayana path of meditation is able to bring about a realization of a particular class, either the hearer, solitary realizer, or bodhisattva class. The sixth reason is optional because it refers to the object of abandonment of a Mahayana path of preparation which is the obscuration to omniscience called the ‘conception associated with the apprehended object.’ The Hinayana path of preparation does not abandon this obscuration. There are four kinds of conception that are obscurations to omniscient mind.
Gyeltsab says that the trainings are definitely only four. In order to destroy all the obscurations to liberation and omniscient mind one has to meditate on the aspects of the three exalted knowers. For the purpose of meditating on the three exalted knowers, the first two trainings are necessary. Complete training in the aspects is necessary because it involves familiarizing with the aspects of the three exalted knowers which is done in order to attain stability in these aspects. This is why it is called complete training in the aspects. The second is necessary because, having attained stability, one has to perfect it. This is peak training. The first training is a cause to achieve stability and the second cultivates this stability. Serial training is necessary to make the meditation even more stable. With the first training one gains familiarity, with the second one perfects that familiarity, and with the third one tries to stabilize this familiarity. The fourth, momentary training, seeks the attainment of the truth body. In order to attain the truth body within one instant one needs to train in it. Someone who develops momentary training is able to have all 173 aspects appear to his mind just by having the appearance of a single aspect, for example, impermanence. For the purpose of attaining total stability, one needs momentary training. In the first training one gains familiarity, in the second one perfects that familiarity, in the third one stabilizes that familiarity, in the fourth one gains total stability on the 173 aspects.

Clarification: in serial training one meditates on the 173 aspects in order. In momentary training not all 173 aspects appear at once to the bodhisattva but while he meditates on one aspect, such as impermanence, all other aspects that belong to that class also appear.

There are four divisions of momentary training, fully ripened, non-fully ripened, etc. When a bodhisattva meditates on the fully ripened momentary training all phenomena of this class appear to the mind and when meditates on the non-fully ripened all phenomena of this class appear. This is a rough presentation, it will come again in greater detail in the eighth chapter.

The eighth category is the truth body, a result.

Gyeltsab’s text says that the Great Commentary by Simhabhadra presents the eight categories as follows: omniscient mind, knower of paths, knower of bases, complete training in the aspects, peak training, serial training, momentary training, and the truth body. The Great Commentary says: ‘Just as it is explained by the one who reflects over the abandonment of pretention and dissimulation, with respect to the Perfection of Wisdom, an omniscient mind realizes all phenomena as illusions.’ Here, there is a connecting phrase which is ‘just as... dissimulation’.

The Great Commentary qualifies each of the eight categories:
- the omniscient mind perceives or realizes sequentially
- the knower of paths analyzes thoroughly
- the knower of bases engages
- complete training in the aspects acts as bridge for realizing
- peak training thinks
- serial training sees
- momentary training realizes things closely/in detail
- the truth body meditates (when the truth body is achieved enlightenment is attained)

A bodhisattva meditates on the eight categories sequentially and when he reaches the seventh he is no longer in difficulty because he is very near enlightenment. A bodhisattva does not find it difficult to attain all the naturally excellent qualities of the truth body and to actualize virtuous activities of the emanation body of buddha, those of the complete enjoyment body, and all the characteristics of the truth body. In brief, this means that when he has attained momentary training it is no longer difficult to attain the four bodies of a buddha.

Gyeltsab says: ‘The three exalted knowers are listed above in the order in which they are explained: omniscient mind, knower of paths, and knower of bases. This is the order of
explanation while the final object to be attained is omniscient mind. Knowing that the omniscient mind is the final object to be attained one understands that to get there one needs the knower of paths. Then one discovers that in order to attain the knower of paths one must first generate a knower of bases which knows the sixteen attributes of the four noble truths. This is the practice of a being of middle capacity/scope. Gyeltsab says that if we talk about the three exalted knowers in the order in which they are generated then the knower of bases comes first. One meditates on the sixteen attributes of the four noble truths, then develops a knower of paths, then achieves omniscient mind, which includes the ten topics.

In regard to the first two trainings, complete training in the aspects and peak training, can be said to be like cause and result because one first generates a complete training in the aspects before going on to develop peak training. Also the serial training and momentary training are like cause and effect because first one generates serial training followed by momentary training. Gyeltsab says the first and third trainings are in the order of generation but it is a bit ambiguous. Our system asserts that the training that is the main subject of the fourth chapter and the training that is the main subject of the sixth chapter are in the order of their generation. Generally speaking complete training in the aspects and serial training can not be put in the order of generation, i.e., first complete training followed by serial training.

Tuesday afternoon class, February 10, 1998

Gyeltsab says that although the eight categories are explained in a particular order, they are not set out in terms of the order in which they are generated. Why are there definitely only eight categories? Because there are four trainings which are the subject, that which meditates, three exalted knowers which are the object of meditation, and one result, the truth body. With these four trainings one ascertains all the aspects of the three exalted knowers and as a result one achieves the truth body.

2B2B-2B Extensive explanation
(see outline 4)
1 Explaining the bodies of the three exalted knowers
2 Explaining the body of the four trainings
3 Explaining the body of the truth body

2B2B-2B1 Explaining the bodies of the three exalted knowers
A Explaining the body of the exalted knower of aspects
B Explaining the body of the exalted knower of paths
C Explaining the body of the exalted knower of bases

2B2B-2B1A Explaining the body of the exalted knower of aspects
1 Nature of the ten topics
2 The way they indicate the exalted knower of aspects
3 Sequence of ascertainment
4 Connecting [the brief] illustration and the [extensive] explanation

2B2B-2B1A-1 Nature of the ten topics

Mind generation, precepts, four types of limbs of definite discrimination, the nature of the expanse of phenomena, which is the support of achieving, referents, intent, armor, activities of engaging, collections, and definite issuance: these together are the Subduer’s very exalted knower of all aspects.

This is divided into:
A Promising in thought
B Precepts showing the methods which achieve the aim of that
C Achievements which accomplish the aim of the promise

2B2B-2B1A-1A Promising in thought
This talks of the first of the ten topics, mind generation. Gyeltsab says that mind generation has a definition but it will come later on. However, just to mention it now the definition of mind generation is: a special mind wishing to attain the complete enlightenment for the welfare of others. In Seventy Topics the definition is more elaborate: (1) a special Mahayana primary mental cognizer (2) that is highly distinguished by abiding within the class of a path that is a gate to the Mahayana path, and (3) that arises simultaneously with an aspiration observing complete enlightenment for others' welfare which is a companion to it (the mind generation). ‘Companion’ refers to the aspiration. Gyeltsab says the definendum is the mind generation itself. In the Ornament it just says ‘Mind generation’ (page 11, italics), showing that this is the definendum. It has 22 divisions. The boundary is the Mahayana small path of accumulation up to the buddha ground. These twenty-two divisions are set out in terms of example, companion, and combining the order of the path with the mind generation. For example, the Mahayana small path of accumulation is combined with the first mind generation, the ground-like mind generation. A person with this mind generation has a vast ground upon which all future realizations can grow. Then there is the gold-like mind generation, the crescent moon like mind generation, the fire-like mind generation, and so forth. There are twenty-two on the basis of example, companion, and a combination of the levels of the path and the mind generation.

If mind generation is divided in terms of its entity there are two: wishing mind generation and engaging mind generation. The wishing mind generation is compared to someone who wishes to go somewhere while the engaging mind generation is compared to someone who actually begins going there.

If mind generation is divided by way of boundaries there are four: the mind generation of using belief, pure extraordinary mind generation, fully ripened mind generation, and the mind generation of abandonment of obscuration. These four are combined with the path. For example, on the path of accumulation and the path of preparation there is the mind generation of using belief since at these levels belief is emphasized. Then from the first up to the seventh ground there is the purely extraordinary mind generation, from the eighth to the tenth the fully ripened mind generation, and on the path of no-more-learning the mind generation of the abandonment of obscuration.

Mind generation can also be divided into three in dependence on how it is generated: the king-like mind generation, the captain-like mind generation, and the cowherd-like mind gen. A king wants to be king in order to take care of his subjects; this is compared to one type of mind generation. The captain-like mind generation is that mind generation that thinks to take all sentient beings from one shore to another at the same time as oneself, like a captain and his passengers. The cowherd-like mind generation is that mind generation which is similar to a cowherd who takes care of his animals before himself by, for example, first putting his herd of sheep in the yard at the end of the day and only then going home.

The definition of precepts is: a speech instructing an unmistaken method for attaining the object sought by the Mahayana mind generation. The definendum is the precepts themselves; in the Ornament it says ‘precepts.’ Precepts has ten divisions. The object sought by the Mahayana mind generation is complete enlightenment for the sake of others. To achieve this goal one needs to depend upon a precept which explains how to go about it. The definition according to Chokyi Gyeltsen is: Mahayana speech that presents methods for achieving the object sought by the Mahayana mind generation. This definition just leaves out the word ‘unmistaken.’

When precepts are divided by entity there are two: (1) Mahayana precepts giving advice about increasing those Mahayana excellent qualities that have already been acquired and (2) Mahayana precepts giving advice about developing those Mahayana excellent qualities that have not yet been acquired. In other words, these precepts give advice about how to develop qualities that have already been developed and about how to develop new qualities that have not yet been developed.
Gyeltsab says there are ten divisions of precepts:

1. precepts on the entity of the very achievement
2. precepts on the four noble truths which are the object
3. precepts on the Triple Gem
4. precepts on the effort of not clinging to trivial worldly activities
5. precepts on the effort of total lack of tiredness
6. precepts on thoroughly holding the path
7. precepts on the five eyes
8. precepts on the six clairvoyance
9. precepts on the path of seeing
10. precepts on the path of meditation

These ten are in terms of how they were taught/given. Gyeltsab says such precepts exist from before entering the Mahayana path of accumulation up to the buddha ground. Chokyi Gyeltsen says precepts exist from before entering the Mahayana path up to the buddha ground. Gyeltsab says that precepts are mainly the speech of Buddha. This means, for example, that although the Commentary Clarifying the Meaning is an instruction/a precept it is not the speech of Buddha.

2B2B-2B1A-1C Achievements which accomplish the aim of the promise
1. Identifying the initial achievement arising from meditation which realizes emptiness
2. Presentation of the general achievements

2B2B-2B1A-1C1 Identifying the initial achievement arising from meditation which realizes emptiness

This refers to the path of preparation which is called ‘the branch of definite discrimination.’ The definition of the branch of definite discrimination is: any Mahayana clear realization that is generated after that which is similar to liberation (the path of accumulation) and belonging to the ground of using belief. This means that the path of preparation is that which comes after the path of accumulation. However, saying that it ‘belongs to the ground of using belief’ (i.e., the ground on which belief is emphasized) avoids the confusion of thinking that the path of seeing is the same as the branch of definite discrimination, the path of preparation. The branch of definite discrimination is divided into four: (1) heat, (2) peak, (3) patience, and (4) highest mundane dharma.

In terms of the path of preparation’s relation to the three wisdoms it is asserted that someone on the path of preparation has the wisdom arisen from meditation on emptiness.

Why is the first level called ‘heat’? Someone who reaches the path of preparation has the wisdom arisen from meditation on emptiness which begins to ‘burn’ the obscurations to omniscience. Like fire heats up and then burns wood at this point there is the heat of the fire that will burn these obscurations; therefore it is called heat.

Why is the second level called ‘peak’? Someone who has reached this level is free from the risk of cutting his roots of virtue by wrong view; therefore it is called peak. Why is the third level called ‘patience’? Someone on this level is definite not to fall to the lower realms, therefore he is no longer troubled by this risk. Why is the fourth level called ‘highest mundane dharma’? At this point one has achieved the highest of mundane or worldly qualities. Mundane or worldly qualities refers to the qualities of ordinary sentient beings. After this level such one becomes an arya.

2B2B-2B1A-1C2 Presentation of the general achievements
A. Support of achieving
B. Supported achievements [explained by means of]

2B2B-2B1A-1C2A Support of achieving

Gyeltsab says that the definiendum is the support of achieving which is a naturally abiding Mahayana lineage that is the support of Mahayana achievement. The definition of a support of achieving is: an expanse of phenomena that serves as a basis for a Mahayana achievement. In short, it is a dharmadhatu, an emptiness, that acts as a support or basis for Mahayana
achievement. It has the thirteen divisions mentioned here plus the Mahayana path of accumulation: (1-6) the group of six realizations, the four levels of the path of preparation (heat, peak, patience and highest mundane dharma), the path of seeing, and the path of meditation, (7) the achievement of antidote, (8) abandonment, (9) thorough arrival at an end, (10) wisdom with mercy, (11) achievement of uncommon disciples, (12) putting others purpose in order, and (13) achievement of engaging in activities without the effort of exalted wisdom. To these are added the path of accumulation which is not listed here. Gyeltsab says this is like the support which leads to the next level.

Gyeltsab says the boundary is that it exists from the heat level up to the end of the continuum of a sentient being. However, in general it can be said to exist from the path of accumulation up to the end of the continuum of a sentient being.

When this is summarized one can ask: what is buddha nature? It is a phenomena that transforms into a buddha body. The buddha nature that is a naturally abiding lineage which we presently possess is the nature of the mind. When the mind transforms into a buddha’s mind it is without stains, this naturally abiding lineage becomes the nature body. The definition of a nature body is a final expanse possessing the two purities. There are two purities because we have two stains, the natural and the incidental. When removed they become the two purities. The natural stain more precisely refers to the object of negation which is true existence. When this object is removed then this stain is removed. The incidental stain refers to an actual stain or obscuration which can be an afflicted obscuration or an obscuration to knowledge. In general, the nature of our mind is free from the natural stain while our mind is obscured by incidental stains. Whenever the mind becomes free from the incidental stains it also becomes free from the natural stains. In regard to this there is a stanza that says: ‘the nature of the mind is clear light and stains are only incidental.’ This means that our obscurations are only incidental and can be removed.

Wednesday morning class, February 11, 1998

1 Referents of achieving
2 Objects of intent [of achieving]
3 Divisions of achieving [the four achievings]

2B2B-2B1A-1C2B-1 Referents of achieving

The referents of achievements will now be discussed. What are these? The definition of a referent of achievement is: the basis upon which superimposition concerning achievement is to be eliminated. This is according to Gyeltsab Je’s text, while Chokyi Gyeltsen says: a basis upon which superimposition on a Mahayana achievement is to be eliminated. A referent of a Mahayana achievement is a synonym of object of knowledge. Gyeltsab quotes the root text saying ‘referents’ which is the definendum of the previous definition. Gyeltsab says a referent of a Mahayana achievement has eleven divisions:

(1) virtue
(2) non-virtue
(3) unpredicted/neutral
(4) five mundane aggregates
(5) four supermundane concentrations
(6) five contaminated aggregates
(7) four uncontaminated close placements of mindfulness
(8) three compounded elements
(9) uncompounded thusness
(10) four common concentrations
(11) uncommon ten powers of a buddha
Objects of intent [of achievement]

The definition of an object of intent is: a final result from engaging in an achievement which is an object of intent. Chokyi Gyeltsen says it is: a final result from engaging in an object of intent. Here there is nothing mentioned in the root text of the Ornament but it is understood. Object of intent is divided into three. The boundary is that it exists only on the buddha ground. The three divisions are the great ones:

(1) great heroic mind
(2) great abandonment
(3) great realization

Illustration of each of these three great ones are:

- for great heroic mind: great compassion in the continuum of an ary buddha
- for great abandonment: true cessations that are free from the two obscurations, afflictive obscurations and obscurations to knowledge
- for great realization: the wisdom realizing the selflessness of persons and selflessness of phenomena in the continuum of an ary buddha

Divisions of achieving [the four achievements]

Before going through the four divisions, achieving or achievement is defined as follows. The definition of an achievement is: an action for achieving the three great ones in dependence on a Mahayana mind generation. Although it is divided into four Gyeltsab Je’s text does not mention this. The divisions of the achievements are:

(1) armor-like achievement
The definition of an armor-like achievement is: an action of a bodhisattva who practices by gathering the six perfections into each other. This means that one practices the six perfections by gathering all six into each perfection. Chokyi Gyeltsen says: it is yoga of a heroic mind sustained by a great mental action wishing to practice by gathering the six perfections into each other. Armor-like achievement is divided into six:

(1) the armor-like achievement of generosity
(2) the armor-like achievement morality
(3) the armor-like achievement patience
(4) the armor-like achievement effort
(5) the armor-like achievement concentration
(6) the armor-like achievement wisdom

These six divisions are condensed but when elaborated there are thirty-six divisions: they are posited by combining the six perfections into each other: the armor-like achievement of the generosity of generosity, the armor-like achievement of the morality of generosity, the armor-like achievement of the patience of generosity, the armor-like achievement of the effort of generosity, the armor-like achievement of the concentration of generosity, the armor-like achievement of the wisdom of generosity, the armor-like achievement of the generosity of morality, the armor-like achievement of the morality of morality, the armor-like achievement of the patience of morality, the armor-like achievement of the effort of morality, the armor-like achievement of the concentration of morality, the armor-like achievement of the wisdom of morality, and so on for each of the remaining perfections. Gyeltsab says the boundary is from the Mahayana path of accumulation up to the end of the continuum of a sentient being.

(2) achievement of engaging
The definition of an achievement of engaging is: an action practicing by being a primary/principal training in any set of Mahayana causes and results. ‘Set’ means for example compassion, the cause, and the result to be achieved in the future. It has nine divisions. Chokyi Gyeltsen says the definition is: a yoga of a heroic mind which practices by way of being an effort principally in
training in any set of Mahayana causes and results. The nine divisions of an achievement of engaging concern that which is engaged in:

(1) four concentrations and four formless absorptions
(2) six perfections, generosity and so forth
(3) path
(4) four immeasurables, love and so forth
(5) objectlessness/non-observation
(6) three pure circles (in the case of generosity these are the donor, recipient, and that given)
(7) object of intent
(8) six clairvoyances
(9) omniscient mind

Gyeltsab says the boundary is from the ground of using belief up to the end of the continuum of a sentient being. Although it says ‘ground of using belief’ it actually ranges from the heat level of the path of preparation up to the end of the continuum of a sentient being. In fact, in Seventy Topics it says that the boundary is from the Mahayana heat level of preparation up to the end of the continuum of a sentient being. The path of accumulation and the path of preparation are said to be the ground of using belief. Perhaps Gyeltsab Je says the definendum ranges from the ground of using belief because when someone attains the heat level of the path of preparation he attains higher seeing and consequently a mental state called ‘preparatory state of appreciation/belief’ which is a mental activity that is a preliminary for higher concentration, in this preparatory state the term belief is mentioned.

(3) achievement of accumulation
The definition of an achievement of accumulation is: an activity which actually gives birth to the great enlightenment which is its own result. Chokyi Gyeltsen says that the definition is: (1) a yoga of a heroic mind that gives rise to its result (2) that is superior to all the lower paths from the middle level of the highest mundane dharma of the path of preparation downward, and (3) that does so by way of being sustained by the two vast accumulations. It has seventeen divisions:

(1) achievement of the accumulation of compassion
(2) achievement of the accumulation of generosity
(3) achievement of the accumulation of morality
(4) achievement of the accumulation of patience
(5) achievement of the accumulation of effort
(6) achievement of the accumulation of concentration
(7) achievement of the accumulation of wisdom
(8) achievement of the accumulation of calm abiding
(9) achievement of the accumulation of higher seeing
(10) achievement of the accumulation of the path of union of calm abiding and higher seeing
(11) achievement of the accumulation of method/skillful means
(12) achievement of the accumulation of exalted wisdom
(13) achievement of the accumulation of merit
(14) achievement of the accumulation of path
(15) achievement of the accumulation of retention
(16) achievement of the accumulation of ground
(17) achievement of the accumulation of antidote

This list comes again later in the Ornament together with an explanation of its meaning.

Gyeltsab says the boundary is from the great level of the highest mundane dharma of the path of preparation up to the end of the continuum of a sentient being.

(4) achievement through definite emergence
The definition of an achievement through definite emergence is: a yoga of a pure ground that definitely gives rise to omniscient mind. It has eight divisions. The boundary is that it exists only
on the three pure grounds. In Chokyi Gyeltser’s text the definition is exactly the same as that of Gyeltsab Je. The eight divisions of achievement through definite emergence are:

1. object of intent of Mahayana achievement
2. equality
3. performing the welfare of sentient beings
4. acting effortlessly
5. transcending the extremes of eternalism and nihilism
6. attaining the aims of the three vehicles
7. knowing all aspects/omniscient mind
8. object-possessor, or subject, of the path

These will all be elaborated on later on.

Gyeltsab says that the exalted knower of aspects represents the result omniscient mind but I will not elaborate upon this here. The Great Commentary by Simhabhadra says that the object represents the subject. The ten topics are the objects that represent omniscient mind, the subject. In order to have a general idea of the omniscient mind one can simply go through the ten topics. The ten topics represent omniscient mind, or the object represents the subject. The representation of the subject by the object is clearly explained in the Great Commentary.

The definition of omniscient mind is: a final exalted wisdom directly realizing the ten topics, mind generation and so forth. To make this definition more simple one can say that someone who realizes the ten topics realizes omniscient mind.

When the general corpus of the Mahayana path appears to the mind one will also know the nature of the result that is to be attained.

The support of a Mahayana achievement is explained here in the middle and not at the beginning for a purpose. With respect to the order of generating the support of Mahayana achievement, the naturally abiding lineage, should be mentioned first since this is the basis upon which one activates and then generates the mind of enlightenment, receives instruction, hears, reflects, meditates, and with the wisdom arisen from meditation then achieves the path of preparation whereupon the person has actually put the instructions into practice. On the path of preparation one meditates on the eleven objects of meditation. Why? One meditates on these in order to achieve the three great ones. How is this done? One meditates upon the four achievements sequentially. By practicing in this way one finally attains omniscient mind which directly realizes the ten topics.

Before we mentioned that buddha nature, the naturally abiding lineage, is explained in the middle; here middle is said because buddha nature is the fourth of the ten topics explained. It is mentioned after the path of preparation because having achieved the heat level of the path of preparation one becomes free from obstacles to activating the buddha nature. For this reason the buddha nature, or naturally abiding nature, is mentioned in connection with the path of preparation, the heat level, and that which is abandoned by the heat level. The four obstacles are:

1. much familiarity with the delusions,
2. being accompanied by misleading friends,
3. being deprived of the necessities for life,
4. being under the control of others, e.g., a king, a director, etc.

This is mentioned in Ornament for Sutra.

Wednesday afternoon class, February 11, 1998
We have gone through the corpus of omniscient mind which is represented by the ten topics.

2B2B-2B1A-4 Connecting [the brief] illustration with the extensive explanation

Who is the person who has the omniscient mind represented by the ten topics? Omniscient mind is found only in the support of an arya buddha. In the Ornament it says: ‘these together are the Subduer’s very exalted knower of all aspects.’

2B2B-2B1B Explaining the body of a knower of paths
1 Indicating the knower of paths by eleven topics
2 Connecting the illustration and the explanation

2B2B-2B1B-1 Indicating the knower of paths by eleven topics

_Eclipsing and so forth, those paths of disciples (hearers) and rhinoceroses, path of seeing - great benefit of qualities of this and other [lives], activity, belief, praise, veneration, and admiration, dedication, rejoicing, unsurpassed attention, achieving, and the so-called extremely pure is the path of meditation; the wise bodhisattva's knower of paths is explained like that._

This is divided into:
A Branches of a knower of paths
B Knower of paths possessing the branches

2B2B-2B1B-1A Branches of a knower of paths

Here the Ornament says ‘eclipsing and so forth’ which refers to the qualities of a knower of paths. The branches of a knower of paths are not defined in Gyeltshab’s commentary. However, there is a definition of a branch of a knower of paths in Seventy Topics: a special excellent quality sustained by great compassion which is included in any of the three, cause, entity, or result, of a knower of paths. There are five branches of a knower of paths:

1. being free from the obstacle of manifest pride
2. having activated the Mahayana lineage, the substantial cause
3. having generated the mind of enlightenment, the simultaneously acting or cooperative condition
4. having the nature of a knower of paths
5. having the function of a knower of paths

(1) Freedom from the obstacle of manifest pride
It is a question of dispelling others pride; the gods of the desire and form realms have light radiating from their bodies which makes them feel special and proud; however, when the Tathagata’s light shines down their light is eclipsed or dimmed. These five divisions are not clearly defined in Gyeltsab Je’s commentary but they are all mentioned.

2B2B-2B1B-1B Knower of paths possessing the branches

2B2B-2B1B-1B1 Knower of paths knowing the paths of hearer learners

The definition of a knower of paths knowing the paths of hearers is: (1) a realization that directly realizes objects [the sixteen attributes of the four noble truths], such as impermanence, and is qualified by three attributes; and (2) a clear realization that is an object to be trained in in order to guide hearer followers. The three attributes are: mind generation itself, dedication, and the realization of emptiness.

Chokyi Gyeltsen defines a knower of paths knowing the paths of hearers as: a Mahayana exalted knower abiding in the class of clear realization which is to be trained in in order to guide a
disciple of the hearer vehicle by way of being sustained by the three, mind generation, dedication, and the realization of emptiness. ‘Knower of paths knowing the paths of hearers’ and ‘exalted knower of a Mahayana arya which abides in the class of a hearer’s realization’ are synonyms. Such a knower of paths is of two types: (1) a knower of paths knowing the paths of hearers that exists in the continuum of an arya bodhisattva and (2) a knower of paths knowing the paths of hearers that exists in the continuum of an arya buddha. This specification is not mentioned by Gyetseb.

2B2B-2B1B-1B2 Knower of paths knowing the paths of solitary realizers

The definition of a knower of paths knowing the paths of solitary realizers is: (1) a realization that directly realizes objects as empty of external existence and that is qualified by three attributes, (2) a clear realization that is an object to be trained in in order to guide rhinoceros-like solitary realizers. Chokyi Gyeltsen’s definition is: an exalted knower of a Mahayana arya that belongs to the class of clear realization to be learned in order to guide the followers of the solitary realizer vehicle by way of being sustained by the three attributes. It has two divisions: a knower of paths knowing the paths of solitary realizers existing in the continuum of an arya bodhisattva and a knower of paths knowing the paths of solitary realizers existing in the continuum of an arya buddha. The three attributes are mind generation, dedication, and the realization of emptiness.

2B2B-2B1B-1B3 Knower of paths of bodhisattvas

A Great Vehicle path of seeing
B Great Vehicle path of meditation

2B2B-2B1B-1B3A Great Vehicle path of seeing

The definition of a Mahayana path of seeing is: a clear realization of truth that ceases the extremes of both cyclic existence and solitary peace. Here Gyetseb Je quotes the Ornament saying ‘path of seeing - great benefit of qualities of this and other (lives).’ Chokyi Gyeltsen defines the Mahayana path of seeing as: a clear realization of a Mahayana truth sustained by the wisdom directly realizing emptiness that exists in the continuum of the person who has it. There are three divisions: (1) an exalted wisdom of meditative equipoise of a Mahayana path of seeing, (2) a post-meditative exalted wisdom of a Mahayana path of seeing, and (3) a Mahayana path of seeing that is neither of these two. The path of seeing in this context must have two attributes: (1) that it ceases the extreme of cyclic existence and (2) that it ceases the extreme of solitary peace.

2B2B-2B1B-1B3B Great Vehicle path of meditation

1 Activity of the Great Vehicle path of meditation
2 Entity of the Great Vehicle path of meditation

2B2B-2B1B-1B3B-1 Activity of the Great Vehicle path of meditation

The definition of the activity of a Great Vehicle path of meditation is: a benefit obtained by the force of meditating on that (that refers to the methods for achieving the Great Vehicle path of meditation). According to Gyetseb this section finishes here but in Seventy Topics it mentions that the activity of the Great Vehicle path of meditation is divided into six. Chokyi Gyeltsen defines the activity of a Great Vehicle path of meditation as a benefit obtained by the force of meditating on the Mahayana path of meditation which is a method for obtaining it. The divisions are:
(1) always peaceful due to having control over one’s own mind
(2) having respect for all beings
(3) gaining victory over the battle with the delusions
(4) never being oppressed by the harm of suffering
(5) having the ability to accomplish enlightenment
(6) making one’s residence into an object of veneration (a bodhisattva transforms his place of residence into an object of veneration).

The activity of a Great Vehicle path of meditation ranges from the second moment of the path of meditation to the buddha ground. This concludes the Mahayana path of meditation.
2B2B-2B1B-1B3B-2 Entity of the Great Vehicle path of meditation  
A Contaminated path of meditation  
B Uncontaminated path of meditation  

2B2B-2B1B-1B3B-2A Contaminated path of meditation  
1 Belief level of the path of meditation  
   A Benefits of [the belief level of the path of meditation]  
2 Highest attention to dedication of the path of meditation  
3 Highest attention to rejoicing of the path of meditation  

2B2B-2B1B-1B3B-2A1 Belief level of the path of meditation  

Gyeltsab says the *definition* of the belief level of the path of meditation is: a subsequent clear realization that believes in the three mothers as a source of the three purposes. Chokyi Gyeltsen says it is: a subsequent clear realization believing that the mothers are a source of the three purposes. If it is divided by way of its root it is of three types:  
(1) belief level of the path of meditation for one’s own purpose  
(2) belief level of the path of meditation for both one’s own and others’ purposes  
(3) belief level of the path of meditation for others’ purpose.  
If it is divided further in terms of its branches there are nine, each of the three being further divided into three. The belief level of the path of meditation for one’s own purpose has small, middle, and great, as do the belief level of the path of meditation for both purposes and the belief level of the path of meditation for others’ purpose. Chokyi Gyeltsen says that if they are divided into secondary branches there are twenty-seven (each of these nine are further divided into three): the small is divided into small, middle, great; the middle is divided into small, middle, great; and the great is divided into small, middle, great. Gyeltsab says the belief level of the path of meditation is divided into twenty-seven. The *boundary* of the belief level of the path of meditation is from the first to the tenth ground.

2B2B-2B1B-1B3B-2A1A Benefits of [the belief level of the path of meditation]  

The definition of a benefit of the belief level of the path of meditation according to Chokyi Gyeltsen is: an excellent quality obtained by the force of meditating on the belief level of the path of meditation which is the method for attaining it. Chokyi Gyeltsen says that there are twenty-seven divisions that are composed of three groups of nine which are associated respectively with praise, veneration, and admiration. The *boundary* is that it exists from the second moment of the belief level of the path of meditation up to the buddha ground. Gyeltsab says that the benefits of the belief level of the path of meditation only have three divisions: praise, veneration, and admiration.  
What is the difference between praise, veneration, and admiration? Praise is to the self purpose, veneration to both purposes, and admiration for others’ purpose. Bodhisattvas meditating on the three types of belief level of the path of meditation delight in the qualities of bodhisattvas of higher levels and those of buddhas. They are also venerated by others because they actually have those excellent qualities. Gyeltsab says that the benefits of the belief level of the path of meditation has two parts: (1) pleasing higher beings and (2) being praised by others for possessing one’s own purpose of the belief level of the path of meditation, both purposes, and others’ purpose.

2B2B-2B1B-1B3B-2A2 Highest attention to dedication of the path of meditation  

Gyeltsab gives the *definition* of the highest attention to dedication of the path of meditation as: a contaminated Mahayana subsequent clear realization that transforms all one’s own roots of virtue and others’ roots of virtue into a branch of complete enlightenment. It has twelve divisions. The *boundary* is as above, i.e., it ranges from the first to the tenth grounds. The definition according to Chokyi Gyeltsen is: a Mahayana subsequent realization together with the conception
apprehending a sound generality and a meaning generality as suitable to be mixed which transforms all one’s own roots of virtue and others’ roots of virtue into a branch of enlightenment.

Gyeltsab uses the word ‘contamination’ in the definition which means the same as Chokyi Gyeltsen’s words ‘a conception apprehending a sound generality and a meaning generality as suitable to be mixed.’ Usually contamination is associated with delusion but in relation to the path of meditation it refers to this particular conception.

Thursday morning class, February 12, 1998

There are twelve divisions of the highest attention to dedication of the path of meditation. The **boundary** is that it exists from the first ground to the end of the continuum of a sentient being.

The twelve divisions of the dedication level of the path of meditation are called:

1. ‘special dedication’
2. ‘unobservable aspect’
3. ‘characteristics without error/mistake’
4. ‘isolation/lack/absence’
5. ‘remembering the merit of a buddha’
6. ‘skillful in method’
7. ‘signlessness’
8. ‘remembering buddha’
9. ‘not included in the three realms’
10. ‘small dedication’
11. ‘middling dedication’
12. ‘great dedication’

An extensive explanation of these will come in the second chapter.

**2B2B-2B1B-1B3B-2B** Highest attention to rejoicing of the path of meditation

The **definition** of highest attention to rejoicing of the path of meditation is: a contaminated Mahayana subsequent clear realization that greatly enjoys one’s own and others’ virtues. It has two divisions. The **boundary** is as above. Chokyi Gyeltsen defines it as: a Mahayana subsequent clear realization together with the conception apprehending a sound generality and a meaning generality as suitable to be mixed that rejoices in one’s own and others’ roots of virtue. There are two divisions:

1. rejoicing in one’s own roots of virtue
2. rejoicing in others’ roots of virtue.

**2B2B-2B1B-1B3B-2B1** Path of meditation of achieving

The **definition** of a path of meditation of achieving is: an uncontaminated Mahayana subsequent clear realization that leaves an imprint for a final realization. It has five divisions. Chokyi Gyeltsen defines it as: an uncontaminated Mahayana subsequent clear realization that leaves an imprint for a final realization that is to be obtained by oneself. A Mahayana path of meditation of achieving and an infinitely pure path of meditation are synonyms. The five divisions are:

1. a path of meditation of achieving that is qualified by entity
2. a path of meditation of achieving that is qualified by a supreme result
3. a path of meditation of achieving that is qualified by special function
4. a path of meditation of achieving that is qualified by temporary excellent qualities
5. a path of meditation of achieving that is of great purpose: the final excellent qualities and the result

The **boundary** is that it exists from the first to the tenth grounds.
The definition of the path of meditation called infinitely pure is: an uncontaminated Mahayana subsequent clear realization that leaves an imprint for a final abandonment. It has nine divisions. The boundary is that it exists from the first to the tenth grounds. Chokyi Gyeltsen defines it as: an uncontaminated Mahayana subsequent clear realization that leaves an imprint for a final abandonment that is to be obtained by oneself. The nine divisions of the infinitely pure are defined in terms of the objects of abandonment of the path of meditation which are divided into three groups of three: the great, middle, and small being further divided into great, middle, and small. Because there are nine objects of abandonment there are nine paths of meditation that are their antidotes. Therefore the path of meditation is divided into small, middle, and great which are each further divided into small, middle, and great.

Connecting the illustration and the explanation

This is the end of the outline concerning the eleven topics representing the knower of paths. We conclude this section of the eleven topics representing the knower of paths by listing them here:
1. the branches of a knower of paths
2. the knower of paths knowing the paths of hearer learners
3. the knower of paths knowing the paths of solitary realizers
4. the knower of paths knowing the paths of bodhisattvas or the path of seeing having the character of benefiting this and future lives
5. the activity of the path of meditation
6. the belief level of the path of meditation
7. the benefit of belief level of the path of meditation
8. the dedication level of the path of meditation
9. the rejoicing level of the path of meditation
10. the achieving level of the path of meditation
11. the very pure level of the path of meditation

Eclipsing and so forth, those paths of disciples (hearers) and rhinoceroses, path of seeing...
These are the eleven topics of the knower of paths.

‘The wise bodhisattva’s knower of paths is explained like that’ is explained by Gyeltshab Je. Thus, the knower of paths is explained by the eleven topics which represent it. It is important to understand that some of these eleven topics represent the knower of paths by way of the object representing its subject and others by way of entity. Many of the topics represent the knower of paths from the point of view of entity: only three—(1) the branches of a knower of paths, (5) the activity of the path of meditation, and (7) the benefit of the belief level of the path of meditation—are not knowers of paths. The others are knowers of paths and represent it from the point of view of entity.

In his Golden Rosary Lama Tsongkhapa says the way in which the eleven topics represent the knower of paths is from the point of view of knowing the paths. Because it knows the paths of hearers, solitary realizers, and bodhisattvas it is called ‘knower of paths.’

Leaving imprints for attaining a final abandonment means that we deposit the imprint to actualize a buddha’s true cessation which is free from the two obscurations. A final realization refers to a buddha’s realization of the two truths, the conventional and ultimate.

Knowing the paths to omniscient mind means to know all the paths of the three vehicles. If one knows these well one knows the path to the omniscient state. In Commentary Clarifying Meaning it says that a buddha should generate and realize the paths and perform the activities. This means that a bodhisattva should know all the paths of the three vehicles. If a bodhisattva only knows a
part of the paths it can be a cause to achieve the omniscient state but the omniscient state remains at a far distance. In other words, if one does not familiarize oneself with all the paths of the three vehicles it will take a long time to achieve the omniscient state.

We have finished 2 Connecting the illustration and the explanation

2B2B-2B1C Explaining the body of the knower of bases
1 Topics which indicate the knower of bases
2 Connection the illustration and the explanation

2B2B-2B1C-1 Topics which indicate the knower of bases

Through knowledge, non-abiding in [cyclic] existence; through compassion, non-abiding in peace; through non-skill, distant; through skill, not distant; classes of the discordant and antidote, training, the very equality of that and the path of seeing - like that of hearers and so forth, asserted as knower of all [bases] itself.

This is divided into:
A Reasoning of distant and close to an effect mother
B Proving that very reasoning
C Divisions of the classes of the discordant and antidote
D Application/training in knower of bases

2B2B-2B1C-1A Reasoning of distant and close to an effect mother

The first of the nine topics discussed in relation to a knower of paths is the knower of paths not abiding in the extreme of cyclic existence while the second is the knower of paths not abiding in the extreme of solitary peace. Gyeltsab says that the first should not be called ‘a knower of bases not abiding in cyclic existence through knowledge’ but should be called ‘a knower of paths not abiding in the extreme of cyclic existence through knowledge.’ Gyeltsab says that the definition of a knower of paths not abiding in the extreme of cyclic existence through knowledge is: a knowledge that directly knows the sixteen attributes, such as impermanence, that is sustained by method, which is great compassion. It acts to cease the extreme of cyclic existence. It has three divisions: the path of seeing, path of meditation, and path of no-more-learning.

Chokyi Gyeltsen defines it as an arya Mahayana exalted knower abiding in the class of realization that ceases the extreme of cyclic existence with respect to the basis, conventionality. This and a knower of paths knowing the path of hearers are synonyms. It has three divisions: the Mahayana path of seeing, the Mahayana path of meditation, and the Mahayana path of no-more-learning that abide in the class of a hearer’s realization. The boundary is that it exists from the Mahayana path of seeing up to the buddha ground.

Gyeltsab then defines a knower of paths not abiding in the extreme of solitary peace through compassion: an arya Mahayana clear realization that abides within the class that ceases the extreme of solitary peace with respect to the basis, conventionality. Chokyi Gyeltsen defines a knower of paths not abiding in the extreme of solitary peace through compassion as an arya Mahayana exalted knower abiding in the class that ceases the extreme of solitary peace with respect to the basis, conventionality. This is a synonym of the exalted knower of an arya Mahayanist that abides in the class of realization of special method. It has three divisions: the Mahayana path of seeing, the Mahayana path of meditation, the Mahayana path of no-more-learning that abide in Mahayana clear realization. The boundary is that it exists from the path of seeing up to the buddha ground.

A mind not abiding in the extreme of cyclic existence has to see the faults of cyclic existence. A mind realizing emptiness directly does not have the aspect of the faults of cyclic existence. In short, a mind perceiving the faults of cyclic existence must be a mind realizing conventionalities (not one that perceives the ultimate).
Questions can arise such as: does the realization of the sixteen attributes of the four noble truths perceive the faults of cyclic existence? The faults of cyclic existence refers to the process by which we enter cyclic existence, the twelve links. In particular it refers to the first link, that of ignorance, which is the ignorance grasping at a self of persons. This is the root of cyclic existence according to the Svetantrika-Madhyamika school. This grasping at a self of persons is the fault of cyclic existence because due to it one remains in cyclic existence. To eliminate this fault we need the wisdom directly realizing the selflessness of persons. Only with this wisdom can we eliminate this ignorance. Therefore the selflessness of persons according to Svetantrika-Madhyamika is a conventional truth. This is why the definition says ‘with respect to the basis, a conventional truth.’ ‘Faults’ refers to all the sufferings of cyclic existence; however, all of them arise from a single cause, the ignorance grasping at a self of persons. Having seen the faults of cyclic existence, one seeks true cessations. One achieves a knower of paths not abiding in the extreme of cyclic existence because with this one ceases the extreme of cyclic existence. A mind focusing on ultimate truth cannot perceive the faults of cyclic existence because it does not analyze conventional reality.

Knower of bases includes:
(1) a knower of bases that is distant from the resultant mother
(2) a knower of bases that is close to the resultant mother
(3) a knower of bases of the discordant class
4) a knower of bases of the antidote class

(1) a knower of bases that is distant from the resultant mother
The definition of a knower of bases that is distant from the resultant mother because of not being a method is: an exalted wisdom directly realizing the sixteen attributes, such as impermanence, that is separated from great compassion and bound by a conception of true existence.

The definition of a knower of bases that is close to the resultant mother is: an exalted wisdom directly realizing the sixteen attributes, such as impermanence, that is sustained by a wisdom directly realizing emptiness and great compassion.

An exalted wisdom directly realizing the sixteen attributes can be either distant from or close to achieving omniscient mind depending on whether or not it is accompanied by great compassion. If it is accompanied by great compassion and free from the conception of true existence it is close, and if it is not accompanied by great compassion and bound by the conception of true existence it is distant from omniscient mind.

Thursday afternoon class, February 12, 1998

A knower of bases distant from the resultant mother because of not being a method is: an exalted wisdom directly realizing the sixteen attributes, such as impermanence, separated from great compassion and bound by a conception of true existence. Such a knower of bases when it investigates base, path, and aspect, they appear as truly existent. As long as a person has this conception his knower of bases is said to be ‘bound by a conception of true existence.’

Chokyi Gyeltsen’s definition of a knower of bases distant from the resultant mother is: a knower of bases separated from great compassion and bound by the conception of true existence. This and a knower of bases of the discordant class are synonyms. The boundary is from the Hinayana path of seeing up to the path of no-more-learning.
Chokyi Gyeltsen’s definition of knower of bases close to the resultant mother is: an exalted knower of a Mahayana arya abiding in the class of Hinayana realization sustained by great
compassion and the wisdom directly realizing emptiness. It and a knower of bases of the antidote class are synonyms. The boundary is from the Mahayana path of seeing up to the buddha ground. (see pg. 296 Tibetan text of Gyeltshab Je’s Essential Explanation) Here it explains the knower of bases bound by a conception of true existence: a knower of bases that does not pass beyond clinging to true existence when checking whether the base, path, and aspect are or are not truly existent. This concept binds the knower of bases.

2B2B-2B1C-1C Divisions of the classes of the discordant and antidote

Gyeltshab’s definition of a knower of bases of the discordant class is: a very knower of bases that is separated from special method and wisdom.
Gyeltshab’s definition of a knower of bases of antidote class is: that very knower of bases sustained by special method and wisdom.
Chokyi Gyeltsen’s definition of a knower of bases of the discordant class is: a knower of bases that is separated from special method and wisdom. It is a synonym of ‘a knower of bases bound by the conception of true existence in the continuum of a Hinayana arya.’ The boundary is from the Hinayana path of seeing up to the path of no-more-learning.
Chokyi Gyeltsen’s definition of a knower of bases of the antidote class is: an exalted knower in the continuum of a Mahayana arya abiding in the class of Hinayana realization and sustained by special method and wisdom. It is a synonym of a knower of bases of a Mahayana arya. The boundary is from the Mahayana path of seeing up to the buddha ground.

Debate: In Gyeltshab’s text someone says a knower of bases of the discordant class has a conception of true existence because of a lack of a system of reasoning and because of not being expert in the order/practice of the path. However, such a statement is not correct. There is some debate here. Someone says: the Hinayana path of seeing is a conceptual thought because it is a consciousness bound by a conception of true existence. If a hearers’ path of seeing were a conceptual thought it would not see objects clearly and would therefore not be a direct antidote to the seed of affective obscurations. Furthermore, that hearers’ path of seeing is a wrong conception because it is a consciousness bound by a conception of true existence. In this case such a hearers’ path of seeing would become a consciousness grasping at a self, which is mistaken with respect to its conceived object. It would follow that there is not even a tiny difference between what is to be practiced and what is to be rejected.

The very knower of bases that is sustained by method and wisdom is called a knower of bases of the antidote class; but Arya Vimuktisena or Simhabhadra do not call an exalted wisdom directly realizing emptiness a knower of bases of the antidote class. A knower of bases is a realization of the selflessness of persons, impermanence, etc., i.e., any of the sixteen attributes. This indicates that an exalted wisdom directly realizing emptiness cannot be a knower of bases.

2B2B-2B1C-1D Application of knower of bases
1 Divisions of application of knower of bases
2 Mode of apprehension of application of knower of bases
3 Effect of application of knower of bases

2B2B-2B1C-1D1 Divisions of application of knower of bases

Gyeltshab’s definition of a bodhisattvas training/application presented in the case of a knower of bases is: a yoga of heroic mind that meditates as an antidote to (1) the wrong conception of entity and differentiation/particularity with respect to the conventional mode of existence and (2) the wrong conception of entity and differentiation with respect to the ultimate mode of existence. With respect to form, for example, its entity is that which is suitable to be form and its differentiation is its various parts.
Chokyi Gyeltsen’s definition of a bodhisattvas training/application presented in the case of a knower of bases is: a yoga of a heroic mind that meditates as an antidote to either (1) the wrong conception of the entity and differentiation within the bases of the conventional mode of existence
or (2) a wrong conception of the entity and differentiation within the bases of the ultimate mode of existence.

The training of a bodhisattva presented in chapter 3 is different from that presented here. The training that is presented in chapter 3 has a different referent from that of the training/application of a knower of bases. Gyeltsab’s commentary just says such is the training of a knower of bases. It has ten divisions. Although a knower of bases is associated with the bases that is the path of preparation, it can exist from the path of accumulation up to the tenth ground. The ten divisions are:

1. a training that opposes the conception of true existence with respect to forms and so forth, the bases of attributes
2. a training that opposes the conception of true existence with respect to impermanence and so forth, the attributes
3. a training that opposes the conception of true existence with respect to the perfect completion or non-completion of the bases of excellence
4. a training that opposes the performance of the conception of true existence by abiding in non-attachment to true existence
5. unchangeable training that opposes the conception of true existence with respect to the three: action, agent, fruit
6. a training that opposes the conception of true existence with respect to the non-ultimate existence of the agent
7. a training that opposes the conception of true existence with respect to the three: difficult objects of intent, training difficult to perform, and action difficult to perform
8. a training that opposes the conception of true existence with respect to the existence to the fruit attained according to one’s fortune
9. a training that opposes the conception of true existence with respect to non-dependence on others
10. a training that opposes the conception of true existence with respect to the seven types of appearance made known by means of examples

Mode of apprehension of application of knower of bases

Mode of apprehension of the application of a knower of bases is also called the equality of training in the case of a knower of bases. Gyeltsab’s definition of the equality of a bodhisattva’s training in the case of a knower of bases is: that which opposes/ceases the conception of true existence of the divisions of the bases, definition, definendum, object, and object-possessor (subject). It has four divisions. Chokyi Gyeltser’s definition of equality of a bodhisattva’s training in the case of a knower of bases is: a yoga of a heroic mind sustained by a wisdom that ceases the conception of true existence of the divisions of bases, definition, definendum, object, and object-possessor. This is the definition of the equality of a bodhisattva’s training in the case of a knower of bases.

The four divisions presented in Gyeltsab’s commentary are:

1. equality of training that is a non-fabrication of true existence with respect to the nature of form and so forth
2. equality of training that is a non-fabrication of true existence with respect to the definitions and definendums of form and so forth
3. equality of training that is a non-fabrication of true existence with respect to the divisions of form and so forth
4. equality of training that is a non-fabrication of true existence with respect to subjects and objects of form and so forth

Effect of application of a knower of bases

2B2B-2B1C-1D3 Effect of application of a knower of bases
Gyeltsab’s definition of the effect of application of a Mahayana path of seeing explicitly presented in this case is: a clear realization of truth that directly realizes the state free from elaboration. The effect of application of knower of bases is the path of seeing.

Chokyi Gyeltsen’s definition of the effect of application of the Mahayana path of seeing explicitly presented in this case is: a clear realization of Mahayana truth that directly realizes the state free from elaboration that is presented explicitly in this case. This is the definition of the Mahayana path of seeing presented explicitly in this case. It is divided into sixteen moments of realization: the knowledges of the Mahayana path of seeing.

2B2B-2B1C-2 Connecting the illustration and the explanation

This concludes the nine topics representing the knower of bases. Some of these topics explicitly represent the knower of bases while some do so implicitly. In the Ornament (page 12 italics of the translation of Commentary Clarifying the Meaning) it lists the nine topics:

*Through knowledge, non-abiding in [cyclic] existence; through compassion, non-abiding in peace...*

All nine are listed here.

(1) knower of paths not abiding in cyclic existence through knowledge
(2) knower of paths not abiding in peace through compassion
(3) knower of bases distant from the resultant mother through non-skill
(4) knower of bases not distant from the resultant mother through skill
(5) knower of bases of the discordant class
(6) knower of bases of the antidote class
(7) training in the knower of bases
(8) the very equality of that
(9) path of seeing

These nine topics represent the knower of bases, some do so explicitly, some implicitly. Gyeltsab explains how the direct realization of emptiness can bring about other realizations by the way. For example, when a bodhisattva gains a direct realization of emptiness, he indirectly gains the realizations of impermanence, misery, and the other attributes [of the four noble truths]. These are all gained on the path of seeing in an indirect way. Gyeltsab then says that there are two kinds of direct realizations in the continuum of a bodhisattva: one to be learned/known and one to be actualized. The clear realization in the continuum of a bodhisattva that is to be learned is the paths of hearers, the paths of solitary realizers, and the paths leading to buddhahood. Of these three paths those of the hearers and solitary realizers are to be passed through. When a bodhisattva passes through the Mahayana path of seeing he directly realizes emptiness and at the same time by the way he effortlessly realizes the selflessness of persons and non-duality. These two are not to be actualized by a bodhisattva. Some text books say that these three realizations arises simultaneously while others say that the direct realization of emptiness arises first and the other two arise during post-meditation.

Gyeltsab says that the second type of clear realization of a bodhisattva, that to be actualized, is not definitely to be meditated on in order to attain mere liberation but it must be meditated on as an antidote to the obscurations to knowledge. To eliminate the obscurations to omniscience one needs a combination of special method and wisdom. Special method and wisdom are the clear realizations to be actualized.

Gyeltsab says that the realizations to be attained by passing through the path of seeing are only at the level of the path of seeing and not on the path of meditation. The Mahayana path of seeing discussed here is of two types: (1) explicitly presented and (2) implicitly presented. An explicitly presented path of seeing is the one that passes through that has to be developed with effort. The implicitly presented path of seeing is the one that is passed through without effort.

If we summarize this last section it means that when a bodhisattva meditates continuously he arrives at the path of seeing when he directly realizes emptiness, this is done with effort but by the way he effortlessly develops a path of seeing knowing impermanence, a path of seeing knowing misery, and so on. Therefore, a bodhisattva does not need effort to develop a knower of bases in his continuum.
QUESTIONs AND ANSWERS

Question: Would Geshe-la please go through the subjects we have covered continuing from where we left off last Friday?

Reply: The important points that we have covered up to now are:

The first section discusses Maitreya’s scriptures; the second discusses the root verse ‘That which through...’ (page 3 Commentary Clarifying the Meaning); the third discusses the purpose for taking the three exalted knowers as an object of expression of worship, why there are definitely three, and how they include the eight clear realizations; the fourth section discusses ‘free of being one or many’ which refers to the reasonings that analyze the nature of phenomena, which comes as a complementary subject to that of the Ornament. Also in this section the two types of trainees, the dull facultied and the sharp facultied, are discussed. The dull facultied disciple generates faith in the three mothers just by hearing the words of the expression of worship while the sharp facultied disciple studies the subject matter until he generates a valid cognizer with regard to it. The focus of this fourth section is to identify the object of negation, the predicate of the negandum, and to negate it by way of the five reasonings:

1. one and many
2. diamond slivers, which is in relation to causes
3. production from existent and non-existent
4. production from the four alternatives
5. the king of reasonings

To establish all phenomena as non-truly existent one considers the magic show, this is the best illustration according to the Svatantrika-Madhyamika school for proving non-true existence. According to Madhyamika Prasangika school the best illustration is a rope which is mistaken for a snake. One should be aware that these illustrations are respectively preferred by the two Madhyamika schools.

The fifth section is on nirvana. Nirvana is a true cessation in which all afflictive obscurations have been abandoned. Nirvana, literally gone beyond sorrow, is to be understood in terms of the afflictive obscurations, these are what one has gone beyond. When these obscurations have been eliminated one is said to have gone beyond them. Nirvana can be explained from the point of view of the four schools. Nirvana is commonly asserted by all of them but the difference comes in terms of the divisions of (1) nirvana with remainder and (2) nirvana without remainder. In certain texts it says that the truth body is a nirvana without remainder while the two form bodies are nirvana with remainder. Although this is said we should understand that this is only an etymological explanation. They are only etymologically a nirvana because the truth body is without aggregates and the form body is with aggregates. The Vaibhashikas, Sautrantikas, and true-aspectarian Chittamatrins say that when someone attains a nirvana without remainder all his compounded aggregates cease to exist and all that remains is true cessations. The higher schools, the Svatantrika-Madhyamika and Madhyamika Prasangika, refute the lower schools saying that this would mean that when there is an attainer there is no object to be attained and when there is an object to be attained there is no attainer. Svatantrika-Madhyamika says that when a person attains a true cessation where there are no more afflicting obscurations but still has the contaminated aggregates which are true sufferings this is a nirvana with remainder. On the other hand, when this person becomes free of these aggregates he attains a nirvana without remainder, which is free of both the afflictive obscurations and the aggregates which are true sufferings. Madhyamika Prasangika says that when someone is free of the afflictive obscurations but still has the appearance of true existence this is a nirvana with remainder, when he no longer has the appearance of true existence he has a nirvana without remainder.

This discussion comes in the context of the verse that begins ‘That which through...’ but is found specifically in the commentary on ‘seeking pacification to peace.’
The sixth section, which discusses the wheel of Dharma, also comes in the context of the verse that begins ‘That which through’ specifically when it says that omniscient mind turns the wheel of Dharma: ‘And through the perfect possession of which the subduers set forth these varieties having all aspects.’ The wheel of Dharma is defined as an excellent quality included in any of the two, the scriptural doctrine or realized doctrine. The wheel of Dharma of realization refers to all inner realizations such as the five paths: the path of accumulation, the path of preparation, the path of seeing, the path of meditation, and the path of no-more-learning of hearers, solitary realizers, and bodhisattvas. This way of defining the wheel of Dharma is according to Svatantrika-Madhyamika and Madhyamika Prasangika. The scriptural wheel of Dharma refers to the three wheels of Dharma turned by Buddha: ‘the four noble truths,’ ‘without characteristics,’ and ‘fine discrimination.’ Someone asks: did the Buddha turn the three wheels of Dharma at one time or serially? This doubt comes because someone may think that the three wheels of Dharma mean that Buddha only taught three times: once at the beginning, once in the middle, and once at the end of his life. However, a teaching that was given at the beginning of his life is not necessarily a first wheel of Dharma, for example, the Tathagatagarbha Sutra. Also a teaching given at the end of Buddha’s life is not necessarily the third wheel of Dharma, for example, the teaching given by Buddha just before he died on vinaya concerning the suitability and concordancy of discipline. In fact, this teaching is said to belong to the first wheel of Dharma. In conclusion, the three wheels of Dharma are not posited in terms of the three periods of Buddha’s life. Rather they are posited in the Sutra Unraveling the Thought in which there is a dialogue that gives a valid way of positing the three wheels of Dharma. Here they are posited only in terms of subject, and not in terms of time, disciples, etc. The first wheel of Dharma presents the four noble truths; the second, the emptiness of phenomena of existing by their own character; and the third, the three natures/characteristics, some of which exist truly and others which do not exist truly.

This section on the wheel of Dharma also discusses definitive and interpretive meanings. According to Svatantrika-Madhyamika interpretive meaning is a teaching that presents conventional truth as a principal subject or one that presents emptiness but is not literally acceptable. A definitive meaning teaching is one that presents emptiness as a principal subject and that is literally acceptable. An illustration of a teaching on emptiness that is not literally acceptable according to Svatantrika-Madhyamika is the Heart Sutra which says that phenomena do not exist inherently while the Svatantrika-Madhyamika school does posit inherent existence. Madhyamika Prasangika say that any sutra that presents conventional truth as a principal subject is interpretive meaning while any sutra that presents ultimate truth as a principal subject is a definitive meaning.

Vaibhashikas, Sautrantikas, and Chittamatrins say that an interpretive meaning teaching is a sutra that is not acceptable literally with respect to the subject it presents, while a definitive meaning teaching is a sutra that is acceptable literally with respect to the subject it presents. Vaibhashikas say that the wheel of Dharma of realization is the path of seeing while the scriptural wheel of Dharma is only wheel of Dharma of the four noble truths. They say that the wheel of Dharma is the path of seeing this because when Buddha turned the wheel of Dharma of the four noble truths the five disciples gained the path of seeing and the gods proclaimed ‘ah la la.’ According to a Vaibhashika acharya, Yangdok, the wheel of Dharma is the eight fold noble path because it is only the eight fold noble path that is analogous to the wheel of a universal king. However, when the Vaibhashikas say the wheel of Dharma is the path of seeing they also compare it to the wheel of a universal king.

The scriptural wheel of Dharma can also be divided into many aspects such as the 84,000 bundles of teachings, the twelve groups of scriptures, and the three baskets. To deepen one’s understanding of the three baskets see Ornament for Sutra which is clarified by His Holiness the Dalai Lama in his text Opening the Eye of New Awareness (Wisdom Publications).

Then the measurement of a bundle of Dharma is discussed. The Vaibhashikas say that six hundred stanzas make one bundle of Dharma and give the example of a text composed by Shariputra called Heap of Dharma which has exactly six hundred stanzas. One particular Vaibhashika [sub-school] says that a bundle of Dharma is a conversation that presents the whole set of aggregates, sources, and constituents/elements. The Kashmiri Vaibhashikas say that any
teaching that presents a complete antidote for one delusion is a bundle of Dharma. Or it can be said to be a teaching that presents a single antidote for all the delusions. In Abhidharmasamucchaya by Asanga it says that a bundle of Dharma is composed of one thousand verses.

From the uncommon Mahayana point of view a bundle of Dharma is the number of scriptures that can be written with the quantity of ink that can be carried by an elephant. Then one can ask: where are these written? This question is answered saying that these scriptures exist in other human continents and in the nagas’ world.

As an extension of the third exalted knower with which an arya buddha turns the wheel of Dharma we should know that there are two sutra sources, the Dharani-svaha-aja-sutra and Sutra Unraveling the Thought that show how and when the wheels of Dharma were taught and the three stages through which disciples are led.

The sixth section also discusses the ‘perfect end.’ Here there is a doubt concerning whether there is the fault of redundancy with respect to the sutra and the treatise because the topics discussed in the treatise were already presented in the Sutras. Does the Ornament only take the bases, or antidotes, or aspects as its principal subject? If it takes the bases there would be repetition because they were already explained in Abhidharmakosha. On the other hand, if it takes only the antidotes as a principal subject then this would not make sense since it does not present the objects to be abandoned. Then in the case of it presenting the aspects together with bases there would be the fault of repetition as the bases were already explained in Abhidharmakosha while if only aspects are presented without presenting the bases there would not be sense in talking about aspects of bases that were not presented. This subject is called ‘rejecting arguments’ and comes in the section on the perfect end.

Then in this section comes recognizing the perfect end of this case, the three conditions for actualizing the perfect end, and the three vehicles.

With this we finish the section of the expression of worship which includes these six subsections.

Question: What is the sphere of qualities, the dharmadhatu?
Reply: ‘Dharmadhatu,’ (translated as sphere of phenomena and element/constituent of phenomena/dharma), perfect end, and suchness are synonyms of emptiness.

Then comes a section on Buddha’s words and treatise which is a branch of the section ‘the statement related to the purpose.’ This comes because of the doubt that there is no purpose to having composed the Ornament because the Sutras already discussed these topics. The answer is that the Ornament does have a purpose, etc. The treatise also has a subject, the eight categories, etc. that were taught in Buddha’s sutras. There is a purpose to composing the Ornament: by depending on it one can easily understand the meaning of the Sutras. Then the essential purpose and their interrelationship are also discussed.

In this section on Buddha’s words and treatise, Buddha’s words are defined as a scriptures that possess ?three/four attributes while a treatise is a pure speech that is qualified by the two attributes of curing and protecting. There are different types of Buddha’s words: those from his mouth, those from an order, and those from blessings. In terms of treatises, there are those that unravel Buddha’s words in general and those that comment on Buddha’s words individually.

With the expression of worship and the statement of purpose the first of three actions in relation to a text has been completed. These three are: (1) the action of entering into the text, the action of explaining the actual corpus/body of the text, and the action that fulfills/concludes. From the point of view of these three actions only the first has been completed. Then comes the body of the presentation.

With respect to the root verse that begins ‘That which through’ (page 3) the four noble truths are discussed. In relation to true sufferings last week we discussed the paths of inferior and middling
beings. We went over the eight sufferings now today we will go over the six faults of cyclic existence:
(1) the fault of uncertainty
(2) the fault of dissatisfaction
(3) the fault of repeatedly discarding one’s body
(4) the fault of repeatedly being reborn
(5) the fault of the high repeatedly becoming low
(6) the fault of being alone without a companion

The shortcoming, or fault, of uncertainty is obvious in the world, for example, things are constantly changing in terms of our friends and enemies. Our health is uncertain, today we might be well but tomorrow suddenly find ourselves sick. Our wealth and possessions also change, we may be rich today but poor tomorrow.

The shortcoming of dissatisfaction is one of the worst problems we experience. It is our worst mental sickness because it keeps us running. The more we have the more we want, we are never satisfied. We may have a friend/partner but still look for a second, then go on to a third, a fourth, and so on. We always look for something more. The shortcoming of dissatisfaction arises in relation to the five sense objects of the desire realm, forms, sounds, odors, tastes, and tangible objects. However, the more we have the more we want. This suffering is compared to a person who drinks salt water in order to quench his thirst but as a result becomes more thirsty.

The shortcoming of repeatedly discarding our body means that we have to abandon this body with which we were born at the time of death. This body is very precious to us but in spite of not wanting to give it up we have to do so.

The shortcoming of repeatedly being reborn is that after death we once again have to take another body.

The shortcoming of the high repeatedly becoming low can be seen in relation to our own past lives. At times we were born as the foremost of the gods, such as Brahma or Indra, and at other times we were born in the hells. In cyclic existence we have experienced all the different types of rebirth. Also in one human lifetime the high can become low in the sense that one who originally had a high status can fall to a low status, for example, a president who finds himself in prison.

The shortcoming of being alone without companions means that when we are born we are born alone and when we die we will die alone. This loneliness accompanies us even in our daily life. Due to this feeling of loneliness we experience much suffering.

The purpose of meditating on these different types of suffering is to become an expert in these sufferings so that naturally we will seek some means to get free from them.

MEDITATION
An analytical meditation on the shortcoming of uncertainty.

END
Monday afternoon class, February 16, 1998

2B2B-2B2 Explaining the bodies of the four trainings
   A Causes and effects which empower
   B Causes and effect which stabilize

2B2B-2B2A Causes and effects which empower
   1 Training in complete aspects
   2 Peak training

   A Topics which indicate
   B Connecting the illustration and the explanation

2B2B-2B2A-1A Topics which indicate
   Aspects along with their trainings, excellent qualities and faults along with their characteristics, similitudes of liberation and definite discrimination, assembly of irreversible learners, the very equality of [cyclic] existence and peace, highest pure realm, skill in means along with this – the clear complete realization of all aspects.

This is divided into:
   1 General presentation from the point of view of the support of virtuous roots
   2 Explicitly showing the stages of generation in the continuum from the point of view of ripening roots of virtue

2B2B-2B2A-1A1 General presentation from the point of view of the support of virtuous roots
   A Divisions of the mode of apprehension of meditation on the path perfection of wisdom
   B Training in meditative equipoise
   C Qualities and faults of meditation on the trainings
   D Characteristics which indicate the perfection of wisdom yoga

2B2B-2B2A-1A1A Divisions of the mode of apprehension of meditation on the path perfection of wisdom

Gyeltsab says that an aspect of training is a type of mode of apprehension. It has 173 divisions. The yogas of the path perfection of wisdom are of 173 types because the three knowers have 173 aspects. The number of yogas corresponds to the number of aspects. There are 110 aspects associated with omniscient mind, 36 associated with the knower of paths, and 27 associated with the knower of bases; therefore there are also 173 yogas which are the path perfection of wisdom. These will be explained in detail in the fourth chapter.

Aspects along with their trainings...
‘Aspects’ refers to the complete training in aspects; ‘along with their trainings’ refers to its definition which is explained elaborately in the fourth chapter. Here someone says that the ‘aspects’ mentioned here is the definendum but the definition that is presented in the fourth chapter is to be taken as the definition of it. To this we say that this is not the meaning of the line from the root text discussed in the fourth chapter that says “the so-called aspects: the definition.” The person who says this has not realized the meaning of this line. It is not correct because what is presented here is the definition of an antidote that has the aspect of being a knower and not that of an aspect [in general]. Thus, there are the aspects knowing a knower of bases, aspects knowing a knower of paths, and aspects knowing a knower of aspects. If only the definition of the aspect (in general) were presented here, it would follow that the meaning of our treatise, the Ornament, which was established previously would be lost; i.e., that of basis, antidote, and aspect.

There are eleven topics that represent the complete training in aspects:
(1) aspects/aspect knowing the class of antidotes presented in this case
(2) trainings/primary training explicitly presented in this case
(3) excellent qualities/excellent qualities of Mahayana training
(4) faults of training
(5) definition/characteristics/yoga of a path perfection of wisdom
(6) similitude of liberation (path of accumulation)
(7) similitude of definite discrimination (path of preparation)
(8) bodhisattva sangha that has obtained the sign of irreversibility
(9) the training in equality of cyclic existence and solitary peace
(10) training in the pure realm
(11) training in skill in means

The 173 aspects mentioned before are included in the first topic of the eleven topics, “aspects,” which represents the complete training in aspects.

The second topic is called ‘training’ or ‘primary training explicitly presented in this case.’ The definition is: a yoga that is a combination of calm abiding and higher seeing realizing the object, subject, bases, path, and aspects as a non-elaboration of true existence. A general primary training does not necessarily realize emptiness but in this case a primary/principal training does necessarily realize emptiness.

Chogyi Gyeltsen says that the definition of a principal training explicitly presented here is: a yoga of a heroic mind sustained by the wisdom that is a union of calm abiding and higher seeing observing emptiness and that is explicitly presented here.

Gyeltsab say that a mere training has twenty divisions while a primary training has nineteen divisions:

(1) training that does not abide in form and so forth
(2) training that opposes abiding
(3) training of profundity
(4) training of the difficult to realize
(5) training of limitlessness
(6) training of one who attains prophecy
(7) training of irreversibility
(8) training of definite emergence
(9) training without interruption
(10) training close to enlightenment
(11) training of one who will quickly become enlightened
(12) training of others’ welfare
(13) training of realizing ultimate non-increase and non-decrease
(14) training of not ultimately seeing dharma and non-dharma
(15) training of not seeing inconceivable forms and so forth
(16) training of not conceiving forms and so forth as being in essence truly existent definitions and definenda
(17) training of bestowing the precious fruit
(18) training of complete purity
(19) training of boundaries

When there are twenty divisions insert the ‘training of realizing or maintaining great difficulty for a long time’ between the 5th and 6th; this training is in fact mentioned in the Ornament.

This subject of training is very vast; the twenty trainings will be explained elaborately in the fourth chapter. These divisions are from the point of view of the person who performs the yogas. In the root text it says ‘along with their trainings’ which indirectly shows the meditation and the support, or person, who meditates and accumulates roots of virtue. It exists from the heat level of the path of preparation up to the end of the continuum of a sentient being.

The third topic is excellent qualities/benefit. Gyeltsab defines it as: a benefit that is attained by meditating on the training that is explicitly presented here. It has 14 divisions.
Chogyi Gyeltsen defines it as: a benefit obtained by the force of meditating on the Mahayana training that is the method for attaining it. It has 14 divisions:
(1) the quality of overcoming the power of demons
(2) the quality of a buddha’s thinking and knowing
(3) the quality of a buddha’s direct performance
(4) the quality of being close to full enlightenment
(5) the quality of the great meaning, great fruit, great beneficial quality, great fully ripened effect, and so forth
(6) the quality of making use of places
(7) the quality of completing all non-contaminated qualities
(8) the quality of becoming the very person who propounds
(9) the quality of indivisibility of opponents
(10) the quality of generating uncommon roots of virtue
(11) the quality of accomplishing the meaning of one’s promise accordingly
(12) the quality of thoroughly holding great, extensive fruits
(13) the quality of accomplishing the welfare of sentient beings
(14) the quality of definitely attaining the mother
Excellent qualities exist from the Mahayana path of accumulation up to the buddha ground. They are mentioned explicitly in the root text saying ‘the fourteen qualities are those such as ‘destroying/overcoming the power of demons’ and so forth.’ If we meditate on the complete training of aspects we will attain these excellent qualities, such as destroying the power of demons.

The fourth topic is the faults of training. Gyeltsab gives the definition of the faults of training as: an obstacle to the generation or the abiding of a training. Chogyi Gyeltsen defines it as: a demon’s action that interferes with any of the three: the generation of a training, the abiding of a training, and the completion of a training. It has 46 divisions. It exists from before the path up to the seventh ground.
The 46 divisions are sub-divided into three groups:
- 20 faults that are unfavorable conditions for training that are dependent on oneself
- 23 faults that are unfavorable conditions that are dependent on oneself and others
- 3 faults that are unfavorable conditions that are dependent on others
Chogyi Gyeltsen says that the 46 divisions range from ‘great difficulty in attainment’ up to ‘generating joy in an inappropriate object.’ Just to give a brief example: ‘great difficulty in attainment’ refers to the fact that some people put a lot of hard work and energy into something for a few days and then completely give it up. This is not correct; one should maintain the same rhythm for a long time. This difficulty is a fault that exists entirely within oneself; it is not brought about by others. An example of the second group, faults that are unfavorable conditions that are dependent on oneself and others, is the case of a disciple who wishes to hear Dharma but a teacher who does not have much wish to teach. Another example is the case of a teacher and disciple who do not have a common wish, for example the teacher wants teach in the mountains but the disciples prefer that the teachings be held on a beach.

The fifth topic is ‘characteristics of training/yoga of the path perfection of wisdom.’ Gyeltsab gives the definition as: a bodhisattva’s action/activity that is the union of calm abiding and higher seeing which is a method for attaining the resultant perfection of wisdom. It has 91 divisions. It exists from the Mahayana path of accumulation up to the end of the continuum of a sentient being.
Chogyi Gyeltsen defines a yoga of a path perfection of wisdom as: a yoga of a heroic mind sustained by the union of calm abiding and higher seeing which is a method for attaining the resultant perfection of wisdom which is to be attained by oneself. Chogyi Gyeltsen gives only four divisions:
The characteristic of knowing has 48 divisions which are composed of three groups of sixteen:
- sixteen characteristics of knowing a knower of bases
- sixteen characteristics of knowing a knower of paths
- sixteen characteristics of knowing a knower of aspects

The differentiating characteristic has 16 divisions; functional characteristic has 11 divisions; and essential characteristic has 16 divisions.

The sixth topic is similitude of liberation (path of accumulation). Gyeltsab gives its definition as: a clear realization of Dharma in the continuum of a bodhisattva who is expert in achieving omniscient mind in his own continuum. It has five divisions.

Chogyi Gyeltsen defines it as: a clear realization of the doctrine in the continuum of a bodhisattva who is expert in achieving omniscient mind in his own continuum. This is the definition of a similitude of liberation that is explicitly explained here. It is divided into three: small, middle, and great. Thus the way of dividing it differs from Gyeltsab. When Gyeltsab says that there are five divisions of the path of accumulation he refers to the five that are developed on the path of accumulation: faith, effort, memory/mindfulness, concentration, and wisdom. A bodhisattva on the path of accumulation has much faith in buddhahood, he has intense mindfulness of a buddha’s qualities, etc. These five are the principal means by which a bodhisattva progresses on the path. A bodhisattva on the path of accumulation has the Buddha, Dharma, and Sangha as his objects of observation, he generates faith in them and aspires to achieve them. He also puts much effort into the practice of the six perfections. A bodhisattva needs concentration because by this he can focus his mind on the object of meditation. Then with wisdom he analyzes the object of meditation and awakens the mind to achieve buddhahood. Therefore, he has to be expert in the five objects/faculties, faith and so forth.

The path of accumulation is also called the occasion of generating the trainings because the path of accumulation is the point at which one begins to actually train in a bodhisattva’s actions. The name ‘occasion of ripening’ is given to the path of preparation because at this time one perfects the wisdom arisen from meditation. On the path of accumulation one generated and perfected the wisdom arisen from hearing and thinking. On the path of preparation one ripens the wisdom arisen from meditation.

Of the eleven topics indicating the complete training in aspects we are on the seventh topic, that of a similitude of definite discrimination. A Mahayana similitude of definite discrimination is defined by Gyeltsab as: a bodhisattva’s clear realization of meaning that is qualified as method. It has twelve divisions.
Chogyi Gyeltsen defines it as: a Mahayana clear realization of meaning that is explicitly explained here and is qualified as a Dharma of method. It has four divisions, such the Mahayana heat level of the path of preparation.

While Gyeltsab says there are twelve divisions, Chogyi Gyeltsen says there are only four. The difference is due to the fact that Gyeltsab further divides the four levels of the path of preparation into small, middle, and great. The definition here is different from that of the path of accumulation in that the path of preparation is a clear realization of meaning while the path of accumulation is a clear realization of Dharma. In the case of someone on the path of accumulation the emphasis is put on listening to the Dharma that was taught by the Buddha. The path of preparation is said to be a clear realization of meaning because, while on the path of accumulation one listens to the words of the teachings, but on the path of preparation one meditates on the meaning of the four noble truths by way of a meaning generality. The path of seeing is a clear realization of the meaning of truth, this is so because such a bodhisattva realizes the four noble truths directly for the first time without a meaning generality. The path of meditation is a subsequent clear realization of phenomena which have already been realized. In other words, a bodhisattva continues to meditate on the truth already realized.

The eighth topic of the eleven is a bodhisattva sangha included in the assembly of those who do not return, or a bodhisattva sangha who has obtained the signs of irreversibility. The definition of such a sangha is: a bodhisattva who has attained any of the signs, such as no longer having the recognition of form as truly existent. It has three divisions. It exists from the heat level of the path of preparation and above.

Chogyi Gyeltsen defines a bodhisattva sangha who has attained signs of irreversibility as: a bodhisattva who has attained any of the forty-four signs of irreversibility, such as the recognition reversed from seeing forms as truly existent. It has three divisions:
1. a sangha on the path of preparation who has attained a sign of irreversibility
2. a sangha on the path of seeing who has attained a sign of irreversibility
3. a sangha on the path of meditation who has attained a sign of irreversibility

It exists from the Mahayana heat level of the path of preparation up to the end of the continuum of a sentient being.

The forty-four signs of irreversibility are:
- the 20 associated with a bodhisattva on the path of preparation
- the 16 associated with a bodhisattva on the path of seeing
- the 8 associated with a bodhisattva on the path of meditation

The 20 associated with a bodhisattva on the path of preparation can be further divided in terms of the four levels of the path of preparation. When a bodhisattva reaches the heat level of the path of preparation he no longer has a gross intellectually acquired conception of true existence of form and so forth (form and so forth refers to the fact that phenomena are counted from forms to omniscient mind). Such a bodhisattva no longer recognizes forms and so forth as truly existent.

The ninth topic of the eleven is the training which equalizes existence and peace. The definition of a training which equalizes existence and peace is: an exalted wisdom of a bodhisattva destroying the occasion in which the manifest conception of true existence can arise even in post-meditation. The definendum is ‘training which equalizes existence and peace.’

The definition according to Chogyi Gyeltsen is: a yoga of a pure ground that destroys the occasion for the manifest conception of true existence to arise during post-meditation by means of
being sustained by a wisdom directly realizing that existence and peace are empty of true existence. It has three divisions: the three exalted wisdoms of the three pure grounds realizing emptiness directly. It exists on the three pure grounds.

The tenth topic of the eleven is the training in a highest pure realm. According to Gyeltsab it is defined as: a bodhisattva’s exalted wisdom that is a powerful root of virtue, such as the prayer to accomplish one’s own pure realm when one attains enlightenment.

Chogyi Gyeltsen defines it as: a yoga of a pure ground that is a powerful root of virtue in one’s continuum, such as the prayer to accomplish a pure realm when one becomes enlightened. It has three divisions: the three exalted wisdoms on the three pure grounds that directly realize emptiness. It exists on the three pure grounds. This prayer is relevant to all of us since we need to pray to actualize buddhahood but, even before that, we need to empower the roots of virtue in our continuum to manifest a pure realm where we will be enlightened.

All of this will be explained in more detail in the future.

The eleventh topic is training in skill in means. Gyeltsab defines it as: a bodhisattva’s exalted wisdom that spontaneously accomplishes virtuous activities by having pacified gross effort. Chogyi Gyeltsen defines it as: a yoga of a pure ground that spontaneously accomplishes the activities by way of having pacified gross effort. It has ten divisions:

1. training in skill in means that has overcome the four demons
2. training in skill in means that (realizes) that which does not abide ultimately but abides conventionally
3. training in skill in means that is impelled (to work for) the welfare of others through the force of prayers (made) in the past
4. training in skill in means that is uncommon (with hearers and solitary realizers)
5. training in skill in means of the non-true entitiness of all phenomena
6. training in skill in means that is truly non-apprehensible
7. training in skill in means that is signless
8. training in skill in means that is wishless
9. training in skill in means by a sign of irreversibility
10. training in skill in means that is limitless

Training in skill in means exists on the three pure grounds.

2B2B-2B2A-1B Connecting the illustration and the explanation

Gyeltsab says that one should know that these eleven topics are the objects that represent the complete training in the aspects. We have merely listed the eleven topics that represent the complete training in aspects but they will be the principal subject of the fourth chapter of the Ornament.

We have concluded the subject of the complete training in all aspects/training in complete aspects. Now to discuss peak training.

A Topics which indicate
B Connecting the illustration and the explanation

2B2B-2B2A-2A Topics which indicate

Signs of that, full increase, stability and thoroughly abiding mind, four types of antidotes to the four types of preconceptions with regard to individuals called seeing and meditation paths, uninterrupted meditative stabilization along with perverse achieving - clear realization of the peak.
This is divided into:

1. Peak training in the path of preparation
2. Peak training in the path of seeing
3. Peak training in the path of meditation
4. Uninterrupted peak training together with perverse achieving

[Peak training is represented by eight topics.] Peak training in the path of preparation has four divisions: those of heat, peak, patience, and highest mundane dharma. These are the first four of the eight topics. Gyeltsab gives the meaning of these four levels.

Peak training in the heat level of the path of preparation is: when someone attains a similitude of definite discrimination and has any of the twelve signs.

Peak training in the peak level of the path of preparation is: when someone possesses the sixteen increasings of merit, which are greater merit than making offerings to a number of buddhas equal to the sentient beings in the billion world systems.

Peak training in the patience level of the path of preparation is: when someone has a wisdom that is a complete similitude of the three exalted knowers and stability in performing others’ welfare.

Peak training in the highest mundane dharma level of the path of preparation is: stability in maintaining one’s mind on phenomena by ripening the power of the path of seeing, the attainment of a concentration called ‘infinite concentration.’

Chogyi Gyeltsen defines them as:

Peak training of heat: an initial Mahayana aid to definite discrimination that has attained any of the signs of peak training. It has three divisions: small, middle, great. It exists exclusively on the heat level of the Mahayana path of preparation.

Peak training of peak: a second Mahayana aid to definite discrimination that has attained the sixteen complete increases of merit: greater (merit) than revering buddhas equal to the sentient beings of the billion universes, and so forth. It has three divisions. It exists exclusively on the peak level of the Mahayana path of preparation.

Peak training of patience: a third Mahayana aid to definite discrimination that has attained firmness regarding the wisdom that is a complete similitude of the three knowers, and (regarding) non-divisibility from the welfare of others. It has three divisions. It exists exclusively on the patience level of the Mahayana path of preparation.

Peak training of highest dharma: a fourth Mahayana aid to definite discrimination that has attained thorough stability of mind from the viewpoint of ripening a power of generating a Mahayana path of seeing which is its fruit.

*Question:* Why do we say first aid, second aid, third aid, and fourth aid?

*Reply:* To avoid confusion and also to show that first comes the heat level, secondly the peak level, thirdly the patience level, and fourthly the highest mundane dharma.

Here we have gone through the first to fourth topics of the eight topics representing peak training. The fifth and six are explicitly stated in the outlines.

**2B2B-2B2A-2A2 Peak training in the path of seeing**

The fifth topic is peak training in the path of seeing. Gyeltsab defines a peak training in the path of seeing as: a Mahayana clear realization of the truth that acts as an antidote to the seed of the conceptions that are to be abandoned by the path of seeing.

Gyeltsab defines a peak training of the path of meditation as: a Mahayana subsequent clear realization that acts as an antidote to the seeds of the conceptions that are to be abandoned by the path of meditation.

Both peak training in the path of seeing and peak training in the path of meditation consist of four paths that are antidotes to four conceptions. The four conceptions are obscurations to omniscience.
which are to be abandoned by the path of seeing and the path of meditation. These four come from the conception apprehending an apprehended and the conception apprehending an apprehender. The conception apprehending an apprehended is of two types: a conception apprehending phenomena for entering cyclic existence and a conception apprehending phenomena for exiting from cyclic existence. The conception apprehending an apprehender is also of two types: a conception apprehending the apprehender of a substance and a conception apprehending the apprehender of an imputation. Each of these four are further divided into nine making 36 conceptions to be abandoned by the path of seeing in relation to the desire realm, thirty-six in relation to the form realm, and thirty-six in relation to the formless realm, for a total of 108. The same number is also to be abandoned by the path of meditation. These will be explained in the fifth chapter of the Ornament.

Chogyi Gyeltsen gives the definition of peak training of the path of seeing as: a Mahayana clear realization of truth abiding in the class of direct antidotes to the seeds of conceptions that are to be abandoned by the path of seeing. It has two divisions: meditative equipoise of a Mahayana path of seeing and post meditation/subsequent attainment of a Mahayana path of seeing.

Peak training of the path of meditation is the sixth topic. It is defined as: a Mahayana subsequent clear realization that abides in the class of direct antidotes to the seeds of conceptions that are to be abandoned by the path of meditation. It has nine divisions, such as the small small. It exists exclusively on the path of meditation.

That which abides in the class of direct antidotes is not necessarily a direct antidote. For example, the exalted wisdom of the post-meditation/subsequent attainment is peak training of a path of meditation but it is not a direct antidote to the seed of conceptions to be abandoned by the path of meditation.

Uninterrupted peak training together with perverse achieving

This includes the seventh and eighth of the eight trainings.

The definition of an uninterrupted peak training according to Gyeltsab is: a yoga of an excellent meditation upon the compendium of the three exalted knowers that directly generates omniscient mind. Chogyi Gyeltsen defines it as: a final yoga of a bodhisattva sustained by a wisdom that is superior to the Mahayana path of accumulation that meditates on the compendium of the three exalted knowers and directly generates omniscient mind which is its result. It synonymous with the exalted wisdom of the end of the continuum of a sentient being.

In terms of the outline ‘Causes and effects which empower’, empower is said because when a bodhisattva is training in complete aspects he does so in order to gain power over the aspects of the three exalted knowers. In the case of peak training a bodhisattva meditates having already gained power over the aspects of the three exalted knowers. Training in complete aspects is the cause, while peak training is the result. Although these two are explicitly presented here as cause and result, this does not mean that the complete training in aspects is always a cause and the peak training is always a result. But in terms of a single individual the complete training in aspects comes first followed by the peak training. In other words, gaining control means that a bodhisattva on the heat level of the path of preparation has gained some control, he can go through all 173 aspects without making any mistake in the meaning or the order.

Tuesday afternoon class, February 17, 1998

The eighth of the eight topics indicating peak training are perverse achievings to be avoided that are explained here. Gyeltsab defines perverse achievings to be avoided that are explained here as
either of the following two: a seed of a conception apprehending the two truths as not being suitable to be gathered into one entity or a manifest conception apprehending the two truths as not suitable to be gathered in one entity. Chogyi Gyeltsen in *Seventy Topics* defines the perverse achieving to be avoided that are explained here as: included in either of the two, a seed of a conceptions apprehending the two truths as not suitable to be gathered in one entity or a manifest conception apprehending the two truths as not suitable to be gathered in one entity, and explained here.

Perverse achieving refers to the fact that someone may think that it is not possible to establish the two truths on one object. The correct assertion is that the two truths can established on every single phenomena. The two truths are one entity but have different names. Chandrakirti in *Madhayamakavatara* says that all phenomena can be perceived in two ways, one in the correct or perfect aspect and one in a false aspect, the conventional truth. Therefore, all phenomena have the nature of the two truths.

Question: All phenomena have the two entities. How is it possible to establish the conventional truth on emptiness?

Reply: Even the object emptiness is imputed. The meaning generality associated with emptiness is the conventional truth of emptiness. Establishing the conventional truth of emptiness differs according to the schools. It is quite simple according to Chittamatra but complicated according to Prasangika. How does the conventional truth exist on emptiness? It is just the fact that it is labeled. This is asserted by both Svatantrika-Madhyamika and Madhyamika Prasangika.

It has sixteen divisions all of which are perverse achievements that are to be eliminated. There are perverse conceptions with regard to:

1. an acceptable object of reference
2. definitely holding the entity of an object of reference
3. an exalted wisdom knowing all aspects
4. the two truths
5. training
6. rare supreme Buddha
7. rare supreme Dharma
8. rare supreme Sangha
9. skillful means
10. a clear realization of a subduer
11. that which is perverse
12. paths
13. antidote class
14. discordant class
15. characteristics of phenomena
16. meditation

The eight topics mentioned here are those that represent peak training.

REVIEW

Now just to clarify some of the previous lists. In some texts, such as *Fundamental Wisdom*, which negates that functioning things exist truly, and *Finely Woven*, which were composed by Nagarjuna there are 16 arguments that are brought forth.

1. things exist truly because there is valid cognition
2. things exist truly because there is an object to be comprehended
3. things exist truly because there is a doubt
4. things exist truly because there is a purpose
5. things exist truly because there is an example (that proves it)
6. things exist truly because there are tenets
(7) things exist truly because there are branches
(8) things exist truly because there are those who dispute
(9) things exist truly because they are established
(10) things exist truly because there are disputes/debate
(11) things exist truly because there is expression
(12) things exist truly because there is refutation/rejection
(13) things exist truly because there are facsimiles
(14) things exist truly because there are words that reject
(15) things exist truly because there are those who imitate arguments/debate (there are twelve imitations of debate mentioned in Pramanavartika)
(16) things exist truly because there is vanquishing

These are the sixteen word meanings coming from those who spend their life debating. These sixteen word meanings are for proving that things exist truly; it is a dry philosophy, dry words, a hard head. In Finely Woven these arguments are refuted. Some of these reasons, however, are partly correct, for example when it is posited ‘because there is an object to be comprehended’ this is true since both specifically and generally characterized phenomena are to be comprehended, as are manifest and hidden phenomena. But, although there are objects to be comprehended, this is not a valid sign proving that things are truly existent. Manifest and hidden phenomena are of two kinds as are the valid cognizers that realize them: a valid direct perceiver and a valid inferential cognizer. Therefore the reason ‘because they are valid cognizer’ is also a valid statement that can be used in other situations, such as in proving that phenomena exist as objects to be comprehended, but it is not a valid reason in the case of proving true existence.

Before we went through the 32 subjects mentioned in the Condensed Meaning of the Eight Thousand Stanza Perfection of Wisdom. They are: (1) the support, a buddha; (2) the point of view of the disciple, a bodhisattva; (3) action; (4) sign; (5) downfall; and (6) benefit. Then there are the sixteen emptinesses: (1) inner emptiness, (2) external emptiness, (3) emptiness of both inner and outer, (4) emptiness of emptiness, (5) great emptiness, (6) ultimate emptiness, (7) emptiness of compounded phenomena, (8) emptiness of uncompounded phenomena, (9) emptiness of that gone to the extremes, (10) emptiness of beginningless and endless, (11) emptiness of that which is not to be discarded, (12) emptiness of nature, (13) emptiness of all phenomena, (14) emptiness of definitions, (15) emptiness of non-functioning things, and (16) emptiness of the very entity of non-functioning phenomena. If we associate these emptinesses with their respective bases:

(1) inner emptiness is the emptiness of the five faculties/sense powers
(2) external emptiness is the emptiness of external objects: forms, sounds, odors, tastes, and tangible objects
(3) emptiness of both inner and outer is the emptiness of the gross physical organs: eyeballs, ears, nose, tongue, and body. These organs can be considered inner and outer depending on how one looks at them. With respect to the subtle lucid faculties they are considered to be outer, while with respect to external objects, such as forms, sounds, and so forth, they are considered inner.
(4) emptiness of emptiness is the emptiness of emptiness itself. Emptiness from any point of view is a basis upon which emptiness can be posited.
(5) great emptiness, in this case the basis that is empty is the ten directions: the four cardinal directions, the four intermediate directions, above and below
(6) ultimate emptiness refers to the emptiness of true paths and nirvana, which are considered ultimate.
(7) the basis of the emptiness of compounded phenomena is any product that has arisen as a result of causes and conditions. It is illustrated by the three realms.
(8) the basis of the emptiness of uncompounded phenomena is any phenomena that has not arisen from causes and conditions, for example, uncompounded space.
(9) the emptiness that has gone to the extreme refers to the emptiness of the two extremes of nihilism and eternalism.
emptiness of the beginningless and endless is the emptiness of cyclic existence. In general one cannot say that samsara began at this time in this place, and one cannot say that samsara will finish at such-and-such a time. This is a general presentation but in relation to a particular individual although cyclic existence is beginningless it is not endless. There is an end to the cyclic existence of a particular individual because when he realizes selflessness he puts an end to samsara. There is a citation in *Four Hundred Stanzas* that says, “Although there is no end to the beginning there is an end to the end. This comes when selflessness is realized.”

(11) the basis of the emptiness of that which is not to be discarded is the thirty-seven factors/aids to enlightenment which are to be adopted, not discarded.

(12) emptiness of nature refers to the emptiness of the nature of uncompounded and compounded phenomena, both of which by nature are empty.

(13) the emptiness of all phenomena refers to the emptiness of the five aggregates, the twelve sources, and the eighteen elements/constituents.

(14) the emptiness of definition is the emptiness, for example, of the definition of form ‘that which is suitable to be form,’ or the definition of feeling ‘that which is thoroughly experienced.’ The emptiness of a definition is its lack of a self of phenomena. Here all phenomena can be included from form to omniscient mind.

(15) the emptiness of non-functioning things refers to the emptiness of such phenomena as uncompounded space.

(16) the basis of the emptiness of the entity of non-functioning things is uncompounded phenomena in general. The Vaibhashikas say that uncompounded phenomena are of three types: analytical cessations, non-analytical cessations, and uncompounded space. Chittamatrins posit uncompounded phenomena differently.

These sixteen emptinesses plus the previous six are 22 of the 32 subjects in the *Condensed Meaning of the Eight Thousand Stanzas*. The remaining ten subjects are the ten antidotes that counteract distractions in meditation. The ten distractions are:

1. conceiving of something to exist
2. conceiving that something does not exist
3. conception that superimposes
4. conception which deprecates
5. conceiving something as one
6. conceiving something as many
7. conceiving something as itself/oneself
8. conceiving something as different
9. conceiving something as a name
10. conceiving something as an object/meaning

We will also go over some of the other lists more thoroughly in the future.

Question: What is the difference between the third and the thirteenth emptiness?
Reply: The third is the emptiness of the gross physical organs while the thirteen is of the twelve sources. Perhaps the thirteenth can be said to include the third but there must be a reason that Buddha explained them separately.

In terms of meditation one should begin with meditating on inner phenomena before going on to meditate on external phenomena. This is advised because if we look at ourselves we will see that, although our familiarity with external objects is strong, our familiarity with our inner faculties is even stronger as we live together with them as one unit. For example, in terms of our eyes there is a subtle form inside them that is the eye faculty/sense power and outside there is the gross eye ball. We cherish our eyes constantly, this is a strong habit. For this reason it is advised to meditate on them first. The fact that our familiarity is so strong helps us to meditate on them. Having concluded the meditation on the inner phenomena one goes on to meditate on external phenomena. It is said that when a bodhisattva enters the path of accumulation he first meditates...
on inner emptiness, then when he reaches middle path of accumulation he meditates on external emptiness, and then later on, on the great path of accumulation, he meditates on the emptiness of the inner and outer. On the path of preparation he meditates on the emptiness of emptiness. On the path of seeing he meditates on great emptiness, the dharmadhatu covering all phenomena. Then on the second ground he meditates on ultimate emptiness. In some texts it says he meditates on the supreme meaning which refers to ultimate emptiness. The *Four Hundred Stanzas* on Madhayamika says that when someone meditates on emptiness it is great, for even though one does not meditate well just by having a doubt concerning emptiness one creates a great amount of merit which shatters/shakes the root of cyclic existence. This means that even though one does not immediately realize emptiness even just meditating on it is of great benefit. If one has the right understanding of emptiness there is great meaning, but even if one just has a doubt concerning emptiness it is great. This doubt, or wondering, can be called a kind of realization.

Wednesday morning class, February 18, 1998

2B2B-2B2B Causes and effects which stabilize
1 Serial training
2 Momentary training

2B2B-2B2B-1 Serial training
A Topics which indicate
B Connecting the illustration and the explanation

2B2B-2B2B-1A Topics which indicate

*Serially: three types, ten types.*

Gyeltsab’s commentary lacks the divisions of serial training and momentary training, although they are discussed. It also does not give the definition of serial training at this point; however, the definition was given before. Serial training has thirteen divisions, such as the serial training in the perfection of generosity. [*The Ornament says: Serially: three types, ten types.*]

The divisions according to Chogyi Gyeltse are:

(1) serial training in the perfection of generosity
(2) serial training in the perfection of morality/ethics
(3) serial training in the perfection of patience
(4) serial training in the perfection of effort
(5) serial training in the perfection of concentration
(6) serial training in the perfection of wisdom
(7) serial training of the recollection of Buddha
(8) serial training of the recollection of Dharma
(9) serial training of the recollection of Sangha
(10) serial training of the recollection of morality
(11) serial training of the recollection of giving
(12) serial training of the recollection of gods
(13) serial training of the entitiness of non-inherent existence

Not only does morality appear twice in this list but so does generosity/giving. You are already familiar with the six perfections. The recollection of Buddha refers to remembering the excellent qualities of the buddhas. These qualities include the qualities of his body, the thirty-two major and eighty minor marks; the qualities of his speech, the sixty-four melodious qualities; and the qualities of his mind, the twenty-one sets of uncontaminated exalted wisdom and the twenty-seven virtuous activities. Recollecting buddha therefore means to recall these qualities. These qualities are not truly existent but only conventionally existent. Recollection of Dharma means to remember the Dharma that we hear but also to remember virtuous phenomena, non-virtuous phenomena, and unpredicted phenomena. When we remember virtuous phenomena it includes
virtue of entitiness/natural virtue, ultimate virtue, and commonly shared virtue, which is free from attachment, hatred, and ignorance. Ultimate virtue is true cessations; but this can be debated since true cessations are not actually virtue. One can recollect non-virtue by thinking to not create non-virtue which is the cause of suffering. One recollects virtue by thinking to create it since it is the cause of happiness. Unpredicted, or neutral, phenomena are neither virtuous or non-virtuous.

In terms of the recollection of Sangha, here sangha refers to aryas bodhisattvas who have achieved a sign of irreversibility. There are twenty sangha of example and twenty sangha of meaning.

The recollection of morality is to remember the three vows. The Ornament is taught from the point of view of sutra therefore in this context the three vows refers to the vows of individual liberation, concentration vows, and uncontaminated vows. These three vows are included in the virtue of entitiness/natural virtue because by their nature they are virtuous. The vows of individual liberation are of eight types which can be divided into two: those of lay people and those of ordained people. Lay vows are of three types: 24 hour vows and the male lay and female lay vows (upasika). Ordained vows are of five types: male and female novice vows (shramanerika/getsul), male and female vows of full-ordination (bhikshu/gelong and bhikshuni/gelongma), and probationary vows. The probationary vows are peculiar to novice nuns. Having taken the novice vows, a nun considering taking full-ordination first takes probationary vows (an extra twelve vows) for two years. These twelve vows are divided into six that are similar to the root vows and six that are similar to the secondary vows. Vows of concentration are achieved upon attaining an actual concentration. When someone attains a concentration all non-virtue is naturally abandoned by the force of the concentration. Uncontaminated vows are so-called because when one attains an uncontaminated path non-virtue is naturally abandoned.

The recollection of giving refers to giving Dharma and material objects.

The recollection of the gods refers to recollecting the aryas beings who take rebirth in the form realm as a god. In the form realm there are both impure and pure form realms; aryas take rebirth in the five pure realms. Recollection of the gods can also refer to thinking of one’s own root guru in the aspect of a deity and remembering him.

The entitiness of non-inherent existence refers specifically to the emptiness of non-functioning things, uncompounded phenomena. But in fact one can meditate on all phenomena as lacking true existence.

2B2B-2B2B-1B Connecting the illustration and the explanation

Gyeltsab says that these are the serial trainings. This concludes the explanation of serial training and its thirteen divisions.

A Topics which indicate
B Connecting the illustration and the explanation

2B2B-2B2B-2A Topics which indicate

Four types by way of the characteristic of manifest complete enlightenment in one moment.

The definition of momentary training was given before. Momentary training has four divisions which are one entity but have different names. With regard to momentary training the root text, the Ornament, says:

Four types by way of the characteristic of manifest complete enlightenment in one moment.

Chogyi Gyeltsen defines each of the four divisions of momentary training:
(1) non-fully ripened momentary training: a bodhisattva’s yoga that is a direct antidote to the obscurations to knowledge by way of being conjoined with a wisdom that, when actualizing one uncontaminated non-fully ripened phenomena in the briefest moment in which an action can be completed, also actualizes them all.
(2) fully-ripened momentary training: a bodhisattva’s yoga that is a direct antidote to the obstacles to knowledge by way of being conjoined with a wisdom that, when actualizing one uncontaminated fully ripened phenomena in the briefest moment in which an action can be completed, also actualizes them all

(3) characterless momentary training: a bodhisattva’s yoga that is a direct antidote to the obstacles to knowledge by way of being conjoined with a wisdom directly realizing emptiness

(4) non-dual momentary training: a bodhisattva’s yoga that is a direct antidote to the obstacles to knowledge by way of being conjoined with the wisdom directly realizing subject and object as being empty of being different substances

These four are mutually pervasive and exist only in the final continuum of a sentient being.

When engaging in serial training one is able to go through the 173 aspects without making any mistake in the number or the order. During momentary training the bodhisattva’s ability has improved and he is able to have all 173 aspects appear to his mind in the briefest moment in which an action can be completed (the duration of a finger snap). These aspects appear sequentially but the bodhisattva goes through them so fast that it almost seems that they appear simultaneously. For example, if someone were to hold up a book with a hundred pages while someone else shoots an arrow or a bullet at it, the arrow or bullet would pass through the pages of the book so quickly that it would almost appear that it went through all simultaneously, but in fact it went through one page at a time. The classical illustration of this is that of an arrow that is shot through a hundred blue upala petals.

Someone says that serial training exists only above the seventh ground. This is not accepted by Haribhadra.

The end of the continuum of a sentient being, a final continuum, does not last 1/65th of a finger snap but lasts the entire duration of a finger snap.

Gyeltsab says that the way a bodhisattva meditates on the last two trainings becomes clear upon examining their definitions. When someone meditates on an impermanent object before achieving the final continuum of a sentient being, for example when on the tenth ground, due to great familiarity with it other aspects also appear to the mind without effort. Although they are said to appear without effort Gyeltsab says that they in fact some effort from time to time is required.

Someone says that with serial training a bodhisattva only meditates on 13 topics. Our system refutes this saying that if this were the case the remaining 160 aspects would be lost. In fact, a bodhisattva in serial training goes through all 173 aspects in order to gain stability upon them. Although the 13 topics are not the main object of meditation when in meditative equipoise on serial training, a bodhisattva in post-meditation does apply the 13 topics of serial training in particular, such as recollecting Buddha, Dharma, Sangha, and so forth.

After completing serial training a bodhisattva progresses to momentary training. When such an arya bodhisattva has the aspect of a single uncontaminated phenomena all the remaining aspects also easily appear to his mind one after the other. The process goes so automatically that it is like water being taken up from a well by pots on a turning wheel. Thereby, he enters the final continuum, which is an uninterrupted path, and then automatically goes on to the omniscient state. When he achieves the omniscient state his mind absorbs irreversibly into concentration and he is able to see all phenomena directly, like one can see an olive in the palm of one’s hand.

Gyeltsab says that the 173 aspects do not appear to the mind of a bodhisattva on the uninterrupted path that is the final continuum of a sentient being. Yet we know that the boundary of momentary training is exclusively the end of the continuum of a sentient being; this is the reason that the definition says ‘being conjoined with a wisdom… (when actualizing one uncontaminated non-fully/fully ripened phenomena...also actualizes them all).’ It seems that the
final continuum does not necessarily refer only to an uninterrupted path; however, this is not clear here in Gyeltab’s text. It is clear that the duration of a final continuum is the duration of a finger snap, that of the briefest moment in which an action can be completed, and that the 173 aspects appear to the mind of momentary training before the final continuum (which is the last moment of the tenth ground). On the tenth ground there is meditative equipoise, subsequent attainment, and the final continuum. The tenth ground begins with a liberated path because it is the result of the ninth ground during which the middle small obscurations to liberation were eliminated. On the tenth ground a bodhisattva works to eliminate the small small obscurations. The tenth ground is not short. There are two types of bodhisattvas on the tenth ground: one blocked by one rebirth and one who is on his last life. The bodhisattva who is blocked by one rebirth takes rebirth once again in cyclic existence to work for the benefit of sentient beings.

B Connecting the illustration and the explanation

Gyeltab says that one attains complete enlightenment in one instant.

Wednesday afternoon class, February 18, 1998

An arya bodhisattva during momentary training has the ability to have all 173 aspects appear to his mind but this does not necessarily mean that they appear. When he reaches the omniscient state this ability is perfected.

2B2B-2B3 Explaining the body of the truth body
A Topics which indicate
   Nature body
   Complete enjoyment body
   Emanation body
   Wisdom truth body
B Connecting the illustration and the explanation

2B2B-2B3A Topics which indicate

   Nature [body] along with complete enjoyment [body], likewise others, the emanation [body], the truth body along with the activities - the four types [of bodies] are perfectly set out.

Gyeltab defines the nature body as: a sphere possessing the two purities. Chogyi Gyeltab defines it as: a final sphere possessing the two purities. The two purities are purity free from natural and purity free from incidental stains. This nature body has two divisions: a part that is purity free from natural stains and a part that is purity free from incidental stains. It exists only on the buddha ground.

Gyeltab defines the complete enjoyment body as: that which is qualified by the five certainties. Chogyi Gyeltab defines is as: a final form body possessing the five certainties. The five certainties refer to
(1) certain place: resides only in Akanishta (Not Low, Ogmin)
(2) certain body: is adorned with the major and minor marks
(3) certain retinue: is surrounded only by arya bodhisattvas
(4) certain Dharma: teaches only Mahayana Dharma
(5) certain time: remains as long as cyclic existence is not empty

Gyeltab defines the emanation body as: a final form body not qualified by the five certainties. Chogyi Gyeltab defines it as: a final form body not possessing the five certainties. An emanation body does not have a certain retinue, is not adorned with the major and minor marks, does not reside in a certain place, and teaches both the Hinayana and Mahayana doctrine. Chogyi Gyeltab divides the emanation body into three:
(1) artisan emanation body  
(2) incarnate emanation body (born from a womb)  
(3) supreme emanation body  
It exists only on the buddha ground.

2B2B-2B3B Connecting the illustration and the explanation  

The text says simply ‘truth body.’ The definition of the wisdom truth body is: a final exalted wisdom seeing conventional truths and ultimate truth. 
Chogyi Gyeltsen defines the wisdom truth body as: a final exalted knower that sees conventional and ultimate truth. It exists exclusively on the buddha ground. 
The Great Commentary says that the wisdom truth body is mainly achieved through the accumulation of wisdom while the form body is mainly achieved through the accumulation of merit. 
Gyeltsab does not mention ‘activities’ while Chogyi Gyeltsen defines the divine/exalted activities of the wisdom truth body as: an immaculate excellent quality that arises from the subjective/dominant/empowering condition, the wisdom truth body, which is its cause. It has two divisions:  
(1) activity that exists in the object (sentient beings)  
(2) activity that exists in the agent (the person possessing the wisdom truth body)  
An example of the first is virtue that exists in the continuum of a disciple. An example of the second is a virtue that exists in the continuum of the arya buddha himself.  
When divided in greater detail there are twenty-seven exalted activities.

At the conclusion of Seventy Topics it says: “Ten, eleven, nine, eleven, eight, thirteen, four, four.”  
These are the number of topics associated with each of the eight clear realizations.

2B2B-3 Having condensed, to explain  
(see outline 3)  

The fifteen stanzas covered thus far present both a brief and extensive presentation of the body of the Ornament. The first two stanzas of the Ornament present the body briefly by mentioning the eight clear realizations. Then the remaining thirteen stanzas extensively present the eight clear realizations which are the body of the treatise.

2B2B-4 The reason these were not unraveled extensively  

Haribhadra says that he did not unravel the eight clear realizations here because otherwise there would be the fault of repetition when later on he does unravel them extensively.
CHAPTER ONE
THE EXALTED KNOWER OF ALL ASPECTS

(see outline 7)
2B2C  Meaning of the words
With this begins the elaborate explanation of the eight categories beginning with mind generation.
  1  Explaining the three knowers extensively
  2  Explaining the four trainings extensively
  3  Explaining the truth body extensively

2B2C-1  Explaining the three knowers extensively
A  Explaining the exalted object to be sought, the knower of all aspects
B  Explaining the knower of paths which progresses toward the exalted knower of all aspects
C  Explaining the knower of bases

2B2C-1A  Explaining the exalted object to be sought, the knower of all aspects
  1  Making a connection
  2  Explaining the ten topics extensively
  3  Summarizing the section

2B2C-1A1  Making a connection

Thus, having shown the summarized meaning, since bodhisattvas desire to attain in accordance with the enlightened, as it is necessary to attain the exalted knower of all aspects itself - because it is the result - initially, the very exalted knower of all aspects is accepted as being explained by means of thoroughly explaining the summarized stanzas.

Making a connection can be of different types in different contexts, such as a connection that gives an answer to a question and a connection stating a relationship. Here there is a connection stating a relationship. In the Ornament there are connections showing the order of the chapters and so forth. In the text Ocean Playground it says that Dharmamitra says there are 153 connections in the Ornament. Some people argue with this. Dharmamitra says there are 36 connections in the first chapter of the Ornament, 20 in the second, 14 in the third, 35 in the fourth, 27 in the fifth, 1 in the sixth, 5 in the seventh, 13 in the eighth; a connection concerning the middling way of counting six categories; and a connection when the categories are condensed into three. Dharmamitra says among all these connections the one made at the beginning is to determine the order of the chapters while the remaining are for various reasons. Others object to Dharmamitra’s list saying that he did not make it with careful thought. According to our system’s way of counting there are 25 connections in the first chapter, 20 in the second, 14 in the third, 36 in the fourth, 27 in the fifth, 1 in the sixth, 5 in the seventh, and 36 in the eighth plus the other two connections, that in relation to the middling way of counting the categories and that in relation to the brief way of counting. We accept this total: 166.

Here at the beginning of chapter one comes the connection: “Mind generation, together with its entity and observed object.”
What is coming now is an explanation of mind generation, its entity, and its observed object. Mind generation is the definendum.
The root text says: Mind generation: the desire for perfect complete enlightenment for the benefit of others.
Mind generation is the definendum while ‘the desire for perfect complete enlightenment for the benefit of others’ is its definition.

Gyeltsab says that having presented the brief meaning he will present here the first category, the knower of all aspects. For this reason mind generation and so forth is mentioned. The definendum and definition of these will be given. Gyeltsab says that omniscient mind is explained first in order to make people understand what is to be obtained by going through the stages of the paths. When disciples see that they can attain an omniscient mind, the result, they become happy and
will engage in the activities of hearing and so forth. Whatever we do we need to achieve is omniscient mind. Since omniscient mind is the result to be achieved, trainees intent upon the Ornament should aspire to achieve the omniscient mind that has been achieved by others and that is being achieved by others.

Here there comes the question: although it makes sense to present omniscient mind first, why is mind generation explained first and precepts second? The answer is that mind generation is explained first because it is the primary cause for attaining omniscient mind. Gyeltsab says that the way the ten topics represent omniscient mind is the same as the way in which an object represents an object-possessor/subject.

(see outline 8)
2B2C-1A2 Explaining the ten topics extensively
A Explaining the thought which promises to attain the exalted knower of all aspects
B Explaining the precepts which indicate the means of accomplishing the aims of the promise
C Explaining the achievements which accomplish the aim of the instructions accordingly

2B2C-1A2A Explaining the thought which promises to attain the exalted knower of all aspects
1 The general meaning
2 Meaning of the branches

2B2C-1A2A-1 The general meaning
A Supports which generate Mahayana mind generation
B Cause
C Entity
D Benefits

2B2C-1A2A-1A Supports which generate Mahayana mind generation

There are no specific words in the Ornament associated with these outlines.

Gyeltsab says the support of the wishing mind generation is the gods, nagas, and all who believe in the Mahayana and wish to attain enlightenment. In general it is said that the male and female human beings of three continents and the six classes of migrating beings can generate the wishing mind generation. The mind generation cannot be generated by beings in the upper realms because they do not have any gross sufferings which can cause their minds to be depressed. For this reason they do not think of the sufferings of sentient beings and do not develop compassion for them. However, this is in the case of someone generating the mind generation newly, i.e., for the first time.

The need to have one of the seven vows of individual liberation in order to be a support of the engaging/practical mind generation, explained in Bodhisattva Grounds and Lamp for the Path, is only from the point of view of being a special support. However, in general even the gods of the upper realms can possess the practical/engaging mind generation because some bodhisattvas migrate from this world to the upper realms. Therefore, beings in the upper realms can be a support of mind generation.

Thursday morning class, February 19, 1998

2B2C-1A2A-1B Cause

In the Compendium of Training by Shantideva it says that there are four causes of mind generation:
(1) to see a buddha’s body and think how wonderful it would be to attain it
(2) to see and hear about the inconceivable powers of the buddhas and bodhisattvas
(3) to be impatient on seeing the Mahayana Dharma declining
(4) to become impatient on seeing sentient beings afflicted by suffering

Gyeltsab also says that these are the four causes of generating the mind of enlightenment. The first, that of seeing a buddha’s body, can mean really seeing a buddha’s body but it may also mean seeing a statue of a buddha’s body since this can also generate the wish to attain such a body.
Gyeltsab says that the mind of enlightenment is generated on the basis of four causes, three conditions, and three powers. Four causes are explained in Bodhisattva Grounds but they are slightly different from those presented here. In that text it says that the first cause is perfect lineage; the second, being guided by a virtuous spiritual friend; the third, great compassion; and the fourth, fear of the sufferings of cyclic existence. In short, there are various causes for mind generation but the main cause, as often mentioned in the texts, is great compassion. As a result of fear of the sufferings of cyclic existence one develops the wish to get out of cyclic existence and becomes impatient upon seeing others suffering.

Four conditions are also explained in the text Bodhisattva Grounds: (1) to see and hear about the magical emanations of buddhas and bodhisattvas, (2) to hear the Mahayana Dharma baskets/collections/canons, (3) to see that the Mahayana doctrine is degenerating, and (4) to see that sentient beings have many delusions. On the basis of these conditions one generates the mind of enlightenment, for example, upon seeing others suffering one develops the wish to attain buddhahood in order to help them.

The four powers are also mentioned in Bodhisattva Grounds: (1) one’s own power, (2) others’ power, (3) power of the cause, and (4) power of the action. All four are required in order to develop the mind of enlightenment. One need’s to have both power from one’s own side and power from others’ side in order to generate the mind. The power of the cause refers to the fact that if one has all the causes this will enable one to generate the mind of enlightenment. The power of action refers to the actual practice which develops the mind of enlightenment, such as the meditation of the ‘seven fold causes and effect’: recognizing all sentient beings as having been one’s mother, remembering their kindness, wishing to repay their kindness, generating love for all sentient beings, generating compassion, developing the extraordinary thought, and generating the mind of enlightenment. Mind generation can also be achieved through the meditation of equalizing and exchanging oneself with others. One meditates on the fact that all faults arise from self-cherishing while all goodness comes from cherishing others. Then one exchanges oneself with others through giving all one’s happiness, virtue, and so forth to all sentient beings out of love, and taking all the suffering of sentient beings upon oneself out of compassion. These are the two main techniques for generating the mind of enlightenment; they are thoroughly explained in Lama Tsongkhapa’s Great Stages of the Path (lam rim chen mo).

Gyeltsab comments on the four causes of the mind of enlightenment saying that of the four causes explained in the Compendium of Training the main one is the last, that of becoming impatient on seeing the sufferings of other sentient beings. The previous three are the mere mind generation seeking buddhahood. In fact, the Compendium of Training emphasizes how important great compassion is to generating the mind of enlightenment. This point is also emphasized in Ornament for Sutra it which it says: “The root is great compassion.” In other words, great compassion is the root of the mind of enlightenment. Chandrakirti in Madhyamakavatara says that great compassion is the cause of the three vehicles, those of hearers, solitary realizers, and bodhisattvas. However, it is not so important to know that such and such a text says this and that about compassion, what is necessary is to actually blend our mental continuum with great compassion.

Gyeltsab gives the definition of the entity of mind generation as: a special mind that is accompanied by the aspiration to attain complete enlightenment for the welfare of others. Chogyi Gyeltsen says the definition is: a specific Mahayana primary mental cognizer that is highly distinguished by abiding in the class of a path that is a gate to the Mahayana and that comes together with the aspiration that observes complete enlightenment for the sake of others which is its companion.
In his Commentary Clarifying the Meaning Haribhadra says: ‘Having achieved buddhahood for the benefit of others, I will endeavor in accordance with the fortunes (of the three lineage bearers);’ this has the characteristics of desiring perfect complete enlightenment for the benefit of others’ (page 2 Commentary Clarifying the Meaning). Saying ‘is of two types’ Haribhadra divides mind of enlightenment into two. Saying “Having achieved buddhahood for the benefit of others” means that one thinks to achieve buddhahood and then to help sentient beings in accordance with their fortunes. However, if someone does not possess certain characteristics a buddha will not be able to help him or her. In the eighth chapter of the Ornament it says: “Although the god of rain sends rain down an impotent seed does not grow, likewise, although the buddhas appear, the unfortunate do not experience excellence.” In other words, if the conditions are not present the buddhas cannot help someone, just as if a seed is rotten it will not grow although it rains.

Haribhadra says that the two types of mind enlightenment are the wishing and the mere entity of practicing. The aspiration that seeks buddhahood for the welfare of others and the thought wishing to attain that enlightenment are taught in the Golden Rosary by Lama Tsongkhapa.

In his commentary Gyeltsab does not specify the two parts of the definition of mind generation, the aspiration seeking the welfare of others and the thought wishing to attain enlightenment. But to avoid questions we should know that the mind of enlightenment is composed of the aspiration for the welfare of others and the thought wishing to attain enlightenment, which is merely an accompanying thought.

(page 2 Commentary Clarifying the Meaning) If it were said: “Is not the very desire for perfect complete enlightenment a mental factor... This is an argument that appears in Commentary Clarifying the Meaning based on the root text, the Ornament, which says (page one Commentary Clarifying the Meaning): Mind generation: the desire for perfect complete enlightenment for the benefit of others. Mind generation is a primary mental cognizer while desire is a mental factor. The argument says: in the definition ‘the desire for the benefit of others’ that desire is not a mind generation because it is a mental factor. We say that this is wrong and quote the root text “Mind generation: the desire for perfect complete enlightenment for the benefit of others” which indicates that this desire itself is mind generation. Then in Commentary Clarifying the Meaning (page 2) it says: “Is not the very desire for perfect complete enlightenment a mental factor of aspiration striving for that virtuous quality, while mind generation is a primary mind having a special appearing object?” The argument here is as to whether the aspiration for the welfare of others is a primary mind or a mental factor. There can be cases of giving the name of a cause to a result and giving the name of an assistant to the one who is assisted. The aspiration for the welfare of others is a case of giving the name of the cause to the result, the mind generation; while in terms of the desire seeking enlightenment it is a case of giving the name of the assistant to that which is assisted, the mind of enlightenment. Therefore there is no fault in giving the name desire to the conventional mind of enlightenment according to Commentary Clarifying the Meaning where it says: “That is right, but here if one has an aspiration to virtuous qualities characterized by striving, one will generate the mind of enlightenment. Therefore, the result is indicated by the cause.” This shows the reason for giving the name desire to the conventional mind of enlightenment.

Then it says: “In order to make known that “all the virtuous qualities of the bodhisattva who strives in such a way will increase,” there is not fault in relying upon a designation.” This shows the purpose of giving the name desire to the conventional mind of enlightenment: to make it understood that if one has the aspiration seeing others’ benefit one has the mind of enlightenment.

The desire which is the aspiration seeking others’ purpose is labeled on the conventional mind of enlightenment. This is a case of giving the name of the cause to the result. The mind generation, the result, is called desire, the cause. Somebody argues that mind generation cannot be called desire. We say yes, that mind generation can be called desire. The reason for designating the
name of the cause, the desire, which is indispensable for the mind of enlightenment, on the mind generation, the result, is because the mind of enlightenment comes from that cause. The purpose of designating in this way is to let a bodhisattva know that his virtuous qualities will increase. It is to make it clear that if one seeks others’ welfare one’s own virtues will increase. However, in reality there is harm in giving the name desire to the result, mind of enlightenment. This is why in Commentary Clarifying the Meaning it says ‘that is right’; this shows that there can be harm.

Then in the Commentary Clarifying the Meaning it says: In the other case, prayer is striving, since it is the very desire for perfectly complete enlightenment. The description of the mind generation which operates in conjunction with that (desire) teaches that ‘a prayerful mind will be generated in the bodhisattva.’ This indicates that the name of the assistant, the aspiration seeking complete enlightenment, is given to the conventional mind of enlightenment, the one that is assisted. Therefore, this is a case of giving the name of the assistant to the one who is assisted. This has both a reason and a purpose. The reason is that the aspiration seeking complete enlightenment is a companion, or assistant, to the conventional mind of enlightenment. The Tibetan words tsung den which have been translated here as “operates in conjunction with” (also translated as ‘bearing similarities’ or ‘associated with’) refers to having the following five in common: (1) the base, (2) the observed object, (3) the aspect, (4) the substance, and (5) the time. In this case the mind generation, which is a primary mental cognizer, and the aspiration, which is a mental factor, have, or bear, these five similarities. Their observed object is complete enlightenment and their aspect is that of apprehending complete enlightenment (however, there is some debate concerning how mind generation and the mental factor desire/aspiration apprehend enlightenment).

Question: What is the observed object of the conventional mind of enlightenment?

Reply: It is of two types, one is complete enlightenment, while the second is others’ purpose. These two are its observed object. The attainment of enlightenment is the aspect of both the conventional mind of enlightenment and the desire. What is being apprehended by the conventional mind of enlightenment? It apprehends enlightenment because the conventional mind of enlightenment wants to attain enlightenment. In this respect there are debates such as: what is the conventional mind of enlightenment with respect to the seven types of cognizers? Is it a valid direct perceiver? No it is not because it is a conceptual mind. It is also not a valid inferential cognizer. In fact, if someone were to say it is an inferential cognizer we would answer: does it arise in dependence on a correct sign? Does it not arise from meditation? To say that mind generation is developed by stating a correct sign without the need for meditation would be absurd. If someone were to say that the conventional mind of enlightenment is a subsequent cognizer, we would then say that if it is a subsequent cognizer is it preceded by preceded by a valid cognizer? And if so, which valid cognizer? Is it presumption? No. Is it an inattentive cognizer? No. Is it doubt? No. Is it wrong consciousness? No. Having gone through the seven cognizers we can see that the conventional mind of enlightenment does not fit in any one of them; however, it has to be one of them. Therefore it has to be the second, an inferential valid cognizer, or the third, a subsequent cognizer. As a conclusion we would have to say that the first moment of the conventional mind of enlightenment is an inferential valid cognizer while remaining moments are a subsequent cognizer. In his texts Panchen Sonam Drakpa says that that which belongs to the class of method in the continuum of a sentient being does not necessarily realize its object. For example, a wrong consciousness and ignorance do not realize their objects but they are a cognizing consciousness. The lower schools, from Svetantrika-Madhyamika down posit this. However, Madhyamika Prasangika says that all consciousness necessarily realize their appearing objects (nang yul).

Thursday afternoon class, February 19, 1998
Question: In the *Commentary Clarifying the Meaning* when it says ‘Mind generation: the desire for perfect complete enlightenment for the benefit of others’ is this desire also present on the buddha ground since mind generation is present there?

Reply: Yes, it is. The desire is there and is even stronger than before.

Question: Since mind generation is a desire/aspiration it is a conceptual mind, but on the buddha ground there are no conceptual minds so how could this be?

Reply: If something is an aspiration or a desire it is not necessarily a conceptual mind although mind generation itself is a conceptual mind. The mind generation in the continuum of a sentient being is a conceptual mind but that which exists on the buddha ground is not conceptual. Some say that there is no conventional mind of enlightenment on the buddha ground because buddhas have already attained perfect complete enlightenment, therefore there is no longer the wish to attain it. In general the boundary of the conventional mind of enlightenment is from the Mahayana path of accumulation up to the end of the continuum of a sentient being. Kedrup Je in *Lamp on the Arguments Concerning the Perfection of Wisdom* says that there is no mind of enlightenment on the buddha ground for various reasons. However, this is a point of debate. The textbooks of some monasteries say that although a buddha has attained complete enlightenment there is still the conventional mind of enlightenment on the buddha ground because they always have the wish that others attain enlightenment. This is a point of discussion so someone could ask: have not buddhas accomplished their own and others’ purposes? They have and for this reason they are said to be perfectly enlightened.

In terms of the five similarities we have discussed the observed object and the aspect. The aspect is of two kinds: the objective and the subjective. The subjective aspect is the conventional mind of enlightenment that apprehends enlightenment. The objective aspect is the attainment of enlightenment. The subjective aspect, the conventional mind of enlightenment, apprehends the objective aspect, the attainment of enlightenment.

The third similarity is that of substance. Just as mind generation is one substance so too is the mental factor aspiration/desire. Mind generation is a primary mind while aspiration is mental factor; these are each one substance.

The fourth similarity is that of support. Both the primary mind and the mental factor share the same support which is an subjective/empowering/dominant condition. The support that is commonly shared in this case is the mental faculty/power. There are six faculties: the eye, ear, nose, tongue, body, and mental faculties. The other faculties are material/physical but according to *Abhidharmakosha* the mental faculty is any one of the six preceding consciousnesses. In the case of the mind generation it is a primary mind and therefore must be based on a mental faculty, but the preceding consciousness can be, for example, an ear consciousness that hears the Buddha’s teachings about the mind generation. The mental consciousness thinking “Today I ate well” is a primary mind. Its subjective condition is a mental faculty that was preceded by a tongue consciousness. For consciousness to arise three conditions are necessary, this also applies in the case of the mind of enlightenment. The three are: (1) the object condition, the (2) dominant/empowering/subjective condition, and (3) the immediately preceding condition. All consciousnesses arise in dependence on these three conditions.

The fifth similarity is that of time. Time is common to both because whenever the primary mind, mind generation, arises, the mental factor aspiration arises simultaneously with it.

This primary mind can be discussed further. When the primary conventional mind of enlightenment arises how many mental factors arise simultaneously with it? Together with any mind there are the five ever-present mental factors and the five object-determining mental factors. Many of the ten virtuous minds also arise simultaneous with the conventional mind of enlightenment. The five ever-present/accompanying mental factors are (1) feeling, (2) recognition/discrimination, (3) intention, (4) contact, and (5) attention. The five object ascertaining/determining mental factors are (1) aspiration, (2) belief/appreciation, (3) memory/mindfulness, (4) concentration, and (5) wisdom.
The point is to understand how the primary mind, the mind of enlightenment, and the mental factor, aspiration, share these five similarities. The support is the mental faculty; the object is enlightenment; the subjective aspect is the wish to attain enlightenment while the objective aspect is the attainment of enlightenment; the substance is the primary mind and mental factor which are each one substance (this means, for example, that in the retinue of the primary mind there cannot be two types of aspiration, for example, the aspiration to attain enlightenment together with an aspiration to attain an object of desire); the time is that whenever the conventional mind of enlightenment arises so too does the mental factor aspiration. The words of the sutra to which mind generation is related are something like: “Shariputra, even someone who desires to attain enlightenment should learn the perfection of wisdom.” This is the reference that is the basis for this discussion about mind generation; it is a quotation from the Twenty Thousand Stanza Perfection of Wisdom Sutra but actually it also appears in the extensive and brief Perfection of Wisdom Sutras.

2B2C-1A2A-1C2 Divisions

Gyeltsab says merely that there are two types: the wishing and the engaging/practical mind generation.

2B2C-1A2A-1C3 Differences of wishing and engaging

Gyeltsab explains the wishing and engaging minds of enlightenment quoting from the Stages of Meditation by Kamalashila: “The wishing mind generation is an aspiration that wishes to become an enlightened being in order to benefit other sentient beings. The engaging mind of enlightenment is a mind that engages in the multitude of actions beginning from the moment of taking the engaging vow.” In Bodhisattvoacharyavatara it says: “The wishing mind of enlightenment is like the wish to go somewhere, while the engaging mind of enlightenment is like actually beginning to walk there. One should understand the difference between these two.” For example, we can merely wish to go to some place, this is likened to the wishing mind of enlightenment. But when we actually begin to go there it is likened to the engaging mind of enlightenment. Of course, there are different ways to get to there, walking, cycling, and so forth. The important difference between the two kinds of mind generation is that a wishing mind generation is not sustained by the practice of any of the six perfections while an engaging/practical mind generation is sustained by the practice of any one of the six perfections.

Gyeltsab says that when someone sees a city he generates the desire to go there, this is like the wishing mind generation. Then when he actually sets off for the city it is like the engaging mind generation. However, both these types of mind generation are qualified by the definition, the difference is in whether or not the mind is sustained by the practice of any one of the six perfections.

Someone says that when someone takes the vow of the engaging mind generation there is no more wishing mind generation. We say that this is not right. Gyeltsab says that even after taking the vow of the engaging mind generation there are two ways of engaging: (1) when even at the time of increasing the intention of giving there is the active aspiration to achieve omniscient mind such a practice is an activity directly sustained by mind generation and (2) an activity during which there is no mind generation manifested is an activity not directly sustained by mind generation.

It is unmistaken to say that there is mind generation from the path of accumulation up to the first ground. On the occasion of realizing emptiness and achieving the first ground, only emptiness appears to the mind while mind generation is not manifest, at this time the realization of emptiness in said to not be directly sustained by mind generation. Aside from the first ground there are also other moments on the second ground, fourth ground etc. when only the realization of emptiness is manifest and is not directly sustained by mind generation. There is some debate that says that although the realization is not directly sustained by mind generation in general it is sustained by mind generation because it says in Uma-gompa-rab-sel by Lama Tsongkhapa:
“Having attained a ground it is not possible for an activity to not be conjoined with mind generation.” In other words, activities are always conjoined with mind generation. Gyeltsab says that the vow of the engaging mind generation and the engaging mind generation itself are contradictory yet one should know that the vow of engaging mind generation can be generated only by taking the vows. Without taking the bodhisattva vows it is difficult to generate the engaging mind.

Gyeltsab says that the engaging mind generation exists from the Mahayana path of accumulation up to the buddha ground. The wishing mind generation exists from the Mahayana path of accumulation up to the tenth ground; it does not exist on the buddha ground. The two divisions that are explained here are only with respect to the conventional mind of enlightenment and not with respect to the ultimate mind of enlightenment.

There is difference between the conventional and ultimate minds of enlightenment. The conventional mind of enlightenment does not think about the ultimate reality of peerless enlightenment but thinks about the conventional body. The buddhas have both a conventional body and an ultimate body. The ultimate mind of enlightenment only thinks about the ultimate reality of enlightenment, just as water poured into water. In other words, the mind and its object of meditation become one. The ultimate mind of enlightenment exists from the path of seeing upward; it does not exist in ordinary beings.

Benefits

This refers to the benefits of generating the mind of enlightenment. Some of the benefits are that temporally one purifies all previously committed negative karma that would cause rebirth in the lower realms and that one stops creating negative karma. In addition, one creates the causes for rebirth in a fortunate realm, one’s positive karma becomes inexhaustible, one becomes an object of veneration of worldly gods and human beings, and eventually one attains peerless enlightenment. The benefits of generating the mind of enlightenment are elaborately explained by Shantideva in Bodhisattvacharyavatara where it says: “Although one has taken contaminated aggregates one can become a holy being. When one attains enlightenment even one’s contaminated human body is venerated by gods and human beings.” One of the most important points concerning the benefits of the mind of enlightenment is that the mind of enlightenment is like an alchemy that transforms the impure body into a holy body, just as the alchemist’s substance can transform iron into gold. In the Sutra of the Request of Shridatta it says: “If the benefits of the mind of enlightenment existed as form it would not fit in the entirety of space.” Knowing that there are so many benefits from the mind of enlightenment we will understand that meditating on it accumulates a great amount of merit. Also in a sutra it says that Shariputra’s merit from hearing, thinking, and meditating on the Perfection of Wisdom Sutra were inconceivable and would not fit in space. It is said that the benefits of hearing, thinking, and meditating on the Perfection of Wisdom Sutra is greater than the number of grains of sand existing in the Ganges River. We should feel fortunate to have the conditions to study the Perfection of Wisdom Sutras as we can also create a huge amount of merit by doing so.
also perform the activities of the [three] paths.’ There are two types of perfect end, the general and
that of this particular context. The activities refer to actualizing the perfect end, however,
bodhisattvas should do this only when the three conditions are complete. In addition, activities
include those of helping sentient beings of the various vehicles. For those of the hearer vehicle, a
bodhisattva should meditate on the selflessness of persons and then teach this to them. For those
who are on the solitary realizer vehicle, the bodhisattva should meditate on and then teach non-
duality. These are the activities for guiding disciples of the two lower vehicles. A bodhisattva
should also complete the activities of the bodhisattva vehicle such as engaging in the practice of
the six perfections, which are for ripening his own continuum, and the four means of gathering
disciples, which are for ripening other sentient beings. The four means of gathering disciples are:
(1) giving necessities, (2) speaking pleasantly, (3) helping or teaching according to others’ needs,
and (4) practicing what one teaches.

We have gone through two principal sections, that of the expression of worship and that of
the statement related to the purpose. In terms of composing a text there is the expression of
worship followed by the promise to compose the text. The promise to compose by thought is not
mentioned explicitly but is implied in the section of the statement related to the purpose. This
completes the section of 2A Engaging in the explanation (outline 1) which is divided into 2A1
Expression of worship and promise to compose. Then comes the actual text, positing the
explanation itself. This is divided into a brief and extensive presentation of the body of the text.
Outline 3 contains a brief presentation of the body of the text in outline 2B2B-2A Showing the
body in short. The extensive presentation of the body (2B2B-2B) which is the list of seventy topics
begins from outline 4. The exalted knower of aspects is divided into four sections, followed by the
knower of paths and the knower of bases which are each divided into only two sections. These
outlines were set up by Gyeltsab Je but they could have been done differently. In fact, each author
would have his own ideas.

In short, the brief presentation of the body and the extensive presentation of the body are
contained in the fifteen stanzas following the first two stanzas which are the statement related to
the purpose. The Ornament lists all eight clear realization or eight categories in the brief
presentation in the first two of the fifteen verses. Then in the third to fifteenth verses all the
seventy topics are listed. The Ornament says ‘The perfection of wisdom is perfectly explained in
eight categories.’ This is a very brief presentation of the body of the text. It can be called ‘the
section of the perfection of wisdom.’

We should then understand that there are objects to be expressed and words that express
them. In terms of the words that express there are the eight chapters of the Ornament and in terms
of the objects to be expressed there are the eight categories. The meaning of a perfection of
wisdom is: a final exalted wisdom that is qualified by three attributes. When it is divided
etymologically there are four types: the natural, scriptural, path, and resultant perfection of
wisdoms. The natural perfection of wisdom is emptiness. [It is called a perfection of wisdom]
because emptiness is the principal object of the perfection of wisdom. However, emptiness is only
a nominal, or etymological, perfection of wisdom. The scriptural and path perfection of wisdoms
both have three steps: the reason for calling them perfection of wisdom, the purpose of calling it
so, and the harm in calling them so. The Compendium of the Meaning of the Eight Thousand Stanzas
says there are two perfection of wisdoms that are imputed, the scriptural and the path perfection
of wisdoms. Only the resultant perfection of wisdom is an actual perfection of wisdom. The
scriptural and path perfection of wisdoms are called perfection of wisdom for various reasons that
were discussed previously while the resultant perfection of wisdom is an actual perfection of
wisdom. Although in Hinayana literature there are a scriptural, path, and a resultant [perfection
of wisdoms], which is arhatship, these are said to be but a shadow or reflection of the Mahayana
scriptural, path, and resultant [perfection of wisdoms]. If we look in a mirror the face that appears
is just a reflection of our real face. Although the Hinayana scriptural, path, and resultant
[perfection of wisdoms] are complete, they are said to be imputed while the Mahayana scriptural,
path, and resultant [perfection of wisdoms] are real. This is all I will say now with regard to the
The perfection of wisdom according to the Svetambara-Madhyaikaka school is necessarily omniscient mind. This means that the wisdom that is achieved at the end of the practice of the perfection of generosity, morality, patience, and so forth is a perfection of wisdom; it is omniscient mind. However, according to Madhyamika Prasangikaka there is no need for the wisdom that comes at the end of each perfection to be an omniscient mind. This is because there are the perfections even in the continuum of a bodhisattva while they do not yet have omniscient mind. There are two perfections, the mundane and the supermundane. The Prasangikakas say, for example, in relation to the perfection of generosity that there are three circles/spheres, the giver, the recipient, and that given. When generosity is practiced without a conception apprehending the three spheres as truly existent it is a supermundane perfection of generosity. However, if generosity is practiced with a conception apprehending the giver, recipient and that given as truly existent then it is a mundane perfection of generosity. However, it is still called a perfection because it is a practice that leads to the perfection.

Then comes the section that begins with the root verse from the Ornament on page 11 ‘The very exalted knower of all aspects... ’ and continues up to page 14 where it says ‘along with the activities - the four types of bodies are perfectly set out.’ This section does not have a specific name but we can say that it belongs to the brief presentation of the body of the text. The brief and extensive body, or corpus, were said to mean a collection of many branches/parts. The subject of the perfection of wisdom is all phenomena from form to omniscient mind for a total of 108 phenomena: the 53 that belong to the ever-deluded class and the 55 that belong to the thoroughly purified class. See the chart of the eight clear realizations and seventy topics; the whole subject of the Ornament is included here since that to be expressed by the Ornament is all phenomena from form up to omniscient mind. There are two types of body, one which expresses and one that is expressed. The object to be expressed it the eight categories, while the subject, that which expresses, is the eight chapters.

With regard to why there are four outlines with respect to omniscient mind while there are only two for the other two knowers. However, the explanation may be there without outlines being specifically mentioned. At one point Haribhadra says that the reason that there is no elaboration here is to avoid repetition since he will explain all in detail later on. This could be why there are less outlines.

Question: How is it possible for a bodhisattva’s activities to not be sustained by mind generation? For example, when an arya bodhisattva has a manifest delusion are his activities sustained by mind generation?
Reply: The answer is yes, although there is manifest delusion an arya bodhisattva’s activities are indirectly sustained by mind generation.
Question: While the delusions are manifest are these delusions sustained by mind generation?
Reply: No, but it is possible that an arya bodhisattva has manifest delusions, such as attachment. However, this happens for a specific purpose. Attachment arises and a bodhisattva at that moment has compassion as a motivation. There is discussion as to whether this attachment is sustained by mind generation, but no, it is not sustained by mind generation. This means that although a bodhisattva has delusion the delusion is like an impotent poison whose energy has been destroyed by medicine or mantra. The attachment in the continuum of an arya bodhisattva does not have energy and cannot bring a suffering result. Whenever there is manifest attachment in the continuum of an arya bodhisattva it is like an ineffective poison and is used only as a media for helping other sentient beings. An illustration is an arya bodhisattva with manifest attachment who, motivated to help others, for example, gives birth to a son who becomes a universal king and thereby can help many other sentient beings. When a bodhisattva has a child who becomes a universal king it is not for the purpose of gaining territory, making war, etc. It is for the purpose
of benefiting sentient beings. For example, a bodhisattva’s son who is a universal king with a gold wheel (there are various classes of universal king, those with gold, silver, copper, and conch wheels) has the most capacity, he can reign over all four human continents, while one with a silver wheel can reign over three, one with a copper wheel over two, and one with a conch wheel over one. Here in this text it says conch wheel rather than iron wheel as is sometimes mentioned.

With regard to this point it says in Bodhisattva Grounds that when a bodhisattva has reached a certain level of realization he is authorized to engage in the seven negative actions of body and speech. These actions are permitted and are not negative actions. There is a story in relation to this. One time a monk, who was said to be a bodhisattva, went begging. He was approached by a young girl who proposed sexual intercourse to him. The monk refused saying that he was a monk. The woman said that if he did not have sex with her that she would commit suicide. The monk went off but the young woman began to pull out her hair and roll on the ground. The monk thought to himself, “I’m a bodhisattva. A bodhisattva is permitted to commit any of the seven unwholesome actions in order to protect someone’s life.” The monk returned to the woman and accepted. In this way, the woman did not die. This story is recounted in sutra in more detail. If someone is a real bodhisattva then he can engage in the seven unwholesome actions of body and speech. It may seem that a bodhisattva creates negative karma in doing so but in fact he does not.

Question: Does a bodhisattva meditate on the shortcomings of cyclic existence?
Reply: He definitely has done so before becoming a bodhisattva, but again from time to time he does meditate on these shortcomings.

Question: Why is that necessary?
Reply: A bodhisattva observes other sentient beings and meditates on the shortcomings of cyclic existence in terms of how much suffering they have. This meditation reinforces both his mind of renunciation and his mind of enlightenment. Mercy/compassion is the cause of generating the mind of enlightenment. A bodhisattva has the mind of enlightenment therefore he definitely has great compassion. But, although he has mind of enlightenment, the texts say that compassion is important at the beginning, in the middle, and at the end. Compassion is like the water necessary for a seed to grow in that it is needed in order to develop the mind of enlightenment. Compassion is necessary in the middle since it needs to be maintained during the path. Compassion is also necessary at the end in order to turn the wheel of Dharma. If a bodhisattva does not cultivate compassion there is the risk of degenerating his mind of enlightenment, since only after the middle level of the path of accumulation, the gold-like mind generation, does he become free from the risk of losing the mind of enlightenment. Before this is can be lost and therefore compassion needs to be cultivated.

Question: What is the meaning of clear realization?
Reply: There is no definition, but it is a synonym of exalted knower. It is that which actually realizes its object. Clear realization is ngon par tok pa in Tibetan and abhisamaya in Sanskrit. Abhi has four meanings: overshadow, actualize, and higher. To summarize, a clear realization is an exalted knower sustained by definite emergence.

We should never be satisfied with our learning and studying. In the Ornament it says ‘not satisfied by hearing...’; we should never be satisfied with our level of learning.

MEDITATION
We will continue on from where we left off last time, the meditation on suffering. Some people say that they do not want to hear about suffering because they are suffering! However, ‘meditating on suffering’ and ‘experiencing suffering’ are two different things. Meditation on suffering and all its various aspects is for the purpose of inspiring us to want to become free from suffering. Last time we looked at true sufferings, which are implicitly discussed in the Ornament saying ‘That which through the exalted knower of all leads hearers seeking pacification to peace.’
Today we will look at true origins, the cause of true sufferings. The causes are karma and delusions. The root of all delusions is the ignorance that grasps at a self of persons. True origins cause us to enter cyclic existence: even more precisely, ignorance is the factor that causes us to enter cyclic existence. With ignorance we go on to create karma (karmic formations) of which there are three types: meritorious, demeritorious, and unwavering/unmoving karma. Meritorious karma throws us into a rebirth in a happy realm, that of the humans and gods of the desire realm. Demeritorious karma throws us into the lower realms. Unwavering karma throws us into the form and formless realms. Motivated by ignorance we create karma which leaves an imprint on the consciousness. The consciousness on which imprints are deposited is the third link. At the time of death the eighth link craving and the ninth link grasping, which are compared to water and manure, activate the imprint deposited on the consciousness. In this way it is made ready to bring a result, this activation is called existence, the tenth link. Thus the two links, craving and grasping, activate the karmic imprint to bring about another existence. This is how the process happens. Then we die, pass through the intermediate state (bardo), and are conceived in a womb. At this time comes the fourth link of name and form and the eleventh link of birth. Slowly the fetus begins to develop and when the organs are formed there is the fifth link, that of the six sources. Then with time comes the sixth link, contact, which occurs when the an object and its respective sense power/faculty and consciousness come together. At this point feeling, the seventh link, arises. Contact and feeling therefore arise while still in the mother’s womb. Of the twelve links six are resultant links. Of the six, five, those of name and form, sources, feeling, contact, and birth, take place while still in the womb, while the sixth resultant link is the twelfth link, that of aging and death. Aging takes place from the moment the aggregates come into being. They immediately begin to change because they are impermanent, this change from the point of view of the texts is said to be aging. It is possible to have the twelfth link even in the mother’s womb since some babies die in the womb. This is quite common at the present time. This, in short, is how we wander in cyclic existence.

The time has run out but keep this in mind and think about it on your own. In general there are two types of ignorance: the ignorance not knowing reality and the ignorance not knowing the law of cause and effect. Ignorance in the context of the first link is that which does not know reality, the grasping at a self of persons. The subject of the twelve links is very profound and important. There is a true story concerning the householder Shridatta who became an arhat by meditating on the twelve links alone.

2B2C-1A2A-2A1A Making general connections

The difference between the outline ‘general meaning’ and that of ‘meaning of the branches’ is that in the general meaning Gyeltshab’s commentary is not based on actual words of the Commentary Clarifying the Meaning. The ‘meaning of the branches’ however is based on the Commentary Clarifying the Meaning.

(page 1 of Commentary Clarifying the Meaning)
Mind generation, together with its entity and observed object.

Here the brief presentation is being connected to the extensive presentation of the body of the text. The first topic to be explained is mind generation, which is the first of the ten topics representing omniscient mind.

2B2C-1A2A-2A1B Root text

Mind generation: the desire for perfect complete enlightenment for the benefit of others

First Gyeltshab presents the definendum, mind generation, and then its definition: a special mind associated with the aspiration seeking perfectly complete enlightenment in order to liberate all sentient beings who are afflicted by suffering. Conventional mind generation is composed of two aspirations/desires: (1) the aspiration to benefit sentient beings and (2) the aspiration to attain enlightenment. The first aspiration is a cause while the second is its companion.

There is a particular purpose for saying that the Mahayana mind generation is an aspiration/desire. By saying “mind generation” one should indirectly understand the aspiration for others’ purpose and the aspiration to attain enlightenment. The aspiration for others is the cause while the aspiration to attain enlightenment is its companion/helper. Therefore, mind generation is called an aspiration. What is it seeking? It is seeking peerless enlightenment. What for? It wishes to attain that peerless enlightenment for others’ welfare. Although the aspiration for one’s own welfare is explained first and then the aspiration for others’ welfare, they are actually generated in the opposite order: first one generates the aspiration for others’ welfare and then the mind of enlightenment. This is a rough commentary on the root text ‘Mind generation: the desire for perfect complete enlightenment for the benefit of others.’

2B2C-1A2A-2A1C Commentary
1 Meaning of the words
2 Dispelling objections

2B2C-1A2A-2A1C-1 Meaning of the words

The mind generation (thinking) “Having achieved buddhahood for the benefit of others, I will endeavor in accordance with the fortunes (of the three lineage bearers),” has the characteristics of desiring perfect complete enlightenment for the benefit of others and is of two types: wishing and the mere entity of practicing.
Gyeltsab simply says that in order to act for others’ welfare one first becomes a buddha and then endeavors in accordance with the fortunes of the three classes of beings. Mind generation is of two types: (1) the wishing mind generation which has the characteristic of wishing to attain enlightenment for others’ welfare and (2) the practical/engaging mind generation which engages.

Up to here we have gone through the interpretations of Haribhadra and Gyeltsab. The wishing mind generation is simply a wish without any activity. As long as mind generation is there but one does not engage, for example, in the six perfections it remains a wishing mind generation. Only when one begins to engage in the six perfections and so forth does it become engaging mind generation.

2B2C-1A2A-2A1C-2 Dispelling objections
A Objection
B Response

An objection is set forth by someone which is then shown to be incorrect.

If it were said: “Is not the very desire for perfect complete enlightenment a mental factor of aspiration striving for that virtuous quality, while mind generation is a primary mind having a special appearing (object)? How can (that desire) be mind generation?”

The Mahayana conventional mind generation is a primary mind. In regards to this someone says: “If it is a primary mind how can it be the mental factor aspiration?” Gyeltsab states the question a little differently: how can the aspiration seeking complete enlightenment be mind generation if aspiration is a mental factor? There is pervasion because the aspiration seeking enlightenment is an aspiration that is a mental factor that individually determines its object. It is one of the five determining/ascertaining mental factors and therefore belongs to the compositional factors aggregate, while mind generation is a primary mind belonging to the consciousness aggregate. Mind generation is a primary mind to which two superior objects appear: (1) others’ welfare/purpose and (2) enlightenment.

Someone else says: “The mind generation is a primary mind, while aspiration is a mental factor. So how can mind generation be called ‘aspiration’?” The main argument here is concerning mind generation and the mental factor aspiration.

2B2C-1A2A-2A1C-2B Responses
1 Designated by the term “desiring the benefit of others”
2 Designated by the term “wishing enlightenment”

That is right, but here if one has an aspiration to virtuous qualities characterized by striving, one will generate the mind of enlightenment. Therefore, the result is indicated by the cause.

In order to make known that “all the virtuous qualities of the bodhisattva who strives is such a way will increase,” there is no fault in relying upon a designation.

Although mind generation is a primary mind there is no fault in calling it an aspiration. There is no fault because the aspiration for others’ welfare comes before the conventional mind generation. The purpose of designating so is to let us know that when such a mind generation is developed all one’s roots of virtue will increase. Simply for this reason and this purpose mind generation is called the aspiration for others’ welfare/benefit.
Gyelt sab comments on giving the name ‘aspiration for others’ welfare’ to mind generation. It is right that if it is a mental factor it not a mind generation but in the case of the mind generation explicitly presented here it can be designated by the name aspiration/desire. Therefore, there is no mistake in positing a common locus between the primary mind, mind generation, and the mental factor, aspiration/desire. This designation is given because it has all three attributes. Mind generation is called aspiration/desire in the sense that the name of the cause is given to the result. These two are cause and effect, i.e., the desire to benefit others and the Mahayana mind generation are cause and effect. When someone has the aspiration wishing to attain enlightenment for the benefit of sentient beings who are suffering, this person will definitely have the Mahayana mind generation. Without first developing the aspiration for others’ purpose a complete Mahayana mind generation as explicitly explained here cannot be developed. The purpose of designating the desire to benefit others to the mind generation is because it lets us know that the basis, the mind generation itself, and all virtuous qualities sustained by the mind generation will increase.

The three attributes are: there being (1) a reason for designating aspiration for others welfare to mind generation, (2) a purpose, and (3) harm in calling mind generation “desire.” The third attribute, that there is harm, is because mind generation is a primary mind and therefore cannot be designated with the name of a mental factor. In other words, a valid cognition that realizes that this primary mind is not a mental factor harms the fact of the mind generation being aspiration, which is a mental factor.

In the other case, prayer is striving, since it is the very desire for perfectly complete enlightenment. The description of the mind generation which operates in conjunction with that (desire) teaches that “a prayerful mind will be generated in the bodhisattva.

Someone says: “If the aspiration is said to be the aspiration seeking enlightenment then it is a sign showing that this person has not even slightly understood the lam-rim presentation of the perfections. It also means that he does not even know the difference between the basis of imputation and the imputed label.” Gyelt sab says that before the generation of the mind of enlightenment one needs to develop the realization of emptiness. However this is only with respect to those of sharp faculty; it is not certain for those of dull faculty. Prior to developing mind generation, compassion is essential. Therefore the mind generation that is presented here definitely must be preceded by great compassion. In order to make this understood the desire for others’ benefit is labeled on the mind generation. If someone has compassion with all the characteristics, a mind generation will naturally be induced and that person will naturally engage in the practice of the six perfections. When this happens one will develop all the virtuous dharmas that are a cause of omniscient mind. To make this known the definition is given in this way.

In the quotation “When someone has the one in the palm of his hand, he will have all in the palm of his hand,” ‘one’ means great compassion.

A sharp facultied bodhisattva realizes emptiness before generating the mind of enlightenment. This is because a sharp facultied bodhisattva first wants to see the goal with his own valid cognition before making a promise to achieve it. This means that a sharp facultied bodhisattva first checks up as to whether he is actually able to achieve enlightenment before making a promise to do so. When it is said that he checks whether he can achieve enlightenment, he actually checks whether he can eliminate the obscurations to enlightenment, which according to Svatantrika is the conception of true existence. Therefore, this is what he checks can be removed. He investigates this and then realizes the lack of true existence and thereby discovers that he can become free of this obscuration. When he sees that the conception of true existence can be removed he knows that enlightenment can be achieved. When he knows that he can in fact achieve enlightenment he then makes the promise to do so and generates the mind of enlightenment.
Question: Does this sharp facultied bodhisattva realize emptiness through an inferential cognizer or a direct perceiver?

Reply: Emptiness is realized through an inferential cognizer when the bodhisattva is an ordinary bodhisattva but then when he reaches the path of seeing he has a direct realization of emptiness and achieves a yogic direct cognizer.

This is the meaning of the statement that a sharp facultied bodhisattva realizes emptiness before generating the mind of enlightenment. Even in regard to those entering the Hinayana path those of sharp faculty check up as to whether the realization of the selflessness of persons is possible. Although Hinayana followers are considered in general to be dull faculties, those among them who are sharper facultied first check as to whether liberation can actually be achieved before striving to achieve it. They check whether the grasping at a self of persons can be eliminated, then when they understand that a selflessness of persons can be realized and that this mind grasping at a self of persons can be eliminated, such sharp facultied Hinayana followers decide to engage in this vehicle.

Mahayana followers who are more dull facultied do not definitely realize emptiness before generating the mind of enlightenment, although they may do so.

Gyeltsab says that compassion is to be cherished at the beginning, middle, and end by those who want to engage in the Mahayana path. When there is an increase in compassion with full characteristics and without degeneration, one will develop the mind generation and all one’s activities will be completed. To make it known that great compassion is followed by mind generation and the engagement in the six perfections, mind generation is designated by the aspiration for others’ welfare. Mind generation is designated in this way in order to make the whole Mahayana path known. Here it is important to know that before developing mind generation one has to develop great compassion. Before actually cultivating great compassion, one develops love, meditates on repaying the kindness of sentient beings, remembering their kindness, and recognizing them as having been one’s mother: this is what is meant by the order of the path. It is important to understand that all sentient beings have been our mothers, but this can be difficult!

In sutra it mentions that if it is difficult to accept that all sentient beings have been our mothers we can imagine (1) that people who are female and the age of our mothers have been our mothers, while those who are male and the age of our fathers can be thought of as having been our fathers, (2) those who are a bit older or a bit younger than ourselves and female can be thought of as having been our older or younger sister and those who are a bit older or a bit younger than ourselves and male can be thought of as having been our older or younger brother, (3) those who are the male and the same age as ourselves and those who are female and the same age as ourselves can be thought of as having been our male friends and female friends,(4) those who are male and much younger than ourselves can be thought of as having been our son and those who are female and much younger than ourselves can be thought of as having been our daughter, and (5) those who are much older than ourselves can be thought of as having been our relatives or our relatives of relatives. Thus there are ten ways of thinking in order to meditate on sentient beings as having been our mothers: five associated with males and five with females.

Tuesday morning class, February 24, 1998

2B2C-1A2A-2A1C-2B2 Designated by the term “wishing enlightenment” (continued)

We have done this division according to the Commentary Clarifying the Meaning but now we will look at Gyeltsab’s commentary on Haribhadra’s text.

Even the other aspect, which is the “aspiration seeking enlightenment,” is designated by the term “wishing enlightenment.” Therefore, there is on fault in accepting a common locus
between mind generation and the aspiration seeking enlightenment. A prayer that hopes for a result is an aspiration seeking enlightenment. Furthermore, here it is the desire to achieve complete enlightenment. The mind generation (subject) is given the name “aspiration seeking enlightenment” because it is that which is associated with the mental factor aspiration. The purpose for designating so is to make bodhisattvas know that they first have to develop the prayer wishing to attain enlightenment, and that the Mahayana mind generation is the gateway to the Mahayana. This can be elaborated upon but I will not do so here. There is also harm in giving that designation as was said before.

In short, there is a reason for, a purpose to, and harm from designating the aspiration seeking enlightenment upon mind generation. The reason is that the conventional mind of enlightenment has five similarities with the aspiration seeking enlightenment. The purpose is to let bodhisattvas know that they first have to develop the prayer to attain enlightenment and to make it known that the Mahayana mind generation is the gateway to the Mahayana path.

2B2C-1A2A-2A2 The branches of ascertaining the (definition): the observed object
A Questions
B Responses

2B2C-1A2A-2A2A Questions
If it is said: “(From where is it (known) that perfect complete enlightenment (is the observed object to be obtained), the essence of whatever is desired and that (the benefit of others is the object of intent) for the purpose of which the mind is generated?”

To simplify this question: “There is much said about that enlightenment which is to be attained, but what is that enlightenment? There is also much said about others’ purpose, but what is that purpose?” The answer to the first question comes in the fifth chapter of the Ornament where enlightenment is defined as an exalted wisdom in which all stains are removed such that they will not return. The verse says: ‘Exalted wisdom of exhaustion and not generating stains called enlightenment. Because of exhaustion and non-generation they are to be known sequentially.’

The answer to the second question is that ‘others’ are sentient beings, while the ‘purpose’ is nirvana in the others’ continua. Others’ purpose is the nirvana that exists in their continuum; this is how Lama Tsongkhapa defines others’ purpose in his text Golden Rosary. Other texts says that others’ purpose is the high status and definite goodness of other sentient beings. This makes sense because what other sentient beings need is rebirth in the upper realms, which is high status, and liberation, which is definite goodness.

2B2C-1A2A-2A2B Responses
1 Root text
2 Commentary

2B2C-1A2A-2A2B-1 Root text
The root text, the Ornament, says:

_That and that are, in accordance with the sutra, expressed by means of the condensed and extensive._

The root text is very condensed, the first ‘that’ cited refers to enlightenment while the second ‘that’ refers to others’ purpose. These two are observed by the mind generation. They are explained in the middle sutra, the Twenty Thousand Stanza Perfection of Wisdom Sutra. Just as it is explained by this sutra it is also taught in the brief and extensive sutras. This is one way of explaining the meaning of this root text, while another way it that these two are explained briefly and extensively in the middle sutra.
In brief, both the first, enlightenment, and the second, others’ purpose, are observed by the
mind generation. This is explained by the middle length sutra, and is also said in the brief and
extensive sutras.

Gyeltsab in *Essential Explanation* says that the objects, enlightenment and others’ purpose,
are explained in all three sutras, the brief, middle, and extensive. One should know that just as the
middle sutra explains them; so do the brief and extensive sutras explain the same point. The other
two sutras, the brief and extensive, also contain the complete meaning. In the middle sutra there
are explanations of two lengths, a brief and an extensive one. These two explanations are also
found in the extensive sutra whereas the brief sutra does not contain these two explanations but
all the same the complete meaning is there. Haribhadra’s thought accords with this. In his *Great
Commentary* he says: ‘It is expressed just as in the twenty-five thousand stanza sutra.’ The *Great
Commentary* is a commentary on the *Eight Thousand Stanza Perfection of Wisdom*, it is also called
*Lamp for the Ornament*. The *Great Commentary* says: ‘Even in the case of presenting the divisions
the two Perfection of Wisdom Sutras (the precious sutra section) explain the brief meaning of the
Twenty-Five Thousand Stanza Perfection of Wisdom. This is similar to the previous explanation.’
Acharya Dignaga says that when the *Ornament* says ‘in accordance with the sutra’ it definitely
refers to the *Twenty-Five Thousand Stanza Perfection of Wisdom Sutra*, yet the *Eight Thousand Stanza
Perfection of Wisdom Sutra* also contains the complete meaning. The meaning is complete but the
words are not elaborate because it is a brief sutra on the perfection of wisdom.

Then comes the phrase ‘without contradicting the meaning of the sutra,’ with regards to
which some say ‘sutra’ refers to *Gandavyuhasutra* but Haribhadra says that it does not refer to this
sutra. In fact if someone wants to know the intention of Haribhadra he should deny this assertion.
This means that the *Gandavyuhasutra* does speak of the mind of enlightenment.

Gyeltsab says that the observed objects of Mahayana mind generation, enlightenment and others’
purpose, are explained extensively in the middle mother, or middle length sutra, while the other
mothers, or sutras, also present the observed objects of mind generation briefly and extensively.
The extensive and brief sutras also present the meaning found in the middle sutra without any
contradiction or missing information. In short, this means that the two sutras, the extensive and
brief, explain the two objects, enlightenment and others’ purpose, just as they are explained in the
middle sutra, the middle mother. Gyeltsab says it is not the case that the extensive and brief sutras
do not have words presenting the two observed objects. For example, in the brief sutra it says:
“Subhuti, begin the activities of the great bodhisattvas with the perfection of wisdom and be
courageous.”

Gyeltsab then explains the meaning of the middle sutra by asking a question: “If one wants
to put the meaning of the middle sutra into practice, how is it to be done?” In the middle sutra it
says: “Shariputra, with respect to this those bodhisattvas who want to directly realize all
phenomena and attain complete enlightenment should put effort into the perfection of wisdom.”
This sutra presents the definition of mind generation which is an aspiration seeking others’
purpose. ‘Directly realize all phenomena’ means that if someone wants to attain omniscient mind
and see all phenomena directly, as one sees an olive in the palm of one’s hand, he should put
effort into the perfection of wisdom. This passage contains the meaning of the brief presentation
of enlightenment.

Also, from all the three types of mothers of the victors: “the perfection of wisdom” and
“regarding all (the perfections) generosity and so forth, the act of generosity, the giver
and the recipient are to be established as non-observable,” possess meanings which
cause to understand. And “exactly in accordance with the fortunes of all sentient
beings, nirvana...” and “by desiring to establish the miserly and so forth, in generosity and so forth, one should accomplish this very perfection of wisdom” and so forth, principally indicate fully - (these) statements, by means of brief and extensive (explanations) not contradicting the meaning of the sutra, indicate perfect complete enlightenment and the benefit of others.

This is a brief presentation of enlightenment, which is one of the two aims. When it says ‘And “exactly in accordance with the fortunes of all sentient beings, nirvana...” it is presenting others’ purpose. Generosity is mentioned here; it is mentioned first because it is the first of the six perfections, which are to be practiced. When it says ‘By desiring to establish the miserly and so forth, in generosity and so forth’ it simply mentions generosity. ‘And so forth, principally indicate fully’ shows how to practice the perfections, for example, in the case of generosity it refers to the act of generosity, the giver, and the recipient, which when practicing generosity should be known to lack true existence. This also applies to the remaining perfections, for example with regard to morality, the one keeping morality, the action of keeping morality, and the morality itself are empty of true existence.

Then there is a quotation that explains “enlightenment” extensively: “Shariputra, with respect to this all the six perfections, such as generosity which has a donor, material, and recipient, are to be practiced without observing them as truly existent. Likewise, one should practice the remaining five perfections.” Gyeltsab says this is also presented in the other two sutras. In fact, the words of the middle sutra of the Perfection of Wisdom are shorter yet the meaning is complete. This is so because when we talk about extensive, middle, and brief sutras it is because they are longer, middling, and shorter in terms of the number of words, yet the meaning is the same. “Brief” is labeled on the brief sutra, the Eight Thousand Stanza Perfection of Wisdom Sutra, because it condenses all the subjects into the five aggregates and the words which express these subjects are less. “Middle” is labeled on the middle sutra because the object to be expressed is extensive but the words that express it are brief. In the case of the “extensive” sutra both the object to be expressed and the words that express it are extensive.

Gyeltsab says that the entity of enlightenment is to directly realize all phenomena. When it is said that in general one should train oneself in the perfection of wisdom as a method for that, enlightenment is briefly presented by way of method. Enlightenment is presented elaborately in terms of method saying: one should practice all six perfections in a manner that is sustained by the wisdom realizing emptiness.

The brief presentation of the second object, others’ purpose, according to the middle sutra is: “Also those bodhisattvas who want to lead all sentient beings, those who abide in the countless worlds equal to the grains of sand of the Ganges River in the ten directions, to the sphere of nirvana, which is the state of nirvana without remainder, should practice the perfection of wisdom.” Others’ purpose is presented here by way of method. This passage is abbreviated in the Commentary Clarifying the Meaning saying: “exactly in accordance with the fortunes of all sentient beings, nirvana...” and “by desiring to establish the miserly and so forth, in generosity and so forth, one should accomplish this very perfection of wisdom.” In the middle sutra the passage that elaborately presents others’ purpose is: “Also those bodhisattvas who want to lead the miserly sentient beings to the practice of generosity, and so forth.” Thus there is both a brief and extensive presentation. In Commentary Clarifying the Meaning when it says “exactly in accordance with the fortunes of all sentient beings, nirvana...” this is the brief presentation, and when it says “by desiring to establish the miserly and so forth, in generosity and so forth, one should accomplish this very perfection of wisdom” this is the extensive presentation.

Gyeltsab comments on the sutra presenting the brief and extensive explanation of the objects of mind generation.
'Principally indicate fully (these) statements, by means of brief and extensive (explanations)' (Commentary Clarifying the Meaning).

Someone says that “principally indicate fully (these) statements” refers to the treatise, the Ornament, and that it presents the objects of mind generation briefly and extensively. However, these words do not make sense because if this were the case then also the mothers, the sutras, would say that the treatise itself presents them briefly and extensively.

If someone says that the word “brief” refers to the definition of the mind generation while “extensive” refers to the classification of mind generation then it would be like talking uncontrollably. Others’ purpose in this case is simply nirvana in the continua of others, as is presented here by the method briefly and extensively. To conclude, others’ purpose means that a bodhisattva leads others to nirvana.

Mahayana mind generation observes two objects; this is what is to be established here.

Thus, one should know mind generation as being for the benefit of others, the essence of desiring perfect complete enlightenment.

Gyeltsab says that the two observed objects have been established, thus one should know that mind generation itself is the very essence of wishing for complete enlightenment for others’ purpose.

The concourse of Buddha’s teachings principally indicating the context (of the observed object of mind generation), though indeed taught in all (three mothers), I did not write about those very sources out of the fear of too many words.

Gyeltsab says that ‘the concourse of Buddha’s teachings principally indicating the context (of the observed object of mind generation)’ is taught within all three piles of sutra, the extensive, middle, and brief, but they are all not mentioned here directly as sources nor are all the words quoted here. This is because Gyeltsab says that Haribhadra only wanted to explain briefly without using too many words. Haribhadra says that many texts present the fact that mind generation has two objects, enlightenment and others’ purpose, but that he does not quote them here in order to avoid using too many words. When it says ‘those very sources’ it is not referring to many sources but only two sources, the Questions of King Dharanishvara Sutra and the Sutra on the Heavily Adorned (Ganavyuhasutra) which are not actually quoted here. These two sutras do teach the two objects of mind generation, enlightenment and others’ purpose, but they are not quoted here.

Thus, having expressed the observed objects of mind generation together with its entity, now the fine divisions of that: twenty-two types (of mind generation) explained in an interceding stanza.

We should understand from this passage that, having gone through the entity and observed objects of mind generation, we are now going to go through its twenty-two divisions. The twenty-two types of mind generation are listed in two stanzas of the Ornament.
Further, it is of twenty-two types: earth, gold, new moon, fire, treasure, jewel-mine, ocean, vajra, king of mountains, medicine, spiritual guide, wish-granting jewel, sun, pleasant song of dharma, king, highway, treasury, mount, spring, pleasant sound, river, and clouds.

These are twenty-two examples, or similes, of mind generation. Apart from this there are twenty-two companions and twenty-two similarities between mind generation and its similes/examples. In the *Ornament* when it says earth, gold, and so forth it means ‘mind generation like the earth,’ ‘mind generation like gold,’ ‘mind generation like a new moon,’ and so forth.

In short, the twenty-two types of mind generation are represented by examples/similes and there are twenty-two types of similarities between the types of mind generation and their similes.

The twenty-two types of mind generation are listed in Haribhadra’s commentary:

(see page 4 *Commentary Clarifying the Meaning*)

These statements explain: 1) aspiration, 2) thought, 3) extraordinary thought, 4) application, 5) generosity, 6) morality, 7) tolerance, 8) joyous effort, 9) meditative concentration, 10) wisdom, 11) skilful means, 12) prayer, 13) power, 14) exalted wisdom, 15) clairvoyance, 16) merit and exalted wisdom, 17) dharmas in the concordant class with enlightenment, 18) compassion and superior insight, 19) the holder and courage, 20) festival of dharma, 21) the one path traveled, and 22) possession of the dharmakaya.

Then the *Commentary Clarifying the Meaning* lists the twenty-two similes of mind generation:

These are respectively likened to: 1) earth, 2) fine gold, 3) the new moon, 4) fire, 5) a great treasure, 6) jewel-mine, 7) a great ocean, 8) a vajra, 9) the king of mountains, 10) medicine, 11) spiritual guide, 12) a wish-granting jewel, 13) the sun, 14) the pleasant song of dharma, 15) a great king, 16) a treasury, 17) a highway, 18) a mount, 19) a spring, 20) a pleasant sound, 21) a river, and 22) clouds.

Then comes the way in which the 22 similes indicating the 22 meanings are related:

These are listed according to: 1) the fundamental property of all virtuous dharmas, 2) not changing until enlightenment, 3) fully increasing all virtuous qualities, 4) burning the fuel of obscurations by the three exalted knowers of all, 5) satisfying all sentient beings, 6) the supporting property of precious qualities, 7) undisturbed by the descending of any undesirable, 8) unchanging through firm conviction, 9) unmoved by the distraction of objects 10) thoroughly pacifying the diseases of the deluded and knowledge obscurations, 11) not forsaking the benefit of sentient beings on any occasion, 12) accomplishing the results of wishes accordingly, 13) completely ripening those to be subdued aspire, 14) showing the dharma which makes those to be subdued aspire, 15) accomplishing the benefits of others through unobstructed power, 16) like a
treasury of many collections of merit and exalted wisdom, 17) that which all aryas traveled and will travel, 18) by not falling into either samsara or nirvana, going easily, 19) by grasping heard and unheard dharmas, inexhaustible, 20) pleasantly proclaiming to those to be subdued who desire liberation, 21) not different to perform the benefit of others, and 22) the capability to always show (the twelve deeds) such as abiding in Tushita abode.

Gyeltsab says that (1) the mind generation associated with aspiration (subject) is like the earth (predicate) because it is a base upon which all white/virtuous dharmas, like a path, can be made. It is said to be like the ground because the universe is supported on a ground. Upon this basis there are mountains, rivers, trees and so forth, and similarly the first mind generation, called aspiration, serves as a basis upon which all subsequent realizations from the middle level of the path of accumulation on up can grow. This mind generation associated with aspiration is that of the small level of the path of accumulation.

(2) The mind generation associated with thought (subject) is like gold (predicate) because it will never degenerate until enlightenment is achieved. Someone who is on the middle level path of accumulation has the mind generation associated with thought; this mind generation will never degenerate and will continue until enlightenment. When a goldsmith checks gold, although he cuts it, burns it, and rubs it, the entity of gold remains unchanged. ‘Thought’ in this context refers to a cognizer that brings about happiness in this life and also provides benefit for future lives. There are two sutras, one that presents enlightenment briefly and one that presents enlightenment extensively. The first sutra presents the mind generation of aspiration which is like the earth; it presents enlightenment briefly. The sutra that presents mind generation of thought which is like gold presents enlightenment extensively.

(3) The mind generation that is associated with extraordinary thought is like a new moon, or crescent moon, because it always increases all virtuous dharmas without degenerating, such as the four close placements of mindfulness.

These are three similes that correspond respectively with the three levels of the path of accumulation: the earth-like mind generation corresponds with the small level of the path of accumulation, the gold-like mind generation with the middle level of the path of accumulation, and the new moon-like mind generation with the great level of the path of accumulation. These three mind generations according to Commentary Clarifying the Meaning are (1) the fundamental property of all virtuous dharmas which is the earth-like mind generation, (2) not changing until enlightenment which is the gold-like mind generation, and (3) fully increasing all virtuous qualities which is the new moon-like mind generation. On the great level of the path of accumulation one has the mind generation that is associated with extraordinary thought and the concentration of continuous dharma. At this point one is free of most of the obstacles to hearing Dharma and a bodhisattva at this level has the privilege of hearing Dharma teachings from emanation bodies at a distance of one hundred pakse and of receiving teachings directly from statues of buddhas. The concentration of continuous dharma is so-called because with the concentration that one has at this level all one’s Dharma qualities increase continuously. At this level one’s virtuous qualities increase like the crescent moon, this is the meaning of extraordinary thought.

(4) The mind generation associated with application/training refers to training in the approximate aspects of the three exalted knowers. Such a mind generation is said to be like fire. Gyeltsab says it is like a fire because it burns the coarse acquired obscurations to knowledge. Haribhadra, in Commentary Clarifying the Meaning, says ‘4) burning the fuel of obscurations by the three exalted knowers of all’. The obscurations which are like fuel are said to be burned up but in reality the obscurations to liberation and the obscurations to knowledge are not completely burned up at this point. The knower of basis is actualized by hearers and solitary realizers, the knower of paths by bodhisattvas, and the knower of aspects by buddhas, therefore to have complete exalted knowers is possible only at the buddha ground. The mind generation associated with training begins to
burn the manifest obscurations to knowledge; this corresponds with the heat level of the path of preparation. As was mentioned before this first level of the path of preparation is called “heat” because at this level one has the capacity to begin to burn the manifest obscurations to knowledge. When a bodhisattva meditates this ‘heat’ begins to burn the obscurations, like smoke rises from wood that is just beginning to burn. On the path of preparation one has actually gained control over the aspects of the three exalted knowers and has achieved peak training.

Gyeltsab quotes a sutra source at the end of each syllogism.

(5) The mind generation associated with generosity (subject) is like a great treasure (predicate) because it satisfies all sentient beings with wealth/resources. In sutra it says: “Desiring to establish the miserly and so forth in generosity.” The word ‘generosity’ comes here because it corresponds with the first ground of the path of seeing on which a bodhisattva emphasizes the practice of generosity; for this reason his mind generation is called together with generosity. It is said to be like a great treasure.

(6) The mind generation cooperating with morality (subject) is like a jewel-mine (predicate) because it serves as a support for all precious qualities. In sutra it says: “Those who desiring to lead sentient beings with perverse morality to correct morality.” In Commentary Clarifying the Meaning (page 5) it says ‘6) the supporting property of precious qualities.’ There are many quotations saying that someone with pure morality and a subdued mind becomes an object of veneration and a source of many positive qualities. When it is said ‘the supporting property of precious qualities’ it refers to the inconceivable qualities of a buddha, the eighteen unshared qualities, four individual correct knowledges, etc., all of which derive from morality. This mind generation is achieved on the second ground where one practices the surpassing perfection of morality, i.e., where one emphasizes the practice of morality. With respect to the importance of morality the Madhyamakavatara says someone on the second ground greatly practices the perfection of morality and surpasses this perfection. A bodhisattva of this level does not even have a thought of perverse morality in a dream. One thus purifies all the stains of body and speech and all one’s virtuous qualities greatly increase.

END
Of the 22 types of mind generation we are on the seventh, that associated with tolerance, or patience. Someone on the third ground has a mind generation associated with patience that is said to be like a great ocean because it is a mind generation that is not disturbed although all harms and sufferings befall one. In sutra presents the mind generation associated with patience saying: “Harmful mind and so forth.” This mind generation is said to be like an ocean because just as an ocean is huge and deep and cannot be harmed or disturbed by anything, even a huge ship; likewise, someone who has the mind generation associated with patience remains undisturbed even when criticized, insulted, hit, and so forth. In the Commentary Clarifying the Meaning (page 5) it says “7) undisturbed by the descending of any undesirable.”

We should engage in the practice of patience to develop this capacity. When one attains the third ground one greatly emphasizes the practice of patience. In relation to this type of mind generation it is said that a bodhisattva on the third ground remains unharmed even if he cuts his own flesh and gives it away. Instead, his mind remains undisturbed and he experiences joy in doing so.

In brief, we should try to develop the three kinds of patience: the patience of not retaliating to harm, the patience of accepting difficulties in practicing Dharma, and the patience of voluntarily bearing suffering. To intensify this practice one can meditate on the benefits of practicing patience, such as that of obtaining a beautiful and attractive body in the future. In this context, there is a story that recounts that when Buddha was alive there was a monk called Tsangden who was extremely ugly yet had a very pleasing voice. Whenever he chanted prayers aloud he delighted even those who passed by his house; however, no one found any pleasure in seeing his ugly appearance. One day someone asked Buddha how someone could this monk be so ugly yet have such a beautiful voice. Buddha replied saying that the monk’s pleasant voice was the result of offering a bell to a stupa of Buddha Kashyapa, and that his ugly body was the result of a complete lack of patience in that same lifetime. So we should try as much as possible to practice patience in our everyday life. Patience is admired in the Madhyamakavatara saying that Buddha recommended that three practices be emphasized by lay people, those of generosity, morality, and patience, while the practice of effort, concentration, and wisdom are to be emphasized by ordained people. However, this does not mean that the ordained do not have to practice generosity, morality, and patience!

8) The mind generation associated with effort is like a vajra because such a bodhisattva has firm trust in the path and therefore never moves from the Mahayana vehicle. In regard to this mind generation it says in sutra: “Those lazy ones” meaning that bodhisattvas who want to lead the lazy do such and such a practice. In the Commentary Clarifying the Meaning it says “8) unchanging through firm conviction.” This effort, or joyous effort, is a mental factor that takes pleasure in virtuous activity. There are three kinds of laziness: (1) that of underestimating oneself, (2) that of lethargy/sloth, and (3) that of clinging to evil actions. However, there are many other types of laziness, these are just the most common. In Madhayamakavatara it says that all excellent qualities follow effort and that wherever there is effort all virtuous qualities blaze forth.

On the fourth ground there is the surpassing perfection of effort.

9) The mind generation associated with meditative concentration is like a king of mountains because such a bodhisattva’s concentration is so firm that his mind does not move away from the observed object due to distraction. Meditative concentration means to be able to focus one’s mind on the meditation object. In the Commentary Clarifying the Meaning it says “9) unmoved by the distraction of objects” to show the relationship between the meaning and the simile. Here this mind generation is likened to ‘the king of mountains’ because, while even a normal mountain is characterized by firmness and stability, the king of mountains, Mount Meru, is completely
unmoved by wind and so forth. Saying that such a mind generation is unmoved by the distraction of objects means that one’s concentration is not moved by the conception of true existence.

There are various types of concentrations, including mundane concentration, supermundane concentration, and the concentration for enacting the welfare of sentient beings. This third is so-called because when one’s mind is clear and focused one achieves success, while on the other hand if one’s mind is not clear and focused one will not be successful in achieving others’ purpose. Concentration is, in short, stability on the object of meditation.

The mind generation associated with meditative concentration arises on the fifth ground. In the Madhyamakavatara it says that a bodhisattva on the fourth ground has a wisdom skilled in knowing the differentiation of the 37 harmonies of enlightenment. On the fifth ground he has a wisdom skilled in knowing the particularities of the four noble truths, i.e. their sixteen attributes. Then on the sixth ground he has a wisdom skilled in knowing the twelve links in terms of both entering and leaving cyclic existence. Before attaining these three wisdoms one needs to develop a concentration that can serve as their basis.

In relation to the mind associated with meditative concentration it says in sutra: “Because of the mind being distracted” and so forth.

10) The mind generation that is associated with wisdom is like medicine because it thoroughly pacifies the illnesses of the obscurations to liberation and the obscurations omniscience. In sutra in this regard it says, “Perverse wisdom” and so forth. There are two wisdoms, the wisdom realizing the selflessness of persons and the wisdom realizing the selflessness of phenomena, that respectively soothe the illnesses of the obscurations to liberation and the obscurations to knowledge. There are various types of wisdom, such as the wisdom analyzing a conventional truth, the wisdom analyzing an ultimate truth, and the wisdom enacting the welfare of sentient beings. The obscurations to knowledge are of 108 types with regard to both the path of meditation and the path of seeing. These 108 conceptions will be explained in the fifth chapter but roughly we can say that there are:
- nine conceptions apprehending the nine factors for exiting from cyclic existence
- nine conceptions apprehending the nine factors for entering cyclic existence
- nine conceptions apprehending nine apprehenders as imputedly existent
- nine conceptions apprehending nine apprehenders as substantially existent

These 36 are related to each of the three realms, the desire realm, form realm, and formless realm, for a total of 108. Those to be abandoned by the path of seeing and those to be abandoned by the path of meditation have the same name but those to be abandoned by the path of seeing are intellectually formed while those to be abandoned by the path of meditation are innate. When talking about deluded obscurations to be abandoned by the path of seeing and deluded obscurations to be abandoned by path of meditation the number is different: there are 112 to be abandoned by the path of seeing and only 16 to be abandoned by the path of meditation. The 112 deluded obscurations to abandoned by the path of seeing are:
- the ten delusions, five views and five non-views, abandoned by a path of seeing observing the true origins in relation to the desire realm
- the ten delusions abandoned by a path of seeing observing true sufferings in relation to the desire realm
- the ten delusions abandoned by a path of seeing observing true paths in relation to the desire realm
- the ten delusions abandoned by a path of seeing observing true cessations in relation to the desire realm
- nine delusions (excluding anger) abandoned by a path of seeing observing true sufferings in relation to the form realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true origins in relation to the form realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true cessations in relation to the form realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true paths in relation to the form realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true sufferings in relation to the formless realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true origins in relation to the formless realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true cessations in relation to the formless realm
- the nine delusions (excluding anger) abandoned by a path of seeing observing true paths in relation to the formless realm

In this way, 40 + 36 + 36 = 108.

There are only 16 deluded obscurations to be abandoned by the path of meditation: six in relation to the desire realm, five in relation to the form realm, and five in relation to the formless realm. These 16 are multiplied by nine for a total of 144.

This is mentioned here in relation to pacifying the illnesses of the obscurations.

11) The mind generation associated with skillful means is like a spiritual guide because it never gives up the welfare of sentient beings through the method for not rejecting sentient beings which is the four immeasurable thoughts. In sutra in this regard it says: “Even a single generation of a virtuous mind is a skillful means.” By way of the method of the four immeasurables such a bodhisattva never gives up sentient beings. To the contrary when we work for sentient beings there are many things that affect our attitude, for example, when someone wealthy asks for our help we may be eager to help him while we may be reluctant to help a poor person. Unlike ourselves, for a bodhisattva there is no difference, he is always happy to perform activities for helping sentient beings. A bodhisattva works for sentient beings with immeasurable love, immeasurable compassion, immeasurable joy, and immeasurable equanimity.

What is the difference between immeasurable compassion and great compassion? To generate immeasurable compassion one needs to already have developed an actual concentration but this is not necessary in order to generate great compassion. This is the interpretation according to Svatantrika-Madhyamika. Someone who has attained an actual concentration is free from the manifest delusions of the desire realm so he would no longer prefer some sentient beings over others; he is free of attachment for some sentient beings and anger for others.

In the lam-rim teachings it is said that in order to develop immeasurable love one needs to develop the four immeasurable thoughts associated with immeasurable love: immeasurable aspiration, immeasurable wish/prayer, immeasurable extraordinary thought, and immeasurable request. These four are developed one after the other, for example: the immeasurable aspiration is the thought “how wonderful it would be if all sentient beings had happiness”; the immeasurable wish is the thought “may they have happiness”; the immeasurable extraordinary thought is “may I be the cause of their having happiness”; and the immeasurable request is “please guru-deity bless me to be able to do this.” These four thoughts can likewise be applied to the other immeasurables. Immeasurable compassion includes the thoughts: “how wonderful if all sentient beings were free from suffering,” “may they be free from suffering,” “I will set them free,” and “please guru-deity bless me to be able to do so.” Immeasurable joy includes the thoughts: “how wonderful it would be if all sentient beings were never parted from happiness,” “may they never be parted from happiness,” “I will cause them to never be parted,” and “please guru-deity bless me to be able to do this.” Immeasurable equanimity includes the thoughts: “how wonderful if all sentient beings were to abide in equanimity,” “may they abide in equanimity,” “I will cause them to abide in equanimity,” and “please guru-deity bless me to do this.”
This order of first immeasurable love, second immeasurable compassion, third immeasurable joy, and fourth immeasurable equanimity is how they generally appear in the texts but when one meditates in accordance with lam-rim one begins with immeasurable equanimity, then immeasurable love, followed by immeasurable compassion and then immeasurable joy.

In the Commentary Clarifying the Meaning it says “11) not forsaking the benefit of sentient beings on any occasion,” which means that whether sentient beings are happy or experiencing difficulties a bodhisattva always takes care of them.

There are six internal skillful means and six external skillful means explained in the text Bodhisattva Grounds.

In this context, Lama Tsongkhapa’s Golden Rosary has an even more elaborate explanation than does Gyeltsab Je. In regard to the mind generation associated with skillful means Lama Tsongkhapa says: “Likewise when one makes small generosity, observes a small morality, practices a small patience, exerts a small effort, cultivates a small concentration, or meditates with small wisdom, one is skillful in all these methods and should carry on as before,” i.e., one should engage in these whether one is in a good situation, wealth and health, or in a bad situation of misery. Lama Tsongkhapa says one should dedicate whatever small merit one creates by practicing the six perfections so that it becomes like drops of water falling into the ocean, in that by doing so the merit is never exhausted. He also says that one should practice skill in means even if it means bearing the sufferings of the sentient beings born in the lower realms in order to help them. There are many ways of helping sentient beings and one should always dedicate the merit accumulated because in this way it will not be lost. To illustrate this there is a story of two people who met while traveling from Tsang to central Tibet. One had a large sack of good quality barley flour while the other had a small amount of poor quality pea flour. The person with the pea flour suggested that they mix the two together. The other accepted the proposal and so they mixed the two types of flour in a bag. After many days of traveling the one with the large bag of barley flour said to the other that his bag of pea flour must be finished by now. However the owner of the pea flour told him to have a look in the bag and sure enough the darker pea flour could still be seen mixed in with the lighter colored barley flour. Thus the owner of the barley flour could not argue that the pea flour had been finished. This analogy is used to show that if we mix our small merit with the dedication to enlightenment it will become inexhaustible.

Tuesday morning class, March 3, 1998

12) The mind generation associated with prayer and like a wish-granting jewel corresponds with the eighth ground. Gyeltsab says that the mind generation associated with prayer is like a wish-granting jewel because it brings about the wished for result by way of the method of the five clairvoyances which have gained control over the result. In Commentary Clarifying the Meaning (page 5) it says “12) accomplishing the results of wishes accordingly.” This mind generation has the characteristic that when a bodhisattva reaches the eighth ground he comes to have the fruition/maturity of prayers such as the twelve hundred thousand prayers made by Samantabhadra. In fact, on the eighth ground the results of five principal prayers are achieved. A bodhisattva on the eighth ground has obtained the five clairvoyances and is able to achieve the results of all his prayers and wishes, just as a wish-granting jewel satisfies all wishes, such as those for food, drink, clothes, and so on. In Lama Tsongkhapa’s Golden Rosary it says: “Wherever [such a bodhisattva] finds himself he will always have the results of prayers exactly as he has made them: to be able to accomplish a buddha’s body of great enlightenment in the future, to be able to pass through the youthful grounds, the grounds of an ordinary bodhisattva, to never be parted from the buddhas and bodhisattvas, to be able to hear the teachings of the buddhas of the ten directions, to possess the lineage/potentiality to become the Triple Gem, and to offer whatever roots of virtue he creates in veneration to the buddhas together with the prayer “May all these roots of virtue become a correct cause for sentient beings to attain enlightenment.” These are the different possibilities of making prayers at the eighth ground.”
In addition to these prayers and the maturation of their result a bodhisattva is also able to perform many activities for the welfare of sentient beings due to possessing the five clairvoyances. Here it only mentions five clairvoyances, while in fact there are six; this is because such a bodhisattva does not yet have the clairvoyance knowing the exhaustion of contaminations. He possesses:
- clairvoyance of magical emanation
- clairvoyance of knowing others’ minds
- clairvoyance of the divine ear
- clairvoyance of remembering places where one was born in the past
- clairvoyance of the divine eye
These five clairvoyances will be explained in detail in the context of the second topic of omniscient mind, precepts.

Sutra says: “Actualizing a buddha’s body of enlightenment.”

The mind generation associated with power is like the sun because it thoroughly ripens the continua of sentient beings by the four means of gathering disciples. In sutra it says, “Bodhisattvas, food, drink, clothes, and so forth are completed by the mind of sentient beings.” In Commentary Clarifying the Meaning it says: “13) completely ripening those to be subdued.” Gyeltsab says that a bodhisattva at this stage ripens the continua of sentient beings by the four means of gathering disciples.

In relation to the four means of gathering disciples the first is giving necessities to sentient beings. In fact, there are many things that can be given to disciples in order to subdue them, including food, drink, clothes, jewels, house, garden, and so forth. Then one engages in speaking to them pleasantly, gives teachings according to their needs, and practices in accordance with what one teaches. In brief, one tries to gradually lead disciples in the practice of the six perfections. There are two principal types of generosity in this context, that of giving Dharma teachings and that of giving material objects.

In short, these are the qualities of the mind generation of a bodhisattva on the ninth ground. Gyeltsab says that although these are the practices and qualities of a bodhisattva on the ninth ground we should try to imitate such bodhisattvas by engaging in the four means of gathering disciples.

The mind generation associated with exalted wisdom is like the pleasant song of Dharma because such a bodhisattva gives teachings, which cause the arisal of aspiration in sentient beings, by means of the four correct cognitions which are the method for attaining liberation. In sutra it says: “Great bodhisattvas, train in the twenty emptinesses.” In the context of the mind generation that is like the pleasant song of Dharma, “pleasant song of Dharma” mainly refers to the teachings on the twenty emptinesses. Lama Tsongkhapa in his Golden Rosary quotes a sutra that says: “Great bodhisattvas, those who wish to train in the twenty emptinesses and want to know all the gross and subtle atoms of the four elements in the billion world systems...” In brief, a great bodhisattva should know and give teachings on the conventional and ultimate truths in accordance with the specific levels of sentient beings. The twenty emptinesses are:
1. inner emptiness
2. outer emptiness
3. emptiness of inner and outer
4. emptiness of emptiness
5. great emptiness
6. ultimate emptiness
7. emptiness of compounded phenomena
8. emptiness of uncompounded phenomena
9. emptiness of gone to the limit
10. emptiness without beginning and end
11. undiscardable emptiness
A bodhisattva at this stage knows these twenty emptinesses. However, we too should try to meditate on these after having studied them and understood them. This can be done by way of either stabilizing meditation or analytical meditation. When doing stabilizing meditation one focuses on the non-affirmative phenomena that is the mere object of negation, true existence. When doing analytical meditation one thinks about each of the twenty emptinesses and analyzes how phenomena exist in reality. When it says in sutra that those who want to know all the particles of the four elements of the billion world systems, it means that such great bodhisattvas, apart from meditating on the twenty emptinesses, should also know the conventional truth which is all the gross and subtle particles of the elements belonging to the billion world systems. This subject is relevant to our times because it is now known that atoms have many parts. This knowledge has enabled scientists to make such things as rockets and so on.

15) The mind generation associated with clairvoyance is like a great king because it is able to perform others’ purpose without difficulty and without losing the realizations that have already been attained. In sutra it says: “Great bodhisattvas, even one with a single moment of the generation of the mind of enlightenment can pass through all the worlds of the ten directions.” Like a king who has the power to reign over his kingdom and with this power can perform many activities, the realizations that such a bodhisattva has already attained do not get lost or destroyed on reaching this ground. Lama Tsongkhapa in his Golden Rosary comments on the mind generation associated with clairvoyance that is like a great king saying that it is possessed by a bodhisattva on the tenth ground who can fulfill the welfare of sentient beings without difficulty. With a single generation of thought he is able to pass through all the worlds of the ten directions, is able with a hundredth part of a hair to stop the downward flow of all the oceans of a billion worlds without harming the creatures who live in it, is able to cool the heat of the fire of the eon of burning with a single breath, is able to stop the force of the wind of the eon of destruction with a single finger, is able to fill the space of a billion world systems with his crossed legs, is able to bind all the mountains existing in a billion world systems with a single hair, then lift them up, and throw them to the immeasurable distance of limitless world systems, is able to see all the tathagatas existing in the ten directions with the clairvoyance of the divine eye, is able to hear their teachings with the clairvoyance of the divine ear, is able to know all the thoughts of sentient beings, is able to remember all the places where sentient beings were born in the past, and has the wish to actualize the clairvoyance knowing the exhaustion of contaminations yet does not wish to actualize the perfect end. These are the inconceivable qualities of a bodhisattva on the tenth ground.

16) The mind generation associated with merit and exalted wisdom is like a treasury because the accumulation of merit and wisdom of a bodhisattva on the tenth ground is so great that it is like a treasury. This mind generation is extremely close to enlightenment. In sutra it says: “Great bodhisattvas, the tathagatas of the ten directions, hearers, bodhisattva sangha and so forth.” In Commentary Clarifying the Meaning it says: “16) like a treasury of many collections of merit and exalted wisdom.”

A bodhisattva on the tenth ground continues to strive for enlightenment. On the tenth ground he then reaches the special, or distinguished, path which is so-called because such a bodhisattva on the tenth ground is just about to complete the accumulation of merit and wisdom
of three great countless eons. This is because while on the path of accumulation and the path of preparation he completes the accumulation of merit and wisdom of one countless eon; on the seven impure grounds he completes the accumulation of merit and wisdom of a second countless eon; and on the three pure grounds he completes the accumulation of merit and wisdom of a third countless eon. Lama Tsongkhapa in his *Golden Rosary* says: “The mind generation associated with merit and wisdom is like a treasury, a place where all merits and wisdom are stored. With this mind generation one is able to venerate all the tathagatas of the ten directions with a single object, such as a flower, in order to accumulate more merit. A bodhisattva on this ground is able to lead the sentient beings of the ten directions to the five uncontaminated aggregates, to the four results, and to the nirvana without remainder of solitary realizers.” The five uncontaminated aggregates mentioned here are the aggregate of morality, the aggregate of concentration, the aggregate of wisdom, the aggregate of liberation, and the aggregate seeing the exalted wisdom which is liberation. The four results are those of stream enterers, once returners, non-returners, and foe destroyers/arhats. The nirvana without remainder of solitary realizers means that sentient beings are led to the enlightenment of solitary realizers. The way a bodhisattva on this ground completes the accumulation of merit is to make offerings of flowers and so forth to the buddhas, bodhisattva sangha, hearer sangha, etc. of the ten directions. When he leads sentient beings to the uncontaminated aggregates and so forth he completes the accumulation of wisdom.

17) The mind generation associated with the thirty-seven dharmas in the class concordant with enlightenment is like a highway because it is the path which all the aryas of the three times have traveled and is the path that all future tathagatas will travel. In sutra it says: “Great bodhisattvas, those who want to attain the excellent qualities of all the buddhas of the three times.” In *Commentary Clarifying the Meaning* it says: “17) that which all aryas traveled and will travel.” The thirty-seven dharmas in the class concordant with enlightenment are so-called because they are indispensable for the aryas of the three classes. For example in order to attain a hearer’s enlightenment one must achieve these thirty-seven, and the same also applies to those who wish to attain a solitary realizer’s enlightenment or a bodhisattva’s enlightenment. For this reason it is said to be the path traveled by all the aryas. When one goes through this bodhisattva vehicle to reach enlightenment one needs to be accompanied by the bodhisattva sangha. We have already mentioned the thirty-seven harmonies with enlightenment and they will come again in the future. However, the first of the thirty-seven is the four close placements of mindfulness. In this context, mindfulness is placed on the body, feelings, mind, and phenomena. One does an analytical meditation on these looking at their two characteristics; for example, in terms of the body one analyzes the specific characteristics and general characteristics of the body. The practice of the four close placements of mindfulness is emphasized in the Sthaviravada tradition.

Tuesday afternoon class, March 3, 1998

One places mindfulness on one’s own body and does an analytical meditation beginning with the specific characteristics of the body. The body is a composition of bones, flesh, etc.; one checks whether it is light or heavy, beautiful or ugly, an element or a secondary element, pure or impure, and so forth. In this way, one focuses the mind on the body and does an analytical meditation on its characteristics. Meditating on the general characteristics of the body means meditating on the fact that the body is impermanent because it changes momentarily, that because it is a product it is impermanent, that it is pervaded by misery because it is under the control of karma and delusions, and that it is empty and selfless because it is a dependent arising. So what is the meaning of meditating on the body? The body is taken as an object of meditation and then it is analyzed in terms of its characteristics, the specific and the general.

This same type of analytical meditation can be done on feelings. Feelings have certain characteristics. The definition of feelings is that which is thoroughly experienced. One analyzes
feelings as to whether they are pleasant, unpleasant, or neutral. Then one meditates on the general characteristics of feelings: they are impermanent, misery, empty, and selfless.

Then one meditates on the specific characteristics of the mind. The mind at times conjoined with attachment, at times with hatred, and at times with ignorance. At other times it is without attachment, without hatred, and without ignorance. The general characteristics of the mind are that it is impermanent because it changes momentarily, misery because it is a contaminated phenomena (if the mind were uncontaminated it would not be miserable), empty, and selfless.

The fourth of the close placements of mindfulness is phenomena. Here phenomena refers to nirvana, the highest of phenomena. Meditating on nirvana as a phenomena means to investigate whether one can attain such a nirvana and then investigate how it can be achieved.

When one meditates on these four close placements of mindfulness one is said to meditate on the four noble truths. This is because when one meditates on mindfulness of the body one is looking at true sufferings, when one meditates on mindfulness of feelings one is looking at true origins, when one meditates on mindfulness of the mind one is looking at true paths, and when one meditates on phenomena one is looking at true cessations. This is so because when one places mindfulness on feelings, one discovers that as a result of feelings, pleasant, unpleasant, and neutral, the delusions of attachment, hatred, and ignorance respectively arise. Due to the arisal of the three delusions one engages in actions which lead to suffering. This is relevant to our lives because we can see that in dependence on pleasant feelings, such as those that arise between friends, couples, etc., there comes attachment, while when unpleasant feelings arise there comes hatred and so forth. Feelings are, in fact, the root of disharmony. One places mindfulness on feelings so as to understand that it is the cause of negative consequences and to come to be able to avoid responding to pleasant feelings with attachment and unpleasant feelings with anger. Also by meditating on feelings one will come to see that by avoiding attachment and hatred, which are the result of pleasant and unpleasant feelings, one will move away from them and in this way one will come to understand that true cessations do exist. These true cessations are achieved in dependence on the mind, the third object of the close placements of mindfulness.

18) The mind generation associated with compassion and superior insight is like a mount because it easily goes to enlightenment without falling into either of the two extremes of cyclic existence or solitary peace. In sutra it says: “Great bodhisattvas, first go to enlightenment before all the hearers and solitary realizers.” It says “first go to enlightenment” because here it is talking about a mind generation that is on the special/distinguished path of the tenth ground, and because such a bodhisattva will definitely achieve enlightenment before one who follows the hearer or solitary realizer paths. The mount has to be perfect, so Lama Tsongkhapa says: “Such a mind generation is like a noble mount. A bodhisattva with such a mind easily goes to non-abiding nirvana without falling into either of the two extremes of cyclic existence or solitary peace. He goes before all hearers and solitary realizers and becomes the innermost retinue of all the buddhas and so forth.” According to Buton Rinpoche the mount refers to “the wise horse” mentioned in the ceremony of the eight Mahayana precepts. Nowadays such a mount could refer to an airplane, ship, motorcycle, etc., any vehicle that travels quickly. Such a mind generation moves quickly because it is associated with compassion and superior insight; compassion functions to prevent one from abiding in the extreme of solitary peace and superior insight prevents one from abiding in the extreme of cyclic existence.

19) The mind generation associated with the holder/retainer and courage is like a spring because a bodhisattva with such a mind generation upholds the Dharma that has already been heard and that which will be heard in the future. In sutra it says: “All the speech of the buddhas of the ten directions that has been spoken, is being spoken, and will be spoken.” “Holder,” or retainer, means that one upholds all the words and meanings of the teachings. “Courage” means being courageous in giving the teachings that one has learned to others. Lama Tsongkhapa in Golden Rosary says: “This mind generation is like a spring because one upholds the Dharma that has been
heard, as well as that which will be heard, and then teaches it to others. One is also able to uphold all the various scriptures, such as the twelve categories of scripture, verses, parables, legends, etc. The speech of Buddha that has been spoken, is being spoken, or will be spoken is retained in such a bodhisattva’s mind. He also listens to teachings that are not heard by the hearers and solitary realizers and retains them in his mind. He then explains them to others.”

This mind generation like a spring belongs to the special path of the tenth ground. There are a total of five mind generation pertaining to the special path of the tenth ground. The last three mind generations of the twenty-two belong to the buddha ground.

20) The mind generation associated with a festival of Dharma is like a pleasant sound because it resonates a pleasant sound that leads those to be subdued seeking liberation to that liberation. In sutra it says: “With his body light he illuminates the dark places of the worlds of the ten directions, and the sentient beings who are born in those places hear the words of the Triple Gem.” The dark places of the worlds of the ten directions are those places where there is no Dharma, these are illuminated by the light from the body of such bodhisattvas who also resonate sounds that causes sentient beings to hear the words of the Triple Gem. The mind generation associated with a festival of Dharma proclaims the pleasant sound of the four totals/seals of Dharma: (1) all compounded phenomena are impermanent, (2) all contaminated phenomena are suffering/misery, (3) all phenomena are empty and selfless, and (4) nirvana is peace.

In Commentary Clarifying the Meaning in regard to the above three mind generations it says “18) by not falling into either samsara or nirvana, going easily, 19) by grasping heard and unheard dharmas, inexhaustible, 20) pleasantly proclaiming to those to be subdued who desire liberation.”

The sound of the four totals of Dharma—all compounded phenomena are impermanent, all contaminated phenomena are suffering/misery, all phenomena are empty and selfless, nirvana is peace—is produced by the great drum of the gods. These teachings, given by Buddha through the power of the blessing of the truth, are also produced in other circumstances, such as by some trees that when blown by the wind produce the pleasant sound of the four totals of Dharma. We need to understand the meaning of the four totals, that all compounded phenomena change momentarily and so on, not just intellectually but in terms of ourselves by, for example, thinking that our own physical and mental aggregates are compounded phenomena which are impermanent.

21) The mind generation associated with the one path traveled is like a river because this mind generation has already attained the ability to subdue all beings without discrimination, therefore the actions of such a bodhisattva for the welfare of others are not biased. In sutra it says: “All the beings in the infinite worlds of the ten directions who are blind, deaf, crazy, naked, thirsty, hungry, and so forth.” Sentient beings who have fallen into the lower realms are helped to achieve a human body. They are also led to attain the five uncontaminated aggregates.” Lama Tsongkhapa in his Golden Rosary says: “Those who want to place all the beings of the infinite worlds of each of the ten directions, who are blind, deaf, crazy, naked, thirsty, hungry, and have fallen into the lower realms, in the state of the five uncontaminated aggregates.” In Commentary Clarifying the Meaning it says “not biased in performing the benefit of others.” Here “not biased” means that such a bodhisattva does not differentiate between sentient beings but acts impartially for their benefit.

22) The mind generation associated with the possession of the dhamakaya is like a cloud because such a bodhisattva abides in the Joyous Land and from there is suitable to perform the twelve deeds at any time, such as that of being conceived in a mother’s womb. In sutra it says: “Shariputra, furthermore, a great bodhisattva should demonstrate the deeds of the tathagatas.” This indicates the twelve deeds of a buddha. This mind generation is so-called because when one becomes such a bodhisattva one can perform the twelve deeds in order to ripen the harvest that is
the continua of sentient beings. According to the text *Uttaratantra* by Maitreya the twelve deeds are:

1. to be born in a high class (meaning as a son of the king of the gods of the Joyous Realm)
2. to descend from the Joyous Land
3. to be conceived in a mother’s womb
4. to be born
5. to be skilled as an artisan
6. to enjoy the company of women
7. to develop renunciation
8. to practice asceticism
9. to sit under the bodhi tree
10. to destroy the four maras
11. to turn the wheel of Dharma
12. to demonstrate parinirvana

These are the twelve deeds of the supreme emanation body of a buddha. According to the uncommon Mahayana tradition all these twelve deeds are the deeds of a buddha, while according to the tradition common to both vehicles, the Hinayana and Mahayana, only the last three are the deeds of a buddha while the first nine are the deeds of a bodhisattva.

This ends the outlines of the extensive explanation of the way the 22 similes indicate the 22 meanings. Up to now we have covered the 22 types of mind generation together with the 22 similes, 22 companions, and 22 similarities.

According to the *Teaching of Akshayamati Sutra* (*Akshayamatinirdeshasutra*) there are 80 more subjects discussed in relation to mind generation. This is also mentioned in a text by Jamyang Shepa. These 80 are discussed in relation to the 37 dharmas and so forth, but the way in which they are combined with the mind generation is different.

Wednesday morning class, March 4, 1998

**2B2C-1A2A-2B3A-2 Summarized meaning**

*Commentary Clarifying the Meaning* page 5

Thus, through namely, earth, gold, moon fire and so forth, the twenty-two mind generations are explained.

Gyeltsab says that the twenty-two mind generations are explained by the twenty-two similes, such as earth, gold, crescent moon, and so forth, and by the twenty-two companions. In regard to the companions there are eighty explained in the *Teaching of Akshayamati Sutra*; these are called “the eighty inexhaustible companions.” The text that explains these is by Kunkyen Jamyang Shepa who quotes this sutra.

The eighty inexhaustible companions are: (1) aspiration, (2) thought, (3) training, (4) extraordinary thought, (5-10) the six perfections, (11-14) the four immeasurables, (15-19) the five clairvoyances, (20-23) the four means of gathering disciples, (24-27) the four correct individual knowledges, (28-31) the four reliances (not relying upon the teacher but relying upon the Dharma that is taught, not relying upon the words but relying upon the meaning, not relying upon the interpretative meaning but relying upon the definitive meaning, and not relying upon a mistaken sensory consciousness but relying upon unmistaken exalted wisdom), (32-33) the accumulations of merit and wisdom, (34-70) the thirty-seven harmonies to enlightenment, (71-72) calm abiding and superior insight, (73-74) retention and courage, (75-78) the four Dharma totals, (79) the one path traveled, and (80) skillful means.
Regarding those, (1,2,3) the first three are included on the small, middling, and great only, on the beginner’s (the path of accumulation), (4) the one after those is included on the path which is an entry onto the first ground (the path of preparation), (5-14) the ten after that are included on the ten grounds, the Extremely Joyous and so forth, and possess the spheres of activity of the paths of seeing and meditation, (15-19) the five after those are included on the distinguished path, (20-22) the three mind generations after those are included on buddha ground in terms of preparation, actual, and conclusion.

Here the twenty-two mind generations are looked at in terms of the paths in which they are included. Gyeltsab says that the first three mind generations are included respectively in the small, middling, and great paths of accumulation. The fourth mind generation is included on the path of preparation, literally the path through which one enters the first ground. The fifth to the fourteenth mind generations are included in the ten grounds respectively, beginning with the Extremely Joyous. The fifteenth to the nineteenth mind generations are included on the distinguished/special path, and are included on the three pure grounds. The twentieth, twenty-first, and twenty-second mind generations are included on the buddha ground, in respectively the preparation, the actual, and the conclusion.

Thus, the detailed divisions of mind generation are included from the beginner’s ground through the buddha ground.

Gyeltsab says: the thorough divisions of mind generation are included in the paths from the beginner’s path up through the buddha ground. This is explained above as it is.

Mind generation is divided somewhat differently in the text Ocean Playground (Rol-tso) by Jedzün Chögyi Gyeltsen. However, when mind generation is divided by way of similes, companions, and similarities there are twenty-two types. When it is divided by way of boundaries there are four: (1) the mind generation utilizing belief/appreciation, (2) the mind generation of extraordinary thought, (3) the fully ripened mind generation, and (4) the mind generation of having abandoned obscurations. The way in which they are related to the paths is that the mind generation utilizing belief is found on the path of accumulation and the path of preparation, the mind generation of extraordinary thought is found on the first to the seventh ground, the fully ripened mind generation is found on the eighth, ninth, and tenth grounds, and the mind generation of having abandoned obscurations is found on the buddha ground. In this way mind generation is divided in terms of its boundaries.

There are also divisions of mind generation based on the way it is generated: (1) the mind generation that is like a king/victor, (2) the mind generation that is like a cow-herder, and (3) the mind generation that is like the captain of a boat. The mind generation that is like a king because just as a king gains control over his kingdom and then takes care of his subjects, likewise a bodhisattva with this kind of mind generations works to become buddha in order to be able to take care of sentient beings. A bodhisattva who has the mind generation that is like a cow-herder works to first set other sentient beings in the state of enlightenment before becoming enlightened himself, like a cow-herder who first puts his cows in the cow-shed before going home himself. The bodhisattva who has the mind generation that is like a captain takes all sentient beings along
with himself to enlightenment, just as a captain travels together with the ship’s passengers to their
destination.

Jedzün Chögyi Gyeltsen also divides mind generation into gross and subtle mind
generations. A gross mind generation is generated upon indication and a subtle mind
generation is generated upon realizing the nature. A gross mind generation that is generated upon indication
means that first one receives instructions from a master who then says, “Now you have generated
the mind generation,” at which point the disciple feels this and imagines having generated it.
According to the Ornament for Sutra
the mind generation that is generated upon indication is
composed of (1) the mind generation by force of a friend, (2) the mind generation by force of the
cause, (3) the mind generation by force of the root, (4) the mind generation by the force of hearing,
and (5) the mind generation by the force of familiarity with virtue. Generating the mind
generation by the force of a friend means that one has a spiritual friend with the mind generation
who encourages one to also generate it. Maitreya says that, although this is considered to be a
mind generation it is not actually one because it is unstable. The mind generation by the force of
the cause is stable because it stems from the buddha lineage which is its cause; upon this cause
one develops compassion and from this the mind generation. The mind generation by the force of
familiarity with virtue is also stable because when someone is familiar with virtue in past lives
this enables him to develop the mind generation. The mind generation by the force of hearing is
also stable because when someone hears many of Buddha’s scriptures describing the qualities of
mind generation he gradually develops the mind generation. There is also a mind generation that
arises from familiarizing oneself with it in this life alone. All these mind generations are gross
mind generations that arise from indication and are conventional mind generations.

Mind generation upon realizing the nature is ultimate mind generation.

Mind generation is also divided by way of its entity into the wishing and practical, or
engaging, mind generations. These were explained before but, in brief, wishing mind generation
is one that is not sustained by practice while practical mind generation is directly sustained by
practice, such as the practice of the six perfections.
(Before when it was mentioned that it is impossible that when a bodhisattva reaches the grounds
that his activities are parted from mind generation, I said that this statement came from Golden
Rosary but actually it comes from in Gyeltsab’s Essential Explanation.)

Jedzün Chögyi Gyeltsen also nominally divides mind generation into conventional mind
generation and ultimate mind generation. Here we will look at ultimate mind generation as we
will often come across it. This nominal division is the sixth way of dividing mind generation.

Ultimate mind generation is looked at in terms of its definition, divisions, boundary, etymology,
and special attributes.

The definition of ultimate mind generation: it is one of the two mind generations, conventional
and ultimate; it does not have dualistic appearance with respect to the nature of complete
enlightenment; and it is an arya Mahayana primary mental cognizer abiding in the class of
realization which is a distinguished/special wisdom. Jedzün Chögyi Gyeltsen says that the reason
that the definition says “it is one of the two” is to negate that the mental consciousness that
directly realizes the selflessness of persons in the continuum of an arya buddha is an ultimate
mind of enlightenment. Jedzün Chögyi Gyeltsen says that the purpose in mentioning “arya
Mahayana” in the definition is to negate that the mental consciousness directly realizing
emptiness in the continuum of a bodhisattva on the path of accumulation who has previously
realized the state of a hearer foe destroyer is an ultimate mind of enlightenment. The purpose in
mentioning “special wisdom” in the definition is to negate that the conventional mind generation
in the continuum of an arya buddha is an ultimate mind generation.

Jedzün Chögyi Gyeltsen says that such an ultimate mind generation has eleven divisions,
these being from the first ground to the buddha ground. Thus there are ten mind generations
which correspond to the ten grounds, while the eleventh is on the buddha ground.
Jedzün Chögyi Gyeltsen says that the boundaries of ultimate mind generation are that it exists from the first ground up. In *Ornament for Sutra* it says: “It begins from the Extremely Joyous on upward.” In *Essential Explanation* is says: “It exists from the moment of attaining the path of seeing and upward, it does not exist on the paths of ordinary bodhisattvas.”

Jedzün Chögyi Gyeltsen says that the etymology of ultimate mind generation is that it is a mind generation that observes an ultimate phenomena. This is an etymology but there is no pervasion.

In Jedzün Chögyi Gyeltsen *Ocean Playground* the presentation of the special attribute [of the ultimate mind of enlightenment] has two sub-divisions: a brief presentation by way of determined words and an extensive explanation by way of presentation. The brief presentation by way of determined words says: the ultimate mind generation (subject) is called ultimate (predicate) because it greatly pleases the totally enlightened beings, because with it one collects the two accumulations of merit and wisdom, and because it gives birth to an exalted wisdom that is not conceptual with respect to phenomena. In *Ornament for Sutra* it says: “The totally enlightened beings are pleased, the accumulation of merit and wisdom are collected, and a non-conceptual exalted wisdom with respect to phenomena is generated; therefore it is called ultimate.”

The mind generation of the first ground is called Extremely Joyous and is said to be superior because such a bodhisattva has found an equanimous state of mind with respect to phenomena, sentient beings, the activities of oneself and others, and the supreme object to be attained. This is so because with respect to phenomena a bodhisattva has found an equanimous state of mind because he has realized all phenomena as not existing truly. He has an equanimous state of mind with respect to sentient beings because he enacts the welfare of sentient beings. He has an equanimous state of mind with respect to the activities of oneself and others because such a bodhisattva wishes to exhaust the sufferings of both self and others. And he has an equanimous state of mind with respect to the supreme object to be attained because he realizes that both self and buddha are empty of self existence, they are realized as having an inseparable entity. In *Ornament for Sutra* it says: “It is greatly superior because of having found an equanimous mind with respect to phenomena, sentient beings, the activities of self and others, and the supreme object.”

The extensive explanation by means of presentation says: the ultimate mind generation (subject) is qualified by six attributes because it has:

1. the attribute of generation,
2. the attribute of being vast,
3. the attribute of taking pleasure,
4. the attribute of being pure thought,
5. the attribute of being expert in the remaining grounds, and
6. the attribute of having definitely emerged from the objects to be abandoned.

In *Ornament for Sutra* it says: “Generation, vastness, pleasure, pure thought, expert in remaining grounds, and definite emergence.” These are all attributes of the ultimate mind generation which are explained in more detail in *Ornament for Sutra*.

Jedzün Chögyi Gyeltsen says with respect to the Mahayana mind generation, both the conventional and ultimate, that: the mind generation (subject) has many attributes (predicate) because it has:

1. the attribute of cause,
2. the attribute of thought,
3. the attribute of belief,
4. the attribute of object of observation/referent,
5. the attribute of the manner of going,
6. the attribute of support,
7. the attribute of disadvantage,
8. the attribute of the discordant class,
9. the attribute of benefit,
(10) the attribute of emerging from the object to be abandoned, and
(11) the attribute of being final/ultimate.

Mind generation has the attribute of cause because the Mahayana mind generation arises from compassion, its root. In *Ornament for Sutra* it says: “The root of that is compassion.” It has the attribute of thought because a bodhisattva has the thought, or intention, to permanently/eternally help sentient beings. In *Ornament for Sutra* it says: “Thinking of permanently helping sentient beings.” It has the attribute of belief because it believes in the Mahayana Dharma. In *Ornament for Sutra* it says: “Belief in Dharma.” It has the attribute of the object of observation because the Mahayana mind generation observes the search for the Mahayana exalted wisdom. In *Ornament for Sutra* it says: “Likewise, it observes the search for exalted wisdom.” It has the attribute of the manner of going [upward] because with the Mahayana mind generation one goes from a high ground to a higher ground by the force of aspiration. In *Ornament for Sutra* it says: “One goes upward by aspiration.” It has the attribute of support because it is supported on extensive bodhisattva vows. In *Ornament for Sutra* it says: “Extensive vows are the support of it.” It has the attribute of disadvantage because with Mahayana mind generation one knows that there is a disadvantage to giving up the Mahayana path. In *Ornament for Sutra* it says: “Giving up the path.” It has the attribute of discordant class because the Mahayana mind generation knows that voluntarily taking the Hinayana motivation is not correct and that it is discordant with the Mahayana mind generation. In *Ornament for Sutra* it says: “Discordant class, voluntarily taking it.” It has the attribute of benefit because there is the benefit of increasing the virtue which is the nature of merit and exalted wisdom. In *Ornament for Sutra* it says: “Its benefit is that it increases virtue which is the nature of merit and wisdom.” It has the attribute of definitely emerging from the object to be abandoned because with this mind one applies oneself to the practice of the six perfections. In *Ornament for Sutra* it says: “Always applying oneself to the six perfections is expressed as definite emergence.”

Wednesday afternoon class, March 4, 1998

(11) Mind generation has the attribute of being final because the bodhisattva with a Mahayana mind generation applies himself to his respective level of practice and eventually reaches the end of the path whereupon the mind generation becomes final. In *Ornament for Sutra* it says: “Each one practices as his/her respective level and generates the mind of enlightenment.”

Jedzün Chögyi Gyeltsen says that there are many other benefits to the Mahayana mind generation:

1. the Mahayana mind generation is the sublime gateway to the Mahayana path,
2. in dependence on it one will continuously create merit,
3. any previously created cause for the lower realms is purified and the creation of future negative actions is stopped,
4. one creates new causes to be born in a happy migration and any virtuous causes created in the past increase,
5. any virtue created in the past is transformed into a cause for peerless complete enlightenment, like alchemy transforms iron [into gold], and
6. anyone who generates such a mind instantly becomes an object of veneration of gods and human beings.

In the *Commentary on the Mind of Enlightenment* it says: “Without mind generation there is no attainment of buddhahood and while remaining in cyclic existence the only method for the welfare of other sentient beings is the mind of enlightenment. This commentary by Nagarjuna is based on the second chapter of the *Guhysamaja Root Tantra*. In *Precious Garland* by Nagarjuna it also says: “If one wishes to attain highest enlightenment for oneself or others the sole root is the mind of enlightenment.”

To summarize:
(1) Whenever someone generates the mind of enlightenment he becomes a Mahayanist; therefore mind generation is the gateway to the Mahayana path.

(2) “To continuously create merit” means that from the moment the mind generation arises one creates merit even when sleeping. To prove this Jedzün Chögyi Gyeltsen quotes the Bodhisattvacharyavatara which says: “From the moment of generating the mind of enlightenment one will have the unchanging determination to liberate the infinite sentient beings. Once this mind is generated one will always naturally create merit, even when one is unconscious. The continuous creation of merit is so great that the merit will be equal to the limits of space.” In short, one who has the mind generation does not stop creating merit even when sleeping or unconscious.

(3) Any previously created cause for the lower realms, negative karma, is purified and one does not create new negative actions to be born in the lower realms. The Sutra on the Liberation of Maitreya says: “When someone develops mind generation, he naturally becomes so magnificent that he overshadows/outshines all the hearers and solitary realizers because of the Mahayana lineage, just like a diamond outshines/surpasses all other jewels.

(4) One creates new causes to be born in a happy migration and any previously created virtue increases.

(5) Any virtue created in the past is transformed into a cause for peerless complete enlightenment, like alchemy transforms iron into gold. This means that when someone develops mind generation it transforms the impure body into the body of a victor, just like alchemy transforms iron into gold. Such a mind generation is priceless therefore one should protect it. All other virtues can be enjoyed but they come to an end, like when one eats any type of fruit. However, the wish-fulfilling tree provides inexhaustible fruit. The Sutra requested by Shridatta says: “If the merit from the mind of enlightenment were to exist as form it would not fit in a billion world systems.”

(6) Anyone who generates such a mind instantly becomes an object of veneration of gods and human beings. In Bodhisattvacharyavatara it says: “Whenever a miserable sentient being bound in the prison of cyclic generates the mind of enlightenment, in the next instant he becomes known as a son of the sugatas and becomes an object of veneration for the whole world, gods and human beings.”

The way in which the mind of enlightenment is generated has three divisions:

(1) The manner of generating the mind generation
(2) The measure of mind generation
(3) The manner of taking it through ritual or precept.

(1) The manner of generating the mind generation
The first way of generating the mind generation is according to the tradition of Atisha while the second way is according to Shantideva. The tradition according to Atisha is the meditation on the sevenfold causes and effect. With respect to the first point of this meditation, that of recognizing all sentient beings as having been one’s mother, it says in Nagarjuna’s Letter to a Friend that our present mother has been our mother countless times in our past lives. In fact, if someone were to gather all the dust of the billion world systems together and make pills the size of a berry from a juniper tree, the number of pills would not equal the number of times a single sentient being has been our mother. This means that we have had many many lives and in each of them we needed a mother in order to be born. The second point is to remember the kindness one has received from these mothers. Nagarjuna’s Letter to a Friend says that the amount of milk we have drunk from our mothers is greater than the quantity of water in the four great oceans. This is because we have taken so many lives while in cyclic existence. Jedzün Chögyi Gyeltsen says that not only has a single sentient being been our mother numberless times in the past but also each sentient being provided us with happiness and protected us from suffering.

Then the third cause is to develop the wish to repay the kindness one has received. In a Letter Sent to a Disciple it says: “Other sentient beings are sinking in the ocean of cyclic existence and if one neglects them simply because of not recognizing, due to changes of rebirth and death,
that they have been one’s mother and thinks only of one’s own liberation it would be a total lack of consideration.” This quotation means that we should not only look out for our own welfare but should exert effort in the methods for dispelling others’ suffering and bringing them every happiness. We have died and been born countless times, it is only because of this that we cannot remember that they have been our mothers.

Then one meditates on love, equanimous love, and its benefits. In meditation we wish that all sentient beings may have happiness. The benefits of love are mentioned in the Sutra of the King of Concentration saying: “If one meditates on equanimous love the benefits are so great that it creates more merit than the merit from making offerings to the buddhas and bodhisattvas even by filling numberless worlds with offering substances.” We should understand from this that we need to meditate on love as much as possible. Buddha himself meditated on love at nightfall and thereby destroyed all the hordes of maras and then at dawn attained enlightenment. Love is important even for protection from external fear.

Then one goes on to develop compassion. Jedzün Chögyi Gyeltsen says that one should take all sentient beings as one’s object of meditation and wish that all of them were free from their sufferings. One should intensely feel this in one’s meditation. Then one develops the extraordinary thought by taking all sentient beings as one’s object of meditation and thinking, “I myself will free them from suffering and set them in happiness.” It is not sufficient to meditate on this one time alone, one needs to repeatedly meditate until one develops this mind. As Shantideva says, “There is nothing that does not become easy through familiarity.” If we habituate our mind with something it becomes possible. For example, if we meditate continuously that other sentient beings bodies are our own, we will eventually be able to even feel their feelings. Only due to familiarity do we feel that our physical body is ours, although it, in fact, comes from our parents.

Having gone through these six causes one comes to the effect, the Mahayana mind generation. To develop this mind one thinks, “At the moment I do not have the capacity to liberate other sentient beings from suffering and give them happiness so I must achieve the state of buddhahood in order to be able to do this.” In reality we do not have the mind generation but what we can do is to make the determination to attain enlightenment in order to later on do all this work for sentient beings. So we should try to develop, at the very least, an artificial mind generation.

The second tradition for developing the mind of enlightenment is that of equalizing and exchanging oneself with others. Jedzün Chögyi Gyeltsen says to do this one needs to give up self-cherishing and develop cherishing others by thinking, “May all my happiness ripen on sentient beings and may all sentient beings sufferings ripen upon me.” In Bodhisattvacharyavatara Shantideva says: “Someone who wants to quickly protect himself and others should exchange himself with others and practice the sublime secret, the practice of equalizing and exchanging self with others.” This text also says: “All the happiness in the world comes from cherishing others, every suffering in the world comes from self-cherishing.” In brief, one should exchange self-cherishing for cherishing others because all bad qualities arise from cherishing oneself and all good qualities arise from cherishing others.

(2) The measure of mind generation
The measure of having developed the mind of enlightenment is that, having trained according to the instructions in the mind of enlightenment, one has prepared one’s mind and as a result one develops a good heart that is a distinguished feeling. The measure of the mind of enlightenment is when, for example, the mind generation becomes like the taste of the core of the sugar cane, whereas the artificial thought to attain enlightenment is compared to the mere taste of the stalk. The Sutra on Activating the Extraordinary Thought says: “One should not get attached only to the pleasant words concerning the mind of enlightenment but rather to its actual meaning.”

(3) The manner of sustaining the mind of enlightenment through ritual or precept.
The way of sustaining the mind of enlightenment through ritual has three divisions: (i) the object from whom one takes the bodhisattva vows, (ii) the person who takes the vows, and (iii) the way of performing the ritual.

(i) The object from whom one takes the bodhisattva vows
It is not enough to abide in the teachings or instructions given by someone who possesses the vows of wishing mind generation; instead, one should take the vows from someone who has the vows of practical mind generation. It is said by past holy gurus that one can perform a ritual through which one merely takes the vows of wishing mind generation and then observes the four positive actions and avoids the four negative actions. However to remain at this level is not enough, one should take the vows of practical mind generation from someone who has the vows of practical mind generation.

(ii) The person who takes the vows
In general even gods and nagas can be a proper basis for developing wishing mind generation. But in the text Lamp for the Path it says that it should be someone who is distressed about cyclic existence, who meditates on death-impermanence, and who has wisdom and compassion.

(iii) The way of performing the ritual
This has three parts: (a) preparation, (b) actual, and (c) conclusion.

(a) Preparation
The preparation is to go for special refuge, adorn the place, arrange statues and offerings (i.e., set up an altar), make the request, then actually take refuge in the Triple Gem and remain in the vows of refuge.

The explanation given today come from other texts and are is mentioned in Gyeltsab’s commentary. We went through these points so that one can understand how to meditate on the mind generation and put it into practice.

Thursday morning class, March 5, 1998

With respect to the ritual of taking the bodhisattva vows we have completed the preparation and will now do the actual body of the ritual.

b) Actual
The actual ceremony involves kneeling in front of the master with folded hands and then repeating either the sentence “All buddhas and bodhisattvas of the ten directions please pay attention to me” or “Master, please pay attention to me.” Then one says: “I, who am called (.............), all the roots of virtue that I have created in this life and in other lives, such as the roots of virtue from practicing the nature of generosity, morality, concentration, both the roots of virtue that I have created, the roots of virtue from making others create them, and the roots of virtue from rejoicing in my own and others creating of them, just as all the past tathagatas, the perfectly complete buddhas, those abiding on the great ground, and all the bodhisattvas who have generated the mind of enlightenment, have done, so do I, who am called (.............), also from this moment until the essence of enlightenment generate the mind of enlightenment toward peerless complete enlightenment. I will liberate those not liberated, give breath to those unable to breathe, and place those who have not gone beyond sorrow in the state of gone beyond sorrow.” This is to be repeated three times in order to receive the bodhisattva vows.

Jedzün Chögyi Gyeltsen says that in the case that there is no acharya present, there is a technique for taking the vows of wishing mind generation as was taught by Atisha. One visualizes Shakyamuni Buddha and all the tathagatas of the ten directions in the space before
oneself and then does as before for the preparation. Then one asks all the buddhas and bodhisattvas to pay attention to oneself instead of asking the master to listen. This is the method for taking the vows of wishing mind generation. One should not however that this person has to already have received the vows of practical mind generation and is therefore a special support for taking the vows of wishing mind generation. In short, the rest of the ritual is the same except that the phrase “Master, please listen to me” is omitted. In other words, one takes special refuge, adorns the place in which one is going to take the vows, arranges images, makes offerings, makes the request, and maintains the refuge vows.

(c) Conclusion
In conclusion the master explains the actual practice in which the disciple is to engage. He should listen to and reflect on the teachings of the baskets of Dharma concerning the mind of enlightenment, avoid all types of misbehavior, create all collections of virtue, encourage others to collect virtue, rejoice in the virtue created by others, admire those who already have collected or are collecting roots of virtue, make prayers three times in the day and three times at night to receive the mind of enlightenment that has not yet been received, to not degenerate that which has been generated, and to increase that which has been generated. One should finish the ceremony by adorning it with this prayer.

If one wishes to take the vows of wishing mind generation more briefly one can simply recite the prayer “I go for refuge until enlightenment to the Buddha, the Dharma, and the Supreme Assembly. By my merit from practicing generosity and the other perfections, may I achieve buddhahood for the benefit of all sentient beings” (“Sang gye chö dang...”).

2B2C-1A2B Explaining the precepts which indicate the means of accomplishing the aims of the promise
   1 Actual
   2 Explaining the origin of generating the wisdom arisen from meditation referring to emptiness through meditating on the subject of the precepts

2B2C-1A2B-1 Actual
   A Making connections
   B Explaining the meaning

2B2C-1A2B-1A Making connections
(Commentary Clarifying the Meaning page 6)

Having set out the ancillary divisions, in order that the bodhisattvas who have generated the initial mind of enlightenment and so forth is such a way, who act to strive just at the time (of hearing), who generate the mind of enlightenment (not attained before) and actualize the qualities entailed by it, (and) for the purpose of completely safeguarding the qualities attained in order to strongly increase them, the instructions as precepts (are presented).

Gyeltsab says that precepts come after the definition, divisions, and referents of mind generation. Persons who listen, such as any of three bodhisattvas on the three levels of accumulation (subject), have a purpose to be given a Mahayana precept by a supreme emanation body (predicate) because it allows them to generate a mind generation that has not been generated before, it helps them to accomplish the calm abiding and superior insight included in the perfect training that is induced by the mind generation, it protects all excellent qualities that have already been attained without degenerating, and it helps to increase more and more the coming grounds. In short, this syllogism means that there is a purpose to the supreme emanation body giving precepts, or oral instructions, to bodhisattvas on the three levels of the path of accumulation; this is in order for them to attain new excellent qualities that have not yet been attained, to generate those not yet generated, and to increase those that have been generated.

What are the excellent qualities that have not yet been attained in the continua of a bodhisattva abiding on the path of accumulation? Such a bodhisattva has not yet attained a union of calm abiding and superior insight observing the object selflessness, the four noble truths, and
emptiness. Although a bodhisattva on the path of accumulation has achieved a union of calm abiding and superior insight, it is not one that observes selflessness, etc.; this is achieved only when the bodhisattva achieves the path of preparation. On the path of accumulation a bodhisattva has the wisdom arisen from hearing and thinking. A bodhisattva on the great level of the path of accumulation realizes the concentration called ‘concentration of the stream of dharmas’ and can therefore receive oral instructions from a supreme emanation body. However there is no pervasion that only such a bodhisattva can receive instructions from a supreme emanation body because even someone who has not entered the path can receive such oral instructions. Since this is so, there is no need to mention that a bodhisattva on the small level of the path of accumulation can receive instructions from a supreme emanation body.

Gyeltsab then explains the characteristics a bodhisattva needs in order to receive the oral instructions/precepts. Such a bodhisattva needs to seek to listen to the oral instructions. Another cause for listening to the oral instructions is to have achieved the ‘concentration of the stream of dharma.’ To achieve this a bodhisattva should have eliminated most of the impediments to actually seeing a buddha and to receiving teachings from him. The are impediments that exist while on the small and middle levels of the path of accumulation, while on the great level of the path of accumulation most of them have been eliminated. He must also have a union of calm abiding and superior insight that is a distinguished ability to directly listen to teachings from a supreme emanation body. He must have accumulated merit over many eons, have pure view and pure morality, have the naturally abiding lineage, have heard many teachings, and have abandoned almost all of the four obstacles to awakening the naturally abiding lineage. These are the causes for achieving the concentration of the stream of dharma.

In regards to the causes for receiving the oral instructions/precepts there are different interpretations according to different masters. For example, some say that the concentration of the stream of dharma can only be achieved on the highest mundane dharma level of the path of preparation while others say that it can be achieved on the great level of the path of accumulation. Why this concentration is said to be a distinguished cause is because when a bodhisattva actualizes this concentration he can receive teachings even from a statue which appears to him as an actual supreme emanation body. Then, when a bodhisattva reaches the first ground, he becomes able to receive teachings from a statue of a buddha which appears to him in the form of a complete enjoyment body and gives only Mahayana teachings.

In his Golden Rosary Lama Tsongkhapa says that the concentration of the stream of dharma is: a concentration that is able to contemplate any object and that is accompanied by a remembering consciousness which is able to retain countless meanings of the words of scriptures taught by the Buddha. Lama Tsongkhapa then gives the etymology of the name ‘concentration of the stream of dharma’ saying that it is called so because it can retain the meaning of the words of the scriptures like a stream without any discontinuity/interruption. The boundary of the concentration of the stream of dharma is from the great level of the path of accumulation upward.

The four obstacles to activating the buddha nature/lineage are:
(1) to lack necessities for the practice of Dharma,
(2) strong familiarity with delusions,
(3) to be connected to negative friends, and
(4) to be controlled by others, such as a king or a domineering partner.
In Ornament for Sutra is also mentions four obstacles to activating the Mahayana lineage:
(1) strong familiarity with the delusions,
(2) being in relation with misleading friends,
(3) lacking the necessities for practicing Dharma and not being able to practice, and
(4) being overcome by another’s power, such as that of a king.
We need to be free of these four obstacles in order to activate the Mahayana lineage. There is a purpose to Gyeltsab mentioning ‘almost free from all obstacles,’ it is because there are always obstacles to activating the Mahayana lineage. These four impede practicing Dharma, meditating, developing compassion and other virtuous qualities.
These are the actual divisions of precepts, the second topic of omniscient mind. The first of these divisions is the precept of the entity of achievement. It is the wisdom realizing the two truths, the conventional and ultimate. The precepts say that a bodhisattva should do all the practices without passing beyond the two truths. In other words, he should stay within the limits of the two truths by understanding that while all phenomena do not exist ultimately they do exist conventionally and are suitable to have the function of being an agent and an action.

The second division of precepts, the truths, refers to the four noble truths which have been mentioned before: true sufferings, true origins, true cessations, and true paths. In relation to the four noble truths the precepts say that a bodhisattva should meditate, for example, on the true sufferings within the limit of the conventional and ultimate truths by understanding that true sufferings do not exist ultimately while they do exist conventionally.

The third division of precepts, the Three Jewels, Buddha and so forth, is the instructions concerning the Three Jewels. These instructions say that a bodhisattva should go for refuge thinking that, although the Three Jewels do not exist truly, they are able to perform the function of protecting from fear and suffering. Even in relation to the Three Jewels a bodhisattva should remain within the limits of the two truths by understanding that while they do not exist ultimately they do exist conventionally.

The fourth division of precepts, non-clinging, is the instruction to put effort into not clinging to the pleasures of this life, that is, to meaningless activities.

The fifth division of precepts, tireless, is to not think, “I am tired today. I will be tired tomorrow,” and so forth but to put effort into the practice.

The sixth division of precepts, that of thoroughly maintaining the path, is the instruction to bodhisattvas to put effort into counteracting the laziness of feeling incapable.

The seventh and eighth divisions of precepts, the five eyes and the six excellent qualities of clairvoyance, are instructions to bodhisattvas to develop these in order to help others.

The ninth and tenth divisions of precepts, the path of seeing and the path of meditation, are instructions concerning how to develop these two paths.

Gyeltsab says that there are ten divisions of precepts beginning from the instructions concerning the entity of achievement up to the instructions concerning the path of meditation.

If these oral instructions/precepts are divided there are two:

(1) oral instructions about the support of achievement and
(2) oral instructions about the supported achievement.

The first, the support of the achievement, is the oral instructions concerning the Three Jewels.

The second, the oral instructions about the supported achievement, is further divided into:

(1) oral instructions about the qualified basis and
(2) oral instructions about the qualities themselves.

The oral instructions on the qualified basis is again divided into:
The instructions about the aspect are the instructions about the entity of the achievement itself, while the instructions about the referent are the instructions about the four noble truths. The oral instructions about the qualities themselves are also further divided into two:

1. Instructions about dispelling the discordant class and
2. Instructions about achieving excellent qualities.

The instructions about dispelling the discordant class are also further divided into:

1. Instructions about dispelling the manifest discordant class
2. Instructions about dispelling the dormant discordant class

The instructions about dispelling the manifest discordant class concern the discordant class that is the three lazinesses of considering oneself as incapable, of lethargy, and of being attached to evil actions.

The instructions about dispelling the imprint/seed are the instructions about the path of seeing and meditation.

The instructions about the achievement of excellent qualities concern attaining the five eyes and the six clairvoyances. The instructions concerning the five eyes are given in order to engage in the achievement by one’s own force, while the six clairvoyances are given in order to achieve the result quickly.

This is just a short presentation of the divisions of precepts, they will be explained in greater detail in the context of the next outline “Commentary.”

Thursday afternoon class, March 5, 1998

In sutra it says: “Instructions about the achievements.” In Commentary Clarifying the Meaning (page 6) it says:

Regarding the achievement within the detailed divisions of the mind of enlightenment, they are explained: “without circumventing (passing beyond) the conventional and ultimate truths, uncommon with the hearers and so forth, one should engage in a manner which does not observe.”

Why is the instruction given? So as to realize the achievements. Also Gyeltsab poses the question: What is to be achieved? The 22 mind generations and the practice the six perfections which are impelled by those mind generations are to be achieved. How does one realize the achievements? One should establish the support, or person, who achieves; the path which is to be practiced; and the result to be achieved with a valid cognizer and then practice as explained. Knowing and practicing this as explained above is a gradual path based on conventional truth. To stay within the limits of the ultimate truth means to know all these as not truly existent. One should place all sentient beings, including those on the hearers’ vehicle, in the uncommon nirvana, the Mahayana nirvana. Thus one should engage in the perfection of wisdom in order to actualize the dharma by observing the four phenomena as non-truly existent. The four phenomena are (1) the object to be achieved, (2) the support, or person, who achieves, (3) the manner in which it is to
be achieved, and (4) the result to be achieved. One should engage them without seeing them as truly existent.

Gyeltsab says that the meaning of not going beyond the limits of the manner of realizing all conventional phenomena as false and an illusion is to be known as above. In sutra it says: “Shariputra, with regard to this when the bodhisattvas mahasattvas engage in the perfection of wisdom they should not see bodhisattvas on the basis of existing ultimately although they do exist.” This sutra passage presents the instruction on the entity of the achievement itself. It tells how not to pass beyond the gradual path based on the two truths. Gyeltsab says that it advises on how to meditate on all the topics representing omniscient mind, such as mind generation and so forth. In sutra it says: “Shariputra, if this world, bhikshu, Shariputra...” and so forth. This sutra passage presents the instructions on the uncommon entity of achievement itself. Gyeltsab says that it means that one should not reflect on one’s own welfare as it is done in the lesser vehicle.

The four phenomena mentioned previously are slightly different here: (1) the support, the person who achieves; (2) for what purpose does one achieve, (3) upon what basis is it to be achieved, and (4) the manner in which one achieves. First is the bodhisattva, the person who engages in the perfection of wisdom. For what purpose does he engage in the perfection of wisdom? To attain enlightenment. Upon what is it achieved? The bodhisattvas achieves it on the basis of the extensive path which is a conventional phenomenon and the profound path which is an ultimate phenomenon. How is this to be achieved? Without passing beyond the two limits, in other words, with the knowledge that although phenomena do not exist truly they do exist conventionally. The meaning of not going beyond the limits of knowing all phenomena to be illusions and false means to know that although conventional phenomena do not exist inherently they do appear to exist inherently and to understand that this appearance of inherent existence is an illusion. In other words, one should realize all phenomena to be like an illusion or like a magic show. A magician takes a substance, for example, a piece of wood, and makes it appear as and elephant or a horse to spectators whose eyes have been tricked. Although this wood appears as and elephant or a horse it does not exist as such. We need to be like the clever spectator who realizes that it is not true. This is the practice characterized by wisdom.

When it says in sutra: “Shariputra, regarding this when bodhisattvas engage in the perfection of wisdom they should not see other bodhisattvas although they do exist” it means that when a bodhisattva analyses the nature of phenomena, including the nature of other bodhisattvas, and investigates whether they exist inherently, he comes to a point where the bodhisattva being analyzed no longer appears. The same thing happens when one thoroughly analyses a table piece by piece until in the end the table no longer appears.

When it says in sutra: “Shariputra, all this world, bhikshu, Shariputra and so on” it is an instruction on the uncommon entity of achievement itself and presents the practice of the method side. This is because it says not to reflect on the lesser vehicle for one’s own purpose and thereby gives the idea that one should not think of oneself but should think of others. This is the conventional mind generation and therefore is the method side.

This section is divided into:

1 Definitions
2 Meaning of the terms
3 Divisions of illustrations
4 Investigating one and different

Then Gyeltsab explains the two truths saying that a bodhisattva should remain within the gradual path based on the two truths. Therefore, in this context one needs to understand the two truths.
The definition of ultimate truth is: that which is to be realized by way of non-dualistic appearance with a direct valid cognizer actually realizing it and which is not to be realized as an aspect of an affirmative phenomena.

Conventional truth

The definition of conventional truth is: that which abides in the class of that which is to be realized by way of dualistic appearance with a valid cognizer actually realizing it.

When we realize the ultimate truth, we realize without dualistic appearance, while when we realize the conventional truth it is by way of dualistic appearance. Since dualistic appearance is mentioned here very often, what does it mean? Dualistic appearance can be explained as being of three types:

1. The subject and object appearing as two,
2. The appearance of true existence, and
3. The mere appearance of conventional phenomena, such as form.

When a bodhisattva realizes emptiness his mind is focused only on emptiness and there is none of the three types of dualistic appearance. When a conventional phenomena is realized there is dualistic appearance because the subject and object appear to be different, the cognizer has the appearance of true existence, and the conventional phenomena appears. Svatantrika-Madhyamikas assert that dualistic appearance is not necessarily mistaken.

The definition of the two truths can be posited differently, for example, ultimate truth is an object found by a valid cognizer analyzing an ultimate phenomenon while conventional truth is an object found by a valid cognizer analyzing a conventional phenomenon.

When it says in the definition of ultimate truth “it is not to be realized as an aspect of an affirmative phenomena” it is because ultimate truth is a synonym of emptiness. When emptiness is realized one realizes just a mere non-affirming negative phenomena, in other words, one realizes the mere negation. Therefore, the definition says that the ultimate truth cannot be realized as an affirming negative phenomena.

Meaning of the terms

The terms are conventional and ultimate truths. The term ultimate truth is posited because anything that exists for an object-possessor/subject that is an aryā’s unmistaken contemplative mind is an ultimate truth. Conventional truth is posited because anything that exists for an object-possessor/subject that is wrong is a conventional truth. While it is a truth with respect to that wrong mind, it is in reality false, therefore it is a conventional truth, literally all-obscuring truth.

The term conventional truth is also used because conventional truths appear to a sensory consciousness that obscures the realization of emptiness yet those phenomena, such as form, do exist and do appear to this consciousness. They are called truths because they do appear to this obscuring consciousness.

Divisions of the illustrations

There are different ways of expressing ultimate truth but in terms of its entity there are no divisions. In terms of its expression there is the enumeration of ultimate truth and the non-enumeration of ultimate truth. The enumeration of ultimate truth is perceived by a knower that is an inferential cognizer while a non-enumeration of ultimate truth is only perceived by an aryā’s contemplative mind that perceives an ultimate truth.

When conventional truth is divided there are two: real conventional truth and false conventional truth. The definition of a real conventional truth is: it is one of the two, real or false conventional truth, and is not realized by ordinary beings to not exist in the way it appears to the mind for which it is an appearing object; for example, form, space, etc. The definition of false conventional truth is: it is one of the two, real or false conventional truth, and it can either be realized by ordinary beings to not exist in the way it appears to the mind for which it is an
appearing object, or it can be harmed by a valid cognizer with respect to its existence; for example, the reflection of a face in a mirror and the self of persons. False conventional truths can be realized by all persons to not exist, for example, one can realize that a reflection of the face in the mirror is not the face itself. On the other hand, the existence of a self of persons can be harmed by a valid cognizer realizing selflessness. The Prasangika-Madhyamikas do not assert a division of conventional truth into real and false because they say that a single basis cannot be both real and false. However, they do say that conventional truth can be divided into two with respect to the consciousness of an ordinary person because even for ordinary persons there is that which is true, or real, and that which is false, for example, a face and its reflection in a mirror.

Oral instruction/precepts was defined before but to repeat it the definition is: a Mahayana speech that unmistakenly shows a method for achieving the objects sought by a Mahayana mind generation. There are two objects sought by the Mahayana mind generation: perfectly complete enlightenment and others’ purpose.

Friday morning class, March 6, 1998

QUESTIONS AND ANSWERS
Question: Please go through the important points of the teachings covered in the past week, then give some more information on the difference between the wishing and practical mind generations in terms of the measure to which the practice is or is not directly sustained by mind generation, an explanation of the preparatory stages required before developing the mind of enlightenment, specifically the need to achieve a concentration, and go over again the five similarities between the mind generation and the mental factor desire.

Reply: Last week on Friday we stopped at the section on the scriptural perfection of wisdom. There are three perfections of wisdom: the scriptural, path, and resultant perfection of wisdoms. The resultant perfection of wisdom is an exalted knower that is fully developed wisdom that knows all phenomena directly. Emptiness is called a resultant perfection of wisdom because it is an object of the mind that is a resultant perfection of wisdom. That emptiness is given the name ‘perfection of wisdom’ is a case of the name of a subject being given to its object.

The scriptural perfection of wisdom is called a perfection of wisdom because one has to first study and listen to teachings on the texts, the three mothers, in order to achieve the resultant perfection of wisdom. This is a case of giving the name of a subject to the object that expresses it, in this case the three mothers. The path perfection of wisdom is so-called in order to make it known that to achieve the resultant perfection of wisdom one must practice the path, this is a case of the name of a result being given to its cause, the path. Therefore, only the resultant perfection of wisdom is an actual perfection of wisdom, while the scriptural and path perfection of wisdoms are merely labeled perfection of wisdoms.

On the other hand, the three Mahayana perfection of wisdoms are considered real compared to those of the Hinayana, which are said to be like a reflection of the Mahayana perfection of wisdoms. This is because the enlightenment achieved by the Hinayana path is like a reflection of the Mahayana enlightenment, the Hinayana path is like a reflection of Mahayana path, and Hinayana scriptures are like a reflection of the Mahayana scriptures.

This is a commentary on the root text of the Ornament “The perfection of wisdom is perfectly explained in eight categories.” This is a very brief presentation of the corpus of the text, which is followed by the eight categories and the seventy topics, which in turn is followed by the extensive explanation. We need to have a clear idea concerning the structure of the Ornament which comes in the 4th-18th stanzas. With respect to the categories one should know their definitions, then with respect to the 70 topics one should know the divisions of the eight categories without going through each of their individual definitions. For example, the exalted knower of all aspects, omniscient mind, is defined as a culminated exalted wisdom directly realizing all ten topics, such as mind generation. It can also be defined as a culminated exalted
wisdom fully realizing all phenomena. With respect to the knower of aspects, the term “aspects” refers to the aspects of phenomena which range from form to omniscient mind, for a total of 108 phenomena. In the context of the knower of paths, the term “paths” refers to either the fifteen paths (five each of hearers, solitary realizers, and bodhisattvas) or the three principal paths of hearers, solitary realizers, and bodhisattvas. The definition of a knower of paths is a Mahayana superior’s clear realization conjoined with the wisdom directly realizing emptiness within the continuum of the person who possesses it. Although a knower of paths is directly sustained by a wisdom directly realizing emptiness, there is no pervasion that it is a wisdom directly realizing emptiness. This specification is made because an arya bodhisattva has a wisdom realizing nonduality which is a realization belonging to those of solitary realizers and has the realization of selflessness of persons that belongs to hearers but neither of these is a wisdom realizing emptiness. A Mahayana arya also has compassion, conventional mind generation, and other realizations but they are not a wisdom realizing emptiness. A knower of paths is necessarily an exalted knower of a Mahayana superior/arya because a knower of paths is a synonym of an exalted knower in the continuum of an arya.

In the case of a knower of bases, the term “bases” refers to the four noble truths or to all the sixteen attributes of the four noble truths. Its definition is: an exalted wisdom conjoined with the wisdom directly realizing selflessness within the continuum of the person who possesses it and abiding within a lesser vehicle class of realization. The knower of bases is elaborately explained in the third chapter.

The definition of complete training in the aspects is a bodhisattva’s yoga that is conjoined with the wisdom meditating a compendium of the aspects of three exalted wisdoms.

The definition of peak training is a bodhisattva’s yoga that conjoined with the wisdom which is highly transformed from the Mahayana path of accumulation and that meditates a compendium of the aspect of the three exalted knowers. What is the meaning of meditating on a compendium of the 173 aspects? It means that meditation on these 173 aspects is sustained by the union of calm abiding and superior insight. Complete training in the aspects and peak training will be elaborately explained in the fourth and fifth chapters respectively.

Meditating on impermanence and compassion were not explained elaborately before. When one meditates on compassion one tries to unify one’s mind with compassion, in other words, one attempts to make one’s mind into the aspect of compassion. However, when one meditates on impermanence one focuses one’s mind on impermanence as an object, in other words, the mind is placed on its object, impermanence. When meditating on impermanence one also necessarily meditates on the exalted wisdom realizing impermanence. (see Gyeltsab p. 319) Gyeltsab says that when someone realizes impermanence he also meditates on the exalted wisdom realizing that object otherwise it would follow that the object becomes empty of existence. Our tradition says that one necessarily meditates on the exalted wisdom realizing that impermanence. Since when one mediates on impermanence one also mediates on the mind realizing that impermanence, there are two aspects, that known, the object, and that which knows, the knower. Here impermanence is taken as the object of the mode of apprehension. It is said that one also mediates on the mind realizing impermanence because at this moment this mind alone is manifest; in other words at this moment there is no other mind manifest.

Thus, we have gone over the eight categories very roughly. Now we can begin to look at the present subject, that of mind generation, in terms of the difference between a wishing mind generation and a practical mind generation. “A practice directly sustained by a mind generation” takes place during the subsequent attainment, or post-meditation, of an arya. We need to be clear concerning the difference between “a mind generation sustained by practice” and “a practice sustained by a mind generation.” A practice directly sustained by mind generation is when a bodhisattva in post-meditation develops the intention to give, at this moment his practice of generosity is directly sustained by a mind generation. There are two minds present in that moment, the mind generation and the intention to give; the mind generation is that which sustains and the intention to give is that which is sustained. This also happens in the case of the
practice of morality as well as the other perfections. Practice is sustained by mind generation from the path of accumulation up to the buddha ground. This is with regards to a practical mind generation, while a wishing mind generation exists from the path of accumulation up to the final continuum of a sentient being. Buton Rinpoche in his commentary on the Ornament says that when an arya bodhisattva has a manifest conception of true existence his mind generation is not sustained by practice. The reason for Buton Rinpoche to say so is because at this time neither mind generation nor a practice, such as the intention to give, are manifest. A bodhisattva, who in the meditation session is on the uninterrupted path of seeing, has a wisdom directly realizing emptiness and a mind generation that is not manifest. This mind generation is said to be only a wishing mind generation; it cannot be practical mind generation. When a bodhisattva attains a ground it is impossible for his practice to not be sustained by mind generation but it may not be directly sustained by mind generation. The reason is that, for example, when a bodhisattva attains a ground he constantly practices the six perfections and at this time the mind generation sustains them, but not always manifestly or directly. Panchen Sonam Trakpa says all practices on the grounds are sustained by mind generation in the sense that the mind generation does not degenerate. In other words, the fact that a bodhisattva does not degenerate his mind generation is taken to mean that his practice is sustained by mind generation.

Jedzün Chögyi Gyeltse says that with respect to actualizing the mind generation there are two supports, the mind and the body. Jedzün Chögyi Gyeltse says that the mental support of the mind generation can be the mind of a preparation of a concentration but that it cannot be a mind of the desire realm. Only on the path of meditation can a mind of the desire realm be a support of mind generation; the mind of the desire realm cannot be the support of a new mind generation. Here the doubt concerns why there is never any indication that the preparations for the concentration can be the mental support of mind generation. To eliminate this doubt we can say that mind generation is of two kinds, the real and the artificial. The support of an artificial mind generation does not need to be the preparation of a concentration. For example, when someone generates a real mind generation he enters the path of accumulation but just before entering into the path of accumulation the mental support can be either a preparation or an actual concentration. In the case of someone who has already attained an actual concentration it is the mental support for the mind generation. If someone has not attained an actual concentration but only a preparation, this mind is the support for the mind generation. If one has not attained a preparation it is possible for a single-pointed mind of the desire realm to be a support of a mind generation. This single-pointed concentration is the ninth level of the stages of developing calm abiding. One text says that this is possible but Jedzün Chögyi Gyeltse says that a desire realm mind cannot be the support of a mind generation because someone who enters the path of accumulation simultaneously achieves the complete training in the aspects. The word training, or application, indicates that two things are joined together, in this context these two are calm abiding and superior insight. It is said in Essential Explanation that one who has attained a union of calm abiding and superior insight has attained a preparation of an actual concentration. There are two kinds of preparation for an actual concentration, one that is uniquely calm abiding and the other that is superior insight, in the preparation that is uniquely a calm abiding there is no union with superior insight, while one who has a preparation that is a superior insight necessarily also has calm abiding. This is commented on in the fourth chapter of the Ornament saying that the supporting mind of a mind generation can be an actual concentration, a preparation, or, if neither of these, a single pointed mind of the desire realm. However, Jedzün Chögyi Gyeltse, based on Gyeltseab’s Essential Explanation, says that a mind of the desire realm cannot be the mental support of mind generation. Even in the hell realm there is the possibility of generating mind generation, so one can argue as to whether there is a mental support for mind generation there such as a preparation. If someone were to reply yes one could ask him whether there is the bliss of the suppleness/pliancy of body and mind in the hell realm? If there is, does that mean that there is a moment in which a hell being does not suffer? This argument comes about because it is said in a text that when Shakyamuni Buddha was born in the hell realm pulling a plow he generated the mind of enlightenment when he developed compassion for his partner and took the work upon
himself. When the hell guardian saw this he hit him on the head and as a result Shakyamuni Buddha immediately died and was reborn in the god realm. In this way Shakyamuni Buddha generated great compassion and the mind of enlightenment. However, some scholars interpret this passage saying that it does not mean that Shakyamuni Buddha generated the mind of enlightenment but only great compassion. They say it is not possible for someone in the hell realm to newly generate the mind generation, but there can be beings in the hell realm who have already generated it because there are bodhisattvas who have the definite karma to be reborn in the hell realm and will consequently be reborn there for a short time. In *Ornament for Sutra* it says that during the time a bodhisattva is in the hell realm he experiences a small suffering and benefits other hell beings. It is said that the duration of a bodhisattva falling into the hell realm and leaving again is similar to the duration of the bounce of a ball. In this case even though a bodhisattva has the definite karma to be reborn in the hell realm the duration of his stay is shorter than usual, and even if he has created the karma to have intense suffering it is less than that experienced by others. In addition while he is in hell he ripens the continuia of other sentient beings.

Then in terms of the supporting body of mind generation it can be the body of the six classes of beings of the desire realm. An animal body can be a support of mind generation because nagas can develop mind generation; this is shown in the quotation from sutra in which it says: “Twenty-one thousand nagas have generated the mind of enlightenment.” That a hell body can be a support is as discussed above. That the body of a hungry ghost can be a support is shown by the sutra in which it says: “Many hungry ghosts are placed in seeing the truth.” Placing them in the state of seeing the truth may appear to mean placing them on the path of seeing but here it means placing them in the mind generation on the path of accumulation and so on. The anti-god body, human body, and god body can also be the support of mind generation. Therefore the bodies of the six classes of being can be a support for mind generation. The body of the formless realm can also be the support of mind generation.

Question: It was said that the mental support of mind generation can be a preparation, which of the seven preparations can it be?

Reply: It can be any of them, including that of the mental contemplation of a mere beginner which is calm abiding. However, Gyeltsab posits this differently. It can also be the mind of the desire realm because it can be single-pointed concentration which is a mind that belongs to the desire realm. The first preparation, the mental contemplation of a beginner, and calm abiding are synonyms. The remaining six are preparations that purify delusions. They are:

- the mental contemplation of individual knowledge of the character
- mental contemplation arisen from belief
- mental contemplation of thorough isolation
- mental contemplation of withdrawal or joy
- mental contemplation of analysis
- mental contemplation of final training

Some people assert eight preparations saying that the eighth is the result of final training, however, this is already the actual absorption.

What does mental support mean? It is a path that is generated in the entity of a ground. Paths are developed on the basis of a ground, so they are generated in the entity of a ground.

Question: In the definition of Mahayana mind generation it says that the accompanying aspiration/desire is others’ purpose, does this word “other” refer to all sentient beings?

Reply: “Other” definitely refers to all sentient beings while “purpose” refers to nirvana. Therefore, “others’ purpose” means to set others’, sentient beings, in the state of nirvana. This refers to non-abiding nirvana. A bodhisattva should place all sentient beings on the path toward non-abiding nirvana.
There are five similarities between the primary mind, the mind generation, and the mental factor desire/aspiration that accompanies it. This desire is the aspiration seeking enlightenment, and not that seeking others’ purpose. The similarity of object is that both the mind generation and the desire observe complete enlightenment. The similarity of aspect is that both the mind generation and the aspiration have the same object of the mode of apprehension, the attainment of complete enlightenment. The similarity of substance means that in the retinue of this primary mind there is only one aspiration/desire, that seeking enlightenment, there are no others. The similarity of time is that the mind generation and the aspiration arise simultaneously. The similarity of support is that they have the same subjective/dominant condition, the mental faculty/organ.

We will learn all this slowly, so there is no need to force things. As it says in one of the trainings we need to go ahead continuously. There were forty-six faults, four groups of ten, plus six, one of which is to put too much energy in at the beginning and then give up completely. This was said by Buddha himself in the *Eight Thousand Stanza Perfection of Wisdom Sutra.*
Monday afternoon class, March 9, 1998

2B2C-1A2B-1B1B-1A4 Investigating one and different

Gyeltsab says that if the two truths were one there would be four faults and if they were different there would also be four faults. This is said in the Sutra Unraveling the Thought. The conclusion is that they are one entity but different in name. The four faults are listed in Jetsun Chogyi Gyeltsen’s commentary. The four faults of the two truths being one can be illustrated by a vase which is the conventional truth and the vase’s emptiness of true existence which is its ultimate truth. If a vase and the vase’s emptiness of true existence were one then:

1. It would follow that the vase’s emptiness of true existence would be an object of comprehension for a direct cognizer of an ordinary being because it is one with the vase.
2. It would follow that on observing the vase’s emptiness of true existence there would be the arisal of delusions such as attachment because it is one with the vase.
3. It would follow that there would not be any purpose to a yogi meditating with effort on the vase’s emptiness of true existence apart from seeing the vase because it is one with the vase.
4. It would follow that vase’s emptiness of true existence would have divisions such as color and shape because it is one with the vase.

The four faults of the two truths being different entities upon the are:
If a vase and the vase’s emptiness of true existence were different entities:

1. It would follow that with respect to a vase (subject) a valid cognition cognizing its emptiness of true existence would not eliminate the superimposition apprehending the vase as truly existent because the vase is a different entity from the vase’s emptiness of true existence.
2. It would follow that the vase’s emptiness of true existence is not the nature of the vase because it is a different entity from the vase’s emptiness of true existence.
3. It would follow that the vase is not the basis upon which the true existence of vase is negated because it is a different entity from the vase’s emptiness of true existence.
4. It would follow that in the continuum of an arya buddha there would be a valid cognition seeing the vase’s emptiness of true existence and another valid cognition seeing the vase’s emptiness of true existence as a different entity from the vase because the vase is a different entity from the vase’s emptiness of true existence.

Gyeltsab says that there is a commentary by Acharya Arya Vimuktisena concerning the two truths being one in entity but different in name. Gyeltsab does not elaborate much on the two truths. However, the two truths are posited upon each and every phenomena; this is what is important to understand here. In Madhyamakavatara Chandrakirti says that all objects of knowledge possess the two truths; in other words, all phenomena have the entity of both conventional and ultimate truths. This means that on each single phenomena there is something that is perceived as false and something that is perceived as its ultimate entity. These two, the conventional and ultimate truths, mean that whatever exists for a mistaken consciousness of an ordinary being is a conventional truth and whatever exists for the contemplative mind of an arya is an ultimate truth. There are much more detailed explanations concerning the necessity and benefits of realizing the two truths. For example, if one does not realize the two truths one will not be on the way to enlightenment. Realizing them, on the other hand, has many benefits, for example, with the realization of the two truths one has the two wings needed to fly to liberation while without this realization one would be like a bird with only one good wing.

According to Svatantrika-Madhyaymika the four noble truths are included in the two truths; in fact, all four truths are included in conventional truths. True sufferings and true origins are clearly included in the conventional truths. True cessations are also a conventional truth according to Svatantrika-Madhyamika because if an object of negation, such as a delusion, is a conventional truth, likewise the state of its having been negated must also be a conventional truth. Objects that are to be negated or ceased, such as the deluded obscurations and the obscurations to omniscience, are conventional truths and so too is the state in which they have been negated. True
paths are definitely conventional truths because they are consciousnesses. However, Prasangika-Madhyamikas asserts that true sufferings, true origins, and true paths are conventional truths, while true cessations are ultimate truths. Chittmatrins also posit similarly. The Prasangikas say that true cessations are the nature of a mind that is free from stains; the nature of mind being its emptiness of true existence. Thus true cessations are the emptiness of true existence of a mind that is free from stains. On a liberated path/path of release one attains a true cessation.

All phenomena are included in the two truths, but all phenomena are not included in the four noble truths. For example, a vase’s emptiness of true existence is none of the four noble truths. It is not a true suffering because it is not a result, it is not a true origin because it is not a cause, it is not a true path because it is not an exalted knower of an arya, and it is not a true cessation because it is not possessed by the continuum of an individual (true cessations are possessed by someone). If someone says it is true cessation it would mean that there would be true cessations in the hell realm because there is emptiness of true existence in the hell realm. This is much debated by scholars. For example one time a geshe argued with another saying that a vase is true suffering. The other replied: then is it samsara? The first geshe replied that it is. In the end both of them wrote commentaries on this.

Question: Is a table included in true suffering?
Reply: Some say it is because it is produced by karma and delusions. But others say that it is not true sufferings because it also exists on the buddha ground. Is not Buddha Amitayus holding a vase? One cannot reply no. Buddhas abide in a pure realm where there are no true sufferings but there are objects such as vases.

Gyeltsab says that for those seeking liberation the principal objects to be established are two:(1) those belonging to the class of cyclic existence and (2) those belonging to the class of nirvana, the purified side. True origins, which bind, and true sufferings, which are bound belong to the class of cyclic existence. True paths, cause, and true cessations, result, belong to the purified class. Thus there are two sets of causes and two sets of results. On the side of cyclic existence there are true origins and true sufferings, while on the side of nirvana there are true paths and true cessations. We find ourselves among the phenomena belonging to the side of cyclic existence with true sufferings and bound by karma and delusions, true origins. This shows why there are these two noble truths. Then recognizing that we are bound by karma and delusions we discover true paths by which we can abandon true origins and achieve true cessations, the other two truths.

According to the order of generation the four noble truths should be presented as true origins followed by true sufferings, and true paths followed by true cessations. Gyeltsab says that although the order according to cause and result is so, the order of their clear realization is true sufferings, true origins, true cessations, and true paths. This is because first we recognize true sufferings and then by meditating on them we come to understand that they are the result of causes, karma and delusions. Then by meditating we come to realize that true origins can be eliminated and true cessations achieved. Then we come to understand that to achieve true cessations we much meditate on true paths.
First one sees the shortcomings of cyclic existence in general and in particular since only with this knowledge of true sufferings can one think to eliminate true origins. Without recognizing true sufferings it is not possible to generate the wish to become free from their causes. When we have the wish to become free from suffering then we ask ourselves, “Can we actually become free from suffering? Do sufferings have causes? Are sufferings permanent?” Then one comes to understand true origins and see that sufferings cannot be removed in the same way that we can take a thorn out of our flesh. When we analyze true sufferings and how they exist we come to understand that to eliminate them we need to have a mind wishing to abandon their causes.

Gyeltsab points out the order of the four noble truths. First one meditates on true sufferings, then one develops the wish to abandon their causes, true origins. When one sees that sufferings can be stopped/ceased one understands that true cessations can be actualized. Therefore, true cessations are the third of the noble truths. To actualize these true cessations one needs to rely upon true paths; therefore, true paths are posited as the fourth noble truth.

Someone says: “At the first stage if one sees that true sufferings can be stopped one necessarily sees that true cessations of sufferings can be actualized. In other words, true sufferings should be presented first followed by true cessations. In addition, before understanding that true sufferings can be ceased one should present true origins. Then, because in order to see true origins can be abandoned one has to depend upon the realization of selflessness, it would be more suitable to present true paths followed by true origins. Therefore, the order of the four noble truths is not right.” Our own system replies to this as follows. In general before entering any activity one has to see its benefits or its disadvantages, only with this does one engage in the activity. Therefore, first one has to see the shortcomings of true sufferings, then by knowing them one develops the wish to achieve the benefits of true cessations. In other words, having first seen that cyclic existence is like a pit of fire with many shortcomings, one then generates the mere mind wishing to be free from such a cyclic existence. For this reason, one thinks to become free from the causes of cyclic existence and develops a valid cognition seeing that true origins can be abandoned and that true cessations can be actualized. Following this reasoning it is clear that true sufferings are suitable to be first, true origins to be second, true cessations to be third; and true paths to be fourth. The order of the four noble truths mentioned here accords with the order of the path of seeing in the continuum of an arya, i.e., he first observes true sufferings, then true origins, then true cessations, and then true paths.

Tuesday morning class, March 10, 1998

2B2C-1A2B-1B1B-1B1C Illustrations

An illustration of the suffering of suffering is kidney pain. An illustration of the suffering of change is the feeling experiencing the taste of good food with excessive attachment. An illustration of pervasive compositional suffering is any contaminated aggregate caused by karma and delusions. All of these are true sufferings. The suffering of suffering is so called because in addition to the kidney itself being a true suffering it is an actual source of pain. Although Gyeltsab only gives the illustration of kidney pain as a suffering of suffering it can be pain in any part of the body.

The second illustration, that of the suffering of change, is of someone with excessive attachment who eats a lot without control. Although at first this person experiences happiness, later, upon eating too much, he or she begins to experience suffering. There is also the example of people at the beach who initially experience happiness in the warm sunshine but then begin to suffer from the heat.

Pervasive compositional suffering is the aggregates produced by karma and delusion. Pervasive suffering is called so because no matter where this physical body is touched by, for example, a needle there is the experience of suffering. In the Sutra on the Close Placements of Mindfulness it says: “All six realms of cyclic existence are pervaded by suffering. No matter where
one takes rebirth there is suffering. If one is born in the hell realm there are the sufferings of heat and cold, if born in the hungry ghost realm there are the sufferings of hunger and thirst, in the animal realm there is the fear of being eaten by bigger and smaller animals, in the human realm there is the suffering of looking for food, shelter, etc., in the god realm there is the principal suffering of seeing the signs of death, and in the realm of the anti-gods there is the suffering of jealousy.” One should understand that pervasive suffering means that as long as one is in cyclic existence one will never have happiness; cyclic existence is like sitting on a bed of nails.

An illustration of true origins is contaminated karma and the delusions. An illustration of true cessations is the state in which suffering has been ceased. An illustration of true paths is the wisdom directly realizing selflessness.

Svatantrika-Madhyamika posit karma and delusions as true origins. There is also another interpretation of true sufferings and true origins which is that any contaminated object included among causes of suffering is a true origin, while any contaminated object that is produced by a contaminated cause is a true suffering. A true cessation is the mere fact of the cessation of suffering. A true path is the wisdom directly realizing selflessness which according to Svatantrika-Madhyamika is the lack of a self supporting substantially existent self of persons. The selflessness of persons and the selflessness of phenomena are posited from the point of view of the object of negation not from the point of view of the basis. Therefore according to the Svatantrika-Madhyamika school the selflessness of persons can be realized upon any object whatsoever.

2B2C-1A2B-1B1B-1B1D Valid cognizers which ascertain them
1 Identifying the sixteen perverse conceptions
2 Identifying the sixteen aspects of the truths contradicting those

2B2C-1A2B-1B1B-1B1D-1 Identifying the sixteen perverse conceptions

Gyeltsab first explains four perverse conceptions in relation to true sufferings which are contradictory to the four attributes of true sufferings:
1. a perverse conception of the aggregates as permanent
2. a perverse conception of the aggregates as pleasurable
3. a perverse conception of the aggregates as pure
4. a perverse conception of the aggregates as having a self

In general true sufferings are impermanent yet in spite of that we have a perverse conception thinking that, for example, the aggregates, a true suffering, are permanent. Another perverse conception thinks that the aggregates are pleasurable while they are in fact misery/suffering. We consider unpleasant feeling to be a happy feeling. We consider the aggregates as pure while they are in fact impure. This is because based on thinking that the self is permanent, partless, and independent, which does not accord with reality, we think that there are aggregates to be enjoyed by such a self and then think these aggregates are in the nature of purity.

The perverse conception of the existence of a self apprehends true sufferings, the contaminated aggregates, as an object to be enjoyed by a self-supporting substantially existent self. This perverse conception conceives of such a self and conceives the aggregates to be an object to be enjoyed by such a self.

These wrong conceptions concerning the self, or the person, come from non-Buddhist ideas of the self. For example, the Samkyas say that self, being, cognizer, and consciousness are synonyms and describe the self as being qualified by five attributes: the self is (1) an eater, (2) a permanent functioning thing, (3) is not a creator/agent, (4) does not possess qualities, and (5) does not have actions. Other non-Buddhists say that the self is permanent, independent, and partless. In Madhyamakavatara it says that while these five attributes are posited by Samkyas, the Tirthikas posit the self differently. The Vaishashikas say that the self does possess excellent qualities because it is a substance and substances necessarily have excellent qualities.

The four perverse conceptions related to true origins are:
1. that suffering is without a cause and that causes do not accord with their results
2. that there is only one cause of suffering
3. that suffering is induced by a movement of a mind, such as that of Ishvara
4. that there is a permanent self that changes momentarily

The Charvakas (Hedonists), a non-Buddhist school, assert that sufferings arise without a cause. Another school asserts that sufferings arise from a discordant cause. However, results arise from a concordant cause, for example, fire comes from smoke and not from water. The Samkyas assert that sufferings arise from a general principal, which implies a principal agent or creator. The Vaishashikas, another non-Buddhist school, say that sufferings arise from a creator which is different, literally a generality which is different. More details can be found in a text on tenets by Konchog Jigme Wangpo, the second incarnation of Kunkyen Jamyang Shepa, which is available in English.

The perverse conception that sufferings arise from a single cause is wrong because sufferings arise from diverse causes and conditions. The fourth perverse conception is that sufferings arise from a movement of Ishvara’s mind, in other words, they are planned by Ishvara. The Vaishashikas assert almost the same thing. They say that everything that exists in the world comes from a movement of the mind of Ishvara. This means that Ishvara at times engages in actions, then rests, then acts, and so on and from this movement all phenomena arise. An illustration of this is that when someone cuts wood with an ax, when the ax actually touches the wood it cuts it, but when he is in the process of swinging the ax it does not actually cut the wood.

In addition to these four perverse conceptions there is a perverse conception posited by the Nirgranthas who say that although the self is permanent it changes by its nature from moment to moment.

We should know that sufferings come from causes and in particular from concordant causes.

These four perverse conceptions are related to the four attributes of true origins:
(1) cause
(2) origin
(3) strong production
(4) condition

The perverse conceptions thinking that sufferings do not have a cause and that causes do not concur with their results are counteracted by the first attribute, that of cause. The perverse conception thinking that suffering comes from a single cause is counteracted by the second attribute, origin. The perverse conception thinking that sufferings arise from a movement of the mind of Ishvara is counteracted by strong production. The perverse conception of a self that is eternally permanent but changes momentarily is contradicted by the fourth attribute, condition.

The four perverse conceptions related to true cessations are:
1. that there is no liberation
2. that some contaminated states are liberation, for example, the actual absorption of the concentrations
3. that some sufferings are auspicious liberation
4. that sufferings can return once exhausted

The four attributes of true cessations are:
1. cessation
2. pacification
3. auspicious highness
4. definite emergence

The perverse conception thinking that there is no liberation from cyclic existence is counteracted by the first attribute, cessation. There is liberation because there is a cessation which is attained by the power of applying an antidote.
The perverse conception that some contaminated states are liberation is counteracted by the second attribute, pacification. Contaminated states are not true cessations because they are not a total pacification.

The perverse conception that some sufferings are auspicious liberation is contradicted by the attribute, auspicious highness, because such cessations of suffering are not auspicious for lasting freedom but are just temporary.

The perverse conception that suffering can return after having been exhausted is counteracted by the attribute of definite emergence which shows that true cessations are definitely emerged from suffering.

The four perverse conceptions with respect to true paths are:
1. that there are no paths to liberation
2. that it is not suitable to familiarize oneself with the realization of selflessness as a path to true cessations
3. that some concentrations are a path to liberation
4. that there is no path to be meditated on in order to eradicate true sufferings

The four attributes of true paths are:
1. path
2. suitability
3. achievement
4. deliverance

The perverse conception that there are no paths to liberation is counteracted by the first attribute, path, which says that there is a path to liberation because there is the wisdom directly realizing the selflessness of persons by way of which one can achieve liberation.

The perverse conception thinking that it is not suitable to meditate on selflessness as a path to liberation is counteracted by the second attribute, suitability, which is that an exalted knower directly realizing selflessness is suitable to act as an antidote to the delusions.

The perverse conception that some form realm concentrations are a path to liberation is counteracted by the third attribute, achievement, because a concentration does not realize the nature of mind, while achievement is a factor that realizes the nature of mind. In the past there were non-Buddhist yogis who meditated for a long time and thought that they had achieved liberation while in fact they had only realized a concentration. Then at the time of death they came to understand that they had not achieved liberation because, through their clairvoyance, they could see that they were about to be reborn in a lower realm. As a result of this they concluded that there is no liberation.

The perverse conception that sufferings although exhausted can return is contradicted by the fourth attribute, deliverance, which is that sufferings are exhausted forever.

These are the sixteen perverse conceptions contradicted by the sixteen attributes of the four noble truths (see Meditation on Emptiness by J. Hopkins).

We need to meditate in order to recognize the aggregates as being suffering, impure, impermanent, and selfless, which is the opposite of the perverse conceptions. If we apprehend ourselves as permanent we will not gain realizations nor even begin to practice Dharma. In other words, Dharma practice begins with the understanding of impermanence. This is why when Buddha taught the four noble truths he began with the first attribute which is impermanence. Buddha also showed the aspect of passing away to demonstrate impermanence. There are many benefits to meditating on impermanence. For example, when we encounter difficulties we should meditate on impermanence thinking that the difficulty itself is impermanent. Thinking in this way we will not give up trying to resolve our problems.
Tuesday afternoon class, March 10, 1998

2B2C-1A2B-1B1B-1B1D-2 Identifying the sixteen aspects of the truths contradicting those

With respect to true sufferings, they are impermanent because they arise occasionally. They are misery because they are controlled by others, which are karma and delusion. They are empty because they do not have a self as a separate object controlling them. They are selfless because they do no have a self that is an independent entity using them.

With respect to true origins, they are cause because contaminated karma and craving are the root of suffering which is their result. They are origin because they give rise repeatedly to the result of suffering. They are strong production because they rise to a strong suffering. True origins, craving, are conditions because craving is a cooperative condition in the maturation of the result of suffering.

With respect to true cessations, they are cessation because they are a freedom in which suffering has been extinguished by the power of an antidote. They are pacification because they are a freedom in which the delusions have been abandoned. They are auspicious highness because they are a liberation in which there is benefit and happiness. They are definite emergence because they are a liberation in which all sufferings have been abandoned irreversibly.

With respect to true paths, the wisdom directly realizing selflessness is a path because it leads to liberation. They are suitable because they act as a direct antidote to the delusions. They are achievement because are they are an exalted wisdom realizing the final reality of the mind. They are deliverance because the wisdom directly realizing selflessness is an antidote that exhausts sufferings irreversibly.

2B2C-1A2B-1B1B-1B2 Meaning of the branches
A Instructing about true sufferings
B Instructing about true origins
C Instructing about true cessations
D Instructing about true paths

2B2C-1A2B-1B1B-1B2A Instructing about true sufferings
(Commentary Clarifying the Meaning page 7)

Concerning suffering, it is said that the emptiness of resultant form and so forth, and the perfection of wisdom (directly realizing that) are the same nature within the entity of suchness.

Gyeltsab’s commentary quotes a sutra that says: “Shariputra, with regard to this a bodhisattva mahasattva who wishes to exert effort in the emptiness of form should...” This is an instruction for negating the perverse conception of the true existence of true sufferings, which are to be known. because it makes known that the resultant emptiness of contaminated phenomena, such as form, and the wisdom realizing that emptiness of true existence are one nature in suchness. This is similar to what it says in the Heart Sutra: “Form is empty, emptiness is form.” Our own minds and the mind of a buddha are also the same nature in that both are empty of true existence. When it says that it is an “instruction for negating the perverse conception of the true existence of true sufferings” it means that one should know true sufferings while stopping the conception of their true existence.

2B2C-1A2B-1B1B-1B2B Instructing about true origins
(Commentary Clarifying the Meaning page 7)
Concerning origins, as emptiness and causal form and so forth are not different entities, it is said that form and so forth are not the bearers of the qualities of origination, cessation, the thoroughly afflicted or the completely pure.

Gyeltsab quotes a sutra that says: “Form that has generation and cessation is not seen correctly/ultimately.” This is an instruction about true origins because the contaminated phenomena included among causes, such as forms, have new origins and new cessations and included among thoroughly afflicted phenomena and thoroughly purified phenomena do not exist truly. These phenomena do not exist truly because emptiness and forms, which exist at the time of the cause, are not different ultimately. True origins, which are to be abandoned, are to be negated as truly existent. This means that contaminated phenomena that are causes belonging to the deluded side, such as form, and those belonging to the purified side are both empty of true existence.

Concerning cessations, with regard to “emptiness is free from birth and ceasing, the thoroughly afflicted and the completely pure, decrease and increase and so forth, it is said, from “form does not exist, ignorance neither has birth nor does ignorance have ceasing, buddha neither exist,” till “nor does enlightenment exist.”

Gyeltsab quotes sutra which says: “Shariputra, emptiness is not generated and does not cease, it is not an thoroughly afflicted phenomena nor a thoroughly purified phenomena.” This is an instruction about true cessations because such an emptiness free from incidental stains is free of the true existence that exists upon the definition of compounded phenomena, generation, cessations, abandonment, antidote, thoroughly afflicted phenomena, thoroughly purified phenomena, temporary degeneration, temporary increasing, cause and effect. It is instructed that these do not have the attribute of existing truly. All things everywhere do not exist truly because ultimately general ever-deluded phenomena beginning with “form does not exist” up to “ignorance is not generated” do not exist truly. General thoroughly purified phenomena beginning with “cessation of ignorance” up to the realization of buddhahood, perfect abandonment and the nature body, do not exist truly. Also the attainment of true cessations does not exist truly. The instruction is given to negate the conception that apprehends true cessations as existing truly. In brief, we should not have a conception apprehending phenomena, which range from form up to enlightenment, as truly existent. Although we generally have a conception apprehending them as truly existent we should not cling to them as such.

Concerning paths, “the perfection of generosity and so forth, oneself or inner emptiness and so forth, outer emptiness and so forth, the limits of the past and the limits of the future, are established merely as not being mutually possessed nor not possessed,” setting forth (such statements) instructs about the truths.

Gyeltsab quotes a sutra which says: “Shariputra, when a great bodhisattva engages in the perfection of wisdom he should neither see himself as ultimately exerting effort or ultimately not exerting effort in practicing generosity.” This is an instruction about true paths because a bodhisattva does not possess perfections, such as generosity, which are truly existent. The bodhisattva does not exist as a truly existent meditator and he does not have a truly existent object of meditation. Even those which are possessed are negated to exist truly.

Gyeltsab quotes a sutra concerning the instructions about the attributes true paths of suitability and achievement: “With respect to emptiness one should not apply true existence to it
because it would not be a yoga of emptiness.” These are instructions on suitability and achievement because the three factors making a circle are empty of true existence. The three factors are inner emptiness, the mind concentrating on the emptiness, and the action of concentrating itself. These three are empty of true existence. Also the three factors making one circle in the case of taking outer emptiness as an object do not exist truly. Even these circles are empty of true existence.

There is a sutra quotation concerning the attribute of true paths of deliverance: “On the basis of form one should not add true existence in the beginning nor at the end.” This is an instruction on deliverance because the beginning of form refers to the beginning of cyclic existence while the end of form refers to the end of cyclic existence, i.e., nirvana. From what does one definitely emerge? One definitely emerges from cyclic existence. Toward what does one emerge? One emerges toward true cessations. Deliverance does not exist truly nor does one possess the attribute of deliverance truly.

These instructions are given to stop the conception grasping at the path as truly existent. No one possesses a truly existent path, yet it is not true that people do not possess a path that is empty of true existence. An arya possesses true paths. In short, paths that exist conventionally are possessed by someone but a truly existent path is not possessed by anyone.

Jetsun Chogyi Gyeltsen in his text Ocean Playground gives the definition of true sufferings: a truth belonging to the thoroughly afflicted class that is distinguished by being the four: impermanent, misery, empty of a self that is a different object, and without a self supporting substantially existent self of persons. When divided there are two: the impure world in which we live and the world/transitory collection that is impure sentient beings themselves. In Abhidharmasamucchaya it says: “What are true sufferings? True sufferings are sentient beings who are born and the place in which they are born. The categories of true sufferings can be discussed in terms of suffering of suffering, suffering of change, and pervasive compositional suffering. An example of the suffering of suffering is kidney pain and so forth; an example of the suffering of change is the taste of good food; an example of pervasive compositional suffering is the aggregates which are appropriated by karma and delusion.

All this means is that true sufferings are qualified by the four attributes mentioned previously.

Wednesday morning class, March 11, 1998

We will continue to look at the four noble truths according to Jetsun Chogyi Gyeltsen.

Jetsun Chogyi Gyeltsen defines true origins as: a truth included in thoroughly afflicted phenomena that is distinguished by four attributes, cause, origin, strong production, and condition. If it is divided there are two: true origins that are karma and true origins that are delusions.

In Abhidharmasamucchaya it says: “What are true origins? They are the delusions and the karma that derives from them. There are three types of karma: meritorious karma that belongs to cyclic existence, demeritorious karma, and unwavering karma. Meritorious karma is divided into two: (1) a karma that projects rebirth in the human realm and (2) a karma that projects rebirth among the gods of the desire realm. The karma that projects rebirth in the human realm has four divisions: the karmas that project rebirth in the four continents. The karma that projects rebirth in the god realm of the desire has six divisions: the karmas that project rebirth in the six levels of the gods of the desire realm.

Demeritorious karma is divided into three: the karmas that project rebirth in the three lower realms.

Unwavering karma is divided into two: the unwavering karma that projects rebirth in the form realm and the unwavering karma that projects rebirth in the formless realm. The
unwavering karma that projects rebirth in the form realm is divided into four: the karma that projects rebirth in the first concentration, the karma that projects rebirth in the second concentration, the karma that projects rebirth in the third concentration, and the karma that projects rebirth in the fourth concentration.

The karma that projects rebirth in the first concentration is further divided into three: that which projects rebirth in Brahma Class, that which projects rebirth in Brahma’s Spokesman, and that which projects rebirth in Great Brahma.

The karma that projects rebirth in the second concentration is divided into three: that which projects rebirth in Little Light, that which projects rebirth in Limitless Light, and that which projects rebirth in Bright Light.

The karma that projects rebirth in the third concentration is divided into three: that which projects rebirth in Little Virtue, that which projects rebirth in Limitless Virtue, and that which projects rebirth in Vast Virtue.

The karma that projects rebirth in the fourth concentration is divided into two: that which projects rebirth in the levels of ordinary beings and that which projects rebirth in the levels of arya beings. The karma that projects rebirth in the levels of ordinary beings is divided into three: that which projects rebirth in Cloudless, that which projects rebirth in Born from Merit, and that which projects rebirth in Great Result. The karma that projects rebirth in the levels of aryas is divided into five: that which projects rebirth in Not Great, that which projects rebirth in Without Pain, that which projects rebirth in Excellent Appearance, that which projects rebirth in Great Perception, and that which projects rebirth in Not Low (Akanishta).

The karma that projects rebirth in the formless realm is divided into four: that which projects rebirth in Infinite Space, that which projects rebirth in Infinite Consciousness, that which projects rebirth in Nothingness, and that which projects rebirth in Peak of Cyclic Existence.

The six classes of the gods of the desire realm are not mentioned specifically here but they are: Four Great Kings, Heaven of the Thirty-Three, Free from Combat, Joyous Land, Enjoying Emanation, and Controlling Others’ Emanations.

All these realms are described in detail in the third chapter of Abhidharmakosha. The beings of these realms can be divided into two groups: those depending/living on the ground and those not depending on the ground. Those depending on the ground include the beings of the three lower realms, human beings, and two classes of the gods of the desire realm, those of Four Great Kings and the Heaven of the Thirty-Three. The rest do not depend on the ground.

Jetsun Chogyi Gyeltsen divides the second of true origins, delusions, into two: the six root delusions and the twenty secondary delusions. The six root delusions are: (1) attachment, (2) anger, (3) pride, (4) deluded ignorance, (5) deluded view, and (6) deluded doubt.

We are already expert in the root delusions and secondary delusions as we have all experienced them. We should check our own mind for attachment, anger, etc. and then examine their particular characteristics. It is of most benefit to know something through experience, since we will then remember it for a long time.

Jetsun Chogyi Gyeltsen defines true cessations as: a truth included in the thoroughly purified class that is distinguished by being qualified by four attributes: cessation, pacification, auspicious highness, and definite emergence. If true cessations are divided without distinguishing between real true cessations and designated true cessations there are ten: (1) profound cessation, (2) cessation of indication/term/label/designation, (3) ultimate cessation, (4) incomplete cessation, (5) complete cessation, (6) cessation without ornament, (7) cessation with ornament, (8) cessation with remainder, (9) cessation without remainder, and (10) highly elevated cessation. In Abhidharmasamucchaya it says: “What is cessation? The profound, indication, ultimate, not
Jetsun Chogyi Gyeltsen gives an illustration of the ten: (1) a true cessation in the continuum of a Mahayana aryā, (2) a temporary abandonment of manifest delusions through the worldly path, (3) a true cessation in the continuum of an aryā, (4) a true cessation in the continuum of a Hinayana learner, (5) a true cessation in the continuum of a Hinayana foe destroyer, (6) a nirvana with remainder that is a liberation by way of wisdom alone, (7) a nirvana without remainder that is a liberation by way of both wisdom and meditative stabilization, (8) a true cessation of a hearer foe destroyer who is abiding in a nirvana with remainder which is a liberation by way of only wisdom, (9) a true cessation of a hearer foe destroyer who is abiding in a nirvana without remainder that is a liberation by way of both wisdom and meditative stabilization, and (10) a non-abiding nirvana. If condensed there are two: designated true cessations and ultimate true cessation. A designated true cessation is merely designated while the others are real true cessations.

“By way of wisdom alone” means that someone, without achieving any of the actual concentrations, becomes free from the deluded obscurations. “By way of both wisdom and meditative stabilization” means that someone, by way of attaining any of the actual concentrations, becomes free from the deluded obscurations and achieves liberation. With the preparation called Not Unable one can become free from the deluded obscurations and achieve liberation without ever achieving an actual concentration.

Jetsun Chogyi Gyeltsen defines true paths as: a truth included in the thoroughly purified class distinguished by four attributes: path, suitability/knowledge, achievement, and deliverance. If true paths are divided from the point of view of their retinues there are five: the path of accumulation and so forth. The first two paths, the path of accumulation and the path of preparation, are merely designated true paths; however, the last three paths are actual true paths. In Abhidharmasamucchaya it says: “What are true paths? They are that which thoroughly knows suffering, abandons true origins, actualizes true cessations, and meditates on the path.” The path is also divided into five: the path of accumulation, the path of preparation, the path of seeing, the path of meditation, and the path of culmination. The “path of culmination” is the path of no-more-learning.

These definitions and divisions are supplementary information concerning the four noble truths. We could go into much more detail in relation to the four Buddhist tenets. In the text Uttaratantra by Maitreya it says: “The sickness is to be known, the cause is to be abandoned, well-being is to be attained, and the medicine is to be applied.” The four noble truths should be understood in the same way: true sufferings are to be known, true origins are to be abandoned, true cessations are to be attained, and true paths are to be applied. This passage in Uttaratantra reflects how one should practice the four noble truths. It is practical advice because whenever we experience pain we should first recognize it, then identify its causes, then, wishing to abandon it, look for a method to become free from it. Often the cause of suffering is found to be an object of attachment, for example, suffering arises when we cannot attain an object we desire. The solution is to decrease our attachment and for this we need to meditate. To not sleep although one goes to bed, to not digest although one has eaten, to not work although goes to work, all these can be due to anger at someone who is considered to be one’s enemy. However, they can also be brought about by an imbalance of elements in the body. We will often find the causes of our problems in our minds, these being mainly attachment and hatred. However, if we do not find the causes in our minds these problems may be due to an imbalance of the four elements. When one finds that the cause is such an imbalance one should take the right medicine, exercise, etc. There are also other causes that can bring about physical problems, such as external beings, maras, etc. and those who cast black magic. We also need a method to stop this kind of harm, such as particular pujas. In India there is a particular person whose job it is to perform pujas. This person goes from home to home performing pujas. In Lhasa, Tibet there were nuns called “ro-ling ani” who at dusk would go to
people’s homes and at the porch would ask whether the family needed some prayers to eliminate interferences. When they sat down to do the prayers, the house owner would offer them food, drink, and a donation. These types of prayers are definitely helpful.

There is a story about a guru who was visited by someone who asked him for a mantra to recite. The guru did not want to teach the man a mantra but the visitor begged him. The visitor’s face was covered with freckles and the guru upon seeing this said in his own language, “Your face is like a raksha’s rosary” because in India the saddhus have a porous rosary with many holes and the visitor’s pocked face reminded the guru of this. However, the visitor became very happy upon hearing this phrase and thinking that he has received the transmission of a mantra recited it day and night. As a result he became able to heal people with his breath and became quite well known. One day the guru whom he had visited developed a swelling in his throat which he was unable to cure even though he visited many doctors. His attendant suggested that he call a particular tantric practitioner who had become very famous. The tantric practitioner was called and said to the lama, “Your face is like a raksha’s rosary,” whereupon the guru remembered saying this and laughed heartily whereupon the ball of pus in his throat burst open and he was healed. In short, although the guru had not given the man a mantra but in fact had actually insulted him, because of the man’s faith he was actually able to achieve powers by reciting the words of this phrase.

Another story to this effect concerns a man who went to see a pandit. The pandit did not want to receive him and shouted, “Go away” (bahira jao) in the Indian language and shooed the man away with a gesture of his hand. The visitor believed he had received both mantra and mudra and went away happy. He recited the “mantra” day and night and became a healer using the mantra and mudra to successfully heal people. This mantra not only healed people but since the man was saying “go away” it also sent spirits who were inhabiting the sick person away.

Wednesday afternoon class, March 11, 1998

2B2C-1A2B-1B1B-2 Instructions about the supports of achieving
A General meaning
There is nothing with regard to this outline in Haribhadra’s commentary.
B Meaning of the branches

2B2C-1A2B-1B1B-2A General meaning
1 Recognizing the uncommon three rare supreme ones
2 General presentation of refuge
3 Difference of conventional and ultimate refuge
4 The manner in which to go for refuge

2B2C-1A2B-1B1B-2A1 Recognizing the uncommon three rare supreme ones

A Buddha Jewel, literally a rare supreme buddha, is: a final object of refuge having eight qualities, such as that of being uncompounded. Gyeltseb quotes Uttaratantra saying that a rare supreme buddha has the eight qualities of being:
(1) uncompounded (a buddha is free from generation and perishing)
(2) spontaneous (a buddha performs activities effortlessly)
(3) unrealizable by sound and conception (the qualities of buddha are so great that they are inexpressible and inconceivable)
(4) knowledge (a buddha possesses knowledge perceiving the conventional and ultimate truths)
(5) mercy (a buddha possesses great compassion)
(6) ability
(7) [the fulfillment of] one’s own purpose
(8) [the fulfillment of] other’s purpose

The first three qualities are those of a buddha’s abandonments because a buddha has the quality of being uncompounded in that he is free from generation and perishing, he is spontaneous, and his qualities are inexpressible and inconceivable. The second three, knowledge, mercy, and ability,
are the qualities of a buddha’s realizations. All of these qualities can be condensed into the last two; the first three into [the fulfillment of] one’s own purpose and the last three into [the fulfillment of] other’s purpose. The first six are included in the last two because to fulfill one’s own purpose a buddha needs to be free from all obscurations; therefore a buddha is uncompounded, spontaneous, and has qualities that are inexpressible and inconceivable. To fulfill the welfare of others one needs knowledge, compassion, and ability. With knowledge but no compassion one would not act, if one had knowledge and compassion but lacked ability one would not be able to fulfill others’ purpose. These are the qualities of a rare supreme buddha. Gyeltsab says a rare supreme buddha is the essence of the three bodies with the two purposes completed.

The rare supreme Dharma also has eight qualities. While a rare supreme buddha necessarily possess all eight of his respective qualities, a rare supreme Dharma does not necessarily possess all eight of its respective qualities. The eight qualities of a rare supreme Dharma are that it is:

1. unthinkable
2. without any of the two
3. inconceivable
4. pure
5. clear
6. an antidote
7. true cessations (which means free of obscurations)
8. true paths (which bring about freedom from obscurations)

“Unthinkable” means that a rare supreme Dharma cannot be reached by someone with intellectual arguments using the four points of comparison. “Without any of the two” means that a rare supreme Dharma is without karma or delusions. “Inconceivable” means that a conception with improper mental activity cannot conceive of a rare supreme Dharma. “Pure” means that a rare supreme Dharma is pure in the sense that it is not mingled with obscurations. “Clear” means that a rare supreme Dharma cognizes conventional truths (what-it-is-ness or whatever exists) and ultimate truths (how-it-is-ness, the way of reality, or how things are). “Antidote” is because a rare supreme Dharma is an antidote to all delusions.

The first three qualities are included in true cessations while the second three are included in true paths.

The qualities of a rare supreme Dharma can be summarized as: any rare supreme Dharma existing in the continuum of an arya and belonging to either of the two, true cessations or true paths, and included in the thoroughly purified class.

In short, Gyeltsab says a rare supreme Dharma is characterized by the two truths, true cessations and true paths, of the thoroughly purified class.

A rare supreme Sangha is: an arya person who possesses any of the eight qualities including those of knowledge and freedom. It has eight qualities:

1. knowledge cognizing ultimate truth
2. knowledge cognizing conventional truth
3. knowledge of the inner sciences
4. free from obscuration of attachment
5. free from obstructive obscurations
6. free from inferior obscurations
7. knowledge
8. freedom

The first three belong to knowledge while the second three belong to freedom. In short can say that a rare supreme Sangha is an arya possessing any of the eight qualities such as knowledge and freedom. There is no pervasion that a rare supreme Sangha necessarily possesses all eight qualities.
According to Gyeltsab, a rare supreme Sangha is an arya sangha who is irreversible and has the qualities of knowledge and freedom.

2B2C-1A2B-1B1B-2A2 General presentation of refuge

Gyeltsab quotes Uttaratantra saying: “The teacher, teaching, and disciple by meaning are the [followers of] the three vehicles in terms of appreciation. Thus, the three objects of refuge are posited.” The teacher is Buddha himself who is posited as a Mahayana refuge. The teaching is the actual Dharma refuge which is posited as a refuge for solitary realizers. The disciple, the sangha, is posited as a refuge for hearers. This is because one who wishes to achieve buddhahood focuses on the Buddha refuge, one who wishes to attain nirvana focuses on the Dharma refuge, in particular the twelve links, and those of the hearer vehicle focus on the arya sangha.

Gyeltsab says that the presentation of the three refuges accords with that of the scriptures in general. There is a purpose to positing the objects of refuge in this way. Those following the Mahayana vehicle have a resultant buddha refuge object. The causal Buddha refuge object is those who are already buddhas. They are also causal refuge objects for followers of the hearer and solitary realizer vehicles. This causal Buddha refuge object is posited as a rare supreme Buddha because there are people who have not yet entered the path but make offerings and pay respect to the buddhas because of their belief.

When solitary realizers come to their last life in cyclic existence after entering their path they seek a resultant refuge object by seeking a nirvana without depending on others’ speech. They are posited here as a Dharma refuge object because there are people who have not entered the path but who count them as supreme and make offerings and pay respect to them. When those following the paths of hearers at the end of their last life in cyclic existence seek their resultant refuge object which is a nirvana that is to be attained by following others’ speech, they are posited as a Sangha refuge object because there are people who have not entered the path who count them as supreme and make offerings and pay respect to them.

To summarize, those following the Mahayana vehicle seek buddhahood and put effort into becoming a buddha. Having become a Mahayanist they dedicate themselves to buddhahood by making offerings and paying respect. Generally speaking there are two kinds of Buddha refuge: the causal and resultant. The resultant Buddha refuge is the future buddha one will become. The causal Buddha refuge is the buddha existing in the continuum of others, such as the historical buddha.

Solitary realizers are related to the Dharma refuge object. Before entering into the solitary realizer vehicle someone aims to achieve the nirvana of a solitary realizer. Then when he enters the path of a solitary realizer he meditates, without depending on others, on the twelve links during his last life in cyclic existence in order to attain the nirvana that is a resultant Dharma refuge. The causal Buddha refuge object for solitary realizers is the same as the above (the buddha existing in the continuum of others).

Hearers before entering the hearer path wish to become an arya, after entering the path they continue to strive to become aryas and for this purpose meditate, make offerings, and so on. Hearers are therefore posited as a Sangha refuge object. Those following the hearer vehicle have a causal Buddha refuge object as above (the buddha existing in the continuum of others).

Although one does not have the two wishes, to achieve the nirvana of a solitary realizer or to become an arya being, alone, one can still take refuge in the present causal Dharma and Sangha refuge objects.

Gyeltsab says that the uncommon Mahayana refuge is presented above. The two, hearers and solitary realizers, have also been posited as having three objects of refuge. One should understand that they themselves have two resultant refuge objects. The purpose of presenting the teaching in this way is to set out the general presentation of the three objects of refuge according to the scriptures.

2B2C-1A2B-1B1B-2A3 Difference of conventional and ultimate refuge
Gyeltsab quotes Uttaratantra which says: “Because of being abandoned, deceptive, non-existence and fear, the two aspect of dharmas and the assembly of sangha are not eternal supreme refuges.”

A scriptural Dharma refuge is not an ultimate refuge for us because when we achieve realizations and become a buddha we “abandon” the scriptural Dharma, like someone who, wanting to cross a river, uses a boat only to get to the other shore, but then abandons it when he gets there.

“Deceptive” refers to a true path existing in the continuum of someone on a learner’s path. A true path is not an ultimate object of refuge because phenomena that appear to be without stain to someone on a learner’s path are not completely without stain. In other words, although phenomena appear to be totally stainless there are still stains at the level of a learner’s path. To an exalted knower realizing selfless phenomena appear to be free from stains, however an exalted knower realizing selflessness in the continuum of, for example, an arya bodhisattva is still stained.

“Non-existence” means a hearer’s nirvana without remainder is not an ultimate object of refuge because it is distinguished by the mere non-existence of the true sufferings and true origins.

“Fear” means that a hearer’s nirvana without remainder is not an ultimate object of refuge because it is together with the fear of the obscurations to knowledge.

It then says “the two aspect of dharmas and the assembly of sangha.” The two aspects of Dharma are the scriptural and realizational. A true path existing in the continuum of a bodhisattva on a learner’s path is not a final object of refuge because it is still together with fear. Such a true path is not a final object of refuge because there still exist the obscurations to knowledge. Someone on a learner’s path can be said to be afraid of the obscurations to knowledge and for this reason is not an ultimate object of refuge. In conclusion, the only ultimate object of refuge is a rare supreme Buddha. The distinction between an ultimate and conventional object of refuge is that which has reached the end of the path in reality is an ultimate object of refuge while that which has not reached the end of the path in reality is a conventional object of refuge. Uttaratantra says that: “the ultimate object of refuge for the welfare of sentient beings is the Buddha refuge alone.” It also says “Buddha himself possesses the truth body and is therefore also a sangha refuge.” Because a buddha is an arya sangha he is a sangha refuge.

Is there anything which is all three objects of refuge? Svatantrika-Madhyamika says yes, there is one and gives the illustration of a mental consciousness existing in the continuum of an arya buddha. Who is an example of an arya buddha? The illustrating mental consciousness is an arya buddha; it is also a Dharma refuge because it is omniscient mind and consciousness; and it is also a sangha refuge because it is an arya being. When we become a buddha our mental consciousness will become the Buddha, Dharma, and Sangha refuges.

Thursday morning class, March 12, 1998

Gyeltsab says that one should read and study the text, Compendium of Ascertainments, which is one of the five treatises of Asanga, to learn about refuge, the precepts associated with refuge, and the qualities of the Three Jewels. One has to have two causes for taking refuge in the Three Jewels. The first cause is to develop fear of all the shortcomings of cyclic existence in general and those of the three lower realms in particular. Secondly, one needs to develop faith that the Three Jewels have the ability to protect one from these fears. With these two causes we should take refuge in the Three Jewels from the depths of our hearts, tame our minds, and train in the precepts of refuge. In brief, with regard to taking refuge we should totally trust that the Three Jewels can help us. With this kind of trust one effectively goes for refuge, while without it it is not real refuge.

It is important that one know the precepts that are to be kept after taking refuge. Details of these can be found in the above mentioned text, Compendium of Ascertainments, by Asanga.

The benefits of refuge and keeping the precepts are that one receives the blessings of the victors whereby one’s qualities increase and one takes the essence of this precious human rebirth. Without heartfelt refuge there will be very little result from hearing, thinking, and meditating.
This presentation of refuge is in accordance with the uncommon Mahayana refuge. The refuge objects will be explained in the context of verse 33 in the fourth chapter of the Ornament which says “Buddha and so forth...”

Concerning buddha, since buddha and enlightenment are the same entity, with regard to not observing the exalted knower of all aspects, the defining quality which acts to (identify) buddha is said to be “by not joining to form and so forth” and “to know equally the observed object and the observer.”

Gyeltsab comments on this subject quoting a sutra that says: “When a bodhisattva engages in the perfection of wisdom he should not join it to form on up to omniscient mind. Form itself is not to be seen ultimately.” This passage is an instruction about abandoning the conception apprehending a buddha to exist truly because that which is observed and that which observes are seen by exalted wisdom to be equally empty of true existence. Such an exalted wisdom is the rare supreme Buddha. “Not join omniscient mind to form” refers to all phenomena, form, feelings, etc., which are not to be joined to true existence. In other words, all phenomena, from form up to omniscient mind, should be seen to not exist truly. Therefore, this sutra gives the instruction to abandon the conception seeing them as truly existent. Only a rare supreme Buddha sees that which is to be observed and that which observes as equal in lacking true existence.

Then in sutra it says it is an instruction on the rare supreme Buddha because: “That very omniscient mind is not to be observed as ultimately existent. One should join the same phrase, [not to be observed as ultimately existent], to subject and object, definition and definiendum, sphere and cognizer of sphere. Joining them in this way they are not to be conceived as ultimately existent.” Although the word used here is “omniscient mind” it refers to buddha because omniscient mind is a characteristic that represents buddha. Omniscient mind is not to be observed to exist ultimately because buddha and the enlightenment possessing the two purities are the same in having the characteristic of being empty of true existence. The sutra means that one should not superimpose true existence on the object and on the subject. Since a buddha is someone who has a final exalted wisdom seeing all phenomena, Gyeltsab talks of omniscient mind in relation to buddha. In brief, one can simply say, “So-and-so is a buddha because he has omniscient mind.” “When it says buddha and enlightenment have the same character” it refers to the two kinds of enlightenment, that of abandonment and that of realization. The enlightenment of abandonment is the enlightenment possessing the two purities (the nature body) in which the incidental stains and natural stains have been removed. The enlightenment of realization refers to a buddha’s exalted wisdom which has exhausted all stains and knows that the stains will no longer be regenerated.

Concerning Dharma, its is said that the three exalted knowers of all themselves include all bases, antidotes, and aspects and that “all phenomena which are included in them are entitless.”

Gyeltsab quotes a sutra that says: “Do not join phenomena, form and so forth, to true existence. Do not join non-functioning things with true existence.” This passage is an instruction about the rare supreme Dharma because it includes all the bases, antidotes, and aspects of the three exalted knowers which are said to not have an ultimate entity. The three exalted knowers include the bases, impermanence and the other fifteen attributes; the antidotes, which include the fifteen
types of paths; and the aspects of knowing all phenomena. When a bodhisattva goes through the bases, paths and antidotes he should meditate free of the conception of true existence. For example, when he actualizes the various levels of the path he should do so without conceiving them to be truly existent.

Concerning sangha, excluding the foe destroyers (arhat) who are included in the buddha-jewel, by means of (setting forth) specific abiders and enterers in the result, seven great beings, along with solitary buddhas, eight, through specific dull faculty and so forth, the enumeration is complete in twenty. It is said, setting forth (such) quotations as “engage the irreversible bodhisattva superior learners as merely non-products,” instructs on the three jewels.

Gyeltsab quotes a sutra that says: “Great aryas bodhisattvas, bodhisattva learners, and non-returners should engage in the practice of the perfection of wisdom without the conception of ultimate generation.” This passage is an instruction about the rare supreme Sangha because it says that one should not conceive of the rare supreme Sangha as a truly existent companion on the way. The sangha who are a companion on the way can be of many kinds: the three abiders in the result and the four enterers (the seven hearer sangha) and the solitary realizers. These eight can be further divided into twenty on the basis of those who have dull faculties, etc.

Are there not eight Mahayana sangha, four enterers and four abiders? The great Mahayana foe destroyer is not included within the rare supreme Sangha because he is included in the rare supreme Buddha.

All this is said to negate the conception apprehending the Three Jewels as being truly existent. This concludes the instructions on the Three Jewels according to Gyeltsab Je. Now we will go through them according to Jetsun Chogyi Gyeltsen who gives a more elaborate commentary on the Three Jewels in his text, Ocean Playground based on quotations from Ornament for Sutra.

Jetsun Chogyi Gyeltsen first says: “The Three Jewels are called rare supreme jewels because there are six similarities between them and a wish-fulfilling gem: the Three Jewels appear rarely in the world just as does a wish-fulfilling gem; they are stainless like a wish-fulfilling gem; they have powers, such as clairvoyance; they are the best ornament for a virtuous thought; they are supreme among excellent qualities; and they are not under the domination of attachment and hatred.” In Uttaratantra it says “Arising rarely, stainless, having powers, worldly ornament, supreme, not changing, because of this they are rare supreme jewels.” The etymology of “rare supreme jewel” is that a buddha appearing in this world is rare. Not only this is rare but the fact that he gives teachings is also rare. In addition, that there are followers who maintain these teachings is also rare. The quality of their being stainless is because the real Three Jewels are stainless. However, it cannot be said that the Three Jewels are completely free from stain because, although the rare supreme Buddha and the rare supreme Dharma are necessarily free from stains, the rare supreme Sangha can still have stains.

The third similarity with a wish-fulfilling gem is that the Three Jewels have powers because they possess clairvoyance and many other excellent qualities. For example, they have the power to benefit sentient beings through clairvoyance, magical emanation, and so forth. Although generally speaking it can be said that the Three Jewels have these powers, more specifically only the rare supreme Buddha and the rare supreme Sangha have these powers. The rare supreme Dharma cannot be said to possess such powers because it is not a person.

The Three Jewels are the best ornament for a virtuous thought or mind because when someone with a virtuous mind takes refuge in the Buddha, Dharma, and Sangha the mind becomes ornamented.
The Three Jewels are supreme among excellent qualities because among all the precious objects, supreme objects, and excellent qualities in the world, the sole uncontaminated quality is the Three Jewels.

The Three Jewels are not dominated by attachment and hatred because they do not change as a result of attachment and hatred. On the other hand, ordinary beings, such as ourselves, change due to attachment and hatred. At times we experience pleasure when we encounter an object of our attachment and at others we experience suffering when we encounter an object of our hatred. This does not happen to the Three Jewels.

For these reasons the Three Jewels are a correct or proper object of refuge. An object of refuge in general can be of many types. According to the Sublime Banner Sutra there are many types of objects of refuge such as food, clothes, houses, darkness, forests, and so forth. This is understandable because if, for example, someone were chasing us we might take refuge in darkness to hide ourselves. These are ordinary objects of refuge and not ultimate objects of refuge.

In Ornament for Sutra there are three outlines: (1) brief presentation of the objects of refuge that have five greatnesses, (2) extensive explanation, and (3) proving that the Mahayana objects of refuge are supreme.

(1) Brief presentation of the objects of refuge that have five greatnesses,
Jetsun Chogyi Gyeltsen presents this in the form of a syllogism: Refuge taken in the supreme vehicle, the Mahayana, is supreme among all refuges because of the following:
(i) its observed object pervades all
(ii) the supreme promise to practice is great
(iii) the attainment of supreme realization
(iv) outshining the hearers and solitary realizers
(v) being supreme due to its natural characteristics
One who takes refuge in the Mahayana has an observed object that pervades all; “all” being all sentient beings. The supreme promise to practice means to promise to go through all three vehicles, hearers, solitary realizer, and bodhisattva vehicles. The attainment of supreme realization means that one attains the two wisdoms: the wisdom realizing the selflessness of persons and the wisdom realizing the selflessness of phenomena. Outshining the hearers and solitary realizers means that one who takes refuge in the Mahayana will generate the mind of enlightenment and thereby outshine the followers of the Hinayana. It being supreme due its natural characteristics means that it is supreme simply due to the different [characteristics] of its divisions.

(2) Extensive explanation
Here the five divisions that show that Mahayana refuge is supreme are explained extensively here. The first of the five divisions, its observed object pervades all, has four attributes which Jetsun Chogyi Gyeltse presents in the form of syllogisms. “(1) A child of the victors (a bodhisattva) with intelligence proceeds to all sentient beings because he engages in activity for the purpose of liberating all sentient beings from sorrow. (2) He proceeds to all vehicles because he is expert in practicing the three vehicles. (3) He proceeds to all exalted wisdoms because he possesses the knowledge of both selflessnesses. (4) He proceeds to all nirvanas because he realizes cyclic existence and peace as one taste in lacking a self of phenomena. For all these reasons, one should understand that such a bodhisattva’s object of observation is all pervasive.” In Ornament for Sutra it says: “One who engages in liberating all sentient beings, proceeds to all vehicles, has skill in proceeding to exalted wisdom, and has a nirvana where cyclic existence and peace are one taste; such an intelligent one in this case is known as “one who goes everywhere”.”

Thursday afternoon class, March 12, 1998
The second of the five divisions is the supreme promise to practice. Jetsun Chogyi Gyeltsen again sets out syllogisms in this regard. “(1) An arya child of the victors seeks supreme enlightenment with great joy because he has a heroic mind that knows its excellent qualities. (2) He has the attribute of achievement because he is able to practice while bearing hardship for others without sadness. (3) He has the attribute of attainment because one day he will become a complete buddha and will have abandonments and realizations equal to all the buddhas. Such a one with intelligence is to be known as having a supreme promise.” In *Ornament for Sutra* it says: “Such a one seeks supreme enlightenment with great joy. Such a one practices while bearing hardship without sadness. Such a one will become equal to the buddhas. This intelligent one is to be known as “having a supreme promise”.”

The third division of the five, the attainment of supreme realization, is also set out as syllogisms. “(1) An arya bodhisattva has a distinguished realization because he has attained a great heap of merit and has become a lama for the three existences, has attained the pleasures of cyclic existence, has pacified the heap of sufferings, and has attained the supreme mind of non-conceptual exalted wisdom with happiness. (2) An arya bodhisattva has a distinguished result because he has a collection of merit for attaining the supreme aggregate of an eternal body of a buddha, attains freedom from cyclic existence and solitary peace, and has eliminated the two obscurations together with their imprints.” In *Ornament for Sutra* it says: “A great heap of merit, a lama of the three existences, the pleasures of cyclic existence, pacification of the heap of sufferings, a supreme mind with happiness, a virtuous accumulation of many dharmas for the attainment of the supreme aggregate of an eternal body, eliminating imprints, freedom from cyclic existence and solitary peace.” The “three existences” can refer to either the three realms, the desire, form, and formless realms, or the realm above ground, the realm on the ground, and the realm below ground.

The fourth division of the five, the outshining light of the bodhisattva, is also set out in syllogisms. “An arya bodhisattva outshines the assembly of hearers and solitary realizers because of possessing the following qualities: (1) possessing extensive roots of virtue which are much greater than those of hearers and solitary realizers, (2) having great purpose, (3) working uninterruptedly for the infinite sentient beings, and (4) possessing the excellent quality of everlasting exalted wisdom. These four virtues have three functions: (1) they ripen the sentient beings of this world and those who have gone beyond, (2) they find the richness of power over excellent qualities, and (3) they exhaust all contaminated aggregates without exception.” In *Ornament for Sutra* it says: “The intelligent ones outshine the assembly of hearers due to extensive virtue, great purpose, uninterrupted work for the infinite; these virtues ripen [sentient beings] of this and other worlds, find the richness of power, and pacify the contaminated aggregates, thereby exalted wisdom becomes inexhaustible.”

The fifth division of the five, supreme due to the nature of its divisions, is also set out in syllogisms. “Mahayana refuge has a significance to its entity because, wanting to obtain the very state of supreme buddhahood, one promises to take them as one’s object of refuge. It has a significance to its cause because it is a knowledge that is derived from mercy-compassion. It has a significance to its result because it acts to attain the omniscient state itself. It has a function because of engaging in hardship for other sentient beings without sadness in order to set them in happiness. It has many excellent qualities because it makes [sentient beings] definitely emerge from the objects to be abandoned and possesses the quality of showing [the way to] complete the two accumulations. If refuge is divided there is gross refuge that comes about by indication and [subtle] refuge that comes about by the force of nature/thusness. The intelligent should know that Mahayana refuge is superior to that of Hinayana as proved above.” In *Ornament for Sutra* it says: “[Mahayana refuge] is wanting that and promising; is to be known to be derived from compassion; from there the omniscience; benefiting without sadness; emerging definitely, always
possessing the quality of showing [the method of] all vehicles; so it is the refuge of the intelligent who have taken refuge by indication and thusness."

Refuge can be condensed into two: one that is taken by way of indication, this is an artificial refuge, and one that is taken by way of thusness, that is a genuine or natural refuge. When it says “wanting to obtain the very state of supreme buddhahood” it indicates that one takes refuge in the buddha because of wanting to become a buddha.

(3) Proving that the Mahayana objects of refuge are supreme
Jetsun Chogyi Gyeltsen says: "Mahayana refuge has great significance because there is both great meaning for oneself, because one’s own excellent qualities increase limitless, and great meaning for others, because one’s compassion pervades all migrating beings. It has the attribute of action because the Dharma of the great aryas who are incomparable expands. In Ornament for Sutra it says: “Going for refuge here has great meaning in that one’s own excellent qualities increase limitlessly and one’s compassion covers all sentient beings. The Dharma of the great incomparable ones also expands.”

These stanzas prove that the Mahayana refuge is supreme when compared to the Hinayana refuge. All these statements are based on verses in Ornament for Sutra.

Next we will look at how refuge is put into practice in that we need to combine the instructions on refuge with practice. The actual practice of going for refuge has five divisions: (1) on which objects does one rely, (2) the causes for taking refuge, (3) the measure of having gone for refuge, (4) the benefits of going for refuge, and (5) the stages of training oneself after having gone for refuge.

(1) On which objects does one rely
Those seeking liberation take refuge in the rare supreme ones alone because the Three Jewels, the rare supreme ones, are the sole objects of refuge. In Sublime Banner Sutra it says: “Those with fear take refuge mostly in mountains, forest, monasteries, places of worship, trees, and so forth. However, these refuges are not the main ones. Nor are they the supreme ones. By relying on these refuges one will not become liberated from all suffering. When one takes refuge in Buddha, Dharma, and Sangha one will become free from suffering and the causes of suffering and will transcend suffering by the eight fold noble path and thereby go to nirvana.” Jetsun Chogyi Gyeltsen quotes the Bodhisattvacharyavatara which says: “The principal refuge is the protector of sentient beings” meaning the Buddha, the Dharma, and the Sangha. Then Jetsun Chogyi Gyeltsen quotes A Hundred and Fifty Stanzas of Praise: “The intelligent definitely take refuge in someone who is totally free of all faults and has complete knowledge.” In Seventy Stanzas on Refuge it says: “Buddha, Dharma, and Sangha are refuge for those seeking liberation. The three rare supreme ones are the right refuge for those seeking liberation because they themselves are free from fear, are skilled in the methods for liberating others from fear, engage in activities for all sentient beings with compassion and without partiality, and act as a sublime friend, protector, and refuge for all embodied beings.”

When we take refuge we should do so in someone who has the ability to protect us, for if we take refuge in someone who cannot protect us there will be many negative consequences.

(2) The causes for taking refuge
The causes are (1) fear of suffering and (2) faith that only the three rare supreme ones have the capacity to help one. Having these, one has the perfect causes for going for refuge. Depending on these perfect causes, one will inevitably take refuge in the three rare supreme ones.

(3) The measurement of having gone for refuge
The measurement of having gone for refuge is (1) to have total confidence from the depths of one’s heart that the Three Jewels can protect one from all suffering and (2) to abide in the distinguished class because of having made the promise [to not go for refuge to any objects other than them] due to the two causes. This is the entity of taking refuge. Jetsun Chogyi Gyeltsen
quotes the *Bodhisattocharyavatara*: “With great fear, I offer all, including myself, to Samantabhadra.”

If the going for refuge is divided by way of its entity there are three divisions: (1) going for refuge with the body, (2) going for refuge with the speech, and (3) going for refuge with the mind. Going for refuge with the body is for example making physical prostrations; going for refuge with the speech is to recite a prayer or mantra; going for refuge with the mind is to think upon the meaning of the words of refuge with mindfulness. When doing physical prostrations one touches the four limbs and the head to the ground. Physical prostrations can differ depending on the limits of space: one can do long prostrations, short prostrations, just join the palms of the hands together, or even just raise one hand in salutation.

Refuge is also divided into the refuges of small, middle, and great beings. That of a small being is to go for refuge to the Three Jewels in order to become free of the suffering of the lower realms. That of a middling being is to go for refuge in order to free oneself from cyclic existence. That of a great being is to go for refuge to the Three Jewels to liberate other sentient beings from the suffering of cyclic existence.

Refuge is also divided by way of its boundaries: (1) the refuge present at the causal time and (2) the refuge present at the resultant time. That present a the causal time is the refuge present in the continuum of sentient beings. That present at the resultant time is the refuge present on the buddha ground.

Refuge is also divided into gross refuge that comes from indication and subtle refuge that comes from the force of thusness. Gross refuge that comes from indication is the refuge that is taken with the help of words recited by an abbot, acharya, and so forth. Refuge that comes from the force of thusness is either when one takes refuge as a result of the imprints of having taken refuge in the past or when one takes refuge by the force of recognizing the natural form, meaning that when one realizes emptiness one [automatically] goes for refuge to the Three Jewels. “Nature” does not always mean emptiness. This is explained in the text *Definitive and Interpretive Meanings* which discusses different kinds of form such as imaginary form, natural form/thusness, form of thorough analysis, and so forth. Natural form can be, for example, when someone sits down and thinks of various things, such as an image of buddha, and then takes refuge. Or natural form can mean a pure vision due to which one takes refuge.

(4) The benefits of going for refuge

Jetsun Chogyi Gyeltsen says: “Having gone for refuge, there are many benefits: (1) the negative karma of downfalls will be destroyed, (2) one completes the two great accumulations, (3) one will be protected from all harm, (4) one will be able to receive new vows such as those of individual liberation, (5) one will increase those vows that have been received, and (6) the buddha nature will be awakened. (7)There are many other excellent qualities such as attaining enlightenment quickly and so forth. In sutra it says: If the merit of going for refuge were to exist as form it could not be contained in a billion world systems. It is impossible to count the number of handfuls of water in the oceans; likewise, is the merit of going for refuge.”

(5) The precepts of going for refuge

There are individual precepts with respect to each of the Three Jewels and common precepts to be kept with respect to all of them. With respect to each of the Three Jewels there is a precept concerning what is to be abandoned and a precept concerning what is to be practiced. With respect to the precepts concerning what is to be abandoned in sutra it says: “When someone takes refuge in the Three Jewels he becomes an upasika. Having taken refuge in the Buddha, he should not take refuge in other gods. Having taken refuge in the sublime Dharma, his mind should be free from harm. Having taken refuge in the Sangha, he should not associate with Tirthikas or misleading friends.” With respect to the precepts concerning what is to be practiced in Nagarjuna’s *Letter to a Friend* it says: “The wise should respect an image of a tathagata, even that made of wood, as if were an actual [tathagata.]” In general the teachings on refuge say that one
should treat all images of a Buddha as if they were an actual Buddha, no matter whether they are made of paper, clay, or wood.

The precepts common to all Three Jewels are to cherish the Three Jewels as even more precious than one’s own life, to remember the Three Jewels continuously, to make prostrations and offerings and respect them, and to never generate a mind of disrespect toward them even for an instant. If one keeps these common precepts a foundation of all happiness and goodness will be established. A praise composed by Lama Tsongkha is quoted here which says: “When sentient beings encounter the terrifying precipice of cyclic existence or are wandering without a friend there is no refuge superior to the three rare supreme ones. Therefore one should take refuge in them from the depths of one’s heart.” This means that whenever one finds oneself in a desert or a jungle and takes refuge in the Three Jewels one will be protected by them.

When I was living in Buxar in Bengal, I once went to visit a small town where there were many Bhutanese. On my return home I met an old lama called Lobpon-la (Master) who was well versed in Dharma. I asked him, “Lobpon-la, why are you walking alone?” Lobpon-la replied, “I am never alone, I am always accompanied by the Three Jewels” and put his hands together in prayer. I felt rather embarrassed by his response! If we take refuge sincerely we will always be accompanied by the Three Jewels.

Friday morning class, March 13, 1998

QUESTIONS AND ANSWERS

Question: Please go through the important points of the teachings given this week. With respect to the mind generation that is like a festival of Dharma, one text says that it exists on the tenth ground while here it says that it is included on the buddha ground. Which is correct?

Reply: Of the twenty-two mind generations the first three belong to the three levels of the path of accumulation, the fourth belongs to the path of preparation, the next ten belong to the ten grounds respectively, the next five belong to the special path of the tenth ground, and the last three belong to the buddha ground. In some texts the last three are said to belong to the tenth ground while in other texts they are said to belong to the buddha ground. The explanation I gave is that the twentieth mind generation, that which is like a festival of Dharma, is one that arises in one session alone on the last interrupted path of the tenth ground. For this reason, it is said to exist on the buddha ground. The tenth ground has three parts: the preparation, actual, and conclusion. The actual ground is meditative equipoise while the conclusion is the subsequent attainment of omniscient mind. This explanation accords with the Ornament for Illumination by Haribhadra. However, in another text it says that this mind generation belongs to the tenth ground because it is a mind generation that arises on an uninterrupted path of the tenth ground. In chapter one it says that the tenth ground can be labeled “buddha ground.” The reason for this is that the tenth ground is very similar to the buddha ground. In chapter one it says “Having passed the ninth ground, the exalted wisdom by which to abide on the buddha ground, that bodhisattva ground should be known as the tenth.” Once a bodhisattva passes from the ninth to the tenth ground he has an exalted wisdom which will allow him to abide on the buddha ground.

Each of the topics of the eight categories presents a complete path to buddhahood. For example, the first topic of omniscient mind, mind generation, covers the five paths. For this reason our system says that the topics are like a curve in a road, each one containing a complete path. The second topic of precepts also covers the whole path. Precepts can be of two types: precepts/oral instructions on the Mahayana and precepts/oral instructions on the Hinayana. A Mahayana precept is defined as a Mahayana speech that teaches a method for attaining that sought by a Mahayana mind generation. A Hinayana precept is defined as: a Hinayana speech that shows the path to the Hinayana liberation.
This week we went through the precepts concerning the entity/nature of achievement itself, about the four noble truths, and the Three Jewels. In terms of the first, when a bodhisattva practices he should not pass the limit of the two truths but practice while remaining within their limits. In this context the two truths, the conventional and the ultimate are discussed.

Viśṇubhaṁśikas define the two truths as:
Conventional truth: a phenomena which is such that when it is broken up or mentally separated into individual parts, the consciousness apprehending that object rejects it. For example, if something is destroyed by a hammer the mind apprehending it as such is given up. Also when an object is dissected mentally it is not longer apprehended as such by the mind.
Ultimate truth: a phenomena which is such that when it is broken up or mentally separated into individual parts, the consciousness apprehending that object does not reject it.
An illustration of an ultimate truth is directionally partless particles and temporally partless moments of consciousness. Viśṇubhaṁśikas say that directionally partless particles cannot be destroyed and that temporally partless moments of consciousness cannot be mentally separated into any more parts.

Sautrantikas posit the two truths as:
Ultimate truth: that which is ultimately able to perform a function.
Conventional truth: that which is not ultimately able to perform a function.
An illustration of an ultimate truth is a vase, which is opposite to what the Viśṇubhaṁśikas assert.
An illustration of a conventional truth is generally characterized phenomena, in other words, a meaning generality.

Chittamātrins posit the two truths as:
Conventional truth: an object that is realized with dualistic appearance by a valid direct cognizer that directly cognizes it.
Ultimate truth: an object that is realized without dualistic appearance by a valid direct cognizer that directly cognizes it.
Other powered phenomena and imaginary phenomena are conventional truths while thoroughly established phenomena are ultimate truths.

Svātantrika-Madhyamikas posit the two truths somewhat similarly as:
Ultimate truth: an object that is realized without dualistic appearance by a valid direct cognizer that directly realizes it and that is not realized as an affirmative phenomena.
Conventional truth: an object that abides in the class that is to be realized with dualistic appearance by a valid cognizer that directly realizes it.
An illustration of conventional truth is a vase and an illustration of an ultimate truth is a vase’s emptiness of true existence.

Prasangika-Madhyamika posit the two truths as:
Ultimate truth: an object that is found by a valid cognition distinguishing a final nature and with respect to which a valid cognition distinguishing a final nature becomes a valid cognition distinguishing a final nature.
Conventional truth: an object that is found by a valid cognition distinguishing a conventionality and with respect to which a valid cognition distinguishing a conventionality becomes a valid cognition distinguishing a conventionality.

(See Cutting Through Appearances for more information regarding the two truths.)

There is an elaborate commentary on the two truths according to the four schools that was composed by a Mongolian monk. He also wrote a text on the grounds and paths of tantra mainly in accordance with the Guhyasamaja tantra.
The etymology of the term “ultimate truth,” literally “ultimate meaning truth,” is that “ultimate meaning” refers to the exalted wisdom of meditative equipoise of an arya, and “truth” to any phenomena seen by this exalted wisdom. Conventional truth, literally all-obscured truth, means anything that is true with respect to an all obscured mind. To a mind that is obscured, phenomena, such as vase, appear to exist truly. These phenomena are a truth for this obscured mind. Another way of saying this is that a conventional truth is a truth for a sensory consciousness.

Ultimate truths, or ultimate meaning truths, are of two kinds: enumerated ultimate truths and non-enumerated ultimate truths. Both are subjects that take emptiness as their object but an enumerated ultimate truth is an emptiness that appears to an inferential cognizer while an non-enumerated ultimate truth is an emptiness that appears to the exalted wisdom of meditative equipoise of an arya.

Conventional truths are of two kinds: unreal conventional truths and real conventional truths. An unreal conventional truth is an object that an ordinary person, who has not realized emptiness, can know to be unreal. A real conventional truth is an object that an ordinary person, who has not realized emptiness, cannot know to not exist as it appears. An illustration of an unreal conventional truth is the reflection of a face in a mirror, while an illustration of a real conventional truth is the face itself. Even by ordinary beings, such as ourselves, who have not realized emptiness know that a face reflected in a mirror is not a real face. On the other hand, ordinary beings do not know that a face, a real conventional truth, does not exist as it appears. For example, a particular building for ordinary beings appears to be permanent in that day after day it appears to be the same. Ordinary beings do not realize that it does not exist as it appears.

The two truths are one entity but different in name. We should understand the four consequences that would follow if the two truths were one and the four consequences that would follow if the two truths were different entities.

When one understands the two truths well one approaches buddhahood. One should meditate on the two truths with the four logical reasonings that (1) prove that phenomena can perform a function, (2) prove the correctness of being [true or right], (3) prove that phenomena are dependently related, and (4) prove that certain objects have their own natural characteristics. The last means that certain objects have particular characteristics, for example, water has the nature of being wet and moist, of flowing downward and never upward, while fire has the nature of being hot and burning and to blaze upward and never downward. All phenomena should be analyzed with these four logical reasonings. An example of the logic that proves correctness is the proof that sound is impermanent by way of a sign, such as the sign “because it changes momentarily.” The five reasonings that establish all phenomena as non-truly existent can be included in the logic that proves correctness. The logic that proves dependent relationship shows that all phenomena are dependent, for example one side of a mountain depends on the other side and vice versa, teacher exists because their are students and vice versa, and so forth. The logic that proves phenomena can perform a function is, for example, that good karma functions to bring about a good result and that bad karma functions to bring about a bad result.

Today is the day in which we celebrate the last of the fifteen days in which the Buddha performed miracles. During these days Buddha participated in a competition of magical emanations.

END
Monday afternoon class, March 16, 1998

Gyeltshab says that there are three [divisions] concerning the instructions about removing manifest discordancies, the first of the three being instructions about not degenerating the causes of achieving/practice. In sutra it says: “Great bodhisattva, the practice of the perfection of wisdom is any effort that is exerted with body, speech, and mind.” This is an instruction about the need for effort in not clinging to trivial actions because it teaches that one has to realize the body and so forth as ultimately entitless. It is suitable to instruct so because if one does not familiarize oneself with the meaning of emptiness, one will have grasping at true existence. This means that trainees of dull faculty would not have the ability to achieve the meaning explained above in the context of the mind generation. Therefore, that grasping at true existence needs to be abandoned. What is the cause of this grasping? It is the generation of the very pleasure that comes from attachment to the body and so forth due to attachment to trivial activities. Those of dull faculty generate pleasure from attachment to their bodies due to clinging to ordinary activities. In other words, beings at an ordinary level are attached, or cling, to ordinary activities. They have this clinging because they are attached to physical and mental pleasure. Due to attachment to this pleasure, the attachment grows. This attachment should be abandoned.

Gyeltshab quotes sutra: “When great bodhisattvas practice the six perfections they should not conceive of form as being truly existent form, they should not conceive of feeling as being truly existent feeling...” This passage is an instruction about the need for a total lack of tiredness in achieving/practice because it is an instruction that teaches that one should realize that all phenomena, from form up to complete enlightenment, do not exist truly. It is suitable to instruct so because when those of dull faculty do not come to the object of their aim after much hardship they become despondent. For that reason it is necessary to eliminate the laziness of lethargy/sloth. The sutra passage means that when one practices the six perfections one should not conceive of phenomena, such as form, as being truly existent. One should abandon the conception of true existence and engage in the practice. One should give up the laziness of lethargy because if one has this laziness one will not be able to reach one’s aim.
“If one must receive instructions of the paths for each meaning from the buddhas residing in the ten directions and so forth,” since the mind will become discouraged, the precept on phenomena as unproduced by nature, instructs concerning the completely upheld path,

Gyeltsab’s commentary quotes a sutra which says “Shariputra, a great bodhisattva due to possessing such an exalted wisdom, the worlds of the eastern direction equal to the grains of the sand of the Ganges River...” This passage is an instruction on completely upholding the Mahayana path because it is an instruction that teaches that all phenomena are not generated naturally. It is suitable to instruct so because if one listens to the meaning of each of the teachings taught by the buddhas residing in the ten directions one might then have the feeling thinking, “How can I ever do that?” This laziness, the laziness of incapability, needs to be abandoned.

In summary, one should not become discouraged but should think, “I can do it!” One should put effort into understanding that one’s own mind and the minds of enlightened beings are the same in being empty of true existence. Whenever one thinks that one is not able to become enlightened, one should think that one can indeed go through all the paths needed to get to their enlightened state. Therefore, it is important to have self-confidence and courage in following the instructions and the whole path. One should make one’s mind strong and encourage oneself.

This laziness is developed because of “one must receive instructions of the paths for each meaning from the buddhas residing in the ten directions.” One may think that one is incapable of doing this, therefore there is the instruction to give up this laziness. As it says in one text: “You, Buddha, became enlightened by your effort and I wander in cyclic existence due to my laziness.”

When Lama Yeshe used to scold the young monks at Kopan he would say that “those who are lazy will not even find water for their mouths!”

Here Gyeltsab says “Five eyes: the causes of engaging independently in achieving” because when one possesses these five eyes one becomes independent in one’s achieving/practice. In other words, at this time one no longer needs to depend on others.

The enumeration of 1) eye of flesh, 2) divine eye which arose from maturation, 3) eye of wisdom, 4) eye of dharma, and 5) eye of buddha, are respectively, the subject which 1) ascertains things individually, 2) (sees) death, migration and birth of sentient beings, 3) does not conceptualize regarding any phenomenon, 4) realizes all superiors, and 5) is completely enlightened with regards to all aspects of all phenomena. To teach that these (subjects) are established as one in suchness, instructs concerning the five eyes.

Gyeltsab quotes sutra: “Shariputra, a bodhisattva mahasattva with his eye of flesh can see phenomena at a distance of 100 pakse (6800 kilometers).” This passage is an instruction about the five eyes because it teaches that all the objects of the five eyes and the subjects (the five eyes themselves) are to be seen as one taste in suchness. Relatively, these five eyes are presented as having the capacity of seeing and at the same time those [subjects and objects] are taught to not exist ultimately.

The flesh eye can be of various types: one that sees phenomena within the limit of 100 pakse and one that sees the gross and subtle forms that exist in a billion world systems. The divine eye realizes [the transference of consciousness] at death of all sentient beings and the place where they will be born. The divine eye comes from the maturation of past contaminated virtuous karma. The wisdom eye directly realizes all phenomena as not existing truly. The Dharma eye is
able to indicate who are aryas of sharp and dull faculty. The buddha eye can see all the innumerable phenomena because it is a subject that realizes the whole universe.

The flesh eye exists from the path of accumulation up; the divine eye from the path of preparation up; the wisdom eye from the path of seeing up; the Dharma eye from the post-meditation of the path of seeing; and the buddha eye exists on the buddha ground. An approximate buddha eye exists from the eighth ground up.

When one has the first eye, the flesh eye, one is able to know where one’s virtuous spiritual friends are no matter how far away they are in the billion world systems. One is also able to know where one’s disciples are. With the divine eye one is able to know when one’s disciples will die and where they will be reborn. With the wisdom eye one is able to directly know the meaning of reality as a method for taming disciples. With the Dharma eye one is able to know the differences between sentient beings very well, i.e., whether they are dull or sharp facultied, and is then able to teach them appropriately. With the buddha eye, even if one realizes just an approximate buddha eye, one is able to see most conventional truths and therefore one exhorts oneself in the practice without need to rely on others.

In his text Ocean Playground Chokyi Gyeltsen sets out five divisions in relation to the five eyes: (1) definitions, (2) divisions, (3) boundaries, (4) causes, and (5) the purpose of them coming from causes.

(1) Definitions
The definition of eye is: that which arises in dependence on a mind of an actual absorption of a concentration, which is its empowering condition, and that is a cognizer abiding in the class that is distinguished by seeing its object directly/clearly.

(2) Divisions
There are five divisions: flesh eye, divine eye, wisdom eye, Dharma eye, and buddha eye.

The definition of a flesh eye is: that which is one of the five eyes and is a cognizer that directly sees all gross and subtle forms within 100 pakse in dependence on an eye of flesh that is its uncommon empowering condition.
The definition of a divine eye is: that which is one of the five eyes and is a cognizer that directly sees the death and rebirth of sentient beings by depending on the divine eye which is its uncommon empowering condition.
The definition of a wisdom eye is: that which is one of the five eyes and is observed as a non-conceptual exalted wisdom.
The definition of a Dharma eye is: that which is one of the five eyes and is an exalted knower that realizes the level of the faculties of arya beings as sharp and dull.
The definition of a buddha eye is: that which is one of the five eyes and is a final exalted wisdom directly realizing all phenomena.

Others’ opinions are set out here in the text but we will not go through them.

(3) Boundaries
This is similar to what Gyeltshab says in that the flesh eye exists from the path of accumulation and so forth. However, Gyeltshab mentions these boundaries in relation to someone who has not previously entered the Hinayana path. Jetsun Chokyi Gyeltsen says that the divine eye can exist in someone who has not entered a path, while the Dharma eye can exist in the continua of those following the hearer vehicle. For example, someone who has not entered a path but has achieved the actual fourth concentration has the divine eye and there are followers of the hearer vehicle who can indicate which aryas have sharp faculties and which have dull faculties. Therefore, there is no pervasion of the boundaries posited above. There are also those who have attained the clairvoyance of reading others mind [without having entered the path].
(4) Causes
In sutra it says: “Great bodhisattva, those who wish to thoroughly train in the five eyes and those who wish to attain all five should practice the perfection of wisdom.” Jetsun Chokyi Gyeltsen says that to attain the five eyes one should train in the six perfections and the four legs of magical emanation. The four legs of magical emanation refer to the concentrations. One goes through calm abiding, attains superior insight, unifies calm abiding and superior insight, achieves the various concentrations, and becomes able to emanate many forms. The principal cause of the five eyes is to achieve the actual concentrations of the form realm. Before attaining an actual concentration one has to develop calm abiding followed by superior insight/higher seeing. Therefore, all is based on calm abiding. To attain this one needs to have the various requirements such as the right place and so forth.

Which eyes do we have? If we had the flesh eye we would be able to see things at a distance of 100 pakses. However, we know that our eyes are made of flesh. In short, our eyes are flesh eyes but not the flesh eyes included in the five divisions of eyes.

Beings in the fourth concentration have the divine eye. Are the divine eyes of beings in the form realm flesh eyes or mental eyes? When answering such questions we have to be careful to distinguish between eye and eye consciousness and so forth.

With respect to the instructions of abandoning the laziness of being attached to evil actions, “evil actions” does not mean killing and so forth but refers to meaningless or trivial actions that are only concerned about this present life. Another instruction says not to indulge in the laziness of lethargy but exert oneself. Another instruction says that one should not feel incapable but develop a self-confidence thinking, “I am able to achieve enlightenment. Then, I will be able to do whatever is necessary.”

Tuesday morning class, March 17, 1998
Jetsun Chokyi Gyeltsen says that there is a purpose to generating the five eyes in one’s continuum. This purpose is to be able to practice the Mahayana achievement independently. There is a purpose to depending on the five eyes because in dependence on them one knows exactly what favorable conditions are needed for the practice of Mahayana achievement, and one realizes how to abandon conditions adverse to Mahayana achievement. There are many favorable conditions necessary for the practice of Mahayana achievement as it says in Nagarjuna’s Letter to a Friend: “To stay in a conducive place, to rely upon a holy being, to have made prayers, and to have merit from past lives; these four great wheels are present in you.” The four wheels refers to the four, staying in a conducive place and so forth. In Ornament for Sutra with regard to staying in a conducive place it says: “The place where an intelligent person practices should be one where all necessities are easily found, it should be a place that is noble/good, one’s companions should be noble, and there should be all the necessities for a yogi to have a good life.” These characteristics are the same as those needed for doing a retreat: a place where necessities, including food and clothes, can be found; a place that is noble, meaning that it should be free from noise and the movement of people, and not too hot or damp as this would produce sickness. Noble companions refers specifically to the person who helps one during retreat, someone who does so without too much talk. All these are part of the first wheel, staying in a conducive place.

With regard to the second wheel, that of relying on a holy being, in Ornament for Sutra it says that this holy being should be: “A bodhisattva who has listened/studied, who sees the truth, who is skillful in speaking, who is merciful, and who is without despondency.” With regard to the third wheel, that of making prayers, Jetsun Chokyi Gyeltsen says that one should make prayers as it says in Ornament for Sutra: “The observed object should be noble, the way should be noble, the method should be noble, the definite emergence should be noble, the effort should be noble, and the application should be noble. A prayer made in this way is a correct prayer.” Jetsun Chokyi
Gyeltsen says a noble observed object is the Mahayana; a noble way means the way of increasing one’s merit; a noble method means to meditate on calm abiding and superior insight; a noble definite emergence means to be satisfied with the minimum of necessities; a noble effort means constant effort; and a noble application means to have respect. One has to pray to develop all these attributes.

With respect to the fourth wheel, that of making merit, it says in Ornament for Sutra: “Joy, rebirth of leisure, without sickness, concentration, acting cause that discriminates, whatever merit created in the past.” Jetsun Chokyi Gyeltsen says that as taught one needs these. “Rebirth of leisure” means to have leisure [for Dharma practice] due to having created good karma in the past. These attributes show how many prayers we have made in the past. For example, if we have health or concentration they are the result of causes, that is, prayer and positive karma created in the past.

The flesh eye, which has an empowering condition, is a special eye; it is not the ordinary eye. This empowering condition is actualized by achieving an actual absorption of a concentration. Within our eyeballs is the eye faculty, which is lucid matter, around which the flesh eye develops.

Gyeltsab quotes a sutra that says: “A great bodhisattva practicing the perfection of wisdom will attain the perfection of the clairvoyances and will perform many types of magical emanation.” This passage is an instruction about the six clairvoyances because it teaches how the six clairvoyances are to be generated relatively in one’s continuum and how they are ultimately pacified from the beginning. The meaning of “ultimately pacified from the beginning” is that the clairvoyances are to be developed in one’s continuum while realizing that they do not exist truly.

With respect to the six clairvoyances Gyeltsab sets up syllogisms. With respect to the first, that of magical emanations he says: the clairvoyance of magical emanation possesses special power because it is accompanied by a concentration and a wisdom with which one is able to shake the earth and make many emanations such as multiplying one emanation into many and many into one. The meditative stabilization possessing a concordance with wisdom should also be applied to the remaining five clairvoyances.

With respect to the second clairvoyance, divine ear, Gyeltsab says: the clairvoyance of divine ear possesses a special power because it possesses lucid matter arisen from meditation, which is its dominant condition and belongs to the level of the concentration, and is accompanied by concentration and wisdom with which one is able to hear any faint or loud sound made in the world/universe.

With respect to the third clairvoyance, that of knowing others’ minds, Gyeltsab says: the clairvoyance of knowing others’ minds possesses a special power because it directly knows whether the minds of others have attachment or are free from attachment and so forth and is accompanied by concentration and wisdom. Gyeltsab only says that this clairvoyance sees whether others’ mind are with or without attachment but this includes all 22 minds, with or without anger, with or without ignorance.

With respect to the fourth clairvoyance, that of remembering former lives, Gyeltsab says: the clairvoyance of remembering former lives possesses a special power because with this
clairvoyance one remembers many hundreds of thousands of past lives by the power of experiences.

With respect to the fifth clairvoyance, that of the divine eye, Gyeltsab says: the clairvoyance of divine eye, which is actualized by meditation on the actual absorption, has a dominant condition that is clear matter, is accompanied by a union of concentration and wisdom, is a mental consciousness, and is able to see gross and subtle forms which are hidden and not hidden. “Hidden” can be because the object is far way, because the entity is subtle, or because there is a lot of time in between. The divine eye is not an eye but a mental consciousness.

With respect to the sixth clairvoyance, that knowing the exhaustion of contaminations, Gyeltsab says: the clairvoyance knowing the exhaustion of contaminations possesses a special power because it is a method for abandoning the afflictive obscurations and the obscurations to knowledge; it is an exalted wisdom that clearly sees the separation from those obscurations; and it possesses concentration and wisdom.

In summary, one possessing the six clairvoyances is able to hear very clearly all the gross and subtle sounds of Dharma teachings in the worlds/universe; one is able to clearly know where the teachers and disciples with which one has had relationships in the past are presently; with the clairvoyance of magical emanations one inspires disciples to develop this power; one knows the minds of sentient beings, whether they are with or without attachment, and thereby can show them the methods for attaining liberation; and one can actualize the achievement/practice quickly in oneself and thereby quickly achieve omniscient mind.

Jetsun Chokyi Gyeltsen also comments on the six clairvoyances under the divisions of: (1) the supports of the clairvoyances, (2) the nature of the supported clairvoyances, (3) boundaries, (4) causes, (5) purpose, and differentiation.

(1) Supports of the clairvoyances

The first five clairvoyances can be generated upon any actual absorption of a concentration as their dominant condition. In Abhidharmasamucchaya it says: “Non-Buddhists, hearers, and bodhisattvas can achieve the four immeasurables in dependence on any one of the four pure concentrations and can also likewise develop the five clairvoyances.” Jetsun Chokyi Gyeltsen says that the sixth clairvoyance is generated only upon the concentration on the excellent end (the fourth concentration). In Abhidharmasamucchaya it says: “The remaining excellent qualities can also be generated in dependence upon that concentration, that of the excellent end.” Jetsun Chokyi Gyeltsen says that the clairvoyance knowing the exhaustion of contaminations, as well as other excellent qualities, can be supported on the concentration of the excellent end and can therefore be developed by hearers, bodhisattvas, and tathagatas. The concentration on the excellent end, refers to the fourth concentration. The six clairvoyances are not supported on the actual formless absorptions. In Abhidharmasamucchaya it says: “All six clairvoyances are supported on the concentrations.”

Among the six clairvoyances the first five can be supported on any one of the four concentrations that is a pure actual concentration. There are two types of actual concentrations, a pure and an uncontaminated. The five clairvoyances are supported on a pure actual absorption and not on an uncontaminated actual absorption. However, the sixth clairvoyance, that knowing the exhaustion of contaminations, is supported on an uncontaminated actual absorption.

“The concentration on the excellent end,” explained in Lati Rinpoche’s Meditative States, is developed through “alternating meditation.” A yogi meditates on an uncontaminated concentration then a contaminated concentration, then an uncontaminated concentration and then a contaminated concentration, and so forth.

(2) The nature of the supported clairvoyances (definition)

The definition of a clairvoyance is: that which abides in a special class because of seeing its object directly in dependence on a mind that is an actual absorption of a concentration which is its empowering condition.

203
(3) Divisions
Clairvoyance has six divisions: that of magical emanation and so forth

The definition of the clairvoyance of magical emanation is: that which is one of the six clairvoyances, is a cognizer that is able to shake the earth, and emanates one into many and many into one and so on.

A mere magical emanation can be divided into four: magical emanation due to karma, magical emanation due to mantra, magical emanation due to medicine, and magical emanation due to the development of concentration. An illustration of a magical emanation due to karma is a magical emanation of a human being, a universal king, a yaksha, and raksha. An illustration of a magical emanation due to mantra is being able to perform magical emanation by reciting mantras, such as being able to levitate or fly, or making the body shrink or grow. An illustration of a magical emanation due to medicine is being able to make magic just by merely holding certain medicines. An illustration of a magical emanation due to concentration is the clairvoyance of magical emanation.

The magical emanation of a human being is performing magic by way of substances; this is often given as an example in the teachings of non-true existence. The fourth cannot be easily achieved, for it cannot be achieved by mantra and medicine, but only by way of achieving an actual concentration.

Tuesday afternoon class, March 17, 1998

The definition of the clairvoyance of divine ear is: that which is one of the six; arises in dependence on a divine ear which is its empowering condition; and knows the gross and subtle sounds existing in the world. Mere divine ear is divided into three: the divine ear attained at birth, the divine ear arisen from karma, and the divine ear arisen from concentration. An illustration of the divine ear attained at birth is that in the continuum of a being of the fourth concentration. An illustration of the second, the divine ear arisen from karma, is that of a universal king. An illustration of the third, the divine ear arisen from concentration, is that of this case, the clairvoyance of divine ear.

To achieve the clairvoyance of the divine ear one needs to first attain an actual absorption, such as that of the first concentration, after which clear matter forms around the ear faculty, which is its empowering condition. This faculty is hundreds of times more powerful than the ordinary ear faculty; with it one can hear the gross and subtle sounds in all the worlds.

A mere divine ear attained at birth is that of a being who is born in any one of the four concentrations and immediately has the divine ear.

A mere divine ear of a universal king is that due to karma a universal king is able to hear distant sounds. Now we have radios and satellites which allow us to hear sounds at a long distance, this is due to the power of substance. However, one day we will be able to hear sounds at a long distance by the power of the divine ear without need for such technology. Hearing sounds through, for example, a radio is due to the meeting of certain conditions, in the same way the divine ear can be achieved by the gathering of the necessary conditions.

The definition of the clairvoyance knowing others’ minds is: that which is one of the six and abides in the class of knowing whether others minds are with attachment or without attachment, and so forth. There is a purpose to saying “abides in the class”; it is to know that the clairvoyance knowing others’ mind that is in the continua of non-Buddhists is not the same as this clairvoyance because their clairvoyance is not able to know whether there is or is not attachment in the minds of others because they cannot know that others’ minds are free from attachment.

If the mere knowing of others’ minds is divided there are four: the knowing of others’ minds attained at birth, the knowing of others’ minds arisen from karma, the knowing of others’ minds arisen from being a logician (the Vedas), and the knowing of others’ minds arisen from
concentration. An illustration of the first, the knowing of others’ minds attained at birth, is the knowing of others’ minds that is possessed by gods of the desire realm and by many spirits. An illustration of the second, the knowing of others’ minds arisen from karma, is the knowing of others’ minds of the intermediate state beings. An illustration of the third, the knowing of others’ minds arisen from being a logician, is the knowing of others’ minds in the continua of an expert logician. An illustration of the fourth is the knowing of others’ minds of this case, the clairvoyance knowing others’ minds.

Gods of the desire realm at birth naturally have the ability to know others’ minds, likewise some spirits naturally know others’ minds. Intermediate state beings due to karma have a complete set of faculties and can move unobstructedly, as a result they know others minds. The knowing of others’ minds in the continua of an expert logician is illustrated by a story. Vasubandhu and Dignaga one time were considering a pregnant cow, unseen to them, on the opposite side of a hill. They made a bet as to how the cow’s calf would be. Dignaga said that the calf would have a white patch on its forehead. However, Vasubandhu, based on intellectual understanding, said that it was the tip of the calf’s tail that was white. After the calf was born they asked the owners where the white patch was on the calf and it was found to be the tip of its tail. Therefore, Vasubandhu was right based on his knowledge of how a calf is situated in the womb of a cow, i.e., that its tail lies against its forehead.

The definition of the clairvoyance of remembering former lives is: that which is one of the six and abides in the class of remembering the places of many former births of oneself and others. There is a purpose to saying “abides in the class”; it is to eliminate the clairvoyance of non-Buddhists who do not see as many past lives. When the mere knowledge of past places is divided there are three: the knowledge of past places at birth, the knowledge of past places arisen from karma, and the knowledge of past places arisen from concentration. An illustration of the first is that of most spirits. An illustration of the second is that of hell beings, who when they take rebirth in the hell realm can recall their previous rebirths. An illustration of the third is the clairvoyance remembering former lives.

The definition of the clairvoyance of divine eye is: that which is one of the six; arises in dependence on its empowering condition the divine eye; and clearly sees all the gross and subtle forms existing in the universe. If the mere divine eye is divided there are three: the divine eye attained at birth, the divine eye arisen from karma, and the divine eye arisen from concentration. An illustration of the first is that of hell beings, who when they take rebirth in the hell realm can recall their previous rebirths. An illustration of the second is that of a universal king. An illustration of the third is that of this case, the clairvoyance of divine eye.

The two clairvoyances of the divine eye and the divine ear are not sensory consciousnesses, but are mental consciousnesses because these two are consciousnesses generated upon the support of a mind of an actual absorption, which is their uncommon empowering condition. This is according to Svatantrika-Madhyamika. However, in Abhidharmakosha the Vaibhashikas assert that the divine eye and divine ear are sensory consciousnesses that are unpredicted/neutral phenomena.

The definition of the clairvoyance knowing the exhaustion of contaminations is: that which is one of the six clairvoyance and is a total abandonment of deluded/afflictive obscurations.

The difference between the clairvoyance of divine eye and the divine eye/eye of the gods is that the clairvoyance of divine eye arises from achieving an actual absorption in this life while the divine eye comes from the maturation of virtuous karma created in the past. In Lamp of Illumination, a commentary on the Twenty-Thousand Stanza Perfection of Wisdom Sutra, it says that the difference is that any divine eye belonging to the group of five eyes arises from the maturation of karma, while the divine eye of clairvoyance comes from a manifest effort in concentration (or
from actualizing a concentration). *Abhidharmakosha* says: “All six clairvoyances are liberated minds,” meaning they are wisdom. In *Abhidharmasamucchaya* it says: “They are included in either concentration or wisdom”.

### (3) Boundaries

The first five clairvoyances exist in the continua of non-Buddhists, hearers, solitary realizers, and bodhisattvas. The sixth clairvoyance, that knowing the exhaustion of contaminations, exists in the continua of all foe destroyers who have attained an actual absorption of concentration. In the case of somebody who has not entered the Hinayana previously, an approximate sixth clairvoyance exists from the eighth ground up while the real one exists on the buddha ground.

### (4) Causes:

There are common causes, causes that project each individually, and causes that actualize.

The common cause for all six clairvoyances is any of the four actual absorptions of the concentrations.

Then comes the causes that project the six clairvoyances individually. The cause for the clairvoyance of divine eye, as it says in Nagarjuna’s *Precious Garland*, is making garlands of light offerings to stupas and in dark places, and making offerings of butter lamps and oil lamps. The cause of the clairvoyance of divine ear is offering music, bells, conch shells, and drums. The cause of the clairvoyance knowing others’ minds, as it says in Nagarjuna’s *Precious Garland*, is to not talk a lot about others’ faults, to not point out what others lack, and so forth, such as saying, for example, that so-and-so has a long nose. The cause of clairvoyance of magical emanation, as it says in Nagarjuna’s *Precious Garland*, is offering shoes and vehicles, paying respect to those who are humble and to those who are one’s elder. “Being wise in this, one will attain magical emanation.” The cause of the clairvoyance remembering others’ lives is to perform Dharma activities, to remember the words and meaning of Dharma, to give Dharma teachings; being pure in these, one will remember one’s past lives. The cause of the clairvoyance knowing the exhaustion of contaminations is knowing that all phenomena do not have the nature of true existence. By this one will attain the supreme state in which all contaminations are exhausted. These are the causes that project the six clairvoyances individually.

Then there are the causes that actualize the six clairvoyances. One first develops a mind of an actual absorption of a concentration which is a non-conceptual exalted wisdom. Then, with this exalted wisdom, one focuses on the six respective objects of the six clairvoyances and reflects upon them. In this way one will quickly attain the six clairvoyances. In *Ornament for Sutra* it says: “After attaining an extremely peaceful concentration, one thoroughly holds a non-conceptual exalted wisdom and reflects on abiding in the aspect of a self-cognizer accordingly. One will thereby attain the sublime cause to accomplish the clairvoyances.” Jetsun Chokyi Gyeltsen says that after developing an absorption of an actual concentration, one goes on to reflect on the appearances of forms, to reflect on the diverse appearances of sounds to the ears, to reflect on the infinite enumeration of minds, to reflect on infinite past lives, to reflect on a light body without obstructions, and to reflect on all phenomena as being non-truly existent. Meditating in this way one will attain the clairvoyances quickly. This is the method for training in clairvoyances. For example, to reflect on the appearance of forms, one trains by meditating to see things at a long distance. To reflect on a light body, one meditates that one’s body is as light as cotton and without obstruction, that it can pass through walls, and so forth. Meditation on all phenomena as lacking true existence is the cause to attain the clairvoyance knowing the exhaustion of contaminations.

One of the exercises to train in knowing others’ minds is to begin by imagining what others are like by noting that they have such and such a type of body, gestures, expressions, etc.

### (5) Purpose
The purpose [of attaining the six clairvoyances] is the same as that mentioned in Gyeltsab’s *Essential Explanation*: “One who has the six clairvoyances is able to hear the gross and subtle sounds of Dharma teachings in all the worlds...” and so forth.

Jetsun Chokyi Gyeltsen summarizes the six clairvoyances saying, “In brief, the six clairvoyances have the distinguished result of the three doors of liberation, [known as] the aryas’ abode, the distinguished result of the four concentrations, [known as] the god’s abode, and the distinguished result of the four immeasurables, [known as] the abode of Brahma (great purity, a buddha realm). While remaining within these results one makes offerings to the fully accomplished buddhas existing in the countless worlds for the sake of sentient beings and purifies the negativities that obscure sentient beings. In *Ornament for Sutra* it says: “By which the abode of the aryas, the gods, and Brahma. One abides there for a long time and makes offerings to all the buddhas of the ten directions for sentient beings.”

There are two more distinguished qualities which we will cover tomorrow.

Wednesday morning class, March 18, 1998

(Continuation of the fifth, purpose)
A further explanation concerning the fifth outline which is about the purpose is that the distinguished result of the six clairvoyances is to abide in the aryas’ abode, the three doors of liberation; to abide in the gods’ realm, the four concentrations; and to abide in Brahma’s abode, the four immeasurables.

There are different ways of positing the three doors of liberation, in this context they are that all phenomena have the entity of not existing truly (emptiness); there being no sign of truly existent causes (signlessness); and there being no wish to (attain) a result that is truly existent (wishlessness). Brahma’s realm has four levels called immeasurable love, immeasurable compassion, immeasurable joy, and immeasurable equanimity. “Brahma” here refers to the great pure land of a buddha. One wanting to attain enlightenment has to develop the four immeasurables, while in the buddha ground these have already been developed.

In summary, the six clairvoyances are explained in terms of their distinguished functions which are divided into three: (1) the function of seeing and showing, (2) the function of radiating rays of light, and (3) the function of purifying the place/land. With respect to the function of seeing and showing in *Ornament for Sutra* it says: “One with the six clairvoyances sees all those with attachment and all those with fear, and sees even the whole universe as an illusion. He has control due to possessing clairvoyance by way of which he can show diverse methods to sentient beings.”

With respect to the function of radiating rays of light it says in *Ornament for Sutra*: “One with the six clairvoyances radiates rays of light everywhere. They set the beings of the lower realms on the way to high status and destroy the mansions of the maras which appear as beautiful, thereby expelling and frightening the maras.” Sometimes maras create emanations, such as beautiful houses, which attract people to live there. One who has the six clairvoyances destroys such houses and sends the maras away.

With respect to the function of purifying the land it says in *Ornament for Sutra*: “One with the six clairvoyances abides in the supreme spiritual community of hearers and bodhisattvas and demonstrates immeasurable levels of concentration. He, with a supreme emanation body, works for the welfare of sentient beings through action, rebirth, and land. He remains all the time.” Also it says: “Because of having gained control over exalted wisdom, one attains a pure land in accordance with one’s wishes. One then makes the Buddha’s name known in those places where it was unknown and causes the sentient beings therein to be placed in the pure lands.” “Because of having gained control over exalted wisdom” means that someone who has the six clairvoyances is able to attain a pure land and, having the clairvoyance knowing the exhaustion of contaminations, can show various aspects to sentient beings, for example, manifesting the color of
lapis lazuli. This person already has attained ten types of control and is therefore able to show whatever is necessary for sentient beings, wherever they are, in accordance with their wishes. “Abides in the supreme spiritual community” means that such a person can demonstrate his powers of concentration to the aryasangha. The ten types of control are:

1. control over life
2. control over the mind
3. control over necessities
4. control over actions
5. control over rebirth
6. control over belief/appreciation
7. control over prayers
8. control over magical emanations
9. control over exalted wisdom
10. control over Dharma

The meaning of these will be explained in the eighth chapter of the Ornament.

Furthermore, someone with the six clairvoyance is able to thoroughly ripen, is admired, and his words are worthy of being retained. As it says in Ornament for Sutra: “With those six clairvoyances one will have the ability to thoroughly ripen sentient beings, will be able to fly like a bird with two wings, will receive great admiration from the buddhas, and one’s words will be worthy of being retained by others beings.” This means that one with the six clairvoyances can easily gather disciples by, for example, flying in the sky, like a bird with two wings, to attract sentient beings. The buddhas admire one with six clairvoyances saying, “Well said. Well said,” when such a person correctly answers questions. There are certain words expressed by one possessing the six clairvoyances that are worthy of being retained, because they are of value. This is because one who possesses the six clairvoyances benefits sentient beings.

(6) Differentiation

In the text The Destruction of Harm, a commentary on the Perfection of Wisdom Sutras, it says: “The clairvoyance existing in the continua of worldly beings, hearers, and solitary realizers allows them to see the minds of those equal or inferior to themselves. The clairvoyance of a bodhisattva allows him to see even the minds of beings of a higher state. They are not impeded to see the power of higher beings such as those of the Buddha Bhagavan.”

Concerning the path of seeing, the very entity of the sixteen moments included (as subjects) by the four truths the essential nature of dharma-forbearance, dharma-knowledge, subsequent-forbearance, and subsequent-knowledge the yogi, like a magician, realizes all phenomena are without entitiness thereby embodies an absence of strong clinging to any phenomenon, and thoroughly meditates on (the mere entity of the sixteen moments) as the direct antidotes themselves of the objects to be
abandoned by the (path of seeing). Setting this forth instructs concerning the path of seeing.

Gyeltsab asks, “What is the path of seeing?” to which the answer is that the path of seeing is the sixteen moments of the realization of the four noble truths, those of dharma forbearance and so forth. To what person are these instructions given? To a yogi who realizes all phenomena as without the entity of true existence. Gyeltsab says that since the actual commentary on the path of seeing will come later on he will not go into detail here.

The sixteen moments of the realization of the four noble truths are the moments of the path of seeing that observe the four noble truths of the desire realm and of the upper realms. With respect to the desire realm there are four dharma forbearances and four dharma knowledges, for a total of eight. With respect to the upper realms there are the four subsequent forbearances and subsequent knowledges, for a total of eight. With respect to the sixteen moments of the path of seeing of a Mahayanist, the eight forbearances are said to occur simultaneously and the eight knowledges to occur simultaneously. For someone on a Hinayana path of seeing, the sixteen moments are gone through sequentially: dharma forbearance with respect to true sufferings, dharma knowledge with respect to true sufferings, subsequent forbearance with respect to true sufferings, subsequent knowledge with respect to true sufferings, and so forth. The Svatantrika-Madhyamikas assert that the Mahayana path of seeing abandons 108 obscurations to knowledge and 112 afflictive obscurations.

Gyeltsab quotes sutra: “Subhuti, without the sphere of compounded phenomena it would not be possible to label a sphere of uncompounded phenomena.” This passage is an instruction about the path of meditation by way of example because it instructs about the path of meditation which is the actual antidote to the innate [obscurations to knowledge and the afflictive obscurations].

The compounded (true path) and the uncompounded (true cessation) are merely one entity. Just as one cannot realize them as mutually different because they are not observed as different from the property which was made manifest by the path of seeing that was explained, (the path of ) seeing and meditation do not have (modes of realizing dharmata) which are different. Thus there is no fully qualified presentation of the path of meditation.

Gyeltsab says that there is no qualified path of meditation to be presented as a different entity from the path of seeing which directly realizes reality because the path of seeing and the path of meditation are not different in terms of their contemplating the same object emptiness. There is a true path that directly realizes compounded phenomena. If the true paths and the true cessations which are free from the seed of stains were different entities it would follow that true cessations would not be free from stains. Just as true paths and true cessations are not different entities, also the two paths, the path of seeing directly realizing its object, and the path of meditation are not different entities. The path of meditation observes the same object observed by the path of seeing. An emptiness does not have a differentiation of aspects by way of entity. Even the two contemplations that meditate on the emptiness do not have a differentiation of aspect by way of entity. Furthermore, the two paths, the path of seeing and the path of meditation, directly observe the very elimination of the conceived object of the innate conception of true existence.

Gyeltsab says that however these two paths cut off their individual objects, their respective superimpositions. This is because the path of seeing removes intellectually formed objects of abandonment, while the path of meditation removes innate objects of abandonment.
Someone says: “Within the contemplation of the tenth ground there is no difference in seeing the object emptiness but there is a difference in seeing the truth body.” We respond: “According to someone who accepts true cessations as ultimate truth that would be right. But if we assert that true cessations are conventional truths then there would be many consequences. If they were conventional truths it would follow that they would be contemplated on the learner’s path that directly sees emptiness but this goes beyond logical reasoning because seeing a conventional truth within that contemplation is not possible. It would follow that meditation equipoise and post-meditation would be the same for someone on a learner’s path. It would follow that this person would have the total abandonment of the stains of the conception holding the two truths as different entities. It would follow that there would not be a mistake in a bodhisattva actualizing the perfect end without completing the three conditions.”

This discussion comes concerning the two truths because Svatantrika-Madhyamika asserts that true cessations are conventional truths while Prasangika-Madhyamika asserts that they are ultimate truths.

However, that is (established) by the nature of dependent-arising. “Meditate on the direct antidotes of the objects to be abandoned by that (path of meditation),” instructs about the path of meditation.

Someone says: “If you say that there are no differences in the characteristics of the path of seeing and the path of meditation it would follow that they do not differ in their ability to abandon the objects of abandonment.” Our own system replies: “Although the two paths are not of different types, the two do have a difference in their ability to abandon the objects of abandonment. For example, the former path does not abandon the innate seeds. The latter path has much greater familiarity with emptiness and is therefore naturally able to abandon the innate seeds. For example, a valid inferential cognizer realizing that sound is impermanent knows the non-existence of sound as permanent; yet this only harms the manifest conception of sound as permanent which is intellectually formed and not the innate conception that sound is permanent.” A valid inferential cognizer realizing that sound is impermanent only abandons the intellectually formed conception of permanent sound and not the innate conception of permanent sound. The purpose of giving this illustration is to show that the path of seeing abandons the intellectually formed objects of abandonment while the path of meditation abandons the innate objects of abandonment. However, these two paths are the same in taking emptiness as their object.

Wednesday afternoon class, March 18, 1998

Gyeltsab says that thus the Mahayana instructions/precepts presented here are of ten types. These ten are presented in the context of instructions because those who strive for the omniscient state can actually accomplish their aims perfectly and completely merely by way of these ten divisions. If someone were to think that there is no purpose to setting out the paths and explanations that follow this would not be right because, although there is no Mahayana path that is not included here in [the category of] instructions/precepts, all the divisions and clarifications are not presented here, therefore they need to be learned from other texts. In brief, although one may think that there is no need to go through the paths because they are gone through here this would not be right because there are many more divisions and clarifications than are included here. These should be learned from other sources. For example, although there are no functioning things that are not included in the category of product there is no pervasion that the term “product” presents all functioning things.
Thus, concerning the mind of enlightenment and the very entity of the phenomena entailed by that, the perfection of wisdom, 1) not referring to whatever aspects of achieving there are, 2) the four truths of the superiors which are the observed objects of that, 3) the three refuges which are the support, 4) non-attachment which is the cause of special progress, 5) consistent tirelessness which is the cause of irreversible progress, 6) completely upholding the path which is the cause of not progressing by other vehicles, 7) the five eyes which are the cause of progressing without dependence on others, 8) the six clairvoyances which are the causes of perfectly completing the knower of all aspects, and (9-10) some of the final causes the path of seeing the truth and meditation, all these are set out in the context of precepts, and since by just that much all aims will become perfected, the precepts are of ten types.

Gyeltsab says that the ten paths, meaning the ten divisions of instructions/precepts, are based on the mind of enlightenment, projected by the mind of enlightenment, sustained by the mind of enlightenment. This entity of Dharma practice is included in the order of the Mahayana path.

To practice such a perfection of wisdom there are different types of meditation on the ten divisions, some of which are not common to hearers. The ten divisions are: (1) not going beyond the limit of the two truths, (2) the observed object of achievement, (3) the support of achievement, (4) the difference of increasing more and more, (5) being irreversible from the practice of achievement, (6) not degenerating from the Mahayana path and falling down to those of hearers and solitary realizers, (7) [the five divine eyes] for engaging in achievement independently, (8) [the six clairvoyances] for quickly achieving the two accumulations, (9) the path of seeing, and (10) the path of meditation. The last two are the causes for finalizing the achievement by extinguishing the two obscurations. These are the ten instructions. In general, the reason for giving the instructions of the ten divisions together with the attribute of emptiness is to make it known that in general all Mahayana paths should be sustained by wisdom and in particular to know that on the path of accumulation one should meditate on conventional truths during post-meditation and on emptiness during meditative equipoise. By meditating thus, one will know that on definite similitude, the path of preparation, there is the wisdom arisen from meditation observing emptiness.

In this way we have completed the topic of precepts. Each of the seventy topics contains the complete path to enlightenment.

2B2C-1A2B-1B2A-1A Presentation of fruits

Gyeltsab asks, “What is the result of the mode of training in virtue?” The answer is that the mode of training in virtue is the manner of engaging in ultimate virtue by abandoning the delusions. The mode of training in virtue is an uninterrupted path. There are certain abandonments by the uninterrupted path that are called a “result of separation,” while a result of a liberated path is called “a result similar to the cause.” Therefore, when results are divided there are two types: the compounded and the uncompounded. The result of a liberated path is a compounded phenomena, while the result of separation is an uncompounded phenomena. There are four types
of result in this context according to sutra. There are four results because there are obstacles to engaging in liberation which are (1) the three objects of abandonment of the path of seeing, (2) the last five similitudes, and (3) the five upper similitudes. The four results in relation to the three objects of abandonment are:

(1) the result of stream enterer which comes about by abandoning the obstacles that are the three objects of abandonment of the path of seeing;
(2) the result of once returner which is achieved by abandoning most of the second, the last five similitudes;
(3) the result of non-returner which is achieved by abandoning all of the second, the last five similitudes without exception, and
(4) the result of foe destroyer which is achieved by abandoning the third, the five upper similitudes.

The results of once returner and non-returner are called “middle results” because they come between the result of stream enterer, the first result, and the result of foe destroyer, the last result. The three objects of abandonment of the path of seeing are: transitory view (view of the transitory collection), the view holding bad morality and bad conduct as supreme, and doubt. This transitory view is that which is intellectually formed. The last five similitudes are: transitory view, the view holding bad morality and bad conduct as supreme, doubt, the attachment of the desire realm, and harmful mind (no sem). The five upper similitudes are: the attachment of the form and formless realms, sleep, excitement, pride, and deluded ignorance.

The first two results, those of stream enterer and once returner can be achieved supported on a preparation of the first concentration. For one who goes through the four results in a sequential manner, the mental support is a preparation of the first concentration (Not Unable).

The third result, that of non-returner, is achieved by previously separating from attachment. The reason for emphasizing attachment is that when someone attains the path of seeing this person has almost always previously separated from the attachment of the desire realm. Those who have the result of non-returner have previously separated from the attachment of the desire realm. One who has achieved the second result, that of once returner, has abandoned most of the delusions of the desire realm. The delusions are divided into nine levels: the small big, small middle, small small, and so on. A once returner has abandoned the first six and is therefore said to have abandoned most of the delusions of the desire realm. A non-returner has abandoned all nine levels of desire realm delusions.

A non-returner who previously separated from attachment did so by depending on one of the four actual absorptions of the concentrations. One who goes through the four results serially achieves the result of non-returner in dependence on a preparation of an actual concentration. One who previously separated from attachment achieves a result of non-returner supported on one of the four actual concentrations.

If the fourth result, that of foe destroyer, is attained in the two lower realms, the desire realm or form realm, it is achieved supported on any of the six levels of concentrations. If it is achieved in the formless realm it is achieved supported on any of the first three formless absorptions (Infinite Space, Infinite Consciousness, and Nothingness).

Thursday morning class, March 19, 1998

With regard to the twenty types of sangha we said that when the fourth result is realized in the two lower realms (the desire and form realms) it is achieved supported on six levels of concentration. These six are:
(1) the preparation of the first concentration called Not Unable
(2) the mere first actual concentration
(3) the special first actual concentration
(4) the second actual concentration
(5) the third actual concentration
(6) the fourth actual concentration
If the fourth result is attained in the formless realm it is supported on a mind of one of the first three formless absorptions: Infinite Space, Infinite Consciousness, or Nothingness. It cannot be achieved supported on a mind of the desire realm or a mind of the Peak of Existence. The mind of the desire realm is too gross and the mind of the Peak of Existence is too subtle and unclear. Therefore, these two minds are not appropriate supports of the fourth result.

By which paths are these results attained? The first result, that of stream enterer, is attained only by the path of seeing. The second and third results, those of once returner and non-returner, when attained serially are attained on the path of meditation. The result of once returner and non-returner who have previously separated from attachment to the desire realm are attained on the path of seeing. The result of foe destroyer is attained only by the path of meditation because the objects of abandonment of the Peak of Existence can only be totally extinguished by the path of meditation.

The four results can be attained by two types of path, a mundane path and a supermundane path. The first and the last results are attained only by the supermundane path. One who has strong familiarity with calm abiding attains the middle two results in dependence on the mundane path which has the aspects of coarseness and peace. “Strong familiarity with calm abiding” means that a mundane path of calm abiding, of someone who has not yet attained the path of seeing, functions to abandon attachment to the lower realms by looking at the lower realms as coarse and the upper realms as peace.

The physical support of the four results are as follows. The first three results, stream enterer, once returner, and non-returner, can be attained with the body of the desire realm. The result of foe destroyer can be attained with a body of all three realms.

This is a general overview of the twenty sangha.

2B2C-1A2B-1B2A-1B Presentation of persons

There are eight persons: (1) approacher to the first result, (2) abider in the first result, (3) approacher to the second result, (4) abider in the second result, (5) approacher to the third result, (6) abider in the third result, (7) approacher to the fourth result, and (8) abider in the fourth result.

The definition of an approacher to stream enterer is: a person striving for the distinguished result by way of abandoning the three fetters (objects of abandonment of the path of seeing). There are two divisions: followers of faith and followers of Dharma. The boundary is from a single meditation session that begins on the path of preparation up to the liberated path belonging to the result of stream enterer.

The definition of an abider in the result of stream enterer is of two types: a serial abider in the result and a simultaneous abider in the result. The definition of a abider in the result of stream enterer who abandons serially is: a person abiding in the distinguished result by way of abandoning the three fetters (objects of abandonment of the path of meditation). The objects to be abandoned are the attachment and so forth of the three realms. These are not abandoned at once because a serial abider in the result abandons them serially. The three objects to be abandoned, the three fetters, are the intellectually formed transitory view, the view holding bad conduct and bad morality as supreme, and doubt.

When abiders in the result of stream enterer are divided in terms of faculty there are two: aspirers-by-faith and attainers-by-seeing.

When abiders in the result of stream enterer are divided in terms of activity there are two: mere abiders in the result and distinguished abiders in the result. A mere abider in the result is
one who has attained the result of stream enterer who is not yet striving to achieve the result of once returner. A distinguished abider in the result is one who has attained the result of stream enterer and is striving to achieve the result of once returner.

These divisions in terms of faculty and activity should also be applied to once returners and non-returners.

When abiders in the result of stream enterer are divided by way of differentiation of rebirth there are two: those who are obstructed by seven lives and those who has to be born from class to class. Those who are obstructed by seven lives are divided into two: those who are definite and those who are not definite. Those who are born from class to class are also divided into two: those who are born as a god after having been a god and those who are born as a human after having been a human.

The boundaries of stream enterer is that it exists from the sixteenth moment of the path of seeing up to the uninterrupted path that abandons the sixth delusion to be abandoned by the path of meditation.

The definition of an abider in the result of stream enterer who abandons simultaneously: a person abiding in the distinguished result by way of abandoning the three fetters who simultaneously abandons all the objects of abandonment of the three realms that are to be abandoned by the path of meditation.

By depending on the preparation of the first concentration called Not Unable, one is able to abandon all the delusions of all three realms. The other levels (the mere actual first concentration, the special actual first concentration, the second actual concentration, the third actual concentration, the fourth actual concentration, and the four formless absorptions) are not appropriate mental supports for abandoning all the delusions of the three realms. These delusions are abandoned only by the supermundane path of meditation because a mundane path of meditation is not able to abandon the delusions of the Peak of Existence. In short, only on the support of the preparation Not Unable can all delusions of the three realms be abandoned simultaneously. It is not possible to abandon all these delusions at once on the basis of the mundane path which has the aspect of coarseness and peace.

The way of abandoning is now discussed. The path of meditation is divided into three main divisions: small, middle, and great. These are then further divided into: 1) small small, 2) middle small, 3) big small, 4) small middle, 5) middle middle, 6) middle big, 7) small big, 8) middle big, and 9) great big. These nine divisions of the path of meditation abandon the 81 levels of attachments of the nine levels.

The nine levels are: 1) the desire realm, 2-5) the four concentrations of the form realm, and 6-9) the four formless absorptions. There is attachment in each of the nine levels. This attachment in each particular level is divided into three: great, middle, and small. These are further divided into: 1) big big, 2) middle big, 3) small big, 4) big middle, 5) middle middle, 6) small middle, 7) big small, 8) middle small, and 9) small small. As there are nine attachments for each level and nine levels, there is total of 81 attachments.

The small small path of meditation simultaneously abandons all the big big levels of attachment of all nine levels. The middle small path of meditation simultaneously abandons all the middle big levels of attachment of all the nine levels. This is the same up to the ninth antidote which is the big big path of meditation that simultaneously abandons all the small small levels of attachment of all the nine levels.

The person who meditates with the preparation of Not Unable is sharp facultied and meditates thinking that the aggregate of form and so forth are impermanent, selfless, etc. without distinguishing them as belonging to the desire realm and so forth. By gathering the aggregates of form and so forth into one he then familiarizes himself with this meditation.

The abiders in the middle two results do not simultaneously abandon all the objects of abandonment because when abiders in the result of once returner abandon the sixth level of attachment of the desire realm they do not abandon the sixth level of attachment of the Peak of
Existence which is to be abandoned by the supramundane path of meditation, and when abiders in the result of non-returner abandon the ninth level of attachment of the desire realm they do not abandon the ninth level of attachment of the Peak of Existence. Only abiders in the result of stream enterer and abiders in the result of foe destroyer simultaneously abandon all these levels of attachment [by each of the nine antidotes].

Simultaneous abiders in the result of stream enterer are divided into two: mere abiders in the result of stream enterer and distinguished abiders in the result of stream enterer. A distinguished abider in the result is one who is striving to attain the result of foe destroyer.

The boundaries of these two divisions of abiders in the result of stream enterer are that they exist from the 16th moment of clear realization of the truth up to the level of the uninterrupted path of meditation that abandons the small small level of attachment (the 81st attachment) that is to be abandoned by the path of meditation.

Once returners are also divided into enterers and abiders. The definition of an approacher to the result of once returner is: a person who is striving to attain a distinguished result of training in virtue who has previously separated from most of the attachments of the desire realm. There are two divisions: the approacher to once returner who abandons serially and the approacher to once returner who leaps over. The boundary of the approacher to once returner who abandons serially is that it exists from the moment of exerting effort (after attaining the path of seeing) in abandoning the objects of abandonment of the desire realm by the mundane path of meditation up to the abandonment of the sixth delusion.

An abider in a result who abandons serially is one who first enters into stream enterer and attains that result, then enters into once returner and attains that result, then enters into non-returner and attains that result, and then enters into foe destroyer and attains that result.

The definition of an approacher to the result of once returner who leaps over is: one who has abandoned any of the two levels of attachment, the seventh and eighth, of the desire realm before the path of seeing. Although this person has abandoned seven or eight levels attachment of the desire realm, he has definitely not abandoned the ninth level of attachment. In other words, the an approacher to once returner who leaps over is one who has previously separated from the six levels of attachment of the desire realm [by the mundane path] and then enters the path of seeing [without previously attaining the result of stream enterer], whereupon on the sixteenth moment of the path of seeing, the subsequent knowledge of true paths, he attains the abider in the result of once returner.

An approacher to the result of non-returner who leaps over abandons the nine levels of attachment of the desire realm before the path of seeing. He then enters the path of seeing and on the sixteenth moment, the subsequent knowledge of true paths, becomes an abider in the result of non-returner. According to Abhidharmakosha there is are five reasons for positing the four results.

Thursday afternoon class, March 19, 1998

The definition of an abider in the result of once returner is: a person abiding in the distinguished result of training in virtue who has previously separated from most of the attachments of the desire realm. When abiders in the result of once returner are divided there are two in terms of the result attained: abiders in the result of once returner who abandon serially and abiders in the result of once returner who leap over.

There is an abider in the result of once returner who has only one more rebirth before achieving the result of foe destroyer. Such an abider in the result of once returner has abandoned either the seventh or eighth level of attachment of the desire realm, but has not abandoned the ninth level of attachment. He will attain nirvana by taking one more rebirth. He attains an uncontaminated faculty which is one of the three uncontaminated faculties included in the
twenty-two faculties: (1) the faculty making all known, (2) the faculty knowing all, and (3) faculty possessing the knowledge of all. These are the antidotes that abandon the objects of abandonment; they refer respectively to the path of seeing, the path of meditation, and the path of non-more-learning. The five faculties of faith, effort, mindfulness, concentration, and wisdom accompany these uncontaminated faculties.

The boundaries of abiders in the result of once returner who leap over is from the sixteenth moment of clear realization of the truth up to the uninterrupted path of meditation that is the antidote to the ninth level of attachment of the desire realm. The boundaries of the abider in the result of once returner who abandons serially are from the liberated path that is separated from the sixth level of attachment of the desire realm up to the uninterrupted path of meditation that is the antidote to the ninth level of attachment of the desire realm.

There are also enterers into the result of non-returner and abiders in the result of non-returner. The definition of an approacher to the result of non-returner is: a person who strives to attain the distinguished result of training in virtue by abandoning the last five similitudes. The divisions are two as above: enterers into the result of non-returner who abandon serially and enterers into the result of non-returner who leap over.

The boundaries of non-returners who have previously separated from attachment are similar to those of once returners who leap over, i.e., from the sixteenth moment of clear realization of the truth up to the uninterrupted path of meditation that is the antidote to the ninth level of attachment of the desire realm.

The difference between an approacher to the result of non-returner who has previously separated from attachment and an approacher to the result of once-returner who leaps over is in terms of the objects that they have abandoned. An approacher to the result of non-returner who has previously separated from attachment has abandoned any level of attachment from the ninth level of attachment of desire realm up to the 72nd level of attachment of Nothingness (the third formless absorption).

The boundaries of enterers into the result of non-returner who abandon serially is from the moment of exerting effort in abandoning the seventh level of attachment of the desire realm after attaining the path of seeing up to that of exerting effort in abandoning the ninth level of attachment of the desire realm.

An abider in the result of non-returner is: a person who abides on the distinguished result of training in virtue by way of abandoning the last five similitudes: (1-3) the three fetters, (4) aspiration for the desire realm, and (5) harmful mind. When abiders in the result of non-returner are divided in terms of the manner of attaining the result there are two: abiders in the result of non-returner who attain the result serially and abiders in the result of non-returner who attain the result by previously separating from attachment. There is also a division of abiders in the result of non-returner in terms of devoting oneself to the aryā Dharma: non-returners who having completed their life in the desire realm go to nirvana and non-returners who do not attain nirvana in that same life but in a future life. Non-returners who having completed their life in the desire realm go to nirvana are those who first generate the aryā path in the desire realm, then continuously generate the path, and then attain the result of non-returner. Having attained the path of seeing, they attain nirvana in, literally, seen-phenomena (the same life).

Non-returners who do not attain nirvana in that same life but in a future life are those who attain the result of non-returner on the path of seeing and do not attain nirvana in that same life but either (1) migrate to the form realm, (2) migrate to the formless realm, (3) attain peace in that life, or (4) manifest with a body.

The definition of a non-returner who migrates to the form realm is: a person who, having attained the result of non-returner at the time of attaining the path of seeing, takes rebirth in the form realm. There are five divisions: (1) those who pass beyond in the intermediate state, (2) those who pass beyond upon rebirth, (3) those who pass beyond with manifest effort, (4) those who pass beyond without manifest effort, (5) those who transfer to a higher level. To attain nirvana
one can pass beyond in the intermediate state, at rebirth, by manifest effort, without manifest effort, and by transferring to a higher level. Transferring to a higher level means that the non-returner migrates from, for example, the desire realm to the first concentration, and so forth. A non-returner who passes beyond in the intermediate state has abandoned the fetters of the projecting causes to be reborn in the form realm but has not abandoned the fetters that are actualizing causes for such a rebirth. Although he passes beyond, i.e., achieves nirvana, in the intermediate state of the form realm, and therefore does not take rebirth there, he is said to migrate to the form realm because he achieves the intermediate state of the form realm which is part of the process of taking rebirth there.

Non-returners who achieve nirvana in the intermediate state of the form realm are of three types: (1) those who attain nirvana quickly, (2) those who attain nirvana slowly, and (3) those who attain nirvana after a long time.

The definition of a non-returner who passes beyond upon birth is: one who has just come into the birth existence of the form realm who has not abandoned either of the two fetters (the fetters that are projecting causes for rebirth and the fetters that are actualizing causes). Such a non-returner attains nirvana at birth by actualizing the path.

The definition of a non-returner who passes beyond with manifest effort is: one who has not abandoned either of the two fetters and, having taken birth, actualizes nirvana with great manifest effort. The definition of a non-returner who passes beyond without manifest effort is: one who attains nirvana without the need to exert great effort due to strong familiarity with the path. This non-returner is also one who is reborn but he attains nirvana without great effort.

The definition of a non-returner who transfers to a higher level is: one abiding in the distinguished result, having abandoned the last five similitudes, who attains nirvana upon either a support of Not Low (Akanishta) or a support of the Peak of Existence after having taken several rebirths in the form realm. Non-returners who transfer to a higher level are divided into two: (1) non-returners who migrate to Not Low (the seventeenth level of the form realm) and attains nirvana and (2) non-returners who migrate to the Peak of Existence and attains nirvana. Non-returner who migrate to Not Low and attains nirvana are further divided into three: (1) those who leap, (2) those who half leap, and (3) those who leap in all levels of the form realm except that of Great Brahma. Those who leap are called so because this type of non-returner is first born in Brahma Class and then reborn in Not Low where he actualizes nirvana. Those who half leap are called so because this type of non-returner is first born in Brahma Class, then in one of the five arya pure lands of the form realm, and then in Not Low where they actualize nirvana. Those who leap everywhere take rebirth in Brahma Class and are then reborn serially in all the levels of the form realm except that of Great Brahma. The reason that they are not reborn in Great Brahma is because it is said that an arya is not reborn there because in that realm one can generate dissimulation/hypocrisy. There is a story concerning Brahma who deceived someone who asked him a question by answering irrelevantly saying, “I am Brahma. I am great Brahma.” This is also mentioned in Abhidharmakosha saying “With dissimulation Brahma led.”

There are said to be twenty sangha but if counted in detail there are many more.

Friday morning class, March 20, 1998

QUESTIONS AND ANSWERS

Question: Please go through the important points of the teachings given this week and then say something about whether at the time of increasing the mind of giving it is directly sustained by mind generation, if so, how it is sustained, and what is its appearing object and observed object.
Then in post-meditation when someone practices the six perfections how is the mind generation sustained by the practice?

Reply: This week we began with continuing the divisions of instructions/precepts which include the three efforts, the five eyes, the six clairvoyances, the path of seeing, and the path of meditation. The instructions regarding the three efforts say to cultivate the three types of effort that counteract the three types of laziness: the effort that counteracts the laziness of lethargy, the effort that counteracts the laziness of clinging to trivial activities, and the effort that counteracts the laziness of feeling incapable.

The five eyes are necessary for oneself to be able to engage in practice/achievement without depending on others, while the six clairvoyances enable one to accumulate merit quickly. With respect to dispelling discordant objects there are those that are manifest and there are those that are seeds. The manifest discordant objects are the three types of laziness. The discordant objects that are seeds are the intellectually formed delusions and innate delusions, which are to be abandoned by the path of seeing and the path of meditation respectively.

We should put effort into actualizing the five eyes and six clairvoyances. The five eyes each have a particular empowering condition which is achieved by way of achieving one of the four actual concentrations. To achieve the first concentration one needs to eliminate the levels of attachment of the desire realm by way of the preparations of the first concentration. Through seeing the desire realm as coarse and the first concentration as peace one achieves the first concentration. Having achieved the first concentration, one aspires to achieve the second concentration and does so by way of the preparations of the second concentration that see the second concentration as peaceful and the actual first concentration as coarse. Then one achieves the preparations of the third concentration and goes on to achieve the third concentration, and so on up to the fourth actual concentration.

Each of the four actual concentrations has its preparations. The first concentration has three levels that are uncommon, or particular to it: the preparation called Not Unable, the mental contemplation of a mere beginner, and the preparation that eliminates delusions. With which of these preparations does one see the lower realm as coarse and the upper realm as peace? Only with the preparation that eliminates delusions. This preparation can be further divided into six [mental contemplations]. By way of the preparation that eliminates delusions one can achieve an actual concentration. On this basis, an actual concentration, one can achieve the five eyes and six clairvoyances. With the preparation Not Unable one does not see the lower realm as coarse and the upper realm as peace.

We looked at the definitions of the five eyes and six clairvoyances before so we will not go through them again here. With respect to the six clairvoyances we looked at their different types of causes: the projecting cause and the actualizing cause. It is important to know that in order to achieve the five eyes and the six clairvoyances one needs to first achieve an actual concentration. To achieve this one needs a conducive place, a noble friend, and so forth, just as is needed in order to achieve calm abiding. With respect to the individual causes that project the clairvoyances there is that of making offerings of light in dark places and so forth. Although each clairvoyance has its specific cause, the common cause for all of them is an actual concentration.

Although we first need to achieve an actual concentration in order to achieve the clairvoyance of the divine eye, we can begin to train ourselves now so as to develop it in the future by imagining in meditation that the whole universe is filled with the light of form—the natural white light of space during the day. With our eyes open we see light, here in meditation we imagine the universe filled with this light. We imagine further and further until all the billion world systems are filled with light.

In order to train in the divine ear and develop its actualizing cause, one imagines that all space is filled with sound, first at a limited distance then extending out to the billion world systems. To train in the clairvoyance knowing others’ minds one can imagine already knowing others’ minds. Abhidharmakosha sets out 12 and 20 different types of mind, one should know them and think of others as having these minds. The twelve minds are related to the three realms:
(1) a virtuous mind of the desire realm
(2) a non-virtuous mind of the desire realm
(3) an obscured unpredicted mind of the desire realm
(4) an unobscured unpredicted mind of the desire realm
(5) a virtuous mind of the form realm
(6) an obscured unpredicted mind of the form realm
(7) an unobscured unpredicted mind of the form realm
(there no non-virtuous mind in the form realm)
(8) a virtuous mind of the formless realm
(9) an obscured unpredicted mind of the formless realm
(10) an unobscured unpredicted mind of the formless realm
(11) an uncontaminated mind of learning
(12) an uncontaminated mind no-more-learning

The twenty minds are:
(1) a virtuous mind of the desire realm acquired from birth
(2) a virtuous mind of the desire realm arisen from application
(3) a non-virtuous mind of the desire realm
(4) an obscured unpredicted mind of the desire realm
(5) an unobscured unpredicted mind of maturation of the desire realm
(6) an unobscured unpredicted mind of behavior of the desire realm
(7) an unobscured unpredicted mind of arts of the desire realm
(8) an unobscured unpredicted mind of emanation of the desire realm
(9) a virtuous mind acquired from birth of the form realm
(10) a virtuous mind arisen from application of the form realm
(11) an obscured unpredicted mind of the form realm
(12) an unobscured unpredicted mind of maturation of the form realm
(13) an unobscured unpredicted mind of behavior of the form realm
(14) an unobscured unpredicted mind of emanation of the form realm
(15) a virtuous mind acquired at birth of the formless realm
(16) a virtuous mind arisen from application of the formless realm
(17) an obscured unpredicted mind of the formless realm
(18) an unobscured unpredicted mind of maturation of the formless realm
(19) an uncontaminated mind of learning
(20) an uncontaminated mind no-more-learning

Virtuous minds are further divided into: virtuous minds acquired from birth and virtuous minds arisen from application.
There are no non-virtuous minds in the form and formless realms. Unobscured unpredicted minds can be divided into four:
(1) an unobscured unpredicted mind of maturation
(2) an unobscured unpredicted mind of behavior
(3) an unobscured unpredicted mind of arts
(4) an unobscured unpredicted mind of emanation

Each of these minds can be further divided into many more; for example, there are many different kinds of minds of arts as each person can have the idea to create something different.
   To develop the clairvoyance knowing others’ minds one should reflect on these different kinds of minds and come to understand them.
To achieve the clairvoyance remembering the places of past rebirths one can train by thinking simply that one had countless rebirths in the past and imagine different kinds of live that one could have had. This is done just at the level of imagination; one tries to imagine where one
was born, the people that were there, etc. One does this for many many lives going backward in time.

To achieve the clairvoyance of magical emanation one trains in meditation imagining that one has a body that weighs as little as cotton, that it can levitate and then fly farther and farther to particular places, without being obstructed by mountains and so forth.

To achieve the clairvoyance knowing the exhaustion of contaminations one should meditate that all phenomena do not exist truly.

These ways of training for the clairvoyances are their actualizing causes. In order to attain the clairvoyances it is not enough to create their respective projecting causes, one must also achieve their specific actualizing causes.

The five eyes and six clairvoyances are genuine instruments that enable one to enact the welfare of sentient beings. One should reflect on the different kinds of clairvoyances thinking for example, “Is the clairvoyance of divine eye an eye consciousness or a mental consciousness? Is the clairvoyance of divine ear an ear consciousness or a mental consciousness?” From the point of view of Svatantrika-Madhyamika they are mental consciousnesses. The Vaibhashikas, however, say that the clairvoyance of divine eye is an eye consciousness, and the clairvoyance of divine ear is an ear consciousness. What is the difference between the divine eye and the clairvoyance of divine eye? The answer was given before.

The ninth division of precepts is the precepts/instructions about the path of seeing. The path of seeing has sixteen moments which are divided into two groups: a group of eight forbearances and a group of eight knowledges. The path of seeing can also be divided as follows: a path of seeing that is an exalted wisdom of contemplation, a path of seeing that is an exalted wisdom of subsequent attainment, and a path of seeing that is neither. A path of seeing that is an exalted wisdom of contemplation can be an uninterrupted path, a liberated path, or neither an uninterrupted path nor a liberated path. Paths of seeing that are exalted wisdoms that are uninterrupted paths are the eight forbearances and the paths of seeing that are exalted wisdoms that are liberated paths are the eight knowledges. On a Hinayana path of seeing one abandons the objects of abandonment serially by first achieving a forbearance, then a knowledge, then a forbearance, etc. On the Hinayana path the eight forbearances cannot be generated simultaneously, nor can the eight knowledges be generated simultaneously. This is only possible for a bodhisattva on the Mahayana path of seeing.

There are two groups of four sangha discussed in terms of the hearer vehicle, these are the four enterers and the four abiders. They are only discussed in terms of the Hinayana sangha and not the Mahayana sangha. These eight are called “sangha of example,” they are the sangha that represents, while the others, the Mahayana sangha, are called “sangha of meaning,” they are the sangha that are represented.

An approacher to stream enterer is one who enters the path of seeing and continues up to the 15th moment of the path of seeing, which is a subsequent forbearance. On the 16th moment, the subsequent knowledge of true paths, this enterer becomes an abider in the result of stream enterer. At this point he is free from the three fetters. Someone is called an enterer when he is in the process of putting effort into abandoning the three fetters; he becomes an abider when these three have been abandoned.

Enterers into stream enterer are of two types: followers of faith and followers of Dharma; they are respectively those of dull faculty and those of sharp faculty. When they become abiders in the result of stream enterer they are called respectively “appreciators-by-faith” and “attainers-by-seeing.”

With regard to the question concerning mind generation. When someone is training in increasing the mind of giving and has the constant wish to attain omniscient mind, the mind generation is said to be directly sustained by practice. The mind generation is said to be directly sustained by practice because at this moment there are two minds manifest: the mind of giving and the mind wishing to achieve enlightenment. The mind generation can be directly sustained by the practice
of generosity, morality, patience, and so forth. For example, in the case of someone who has the manifest mind of safeguarding vows together with the constant wish to achieve enlightenment, the mind generation is directly sustained by the practice of morality. One can say that there are two minds that sustain each other: the mind safeguarding the vows directly sustains the mind generation and the mind generation directly sustains the mind safeguarding the vows. The observed object of the mind generation is enlightenment. The observed object of the mind of giving is the object of the generosity. These two minds are not one substance, i.e., they do not have a common substance. They are like two people helping each other in that they cooperate with each other but do not have a common substance.

We can talk about two minds being directly sustained by each other only in post-meditation. In the case of meditative equipoise there is no direct sustainment. There is sustainment but it is not direct. In meditation equipoise [on emptiness] the only mind that is manifest is that realizing emptiness. In post-meditation, two minds directly sustain each other because a bodhisattva in post-meditation has a constant wish to attain enlightenment and with this engages in various practices.

Question: What are the appearing objects to the two minds and to the two persons in post-meditation?
Reply: Two objects can appear to one person at the same time, for example, two people can be seen at the same time. For the mind generation observing complete enlightenment the appearing object is the meaning generality of complete enlightenment. In post meditation, when someone with the mind generation has the wish to increase the mind of giving, his appearing object is the object of his generosity. Therefore, he has two appearing objects: complete enlightenment and the object of his generosity. However, according to Pramanavartika there cannot be two conceptual minds simultaneously in a single mind of an ordinary being because in sutra it says that an ordinary being at any one moment can have only a single continuity of mind. Therefore, if we look at this person in post-meditation from the point of view of Pramanavartika, he cannot have two conceptual minds at the same time, one that wishes to attain enlightenment and one that wishes to increase the mind of giving. However, the Pramanavartika can be interpreted to mean that there cannot be two minds that are similar but different substances.

Question: What is meant by dualistic appearance with respect to conventionalities?
Reply: If something else appears to a mind that has just seen the non-affirming negative, emptiness, there would be dualistic appearance. However, if what appears to the mind is only the non-affirming negative, emptiness, there is no dualistic appearance.

Question: In the example of the suffering of change, the experience of eating food with excessive attachment, what is the actual suffering of change? The pleasure of eating the food with excessive attachment or the suffering that comes afterward?
Reply: The pleasure of eating the food with excessive attachment is the suffering of change. All contaminated pleasures are the suffering of change; however, they are not suffering because they are happiness. If they were suffering they would have to be the feeling of suffering.
Monday afternoon class, March 23, 1998

2B2C-1A2B-1B2A-1B  Presentation of persons (continued)

If someone does not do the alternating meditation he will not be born in a pure land. These are the five pure lands of the form realm. Those who do the alternating meditation can be non-returners or foe destroyers. Foe destroyers who do the alternating meditation can be either those of sharp faculty or those of dull faculty. Foe destroyers of dull faculty meditate in order to eliminate the obscurations to experiencing the taste of concentration. Foe destroyers of sharp faculty meditate in order to abide in bliss in this life (literally visible phenomena). Non-returners do the alternating meditation in order to be reborn in one of the five pure lands.

The mental support of the alternating meditation is a mind that is serviceable/pliant; this mind is supreme. The alternating meditation begins with the fourth concentration because it is free from the eight types of faults of concentration and is therefore a mind that is supreme. The eight faults are: (1) happy feeling and (2) suffering feeling, (3) investigation and (4) analysis, (5) joy and (6) happiness of mind (sem de), and (7) inhalation and (8) exhalation. Someone at this level no longer depends on breathing; inhalation and exhalation almost come to a stop. Someone who is free from all these faults has a mind that is very serviceable/pliant.

To do the alternating meditation one begins with the support of the fourth concentration, but, having done one round, one can go on to do the alternating meditation on the basis of the first concentration and so forth. The alternating meditations are of five types because there are five pure lands:

- (1) three alternations, the small;
- (2) six alternations, the middling;
- (3) nine alternations, the great;
- (4) twelve alternations, the extremely great; and
- (5) fifteen alternations, the greatly extremely great.

When doing three alternations one enters, in a single session, into an uncontaminated absorption, then a contaminated absorption, then an uncontaminated absorption.

Each time one enters a round of three, one begins with an uncontaminated concentration, then a contaminated concentration, then an uncontaminated concentration. Then again one enters an uncontaminated concentration, then a contaminated concentration, and then an uncontaminated concentration. In the first round there are two uncontaminated absorptions and one contaminated absorption. In the second round there are four uncontaminated absorptions and two contaminated absorptions.

Someone who has previously created the projecting cause to be reborn in the fourth concentration by meditating on a pure fourth concentration transforms this projecting karma into the projecting karma to be born in a pure land of the fourth concentration. Although it is generally said that a person does not create new projecting karma after seeing the truth and becoming an arya, it is not a fault to say as above because there is the transformation of a karma that was created previously (and not a creation of new karma). There is no fault in this because although it is generally said that when someone sees the truth he does not create new projecting karma, here he merely transforms his own previous karma to be reborn in the fourth concentration into the cause to be reborn in a pure land.

All that said above is in relation to a non-returner who migrates to the form realm.

The definition of a non-returner who migrates to the formless realm is: a non-returner who has attained the path of seeing who, without taking rebirth in the form realm, actualizes nirvana on a support of the formless realm. There are four divisions, those above excluding that of passing beyond in the intermediate state: (1) those who pass beyond upon birth, (2) those who pass beyond with manifest effort, (3) those who pass beyond without manifest effort, and (4) those who transfer to a higher realm.
The definition of a non-returner who attains peace in this life is: a non-returner who actualizes nirvana in the very life that he attains the path of seeing.

The definition of a non-returner manifesting-with-a-body is: a learner arya who possesses the eight liberations.

The liberations are divided into three groups: one group of three related to form, one group of four related to the formless, and one related to cessation. The three related to form are:
1. the embodied looking at form
2. the formless looking at a form
3. beautiful form

The group of four related to the formless are:
4. infinite space
5. infinite consciousness
6. nothingness
7. peak of existence.

The eighth is:
8. the absorption of cessation

These will be explained elaborately in the fourth chapter of the Ornament.

The boundaries in relation to a non-returner who abandons serially are from the liberated path that is free of the ninth level of attachment of the desire realm up to the uninterrupted path that opposes the ninth level of attachment of the Peak of Existence. The boundaries of a non-returner who is a leaper is from the sixteenth moment of the clear realization of truth [up to the uninterrupted path that opposes the ninth level of attachment of the Peak of Existence].

Foe destroyers are also divided into approachers to the result of foe destroyer and abiders in the result of foe destroyer. The definition of an approacher to the result of foe destroyer is: an arya who is striving to attain a distinguished result of training in virtue by abandoning the five upper similitudes. When foe destroyers are divided there are two: foe destroyers who abandon serially and foe destroyers who abandon simultaneously.

If the approacher to the result of foe destroyer is a non-returner (who is still abiding in this result) the boundaries are from the beginning of striving to eliminate the remaining attachments (from the 10th upward) to be abandoned by the path of meditation up to the uninterrupted path that opposes the ninth level of attachment of the Peak of Existence (the 81st level of attachment). If the approacher to the result of foe destroyer is a stream enterer the boundaries are similar to those of a stream enterer who eliminates the objects of abandonment simultaneously; or we could simply say that it is from the sixteenth moment of the path of seeing up to the uninterrupted path that oppose the small small object of abandonment of the path of meditation.

The definition of an abider in the result of foe destroyer is: one abiding in the distinguished result of training in virtue who has abandoned the five upper similitudes. Before we said that the five upper similitudes are:
1. attachment of the form realm and attachment of the formless realm
2. sleep
3. excitement
4. pride
5. ignorance

However, in the Gyeltsab’s commentary, the first two upper similitudes seem to be two attachments: (1) attachment of the form realm and (2) attachment of the formless realm, without clearly saying two, but we think that perhaps the person who transcribed this text simply forgot to put in the word “sleep” since according to Abhidharmakosha the second is of the upper similitudes is sleep.
When abiders in the result of foe destroyer are divided in terms of the objects to be abandoned there are foe destroyers who abandon serially and foe destroyers who abandon simultaneously. But when divided by way of faculty there are six:

1. foe destroyers with qualities that thoroughly degenerate
2. foe destroyers who intend to die
3. foe destroyers who subsequently protect
4. foe destroyers who abide immutably
5. foe destroyers who are fortunate ones who realize
6. foe destroyers with unfluctuating qualities

The boundaries of these six is that they exist at a level where the extinction of delusion is known to be forever, literally “the extinction [in which the delusions] are known not to arise anymore.”

The six abiders in the result of foe destroyer are explained here in relation to \textit{Abhidharmakosha}. The Mahayana does not assert that there are foe destroyers who can degenerate due to the arisal of delusions. However, the Vaibhashikas say that there are foe destroyers who can degenerate from their realization, but who attain it again in the same life. For example, by generating attachment a foe destroyer falls from the state of foe destroyer but then by meditating he once again restores his realization. In \textit{Abhidharmakosha} it says that one who degenerates from the result of foe destroyer will definitely restore it in the same life before dying.

Here we are discussing the sangha of example— those who represent.

2B2C-1A2B-1B2A-2  Meanings which are indicated

The basis of classification of the twenty sangha is an arya bodhisattva who is at learning level and who is irreversible. According to Arya Vimuktisena the way of classifying such aryas into twenty is that there are sixteen sangha actually listed in the \textit{Ornament} in which the five who migrate to the form realm are included in one. The five migrators are those who migrate to Akanishta through ?to those finally reaching the Peak of Existence. In addition to the sixteen listed in the root text there are another four, making a total of twenty. The four others are:

1. the eighth [sangha], which refers to the abiders in the result of stream enterer,
2. the mere abiders in the result of once returner,
3. the mere abiders in the result of non returner,
4. the approachers to [the result of] foe destroyer.

In brief, according to Arya Vimuktisena there sixteen actually mentioned in the root text and four additional ones.

However, according to Acharya Haribhadra, there are seventeen sangha actually mentioned in the root text and three additional ones. According to Haribhadra among the twenty sangha there are five related to stream enterers:

1. the followers of faith
2. the followers of Dharma
3. those born from god to god
4. those born from human to human
5. mere abiders in the result of stream enterer.

There are three related to once returners:

6. approachers to the result of once returner
7. once returners blocked by one rebirth
8. mere abiders in the result of once returner

There are ten related to non-returners:

9. approachers to the result of non-returner
10. those passing beyond in the intermediate state
11. those passing beyond upon rebirth
(12) those passing beyond with manifest effort
(13) those passing beyond without manifest effort
(14) those who leap
(15) those who half leap
(16) those who transfer/die in all places
(17) those who attain nirvana in the same life
(18) those who manifest with a body

There are two related to foe destroyers:
(19) approachers to [the result of] foe destroyers
(20) rhinoceros-like solitary realizers

These twenty sangha are divisions based on the four persons: stream enterers (five divisions), once returners (three divisions), non-returners (ten divisions), and foe destroyers (two divisions). These are the twenty sangha of example, while bodhisattvas are the sangha of meaning. The same divisions of twenty sangha also apply to them. With respect to both the sangha of example and sangha of meaning what is important is that we ourselves actually strive to become them.

Tuesday morning class, March 24, 1998

The twenty sangha of meaning are aryatva bodhisattvas who are irreversible. According to Arya Vimuktiṣena there are sixteen sangha listed in the Ornament (see Commentary Clarifying the Meaning page 11 root text in italics) plus four:

(1-2) dull and sharp facultied
(3) faith
(4) seeing attainment
(5-6) family to family
(7) one interval
(8) via intermediate
(9) rebirth
(10) production
(11) non-production
(12) progressing to Akanishta
(13) form’s attachment destroyed
(14) visual dharmas pacified
(15) making the body manifest
(16) rhinoceroses

The four additional implied sangha are:
(1) mere abiders in the result of stream enterer
(2) mere abiders in the result of once returner
(3) mere abiders in the result of non-returner
(4) approachers to the result of foe destroyer

According to Arya Vimuktiṣena there are:
- five sangha related to stream enterers: the four sangha who are explicitly listed in the root text plus the mere abiders in the result of stream enterer
- three sangha related to once returners: the two explicitly listed plus the mere abiders in the result of once returner
- ten sangha related to non-returners: the nine explicitly listed plus the mere abiders in the result of non-returner
- two sangha related to foe destroyers: the one explicitly listed plus the approachers to the result of foe destroyer

The difference here is that Vimuktisena says that there are sixteen listed in the Ornament plus an additional four while Haribhadra says that there are seventeen listed plus an additional three.

The seventeen sangha explicitly listed in the Ornament according to Haribhadra are as follow:
1. dull and sharp facultied (stream enterers)
2. faith (approachers to the result of once returner and approachers to the result of non returner counted as one)
3. seeing attainment (approachers to the result of once returner and approachers to the result of non returner counted as one)
4. family to family (stream enterers)
5. one interval (once returners)
6. via intermediate (non returners)
7. rebirth (non returners)
8. production (non returners)
9. non-production (non returners)
10. progressing to Akanishta; three who leap (non returners)
11. progressing to the limit of the peak of existence form’s attachment destroyed visual dharmas pacified (non returners)
12. making the body manifest (non returners)
13. rhinoceros (foe destroyers)

The three additional implied sangha are:
1. mere abiders in the result of stream enterer
2. mere abiders in the result of once returner
3. approachers to the result of foe destroyer

The summary according Acharya Haribhadra is as follow:
- five sangha related to stream enterers: the four sangha who are explicitly listed in the root text plus the mere abiders in the result of stream enterer
- three sangha related to once returners: the two explicitly listed plus the mere abiders in the result of once returner
- ten sangha related to non-returners: all ten are explicitly listed in the root text
- two sangha related to foe destroyers: the one explicitly listed plus the approachers to the result of foe destroyer

The sangha of meaning are always bodhisattvas. There exist both sangha from the point of view of the object to be abandoned and sangha from the point of view of the result; these divisions also apply to the sangha of meaning. No bodhisattvas are actually called stream enterers, once returners, and so forth, but these names can be applied to them. The bodhisattva sangha, the sangha of meaning, is represented by the Hinayana sangha who are the sangha of example.

This concludes the outline “2B2C-1A2B-1B2A General meaning.”
Gyeltsab says that there are two interval stanzas which are mentioned in order to easily realize the divisions taught in the sutra concerning the rare supreme sangha.

In the context of the sangha jewel, for the sake of effortless realization, there are two interceding stanzas.

Gyeltsab says that although the Commentary on the Twenty-Thousand Stanza Perfection of Wisdom Sutra by Haribhadra, which combines sutra and the Ornament, says that there are twenty-five sangha, five more mentioned in sutra being added to the twenty that are listed in the Ornament, there is no contradiction. The five additional sangha are:

(1) the eighth
(2) abider in the result of stream enterer
(3) abider in the result of once returner
(4) abider in the result of non returner
(5) approacher to the result of foe destroyer

Also in the same commentary by Haribhadra it says: “Bhagavan, the bodhisattva abiding in the practice of the perfection of wisdom who is here now, where did he die? And where will he be reborn after dying here?” Likewise different sutras are quoted individually regarding the followers of faith and the followers of Dharma but it would mean too many words if I were to mention all these here.

Gyeltsab says that those abiding on dharma forbearance, which is an uninterrupted Mahayana path of seeing, can be divided into two because there are those with dull faculty and those with sharp faculty. Likewise, there are bodhisattvas with the name of “approachers to stream enterer,” “appreciators by faith,” “attainers by seeing,” “approachers to once returner,” and “approachers to non-returners.” There are bodhisattvas called “distinguished abiders in the result of stream enterer and so forth. However if we through them once more based on the root text, it turns out as follows:

<table>
<thead>
<tr>
<th>dull and sharp facultied</th>
<th>(1-2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>here there are two bodhisattvas with these names plus an implicit bodhisattva named “mere abider into stream enterer”</td>
<td>(3)</td>
</tr>
<tr>
<td>faith; seeing attainment; family to family</td>
<td>(4-5)</td>
</tr>
<tr>
<td>here there are two with the name of “approachers to once returner and approachers to non returner”</td>
<td></td>
</tr>
<tr>
<td>family to family; one interval; a bodhisattva with the distinguished name of “one interval”</td>
<td>(6-7-8)</td>
</tr>
<tr>
<td>via intermediate, a bodhisattva named “passing beyond during the intermediate”</td>
<td></td>

</tbody>
</table>

...
who is a non returner .................................................................(10)

rebirth;

a bodhisattva named “passing beyond upon rebirth”..........(11)

production,

a bodhisattva named “passing beyond with manifest effort”.......(12)

non-production;

a bodhisattva named “passing beyond without manifest effort” .......(13)

progressing to Akanishta; three who leap;

three bodhisattvas named “ leaper,” “half-leaper,” and “dying
everywhere” ..................................................................................(14-15-16)

progressing to the limit of the peak of existence;

form’s attachment destroyed,

visual dharmas pacified,

a bodhisattva named “visual dharma pacified” on the basis of those who
have destroyed attachment to the form realm and are known
to go to the peak of cyclic existence .................................................(17)

making the body manifest,

a bodhisattva named “making the body manifest” ....................(18)

the rhinoceros

a bodhisattva named “rhinoceros-like solitary realizer” plus an implicit one named
“approacher to the result of foe-destroyer” .......................................(19-20)

Gyeltsab comments on Haribhadra’s commentary. This is explained in detail in the seventh
chapter of the Abhidharmakosha, however Gyeltsab sets out a syllogism: bodhisattvas abiding on
the result that is gained in dependence on the eight dharma forbearances (these eight belong to
the sixteen moments of the path of seeing and are all knowers of paths) have two names because
there are “followers of faith” and “followers of Dharma.”

Then in Gyeltsab’s text many ignorant people voice their opinions. Someone says: “Those
who are on the first fifteen moments of the clear realization of truth of the path of seeing are
enterers while those on the sixteenth moment are abiders in the result.” Our system says, “This is
not possible because bodhisattvas do not have serial generation of the sixteen moments of the
path of seeing. You have not understood the assertions of Arya Vimuktisena and Arya
Haribhadra. You are talking in space without knowing what you are saying. It is not possible for a
bodhisattva to newly realize true sufferings and only afterward to newly realize true origins; he realizes these two simultaneously.” Haribhadra negates what that person said later on in detail.

Then someone says: “The bodhisattva sangha cannot be stream enterers and so forth, however such bodhisattvas abide in the distinguished result of training in virtue by abandoning the objects to be abandoned by the Mahayana path of seeing.” Our system says: “Such an opinion complicates one’s own life. We accept the meaning of stream enterer and so forth just as you do but then you make a consequence that is absurd.” It is absurd because this person accepts what others assert but then criticizes these assertions by presenting an absurd consequence. Our own system says that one who abides on a Mahayana liberated path and abides in the eight knowledges and who is striving to attain a nirvana that is free from the deluded obscurations is a stream enterer because he is a bodhisattva who has totally extinguished the three fetters that are to be abandoned by the path of seeing. The three fetters are deluded doubt, the view holding bad morality and bad conduct as supreme, and the intellectually formed transitory view (view of the transitory collection). Such a person still has the innate transitory view so he is not totally free from this fetter.

In essence, Gyeltsab takes a phrase from Haribhadra’s commentary and elaborates further on it.

Tuesday afternoon class, March 24, 1998

One cannot say that all three fetters are completely abandoned by the path of seeing because the innate fetters are yet to be abandoned.

Our own system says that although bodhisattvas on the path of meditation who are striving to attain the liberated path that is free from the sixth level of attachment that is to be abandoned by the path of meditation can be of dull or sharp faculty these two are counted at one when the twenty sangha are enumerated. ?The dull facultied are the appreciators-by-faith and the attainers-by-seeing. Such bodhisattvas are called approachers to the second result.

There are also bodhisattvas called abider in the result of once returner who are separated from the sixth level of attachment. There are bodhisattvas who are called those with one obstacle because they still have one object to be abandoned by the path of meditation, which is the ninth level of attachment. When this is abandoned they attain the liberated path that is free from the deluded obscurations.

There are also bodhisattvas who are approachers to the third result. They abide on the path of meditation and strive to attain the liberated path that is free from the ninth level of attachment of the desire realm by the path of meditation. These bodhisattvas can be either of dull faculty or sharp faculty yet they are counted here as one type of sangha.

Then there is the presentation of four types of bodhisattvas who are called non-returners. The first are non-returners who have attained the liberated path that is free from all the deluded obscurations who pass beyond in the intermediate state of the form realm. The second are those who pass beyond upon rebirth in the form realm. The third are those who pass beyond with manifest effort. The fourth are those who pass beyond without manifest effort. These four types of bodhisattvas pass beyond upon attaining the liberated path that is free from all deluded obscurations.

Someone says: “A bodhisattva has abandoned the fetters for rebirth but has not abandoned the fetters that actualize. Having abandoned the fetters for rebirth but positing two individual causes, one for the intermediate state existence and one for taking rebirth in the form realm, it is not correct to say an arya bodhisattva takes rebirth due to the control of karma and delusions. These two are contradictory.

Someone says: “Saying that a bodhisattva non-returner abiding on the liberated path that is free from the ninth level of attachment of the desire realm is merely designated as non-returner and saying that there is a bodhisattva abiding on the distinguished result of training in virtue by having abandoned the five last similitudes is senseless and [can be refuted by] the three circles.”
The three circles refers to an answer that makes someone give up a previous assertion: the answer can be a sign that is shown to be wrong, a predicate that can be shown to be wrong, or a pervasion that can be shown to be wrong. When debating there are two responses that can be given to the predicate, one being “yes” (do) and one being “no” (chi chir), and with respect to the sign there are two answers that can be given: “the reason is not established” (tak ma drub) or “there is not pervasion” (ma kyab). When debating the one answering has to limit himself to giving one of these answers.

When the ninth level of attachment of the desire realm is abandoned is it the manifest attachment or the seed of attachment that is abandoned? If one asserts that it is manifest attachment that is abandoned, it would mean that those who had previously attained one of the four concentrations before becoming bodhisattvas on the Mahayana path of seeing would become bodhisattva non-returners. However, there is no pervasion that they have abandoned this attachment nor that they are this sangha. Generally non-returners are understood to be abiding on the path of meditation and not on the path of seeing. On the other hand, if one asserts that it is the seed of the ninth level of attachment that is abandoned one would be an upholder of non-Buddhist tenets because it is well known that the seed of attachment is only abandoned by the uninterrupted path at the end of the continuum of a sentient being.

With respect to the three who leap that belong to the non-returner sangha there are the five who pass beyond in the intermediate state, pass beyond upon rebirth, pass beyond with manifest effort, pass beyond without manifest effort, and those who transfer to a higher level. However, only the last is counted here: those who leap, those who half leap, and those who die everywhere. The leaper is a bodhisattva who takes rebirth in Brahma Class and then takes rebirth in Akanishta (Not Low). The half leaper takes rebirth in the Brahma Class, then in one of the first three of the pure lands, and then in Akanishta. Those who die everywhere are those who take rebirth in Brahma Class and then in all the levels of the form realm, except Great Brahma, before taking rebirth in Akanishta.

Someone ignorant who takes the meaning of sutra too literally says: “There is a bodhisattva who attains the four levels of concentration and then takes rebirth in Brahma Class. Doing so he has degenerated from the upper three levels of concentration.” Our system says this is very wrong because it is not possible for an ary bodhisattva to degenerate from the upper three levels of concentration. The person who makes this statement is relying on a text that says “extinguishing the branches” which means that a bodhisattva who has degenerated a concentration takes rebirth in cyclic existence. We ask: “How can an ary bodhisattva who has attained the four concentrations take rebirth in cyclic existence due to karma and delusion because he has exhausted the energy for taking rebirth in cyclic existence?” Our system says that when an ary bodhisattva takes rebirth in the form realm it is due only to compassion and prayer and that the phrase in sutra refers only to the hearer sangha. The meaning of the sutra saying that bodhisattvas take rebirth in the form realm is that they do so in order to guide those on the Hinayana path to the Mahayana path. Since there are specific words presenting the hearer sangha [in sutra], those following the Hinayana scriptures say that there are no words referring to the Mahayana. Our system says that this is not right. The purpose is to guide those on a Hinayana path to the Mahayana path. What is negated here is that the words in Mahayana texts are not words of Buddha because they do not present enterers and abiders, etc. What is implied is that in the Mahayana there are also enterers and abiders. By saying that there are enterers and abiders, those following the Hinayana are made to understand that they also exist in the Mahayana. Our own system says that those who abide in the sphere of peace of hearers have still not accomplished their principal aim so they are told that there still remains another step, that of attaining a non-abiding nirvana. In this way they are led to the Mahayana goal, that of a non-abiding nirvana.

A “bodhisattva who does not seek rebirth in the form realm” is designated as one who goes to the Peak of Existence because he is a bodhisattva who has abandoned the attachment of the form realm and is therefore free from the attachment of the form realm. A “bodhisattva with the attachment of the Peak of Existence” is one on the sixth ground who is the eighth type among
the twenty types of sangha. Then there are those who attain peace in the same life and those manifesting with a body. Those who attain peace in the same life are those who extinguish the delusions and attain nirvana in the same life that they attain the path of seeing. Those manifesting with a body are those who manifest a body of the concentrations by way of the eight liberations.

There are also bodhisattvas who strive to attain the liberated path that is totally free from deluded obscurations, they are approachers to the result of foe destroyers and are counted as one. And there are bodhisattvas called solitary realizers. These sangha added together give a total of twenty.

The essence of this commentary is to explain why bodhisattvas are given such particular names as “from family to family” and so forth. We need to know the twenty sangha and how they are connected to the arya bodhisattvas. Although there are twenty sangha listed here, in reality there are many many more. In fact, there are several million types of sangha.

Of the twenty sangha the first five are related to stream enterers:
(1) followers of faith
(2) followers of Dharma
(3) born from god to god
(4) born from human to human
(5) mere abiders in stream enterer

Then there are those blocked by seven lives who can be divided into those blocked by seven lives as gods and those blocked by seven lives as humans who can each be further divided into those who pass beyond in the intermediate state and those who pass beyond upon rebirth.

With respect to the six types of abiders in the result of foe destroyer there is more explanation in other texts such as Abhidharmakosha.

Here we have covered the twenty types of sangha. Then next comes the path of preparation, the third topic representing omniscient mind, which is called the branch of definite discrimination.

2B2C-1A2B-2 Explaining the origin of generating the wisdom arisen from meditation referring to emptiness through meditating on the subject of the precepts
A General meaning
B Meaning of the branches

2B2C-1A2B-2A General meaning
1 Support
2 Entity
3 Analyzing awareness and knowing

2B2C-1A2B-2A1 Support

This refers to the body that is the support of the path of preparation. It can be a body of the humans, both male and female, of three continents and a body of the gods of the desire realm. Although the heat and peak levels of the path of preparation can be generated upon the body of the form realm, the bodies of the form realm are not a support for generating the highest mundane dharma level. When Gyeltsab says that the bodies of the male and female humans of three continents it means those with complete signs/gender and not hermaphrodites and those who are impotent. The path of preparation can also be generated on the support of the bodies of the gods of the desire realm.

The path of preparation cannot be generated on the bodies of humans of the northern continent, Unpleasant Sound, because they are not a suitable vessel since they cannot generate renunciation of cyclic existence. These humans experience much pleasure and have a fixed life span of 1000 years. They live an easy comfortable life without much effort and do not have the idea of personal possessions but share everything. This is what is usually said about these particular humans. Nagarjuna visited this continent, stayed there some time and did long-life mantras, before returning with presents from this continent. Nagarjuna also visited the land of the
nagas and stayed there. He became an object of veneration of the nagas who gave him the name Nagarjuna, his original name being Glorious Bhikshu. There is a prophecy about him in the Manjushri Root Tantra in which Buddha said: “Four hundred years after my passing there will be born one named Glorious Bhikshu who will go to the naga land...”

Wednesday morning class, March 25, 1998

With respect to the twenty sangha some Indian pandits count them all from the words of the root text, the Ornament, as follows:

(1) dull facultied
(2) sharp facultied
(3) faith (aspirers-by-faith)
(4) seeing attainment (attainers-by-seeing)
(5-6) family to family
(7) one interval (one interference)
(8) via intermediate (those who pass beyond in the intermediate state)
(9) rebirth (those who pass beyond at birth)
(10) production (those who pass beyond with manifest effort)
(11) non-production (those who pass beyond without manifest effort)
(12) progressing to Akanishta
(13-14-15) three who leap
(16) progressing to the limit of the peak of existence
(17) form’s attachment destroyed
(18) visual dharmas pacified (those who attain peace in this life)
(19) making the body manifest
(20) rhinoceros

These are the twenty sangha counted literally in accordance with the words of the Ornament.

There are six kinds of foe destroyers:

(1) foe destroyers with qualities that thoroughly degenerate
(2) foe destroyers who intend to die
(3) foe destroyers who subsequently protect
(4) foe destroyers who abide immutably
(5) foe destroyers who are fortunate ones who realize
(6) foe destroyers with unfluctuating qualities

Foe destroyers with qualities that thoroughly degenerate are those whose realization can degenerate due to a particular circumstance. For example, those who when on the learner’s path were of dull faculty and lacked continuous/eternal effort and effort due to respect. There are five conditions mentioned in sutra that can bring about the degeneration of the result of foe destroyer:

(1) engaging in actions
(2) talking continuously
(3) too much debate
(4) running or walking for a long time
(5) chronic illness

There are many small conditions that can cause a foe destroyer to lose his realizations.

Foe destroyers who intend to die are those who worry about degenerating their realizations and prefer to die before this happens. Foe destroyers who subsequently protect are those who are worried about degenerating their realizations and therefore put effort into protecting the path. Foe destroyers who abide immutably are those who are do not lose their realizations due to small conditions; for this reason their realizations are said to be immutable. Foe destroyers who are
fortunate ones who realize are those who previously were of dull faculty but then transferred to sharp faculty and are therefore on the way to having unfluctuating realizations. Foe destroyers with unfluctuating qualities are those who do not degenerate their realizations due to any conditions whatsoever.

According to Abhidharmakosha the first five foe destroyers can degenerate from the result of foe destroyer because they are dull facultied. The sixth type of foe destroyer is sharp facultied. When a foe destroyer trains to have sharp faculties it is possible that he can change from dull to sharp faculty but then once again return to dull faculty. He can then train again to develop sharp faculty. In brief, there are two types of foe destroyers, those with dull faculties and those with sharp faculties. This is because previously when they were on the learner path they had these respective types of faculties. In the Ornament there is no clear indication that the first five foe destroyers are dull facultied and the last, sharp facultied.

According to Haribhadra among the twenty sangha there are:
- five related to stream enterers
- three related to once returners
- ten related to non-returners
- two related to foe destroyers

Arya Vimuktisena says that sixteen are counted explicitly in the root text while the remaining four are implicit.
(1) dull facultied
(2) sharp facultied
(3) faith
(4) seeing attainment
(5-6) family to family
(7) one interval
(8) via intermediate
(9) rebirth
(10) production
(11) non-production
(12) progressing to Akanishta, three who leap, progressing to the limit of the peak of existence
(13) form’s attachment destroyed
(14) visual dharmas pacified
(15) making the body manifest
(16) rhinoceros

and in addition:
(17) mere abiders in result of stream enterer
(18) mere abiders in the result of once returner
(19) mere abiders in the result of non-returner
(20) approachers to the result of foe destroyer

Haribhadra counts seventeen in the root text:
(1) dull facultied
(2) sharp facultied
(3) faith
(4) seeing attainment
(5-6) family to family
(7) one interval
(8) via intermediate
(9) rebirth
(10) production
(11) non-production
(12-13-14) progressing to Akanishta, three who leap
(15) progressing to the limit of the peak of existence, form’s attachment destroyed, visual dharmas pacified
(16) making the body manifest
(17) rhinoceros

and in addition:
(18) mere abiders in the result of stream enterer
(19) mere abiders in the result of once returner
(20) approachers to the result of foe destroyer

Now we will continue on with the next outline concerning the path of preparation.

2B2C-1A2B-2A2 Entity
A Definition
B Divisions
C Mode of generation
D Meaning of the individual divisions

2B2C-1A2B-2A2A Definition

The definition of the path of preparation is: a Mahayana mundane path that is subsequently similar to the clear realization of truth, and that follows the completion of the path of accumulation/similitude of liberation. The path of preparation is not necessarily a wisdom arisen from meditation because it can also be a wisdom arisen from hearing or a wisdom arisen from thinking. The path of preparation comes after the path of accumulation and before the path of seeing, which is a clear realization of the truth. It is a mundane path and here in particular a Mahayana mundane path. Someone on the Mahayana path of preparation can have previously achieved the state of a Hinayana foe destroyer. Although his realizations are supermundane, he is still said to be on a mundane path in relation to the Mahayana. When someone attains the path of seeing he is said to be on a supermundane path. Before this, on both the path of accumulation and the path of preparation, he is said to be on a mundane path.

The path of preparation is not only a wisdom arisen from meditation because it can also be a wisdom arisen from hearing or a wisdom arisen from thinking. However, the path of preparation is principally characterized by the wisdom arisen from meditation, while on the path of accumulation there are principally the wisdoms arisen from hearing and thinking.

2B2C-1A2B-2A2B Divisions

There are divisions by way of time and divisions by way of entity. There are three temporal divisions: small, middle, and great. There are four divisions by way of entity: the heat level, peak level, patience level, and highest dharma level of the path of preparation. Each of these are further divided into small, middle, and great; therefore, the path of preparation has a total of twelve divisions.

2B2C-1A2B-2A2C Mode of generation

On the path of accumulation there is a fully qualified complete training in aspects that completely practices all the aspects of the three exalted knowers without exception. On the path of accumulation there can be a wisdom arisen from meditation observing impermanence, misery/suffering, and ugliness but there cannot be a wisdom arisen from meditation observing emptiness. When someone achieves a wisdom arisen from meditation observing emptiness, he achieves the path of preparation. This way of moving upward is with respect to a bodhisattva who has not previously passed through other paths. On the Mahayana path of accumulation there
can be someone who has already achieved the realization of emptiness, such as someone who was previously attained the state of a Hinayana foe destroyer.

Gyeltsab discusses the wisdom arisen from hearing observing emptiness, the wisdom arisen from thinking observing emptiness, and the wisdom arisen from meditation observing emptiness. In the case of the wisdom arisen from hearing observing emptiness and the wisdom arisen from thinking observing emptiness, emptiness is observed by way of a meaning generality and there is a dualistic appearance of subject and object. In the case of the wisdom arisen from meditation observing emptiness there is still dualistic appearance but the object, emptiness, appears almost as if the subject and object are like water poured into water. Dualistic appearance is almost stopped, but not quite. When subject and object appear to become one, like water poured into water, one attains a direct realization of emptiness and achieves the path of seeing.

To one who is on the path of preparation, emptiness appears clearly. This means that the meaning generality of emptiness appears clearly, however there is no non-conceptual clear appearance of emptiness. A non-conceptual clear appearance of emptiness is a direct perception of emptiness without an intervening meaning generality. When one achieves this, one attains the path of seeing.

The measurement of having attained a fully qualified superior insight observing emptiness is when through analyzing emptiness by logical reasonings on the basis of calm abiding one achieves the bliss of mental and physical pliancy. Such a meditation is a union of calm abiding and superior insight observing emptiness. Those on the path of accumulation, and even non-Buddhists, can achieve a mere union of calm abiding and superior insight [but not one that observes emptiness]. For example, there are non-Buddhists who achieve the actual concentrations and even the absorption of the Peak of Existence.

The heat level of the path of preparation is attained when one generates for the first time a union of calm abiding and superior insight observing emptiness. On the heat and peak levels someone contemplating emptiness is able to ascertain dualistic appearance by the force of experience. However, when he attains the patience level of the path of preparation that dualistic appearance is no longer ascertained as before. In the text Hearer’s Grounds it says: “It seems that the dualistic appearance has disappeared but this is not so.” On the heat and peak levels there is the ascertainment of dualistic appearance by the force of experience because on these levels the mind has not actually penetrated its object emptiness. But someone who is on the patience level has penetrated the object and there no longer appears to be dualistic appearance, although in fact there still is. There is dualistic appearance for one on the patience level because such a person only sees the meaning generality of emptiness and still has the appearance of conventional truth and the appearance of ultimate truth.

The individual divisions are the four divisions of the path of preparation: heat, peak, patience, and highest dharma.

Someone says: “The heat, peak, and patience levels are posited in relation to the clear appearance of the object as not existing inherently. On the heat level the completion of this clear appearance is small; on the peak level the completion of this clear appearance is middling; and on the patience level the completion of this clear appearance is great. On the highest dharma the clear appearance of the non-inherent existence of the subject is complete.” We say that this way of positing is not right. This is because the four levels of the path of preparation contemplate only the fact that subject and object do not exist inherently (which, in the context of Svatantrika-Madhyamika, means they do not exist truly because this school does assert inherent existence). There is no difference in the clear appearance of the meaning generality of emptiness on the four levels.

Gyeltsab then looks at the ability of the path of preparation to suppress the four manifest levels of the objects to be abandoned by the path of preparation. The heat level of the path of
preparation has the capacity to suppress the manifest conception grasping at the phenomena of the ever-deluded class as truly existent. The peak level has the capacity to suppress the manifest conception grasping at the phenomena of the thoroughly purified class as truly existent. The patience level has the capacity to suppress the manifest conception apprehending the apprehender of substantial existence as truly existent. The highest mundane dharma level has the capacity to suppress the manifest conception apprehending the apprehender of imputed existence as truly existent.

Those four conceptions can be grouped into two: the conception of apprehended and the conception of apprehender. The former apprehends the apprehended as a truly existent object to be enjoyed whereas the latter apprehends the apprehender as a truly existent enjoyer or agent.

Wednesday afternoon class, March 25, 1998

The heat and peak levels of the path of preparation suppress the manifest conception apprehending truly existent objects. The patience level suppresses the innate manifest conception apprehending truly existent subjects. At this point all phenomena appear to this person like a reflection in a mirror. On the highest dharma level, due to the force of meditation on emptiness, the conception apprehending a truly existent subject/agent is suppressed and phenomena appear like a face reflected in a mirror.

The reason for positing the four levels of the path of preparation is in terms of the relative difficulty and ease of abandoning the conception apprehending truly existent objects and the conception apprehending truly existent agents. Of these two that which is easier to abandon is the conception apprehending truly existent objects. In Ornament for Sutra it says: “At that time the distraction apprehending the object is abandoned. Then at the end, the distraction related to the agent is abandoned.” Here “distraction” means the conception holding objects to exist truly and the conception holding agents to exist truly.

Someone says that these four levels of the path of preparation are posited in terms of the clear appearance of the object to wisdom but our system replies that this is just senseless talk.

2B2C-1A2B-2A3 Analyzing awareness and knowing

Gyeltsab says that when someone is in meditative equipoise on the path of preparation his mind cannot be posited as a non-conceptual cognizer that apprehends a sound generality and a meaning generality as suitable to be mixed because a mind of the path of preparation is a mind of an ordinary person and therefore the nature, emptiness, is hidden to it. It is not possible for such a non-conceptual mind of the path of preparation to realize a hidden phenomena. If this mind were mistaken with respect to the nature, emptiness, it would not be correct to say that it eliminates a manifest superimposition because it would be a non-conceptual mistaken consciousness. On the other hand, if this mind were unmistaken with respect to that, it would abandon the seed that is to be abandoned by the path of seeing because it would be a non-conceptual consciousness that is not mistaken with respect to the nature, emptiness. The conclusion is that the mind of a person on the path of preparation is a subsequent cognizer because the mind of meditative equipoise of the path of preparation is continually familiarizing itself with the realization of emptiness and is therefore a wisdom arisen from meditation to which the meaning generality of emptiness appears, and it is the entity of a mind analyzing its object.

Therefore, of the seven types of cognizers, the mind of meditative equipoise of the path of preparation is a subsequent cognizer. Why is it not a valid inferential cognizer? Because it is a wisdom arisen from meditation. It is also not a valid direct perceiver because it is not a new, incontrovertible, non-mistaken knower free from conceptuality; this being the definition of a direct perceiver. This mind of the path of preparation is also not correct assumption/belief because it realizes its object, while correct assumption is a concordant concever which is incontrovertible with respect to its object. It is not an inattentive cognizer, nor is it a wrong
consciousness, nor is it doubt. Therefore, the mind of equipoise of the path of preparation must be a subsequent cognizer as it cannot be any of the others.

Someone who does not understand the three types of wisdom says: “The contemplative mind of the path of preparation is an inferential cognizer that arises due to the sign “being free from one and many.”

2B2C-1A2B-2B Meaning of the branches
1 Demonstrating in brief
2 Explaining extensively

2B2C-1A2B-2B1A Making a connection

For beginners to attain the instructions accordingly, the branches of definite discrimination arise, hence the branches of definite discrimination:

Here the connection is made between the section of the text on the precepts/instructions and the section on the path of preparation. Gyeltsab says that someone who is a new abider on the path of accumulation first hears the instructions, then meditates on these instructions, and then achieves the branches of definite discrimination, the path of preparation, which is the result of meditating on the instructions. From this comes the generation of the path of seeing. Since the path of preparation is similar to the path of seeing, its result, it is called “branch of definite discrimination.”

The root text then presents the path of preparation in brief.

2B2C-1A2B-2B1 B Root text

By observed object, aspect, cause, and tutor, the heat of the bodhisattva and protector and so forth, according to essential nature, depends on possessing four conceptualizations. The small, middling, and great especially distinguish (them) from the hearers together with the rhinoceros-like.

The main point here is that Mahayana path of preparation is superior to the path of preparation of hearers and solitary realizers. How is it superior? It is superior due to six reasons:
(1) its observed object
(2) its aspect
(3) its cause
(4) its tutor
(5) its possession of the conceptualizations
(6) its divisions into small, middle, and great.

The observed object of the Mahayana path of preparation is superior because it observes the four noble truths to not exist truly while the Hinayana path of preparation does not observe them to not exist truly.

The aspect of the Mahayana path of preparation is superior because the Mahayana path of preparation takes the non-true existence of the four noble truths as its object of the mode of apprehension.

The cause of the Mahayana path of preparation is superior because the Mahayana path of preparation acts as a cause to bring one closer to the three types of realizations, those of hearers, solitary realizers, and bodhisattvas, while the Hinayana path of preparation does not act as a cause to bring one closer to these three types of realizations.
The tutor of the Mahayana path of preparation is superior because on the path of preparation one receives help from supreme emanation bodies of buddhas who act as tutors and give the complete set of teachings on the path.

The possession of conceptualizations of the Mahayana path of preparation is superior because its abandonments are superior in that the Mahayana path of preparation removes all four kinds of conceptions:

(1) the conception apprehending phenomena of the ever-deluded class as truly existing objects to be enjoyed
(2) the conception apprehending phenomena of the thoroughly-purified class as truly existing objects to be enjoyed
(3) the conception apprehending an apprehender/agent of substantial existence as a truly existing enjoyer
(4) the conception apprehending an apprehender/agent of imputed existence as truly existing enjoyer

The divisions of the Mahayana path of preparation are superior because all the levels of the Mahayana path of preparation can be divided into small, middle, and great, while in the case of the Hinayana path of preparation the highest mundane dharma level is not divided into three but is composed of only one moment. The Hinayana path of preparation is very short while the Mahayana path of preparation is longer, thus each of the four levels can be divided into three for a total of twelve divisions.

These characteristics of the Mahayana path of preparation make it superior to the Hinayana path of preparation. To summarize, the Mahayana path of preparation is superior to the Hinayana path of preparation due to its observed object, aspect, cause, and so forth.

In the Tibetan the root text is divided into two stanzas of four lines each. Gyeltsab says that the middle four lines present the qualified basis, the first two lines present the attributes themselves, and the last two lines present that to which the Mahayana path of preparation is superior. The middle four lines refer to the bodhisattvas on the path of preparation, the first two lines refer to the observed object and so forth, while the last two lines mention to that to which the Mahayana path of preparation is superior. Gyeltsab says that there are four attributes mentioned in the root text that make the Mahayana path of preparation superior to the Hinayana path of preparation: its observed object, aspect, cause, and tutor. The first two lines correspond to the English translation “by observed object, aspect, cause and tutor.” “The heat of the bodhisattva and protector and so forth, according to essential nature, depends on possessing four conceptualizations. The small, middling, and great” corresponds to the middle four lines. “Especially distinguish them from the hearers together with the rhinoceros-like” corresponds to the last two lines.

The divisions of the levels of the path of preparation into small, middle, and great also differentiates the Mahayana path of preparation from the Hinayana path of preparation. This is taught by Haribhadra and also accords with that said in Arya Vimuktisena’s commentary. According to these sources the aim of the four bodhisattvas, those on the heat level and so forth of the path of preparation, (subject) is superior to that of hearers and rhinoceros-like solitary realizers as is their path of preparation superior (predicate) because it is superior for the reason of its observed object, aspect, cause, tutor, possession of the four conceptualizations, and its divisions into small, middle, and great (sign). The reason for being superior due to having divisions of small, middle, and great is that the whole set of the body of the Mahayana path increases more and more. This is a peerless attribute unique to the Mahayana path.

The rest will be explained below.
With regard to attaining the culmination of the superior hearing and so forth of the bodhisattvas, “the similitude of liberation”: after the roots of virtue of the characteristics of faith and so forth, harmonious with realizing the four truths, “the four similitudes of definite discrimination”; 1) arisen from mundane meditation, the root of virtue called “transformed into heat”; after that, 2) “transformed to the peak”, after that 3) “transformed to patience”; and after that 4) “transformed to the highest dharma” by generating “small” and so forth successively or by individual persons of dull faculties and so forth in relation to (different) bodhisattvas, will be explained.

1) The mere entity of the special observed object refers to the properties of the four truths; 2) by mere antidotes of viewing phenomena, engaging the aspects of non-strong attachment; 3) the entity of the realizations of the three vehicles together; 4) by the mere characteristics of the virtuous friend, skilled in means, possessing the tutor. 5) the four types of conceptualization of the apprehended and the apprehender, which are objects to be abandoned by the (paths) of seeing and meditation arising in relation to the manner which will be explained, are the special distinctions from “heat” and so forth of the hearers and so forth.

Gyeltsab explains the differences between the Mahayana path of preparation and the inferior, or Hinayana, path of preparation by setting out a syllogism: The four bodhisattvas abiding on the four levels of the path of preparation (subject) are superior to the four hearers (predicate) because they are superior for five or six reasons (sign).

The Mahayana path of preparation is distinguished in terms of its cause because its cause is the similitude of liberation (the path of accumulation). The cause is the path of accumulation which includes the five faculties of faith and so forth. The path of preparation is distinguished in terms of its result because it is a cause that brings about a similar type of realization which is the path of seeing that directly sees the four noble truths. Therefore it has a distinguished result. The path of preparation is distinguished in terms of its entity/nature because it is a mundane path that is mainly a wisdom arisen from meditation observing its object emptiness. The Mahayana path of preparation is distinguished in terms of its divisions because there are the roots of virtue that are the heat level of the path of preparation that observes its object emptiness, there are the roots of virtue that are the peak level of the path of preparation that observes emptiness which is superior to that of the heat level, there are the roots of virtue that are the patience level of the path of preparation that is a realization that is not frightened with respect to its object emptiness, and there are the roots of virtue that are the highest mundane dharma level.

In brief, what this means is that the Mahayana path of preparation has a good cause, good result, good nature, and good divisions into small, middling, and great. In short, it is distinguished because of five or six attributes: its observed object, aspect, cause, tutor, possession of the four conceptualizations, and its divisions.

Thursday morning class, March 26, 1998

The Mahayana path of preparation also has temporal divisions: (1) in terms of a single continuum and (2) in terms of different continua. In terms of a single continuum there are three divisions: the small, the path of preparation generated at the beginning; the middle, the path of preparation generated in the middle; and the great, the path of preparation generated at the end. In terms of different continua, small refers to the path of preparation of those of dull faculty; middle, refers to the path of preparation of those of middling faculty; and great, refers to the path of preparation of those of sharp faculty.

The superiority of the Mahayana path of preparation can also be explained in terms of its qualified basis. Then there is also the superiority due to its observed object. The first level of the
Mahayana path of preparation, the heat level, is superior because of observing the attributes of the four noble truths because it takes the sixteen attributes of the four noble truths as its observed object and on this basis superimpositions are eliminated. This means that the observed object of the heat level is the four noble truths while the aspect is that of being an antidote to the conception apprehending apprehenders and apprehendeds as truly existent. This observed object and aspect are those of the small heat level of the Mahayana path of preparation.

Such a Mahayana path of preparation is also distinguished because of being a powerful cause of a distinguished result because it is a distinguished entity of a cause for the path of seeing that directly realizes all three vehicles.

The Mahayana path of preparation has the distinction/superiority of tutor because of having the distinction of being guided by a spiritual friend who is a supreme emanation body who teaches the whole Mahayana path that has the quality of being distinguished by method.

These qualities refer to the path of preparation in general.

There are objects to be abandoned by the path of seeing and the path of meditation that belong to peak training because when peak training is divided there are different levels, peak training at the time of the path of preparation, peak training at the time of the path of seeing, and peak training at the time of the path of meditation. The path of preparation also has objects to be abandoned that are similar to those to be abandoned by the path of seeing and the path of meditation. This means that peak training at the time of the path of preparation, peak training at the time of the path of seeing, and peak training at the time of the path of meditation each abandon the four conceptions:

1. the conception apprehending thoroughly afflicted phenomena to exist truly
2. the conception apprehending thoroughly purified phenomena to exist truly
3. the conception apprehending apprehenders of substantial existence to exist truly
4. the conception apprehending apprehenders of imputed existence to exist truly

These four conceptions exist on all three paths but the names of the first two conceptions are different. On the path of seeing and the path of meditation, the first two conceptions are called the conception apprehending the objects in which one engages as existing truly, these being the Mahayana path, the Mahayana scriptures, and the Mahayana result. One has to abandon the conception thinking that they exist truly. The second conception is the conception apprehending the objects to be rejected, the Hinayana path, the Hinayana scriptures, and the Hinayana result, as existing truly. One has to abandon the conception thinking that they exist truly. Therefore, the first two conceptions are not the same for the inferior Mahayana path and the higher Mahayana paths. This discussion of the objects to be adopted and the objects to be rejected will be elaborated upon later but, in short, there are nine related to the conception apprehending the object to be adopted as truly existent, nine related to the conception apprehending the object to be rejected as truly existent, nine related to the conception apprehending apprehenders of substantial existence as truly existent, and nine related to the conception apprehending apprehenders apprehending imputed existence as truly existent. These thirty-six are the same for the path of preparation, the path of seeing, and the path of meditation.

The roots of virtue of their “transformed into heat” and so forth: 1) refer to the four truths, the essential nature of the subjects of the definitions, “suitable as form” and so forth, 2) by mere antidotes of viewing self, engaging in the aspects of impermanence and so forth, 3) are for the purpose of realizing only their own vehicle, 4) are separated from a tutor, and 5) arise not possessing the four types of conceptualization because of appearing in their tradition.

The Hinayana path, for example, the path of preparation of hearers and solitary realizers, also observes true sufferings, true origins, true cessations, and true paths but they only observe the
true sufferings and true origins that are pure (meaning designated) and the true cessations and true paths that are pure/designated. This path of preparation only acts as an antidote against the conception of a self supporting substantially existent self and does not act to eliminate the conception of true existence. Its observed object is the designated four noble truths and its aspect is that of having engaged in knowing impermanence and so forth. The mind realizing impermanence is not said to be a realization of selflessness.

A hearer’s path of preparation is only a cause of a hearer’s path of seeing. Or, in other words, it is a cause of a realization abiding in the Hinayana class of realization.

A hearer’s path of preparation is separated from a tutor that teaches a complete set of method and wisdom. A hearer’s path of preparation is not an antidote to the four types of conceptions related to the apprehender and apprehended.

One first recognizes true sufferings and then one comes to understand that true origins are to be abandoned. When one discovers that there are true cessations that are separated from true sufferings and true origins, one understands that there are true paths that lead to those cessations. True cessations are to be realized in dependence upon relying on true paths for a long time. Thus one has to meditate on true cessations and true paths. On this qualified basis one meditates on the eight attributes of true cessations and true paths—the four of true cessations: cessation, pacification, auspicious, definite emergence; and the four of true paths: path, suitability, achievement, and definite deliverance.

2B2C-1A2B-2B1C-2 The twelve modes of reference summarized into four
A Actual
B Referring by means of other aspects
C The reason for not actually showing that here
D Dispelling objections

2B2C-1A2B-2B1C-2 Actual

The bodhisattvas’ “similitude of definite discrimination”, through the strength of skillful means, refers to properties of the four truths, in the proper way: 1) by means of cause regarding some, 2) by means of effect regarding some, 3) by means of mere entity regarding some, and 4) by means of the aspects of dharmata regarding some.

Gyeltsab sets out a syllogism: bodhisattvas with a similitude of definite discrimination (subject) observe the four truths in different ways because in order to practice the whole path by the force of skillful means those on the middle level of the patience level of the path of preparation observe the four truths by way of cause; those on the small level of the highest mundane dharma level observe the four truths by way of result; those on the small level of the patience level observe the four truths by way of the entity of the two truths; and those on the remaining nine levels observe the four truths by way of the aspect of their nature/dharmata.

That bodhisattvas on the middle patience level of the path of preparation observe the four truths by way of cause means that before entering meditative equipoise they motivate that their meditation becomes a cause of the four purities and then meditate and realize that cyclic existence and nirvana do not exist truly. This is the cause for the four purities: pure body, pure speech, pure mind, and pure marks.

That bodhisattvas on the small level of highest mundane dharma level observe the four truths by way of result means that they enter meditative equipoise knowing that their contemplation on the four noble truths will bring the result of different types of concentrations, such as the vajra-like concentration, the illusion-like concentration, and the concentration of becoming a hero.

That bodhisattvas on the small level of the patience level observe the four truths by way of the entity of the two truths means that they know that the fact that the four noble truths do not exist ultimately is the entity of their being a conventional truth. This means that the two truths are one in entity. In other words, those on the small patience level enter into meditation equipoise.
understanding that the two truths are one entity and that the fact that the four noble truths do not exist ultimately is the entity of conventional truth.

That bodhisattvas on the remaining nine levels observe the four truths by way of the aspect of their nature/dharmata means that these bodhisattvas enter into meditation equipoise understanding only that the four noble truths lack true existence. This means that during meditative equipoise their mind that meditates is in the aspect of nature/dharmata, but when they arise from this meditation, i.e., in the post-meditation period, they observe the four truths by way of entity, cause, and result.

These four ways of positing, the middle patience level etc., is in accordance with the minds of the disciples. However, in reality all twelve minds can observe all.

2B2C-1A2B-2B1C-2B Referring by means of other aspects

It should be understood that, like the former, they always refer to the four truths by other aspects.

Gyeltsab says that bodhisattvas on the path of preparation observe the sixteen attributes, impermanence and so forth, just as do those on the hearer’s path of preparation. One has to train well in the mind training of beings of middle scope in order to guide other inferior beings, in order to become depressed about staying in cyclic existence, and in order to eradicate the glory of the delusions. In short, in order to be able to appropriately guide inferior beings, those who follow the hearer path, one has to train in the middle scope.

2B2C-1A2B-2B1C-2C The reason for not actually showing that here

In brief, out of a desire to express the aspects merely commented upon, I do not elaborate.

Gyeltsab says that these ways of observing are not explicitly elaborated here, but are summarized by simply commenting on the meaning of the words of the root text. This means that there is only commentary on the root text at this point.

2B2C-1A2B-2B1C-2D Dispelling objections

For what (reason)? This is only a dissimilar presentation, and for that (reason), arguments based on the other vehicles should not be expressed at any time.

Someone voices an objection saying: “If the four noble truths are observed in an infinite way this would contradict Abhidharmakosha which says that in terms of the four noble truths there are only the sixteen stainless attributes.” Gyeltsab responds saying that the meditation on the four noble truths and their sixteen stainless attributes is set out for those of lower tenets and should not to be contradicted at any time. However, a person practicing the complete attributes of the four noble truths is meditating on truths that are different from those set out by the lower tenets; those meditated on here are those presented in the Mahayana basket/canon, while those mentioned in Abhidharmakosha are in accordance with the four noble truths as set out in the lower vehicle.

Thursday afternoon class, March 26, 1998

2B2C-1A2B-2B2 Explaining extensively
A Explaining the three former characteristics
B Characteristics of conceptualizations
C Explaining the tutor

2B2C-1A2B-2B2A Explaining the three former characteristics
1 Making general connections
2 Explaining the individual meanings
3 Dispelling objections about the manner of expression

If asked, “Just what are the distinctions of observed object and aspect?” - because of that, the observed objects and aspects are explained by an interceding seven stanzas.

Here a connection is made between the sections “Demonstrating in brief” and “Explaining extensively.”

2B2C-1A2B-2B2A-2 Explaining the individual meanings
A Distinctions of observed object, aspect and cause of heat
B Peak
C Tolerance
D Supreme dharma

2B2C-1A2B-2B2A-2A Distinctions of observed object, aspect and cause of heat
1 Root text
2 Commentary

Referring to impermanence and so forth, having support of the truths its aspects cease, strong settling and so forth, the cause of attaining three vehicles together, assembling and presenting of form, and so forth., separated from abidance, abidance, imputations, and inexpressible.

The observed object, aspect, and cause are discussed further.
The first two lines of the 28th stanza of the root text in Tibetan presents the distinction of observed object (“referring to impermanence” up to “and so forth”), the third line presents the distinction of aspect, and the fourth presents the distinction of cause.

Gyeltsab presents a syllogism: The sixteen attributes which have the support of the truths (subject) are the observed object of the small heat level of the Mahayana path of preparation (predicate) because they are the basis upon which superimposition concerning them is to be eliminated (sign). This type of syllogism is also to be applied to the observed objects of the remaining levels of the path of preparation.

Then Gyeltab sets out a syllogism regarding the aspect of the small heat level of the Mahayana path of preparation: the small heat level of the Mahayana path of preparation which opposes the conception that strongly clings to the sixteen attributes as existing truly and then abides on this excessively is the aspect of the small level of heat because it is an exalted wisdom of the small heat level that opposes the superimposition that is wrong concerning the observed object.

There are three levels of conceptions to be removed:
(1) the conception strongly clinging to the sixteen attributes as existing truly
(2) the conception abiding on this excessively
(3) the conception knowing all
Such types of syllogism concerning the observed object, aspect, and cause should also be applied to the other eleven divisions of the path of preparation. In sutra it says: “Shariputra, when a great bodhisattva practices the perfection of wisdom if he strongly clings to, excessively abides on, and knows all form as impermanent, suffering, empty, and selfless, the craving for these concordant factors of great enlightenment is a fault.”

The syllogism regarding cause is: the small heat level of the Mahayana path of preparation (subject) acts as a cause of a distinguished result (predicate) because it is the cause of a Mahayana path of seeing that realizes all three vehicles (sign). The sign “because it is the cause of a Mahayana path of seeing that realizes all three vehicles” is to be applied to all the remaining divisions of the path of preparation.

243
Regarding that, the observed objects of the small are the sixteen aspects of impermanence and so forth, and relying on the four truths of suffering and so forth, Its aspects are the ceasing of strong grasping to the truths of suffering and so forth, referring, and so forth. That all (the levels) such as heat and so forth also are the entity of the cause of attaining the realizations of the three vehicles together, should be known. The observed objects of the middling are listed thus: by attention to the visualized and to thusness, “not referring” and “not seeing” form and so forth, positive and negative (phenomena). The aspects are: by the mere non-existence of all names, “the non-existence of characteristics of engaging in dissimilar continuities and similar continuities”. the observed objects of the great are all phenomena, “from form to buddha,” and conventional phenomena which are imputed by convention. The aspects are “the inexpressibility, in any way, of phenomena of virtue and so forth themselves.”

In the root text when it says “assembling and presenting of form and so forth, separated from abidance, abidance” “assembling and presenting of form and so forth” refers to the observed object of the middle heat level of the path of preparation while “separated from abidance, abidance” refers to its aspect. The words “imputations and inexpressible” present the observed object and aspect of the great heat level of the path of preparation.

When Haribhadra’s commentary says “The observed objects of the middling are listed thus: by attention to the visualized and to thusness, “not referring” and “not seeing” from and so forth, positive and negative phenomena” it presents the observed objects of the middling heat level of the path of preparation. “The aspects are: by the mere non-existence of all names, “the non-existence of characteristics of engaging in dissimilar continuities and similar continuities” presents the aspect of the middling heat level of the path of preparation. “The observed object of the great are all phenomena, “from form to buddha,” and conventional phenomena which are imputed by convention” presents the observed object of the great heat level of the path of preparation. “The aspects are “the inexpressibility, in any way, of phenomena of virtue and so forth themselves” presents the aspects of the great heat level of the path of preparation.

Gyeltsab quotes sutra: “Even someone who wishes to learn the hearers ground should listen to the very perfection of wisdom.” The “assembling and presenting of form and so forth” are the observed objects of the middle heat level of the path of preparation. The aspect of the middle heat level of the path of preparation is an exalted wisdom that realizes that the name is free from continuous abidance and that realizes abidance does not exist ultimately.

The observed objects of the great heat level of the path of preparation are form and so forth that are qualified by being labeled. The aspect is an exalted wisdom that realizes that a phenomenon cannot be expressed ultimately.

Gyeltsab then quotes various phrases from sutra regarding the three levels of the heat level:
“Bhagavan, I myself have not had the assembling and presenting of form and so forth, I have not looked for them, I have not observed them, I have not seen them ultimately.”
“Even the names are not abidance, nor are they non-abidance.”
“Bhagavan it is so. A bodhisattva labeling phenomena with names and any phenomena that is designated...”
“All phenomena from the aggregates up to the unshared qualities of a buddha are not to be expressed ultimately.”
What is the observed object of the great heat level of the path of preparation? It is the four noble truths. Haribhadra says: “all phenomena, “from form to buddha,” and conventional phenomena which are imputed by convention.” We should know that the observed objects of all three levels of the path of preparation are the four noble truths but that the aspect changes. The observed objects of the small heat level of the path of preparation are the sixteen attributes of the four noble truths, while the aspect is the exalted wisdom knowing that the sixteen attributes do not exist truly.

The observed objects of the middle heat level of the path of preparation are the assembling and presenting of forms which are qualified by being free of true existence. Haribhadra says: “The observed objects of the middling are listed thus...” which is a somewhat different presentation.

The observed objects of the great heat level of the path of preparation are all phenomena that are imputed from the aggregates up to the unshared qualities of a buddha.

Thus, because of being an omen of the fire of completely non-conceptual exalted wisdom, transformed to heat, possessing observed objects and aspects, (it is of) three types.

This summary explains why the heat level is so called; it is because it is an omen of fire. The heat level begins to consume the obscurations to knowledge, just like the heat of a fire begins to burn wood. The heat level is the point at which a wisdom arisen from meditation on emptiness is generated for the first time; this wisdom produces the heat that begins to burn the obscurations to knowledge.

1 Commentary

Not abiding (in) form and so forth, they are without self nature as their entity. They are the nature of one another, not abiding in them as impermanent and so forth, they are empty by their own entity, they are the nature of one another, whatever is not grasping any phenomenon, because they are not seen as signs. By wisdom, completely investigating, all as without observed.

Gyeltsab says that Arya Vimuktisena presents the observed objects and aspect of the small peak level of the path of preparation in two ways. These two presentations are not clearly evident in Gyeltsab Je’s commentary, however in the first way it seems that Arya Vimuktisena does not thoroughly present the four noble truths as an observed object and aspect of the small peak level. Then in the second way he does present the four noble truths as the observed object and aspect of the small peak level. The observed objects are explained saying form and so forth do not exist ultimately. Form and so forth do not exist truly as an entity of form and so forth; the observed object is qualified in this way. The exalted wisdom realizing form and so forth and their emptinesses as one nature is the aspect.

In the Ornament it says “not abiding in form and so forth, they are without self nature as their entity. They are the nature of one another, not abiding in them as impermanent and so forth.” “Not abiding in form and so forth, they are without self nature as their entity” presents the observed objects of the small peak level of the path of preparation. “They are the nature of one another” presents the aspect of the small peak level of the path of preparation. This is the first presentation which is based on the four noble truths.

Then with respect to the presentation that is not based on the four noble truths “not abiding in them as impermanent and so forth, they are empty by their own entity” presents the
observed object, while “they are the nature of one another” presents the aspect. This concludes the presentation of the observed objects and aspect of the small peak level of the path of preparation.

“Whatever is not grasping any phenomenon” presents the observed object of the middle peak level of the path of preparation, while “because they are not seen as signs” presents the aspect of the middle peak level of the path of preparation.

“By wisdom, completely investigating” presents the observed object of the great peak level of the path of preparation, while “all is without observed” presents the aspect of the great peak level of the path of preparation.

Friday morning class, March 27, 1998

MEDITATION ADVICE
In terms of the offering of worship we talked about how it could be practiced related to the practice of beings of lower scope. “That which through the exalted knower of all leads hearers seeking pacification to peace” (see Commentary Clarifying the Meaning, Introduction, page 3) is related to the practice of beings of lower and middling scope. Here we will talk a bit about the practices of beings of middling scope.

The word “pacification” in the root text refers to the pacification of true sufferings and the true origins of suffering. True origins are karma and delusions. According to Abhidharmakosa karma is principally the mental action of intention; from this root arise actions of body and speech. When we meditate we should apply our daily problems to meditation in order to understand the cause of our suffering. Although these problems do, of course, arise as a result of conditions their main cause is actions we created with body, speech, and mind in past lives. The subject of karma is extremely profound. For example, even the fact that people do not listen to us or believe us when we say true words is due to actions we created in the past. What kind of karma created this result? The cause was not believing others heartfelt sincere words. This is a particular example of a result similar to its cause. Each day we create hundreds of actions which will eventually bring their results. Thus, karma is inconceivable. In fact, there are four things that are inconceivable:

1. the karma of sentient beings is inconceivable
2. the energy of medicines is inconceivable
3. the energy of certain substances is inconceivable
4. the magical emanations of buddhas and bodhisattvas are inconceivable

Because of having created inconceivable karma in the past we experience its inconceivable result.

Meditating on karma also means to contemplate its four characteristics:

1. karma is definite
2. karma increases
3. karma created does not disappear
4. karma not created will not be experienced

With respect to karma being definite there are two cases: positive actions definitely bring the experience of pleasant feeling, while negative actions definitely bring the experience of suffering feeling. This is an inner cause but it can be compared to external causes such as that of planting a sweet seed that brings a plant with sweet fruit or planting a chili seed that brings the result of a chili plant.

Karma has the nature of increasing means that when we create non-virtuous karma such as that of killing an ant, if it is not purified immediately, the karma will double in strength by the next day to equal that of having killed two ants, and so forth. This is the general interpretation of the characteristic of increasing but there is another way of interpreting this which is that a single cause can bring many results. For example, when someone plants an orange seed in fertile ground it brings an orange tree with many branches and many oranges. In the same way, one small action can bring many results.

That karma created does not disappear means that karma created will definitely bring its result unless an antidote, such as purification, is applied. If no antidote is applied, karma will

Friday morning class, March 27, 1998

MEDITATION ADVICE
In terms of the offering of worship we talked about how it could be practiced related to the practice of beings of lower scope. “That which through the exalted knower of all leads hearers seeking pacification to peace” (see Commentary Clarifying the Meaning, Introduction, page 3) is related to the practice of beings of lower and middling scope. Here we will talk a bit about the practices of beings of middling scope.

The word “pacification” in the root text refers to the pacification of true sufferings and the true origins of suffering. True origins are karma and delusions. According to Abhidharmakosa karma is principally the mental action of intention; from this root arise actions of body and speech. When we meditate we should apply our daily problems to meditation in order to understand the cause of our suffering. Although these problems do, of course, arise as a result of conditions their main cause is actions we created with body, speech, and mind in past lives. The subject of karma is extremely profound. For example, even the fact that people do not listen to us or believe us when we say true words is due to actions we created in the past. What kind of karma created this result? The cause was not believing others heartfelt sincere words. This is a particular example of a result similar to its cause. Each day we create hundreds of actions which will eventually bring their results. Thus, karma is inconceivable. In fact, there are four things that are inconceivable:

1. the karma of sentient beings is inconceivable
2. the energy of medicines is inconceivable
3. the energy of certain substances is inconceivable
4. the magical emanations of buddhas and bodhisattvas are inconceivable

Because of having created inconceivable karma in the past we experience its inconceivable result.

Meditating on karma also means to contemplate its four characteristics:

1. karma is definite
2. karma increases
3. karma created does not disappear
4. karma not created will not be experienced

With respect to karma being definite there are two cases: positive actions definitely bring the experience of pleasant feeling, while negative actions definitely bring the experience of suffering feeling. This is an inner cause but it can be compared to external causes such as that of planting a sweet seed that brings a plant with sweet fruit or planting a chili seed that brings the result of a chili plant.

Karma has the nature of increasing means that when we create non-virtuous karma such as that of killing an ant, if it is not purified immediately, the karma will double in strength by the next day to equal that of having killed two ants, and so forth. This is the general interpretation of the characteristic of increasing but there is another way of interpreting this which is that a single cause can bring many results. For example, when someone plants an orange seed in fertile ground it brings an orange tree with many branches and many oranges. In the same way, one small action can bring many results.

That karma created does not disappear means that karma created will definitely bring its result unless an antidote, such as purification, is applied. If no antidote is applied, karma will
definitely bring its result. For example, if a seed is planted and then does not rot and so forth it will definitely bring its result, a plant.

The fourth characteristic is that karma not created will not bring a result. There is a story of an Indian king that illustrates this law. This king had a well in his palace that was well covered by a roof. One time a particular rain fell that made those who drank the rain water crazy. As a consequence all the king’s subjects became crazy while the king remained sane as he drank only the water from his well. However, all the subjects thought that the king was crazy while they themselves were sane. This particular rain was the result of a collective karma of the subjects, while the king did not have the karma to become crazy. There are many such stories mentioned in the Sutra of the Wise and the Foolish (Damamuko nama sutra) and the Sutra of a Hundred Actions (Karmashataka).

We need to meditate on these characteristics of karma until the meditation brings some stable understanding of these points as then will know what to practice and what to avoid. One can also meditate on particular karmas, such as the ten black, or non-virtuous, karmas and the ten white, or virtuous, karmas. Included in the non-virtuous actions are those committed with body, speech, and mind. For example, non-virtuous karma of body includes killing. Then, to go into this in more detail, one can consider that to create a complete karma of killing certain conditions need to be complete: the preparation, actual, and conclusion. When we elaborate on this even further there are the branches of basis, intention, the actual action, and the conclusion. Included in the branch of basis are a further two factors, the basis itself and the support, the person who kills. Within the branch of intention there are the factors of delusion, recognition, and motivation. The motivation and the recognition are fundamental to the completion of the action. For example, in the case of someone who wants to kill Tashi but actually kills Sherab the recognition is mistaken and so the action is not complete. The motivation is the constant wish to kill a certain person. With the motivation and recognition, one can engage in the execution, or preparation, of the action in various ways, for example, killing with a knife or other means. The conclusion is that that particular person dies. When all these factors are present one creates the complete action of killing.

These factors can be summarized in (1) the preparation (this includes the basis, recognition, motivation, and delusion), (2) the actual (the action of killing), and (3) the conclusion (the death of the person and subsequent actions; for example, when a sheep is killed one then skins it, chops up the meat, sells its wool, meat, etc.).

The same branches are also needed to create a complete action of stealing: the basis, intention, execution, and conclusion. The actual action of stealing is to take something from someone without it having been given. The object has to be of some value.

Also in regard to the negative action of sexual misconduct there are the four branches, but in this case a correct recognition is not necessary for the action to be complete. The basis is anyone who belongs to someone else. The action can become misconduct with respect to an improper place, improper time, improper organ/limb, improper object. Sexual misconduct with an improper organ is for the penis to enter into the mouth or anus. In this case there is sexual misconduct for both partners. According to the texts one does not commit sexual misconduct in the case that other objects are used. Homosexuality is also considered sexual misconduct, for example, men engaging in oral or anal sex. Even a man having oral sex with his own penis is sexual misconduct; in relation to this there is a story in the Vinaya teachings of a monk called “Long Gender” whose penis was so long that he could wrap it around his waist. Sexual misconduct also occurs in the case of an improper object, for example, a man committing adultery or having sexual intercourse with his mother, sister, a nun, etc., or a woman committing adultery or having sexual intercourse with a monk, etc. In the case of sexual intercourse with one’s own partner there is no misconduct in relation to the object. Sexual misconduct also occurs in relation to an improper time, for example, in the case of a husband and wife when one of them has the eight Mahayana precepts, or when the woman is pregnant or menstruating. Sexual misconduct also occurs in relation to an improper place: having sexual intercourse in a gompa, near a stupa, in
the presence of one’s lama, or in a room shared with one’s parents. Sexual misconduct may appear simple to understand but in fact there are many details that one should know.

In relation to speech there is the negative action of lying. To be complete the result is to successfully deceive another person and the action is any means that is used to deceive the other person. The speech is necessarily one’s own, and it must be expressed clearly such that the other person understands what one said. There is also the karma of divisive speech which is speaking words that create disharmony. The negative action of harsh words is to express words that hurt others. Then there is the karma of senseless or frivolous talk which is to talk purposelessly or meaninglessly. This karma can also be committed by doing such actions as reading war novels. In Abhidharmakosha it also says that giving Dharma teachings motivated by attachment to receiving offerings or fame is the negative action of senseless talk.

The negative actions of mind include covetousness which means the wish to have that which belongs to others. Harmful intent is the thought to harm someone. Wrong view means viewing something that exists as not existing, for example, past and future lives, the Three Jewels, and so forth.

Just as there are the ten non-virtuous actions, so too are there ten virtuous actions. In relation to our daily life it is important to understand the details of non-virtuous actions and to behave properly. In this way we will put the Dharma into practice.

Karma can be heavy or light. Karma can bring four kinds of results: the two results similar to the cause, the result similar to the cause as an activity (for example, the natural desire to kill due to having accustomed oneself to the activity of killing in a previous life) and the result similar to the cause as an experience (for example, to have a short life due to having taken others’ life in the past); a maturation result (principle part); and an empowering/environmental result. All four of these results can be either pleasant or unpleasant. Because there are four kinds of results of actions the practice of purification is composed of four kinds of antidotes/remedies: the opponent forces of the basis, regret, determination, and the application of an antidote. The opponent force of the basis counteracts the environmental result, the opponent force of the application of antidotes counteracts maturation result, the opponent force of regret counteracts the result similar to the cause as an experience, and the opponent force of determination counteracts the result similar to the cause as an activity.

This is enough about the meditation of beings of middle scope in relation to this particular line of the Ornament.

QUESTIONS AND ANSWERS
Question: Please summarize the important points of the teachings this week.

Reply: We have been looking at the branches of definite discrimination and before that the twenty sangha. In the context of the twenty sangha there are four types of enterers, the first being approachers to stream enterer. An approacher to stream enterer is defined as: one of the four types of enterers who is exerting effort to abandon the three fetters to be abandoned by the path of seeing. The three fetters are intellectually formed transitory view, the view holding bad conduct and bad morality as supreme, and doubt. In Abhidharmakosha these three fetters are referred to as “not wanting to go” (intellectually formed transitory view), “mistaking the path” (the view holding bad conduct and bad morality as supreme), and “doubting the path” (doubt). These are said to be the three main obstacles to liberation because as long as one has the intellectually formed transitory view one will not want to go to liberation; although one wants to go to liberation one mistakes the path (likened to the view holding bad conduct and bad morality as supreme); although one does not mistake the path one doubts whether it is the right one.

Stream enterers are divided into the dull facultied and the sharp facultied.

Then there are abiders in the result of stream enterer. An abider in the result of stream enterer is defined as: one of the four abiders who abides in the distinguished result of training in virtue having abandoned the three fetters to be abandoned by the path of seeing.
When stream enterers are further divided there are “determined stream enterers” who will take seven more lives, and “undetermined stream enterers” who take rebirth from god to god or who take rebirth from human to human without a fixed number of rebirths. The determined stream enterer who will take seven more lives is said to have a total of twenty-eight existences: 14 intermediate state existences and 14 rebirth existences. This stream enterer takes seven human rebirths and therefore also goes through seven intermediate state existences, and also takes a seven god rebirths accompanied by seven intermediate state existences. The undetermined stream enterer does not have a fixed number of rebirths remaining [until the achievement of nirvana].

Among the twenty sangha there are five related to stream enterers:
(1) stream enterers who are born from god to god
(2) stream enterers who are born from human to human
(3) dull facultied stream enterers
(4) sharp facultied stream enterers
(5) mere abiders in the result of stream enterer

Once returners are also divided into enterers and abiders. The definition of approacher to the result of once returner is: one of the four enterers who is exerting effort to abandon the six levels of attachment of the desire realm. They are of two types “appreciators by faith” and “attainers by seeing.”

The definition of an abider in the result of once returner is: one of the four abiders who is abiding in the distinguished result of training in virtue due to having abandoned most of the five last similitudes or due to having abandoned the six levels of attachment of the desire realm. Abiders in the result of once returner can be divided into those who abandon serially and those who abandon simultaneously. There are once returners who are blocked by one life and one obstacle meaning that they will take one more rebirth before attaining nirvana and have one remaining obstacle which is the ninth level of attachment of the desire realm. Therefore, there are three sangha who are once returners:
(6) approachers to the result of once returner
(7) once returners blocked by one life and one obstacle
(8) mere abiders in the result of once returner

Non-returners are also divided into enterers and abiders. The definition of an approacher to the result of non-returner is: one of the four enterers who is exerting effort to abandon the five last similitudes. Approachers to non-returners can also be divided into “appreciators by faith” and “attainers by seeing.”

The definition of an abider in the result of non-returner is: one of the four abiders who is abiding in the distinguished result of training in virtue by having abandoned the last five similitudes. This abider can be divided into those who abandon serially and those who leap.

Among the twenty sangha there are ten related to non-returners:
(9) approachers to the result of non-returner
(10) those who pass beyond in the intermediate state
(11) those who pass beyond upon birth
(12) those who pass beyond with manifest effort
(13) those who pass beyond without manifest effort
(14) those who leap
(15) those who half leap
(16) those who die-transfer everywhere
(17) those who attain peace in the same life (visual dharmas pacified)
(18) those who manifest a body
Foe destroyers are also divided into enterers and abiders. The definition of an approacher to the result of foe destroyer is: one of the four enterers who is exerting effort to abandon the five upper similitudes.

The definition of an abider in the result of foe destroyer is: one of the four abiders who is abiding in the distinguished result of training in virtue due to having abandoned the five upper similitudes.

The last of the twenty sangha are:
(19) approachers to the result of foe destroyer
(20) rhinoceros-like solitary realizer

There are six types of foe destroyers:
(1) foe destroyers with qualities that thoroughly degenerate
(2) foe destroyers who intend to die
(3) foe destroyers who subsequently protect
(4) foe destroyers who abide immutably
(5) foe destroyers who are fortunate ones who realize
(6) foe destroyers with unfluctuating qualities

END
Monday afternoon class, March 30, 1998

We will continue the discussion of the observed objects and the aspects of the path of preparation, in particular, those of the peak level, which is divided into small, middle, and great. With regard to the small peak level there are two ways of presenting its observed object, one presentation is not related to the four noble truths while the other is related to the four noble truths.

Not abiding (in) form and so forth, they are without self nature as their entity presents the observed object of the small peak level. They are the nature of one another presents the aspect of the small peak level.

Not abiding in them as impermanent and so forth presents the observed object of the small peak level in the context of the presentation related to the four noble truths. In short, it means that the object of the small peak level is the four noble truths and their sixteen attributes, beginning with impermanence. They are empty by their own entity, they are the nature of one another presents the aspect of the small peak level in accordance with the presentation related to the four noble truths.

Whatever is not grasping any phenomenon shows the observed object of the middle peak level, while because they are not seen as signs shows its aspect. The aspect of the middle peak level is the exalted wisdom of the middle peak level that sees the sixteen attributes as free from the sign of true existence. By wisdom, completely investigating shows the observed object of the great peak level, while all as without observed shows its aspect.

The observed object of the small is: since form and so forth are the mere entity which is devoid of its own entity, through their entity emptiness and “not abiding in form and so forth”. The aspect is: since ultimately all phenomena of form and so forth, and emptiness are mutually one entity, through mere non-existence of impermanence and so forth in emptiness, “not abiding in those form and so forth as permanent or impermanent and so forth”. The referent of the middling is: since by the mere entity of the sphere of dharma impermanence and so forth and emptiness do not have their own entities, “mere impermanence and so forth, and emptiness are mutually one essential nature”. The aspect is: by ceasing mere entities, “not taking form and so forth as mine”, whatever there is. The observed object of the great is: by mere non-entitiness, “not seeing those forms and so forth as signs of blue and so forth”. The aspect is: since wisdom thoroughly distinguishes phenomena perfectly, “definitely realizing all properties as not referring”.

Gyeltsab quotes two sutras with respect to the observed objects and aspects presented in relation to the four noble truths: “Bhagavan, when a great bodhisattva practices the perfection of wisdom he should not abide conceiving of form as impermanent” up to “he should not abide conceiving of form as pacified,” and “Bhagavan, whatever is the emptiness of impermanence is not impermanent, and whatever is degenerated from impermanence is not emptiness.” This basically means, as said in the Heart Sutra: “Form is empty, emptiness is form. Emptiness is not other than form and form is not other than emptiness.” Form is empty, but is the emptiness form? No. Is there a form other than emptiness? It is true that there is no form other than emptiness. As it says in the Heart Sutra: “Form is empty, emptiness is form. Emptiness is not other than form and form is not other than emptiness.” When we ask, “Is emptiness form?”, the answer is, “No, it is not.”
but at the same time the very entity of form, which is the lack of true existence, and the emptiness of form are one entity. “When a great bodhisattva practices the perfection of wisdom he should not abide conceiving of form as impermanent” means that a great bodhisattva should not abide conceiving of form as truly impermanent.

In terms of the observed object and aspect of the small peak level, the observed object is impermanence and so forth, the attributes of the four noble truths, while its aspect is the exalted wisdom of the small peak level that realizes that these sixteen attributes do not exist truly. In sutra it says “he should not abide conceiving of form as pacified” which means that such a bodhisattva should not abide conceiving that form is truly existent misery or that form is truly existent pacification. The quotation “He should not abide conceiving of form as pacified....” shows the observed object of small peak, while “whatever is the emptiness of impermanence is not impermanent” shows the aspect of small peak.

There are two kinds of aspect: the aspect of the object and the aspect of the subject. The aspect of the object is the lack of true existence of the four noble truths upon which form and so forth are supported, while the aspect of the subject (the knower) is the exalted wisdom of the small peak level that realizes that the four noble truths do not exist truly.

The observed object of the middle peak level is any phenomenon that is not grasped as having the sign [of true existence]. The aspect of the middle peak level is the exalted wisdom of the middle peak level that realizes that that phenomenon does not have signs of true existence. Gyeltshab quotes two sutras respectively in relation to the observed object and aspect of the middle peak: “Bhagavan, the exalted knower of all aspects is not to be held as having the sign of true existence,” and “not holding thoroughly the phenomena which are empty of existing by their own character.” Thus, what is known is not to be seen as existing ultimately. What is known in this context is the inner attainment and clear realization. Inner attainment can be any cessation that has been actualized. These attainments are not to be looked at as existing ultimately.

The observed object of the great peak level is the four noble truths that are the object to be investigated by a wisdom realizing an ultimate. The aspect of the great peak level is the exalted wisdom of the great peak level that does not observe all three factors as truly existent. The three factors are: (1) the wisdom realizing an ultimate, (2) an object to be investigated by, and (3) the four noble truths. Gyeltshab quotes two citations from sutra with respect to the observed object and aspect of the great peak level: “Great bodhisattvas, when you practice the perfection of wisdom, what is that perfection of wisdom? What is it for? The so-called perfection of wisdom is to be investigated thoroughly,” and “Venerable Shariputra, because there is inner emptiness and so forth, there are no forms, and they are not observed.”

The observed object of the small peak level in the presentation not related to the four noble truths is form and so forth which do not abide ultimately. The reason for this is that form and so forth are free from existing as an ultimate entity. In other words, they are qualified by being empty of being an ultimately existing entity. The aspect of the small peak level is the exalted wisdom of the small peak that realizes that form and form are not ultimately impermanent nor ultimately permanent. The reason for positing this is that within emptiness everything, impermanence and so forth, is pervaded by not existing ultimately because all phenomena, form and so forth, and their emptinesses are ultimately one entity with respect to each other.

The observed object of the middle peak level is that which is qualified by being a single essential nature of impermanence and so forth and emptiness. Impermanence and its emptiness necessarily do not have their own ultimate self entity because they are the very entity of the sphere of phenomena which is the emptiness of true existence. The aspect of the middle peak level is an exalted wisdom of the middle peak level that realizes, by negating the entitiness of true existence, that form and so forth are not to be ultimately possessed as one’s own. In short, it is an exalted
wisdom of the middle peak level that realizes that the forms and so forth based upon the four noble truths do not exist truly.

The observed object of the great peak level is form and so forth, including the color blue, which are not truly existent. While only blue is mentioned explicitly, this includes the root colors, red, white, blue, and yellow. These are realized to exist free from the sign of true existence. In other words, while there are forms, such as blue and so forth, they do not exist truly. The aspect of the great peak level is the exalted wisdom of the great peak level which observes all phenomenon, such as the three circles/factors, as non-truly existent. This is an exalted wisdom that decisively investigates the three circles as to whether they are truly existent or not. When such objects are investigated, they are perfectly and correctly realized by the wisdom analyzing an ultimate.

Thus, because of being the peak of variable roots of virtue, “transformed to the peak”, possessing observed objects and aspects (are of) three types.

Gyeltsab says that because below the heat level of the path of preparation wrong view can cut one’s roots of virtue, these roots of virtue are said to be movable/unstable. After reaching the peak level, so called because it is the peak of movable roots of virtue, one’s roots of virtue become immovable. In other words, there is no longer the risk that one’s roots of virtue can be cut off by wrong view. However, it can be debated as to whether wrong view can actually cut the roots of virtue of one who is on the path of preparation. The conclusion of the debate is that while wrong view cannot cut one’s root of virtue on the heat level of the path of preparation it is not certain that one will not generate wrong view while on the heat level. However, on the peak level it is sure that wrong view will no longer be generated.

Although the observed object and aspect of the path of preparation seem to be difficult, it only appears so because of the intervening quotations from the sutras. These citations are taken from the Twenty Thousand Stanza Perfection of Wisdom Sutra. Although from time to time Gyeltsab also quotes other sutras, in the context of the path of preparation the citations are exclusively from the middle sutra. There is further clarification on this subject in the commentary on the Twenty Thousand Stanza Perfection of Wisdom Sutra by Haribhadra called the Eighth Chapter, which is also called Perfectly Reaching the Meaning. This is one of the commentaries that combines sutra and the Ornament and is composed of three volumes, as is the Twenty Thousand Stanza Perfection of Wisdom Sutra itself.

Clarification: In the Commentary Clarifying the Meaning (page 15) the root text says “the assembling and presenting of form, and so forth” which is literally in accordance with the Tibetan, however “assembling” means the generation of form and so forth, while “presenting” means the perishing of form and so forth. Therefore it actually means that there is no ultimate generation of form and so forth, and no ultimate perishing/decline of form and so forth.
This stanza from the *Ornament* presents the observed objects and aspects of the three levels of the tolerance/patience level of the path of preparation.

“Form and so forth, mere non-entitiness” presents the observed object of the small patience level, while “the mere non-existence, entitiness” presents its aspect.

“They do not grow, do not definitely emerge” presents the observed object of the middle patience level, while “pure and” presents its aspect.

“They are signless” presents the observed object of the great patience level, while “By not relying on their signs are not visualized, are not discriminated” presents its aspect.

Gyeltsab comments on this stanza saying that the observed object of small patience is the form and so forth which are ultimately entitless. In other words, the observed object is form and so forth, which do not exist ultimately, based upon the four noble truths. The aspect of small patience is an exalted wisdom of small patience that realizes that form and so forth do not exist ultimately but do exist conventionally/imputedly.

The observed object of middle patience is form and so forth qualified by non-generation/non-growth and non-definite emergence. This means that the generation of cyclic existence and the definite emergence [to the state of] nirvana are empty of true existence. “Non-generation” refers to fact that the form and so forth that belong to cyclic existence are empty of true existence, while “non-definite emergence” refers to the fact that the form and so forth that belong to nirvana are empty of true existence. The aspect of middle patience is an exalted wisdom of the middle patience that realizes the body and so forth as thoroughly pure by observing the four noble truths and meditating in that way. “By observing the four noble truths and meditating in that way” means that the phenomena belonging to cyclic existence are not truly generated and the phenomena belonging to nirvana are not truly definite emergence. Observing the four noble truths is the cause for actualizing the four purities: pure body, pure speech, pure mind, and pure marks.

The observed object of the great patience is form and so forth qualified by not having sign. The aspect of great patience is an exalted wisdom of great patience that realizes that form and so forth, which do not ultimately rely upon the sign [of true existence], are not to be visualized/appreciated as having the sign [of true existence] and not to be realized as an object of recognition having the sign [of true existence] by, respectively, the two types of mental attention.

Gyeltsab then quotes sutra with respect to these observed objects and aspects. “Shariputra, form is free from being inherently existent form... up to the unshared qualities of buddha.” Here “free from being inherently existent form” means free from being truly existent form. “Saying “up to” means that also feelings are free from being truly existent feelings and so forth up to the unshared qualities of buddha are free from being truly existent unshared qualities of buddha. This passage presents the observed object of small patience. Sutra presents the aspect of the small patience with: “Shariputra, the characteristic is also free from the very entity of characteristic. Also the entity is free from the characteristic of entity.”

The observed object of the middle patience is presented saying: “Shariputra, form and so forth are empty of inherently (truly) existing form. [Knowing] that the generation [of cyclic existence] and even the definite emergence [of nirvana] are not to be observed as true existent”, and “Practicing the perfection of wisdom [brings us] close to omniscience because the closer we are to the omniscient state the purer are our bodies, speech, minds, and we will not generate the mind of attachment.” This passage also presents the cause for attaining the four purities. The aspect of middle patience is presented saying: “Great bodhisattvas, when one practices the perfection of wisdom if one engages in form without a skillful method it becomes an [a practice] with the sign [of true existence].”
“Great bodhisattvas, when one practices the perfection of wisdom there is no abiding on form, no excessive appreciation, no knowing all.” In the context of the basis upon which superimposition is to be eliminated it was said previously that there is strong clinging [to truly existent form], abiding excessively [on truly existent form], and knowing all—these are to be given up. “Knowing all” means knowing all as existing truly. Strong clinging, excessive abiding, and knowing all can be applied to all phenomena.

Regarding that, the observed object of the small is: since the entitiness of characteristics and the characteristics of entitiness (are) oneness in emptiness, “mere non-entitiness of form and so forth”. The aspect is: in front of the being possessing observation, “form and so forth mere non-things entitiness.” The observed object of the middling is: since merely not generating by self nature, with regard to form and so forth, generating does not exist nor does passing beyond sorrow exist. The aspect is: by only realizing the self entity of all phenomena, body and so forth, in all ways completely pure. The observed object of the great is: since specific and general characteristics are improper, “signlessness of all phenomena”. The aspect is: by only self nature, since merely separated from the support of all signs of form and so forth, by attention to the visualized, not visualizing; by attention to thusness, not knowing completely.

This is Haribhadra’s presentation of the observed objects and aspects of the three levels of the patience level of the path of preparation. Gyeltsab says that the observed object of small patience is the distinguished ultimate non-entitiness of form and so forth. Another way of saying this is that form and so forth, which are qualified by being ultimately entitiless, is the observed object of small patience. They are ultimately entitiless because the entitiness of the characteristic which illustrates and the characteristic of entitiness which is illustrated are ultimately the same in emptiness. The aspect of small patience is the exalted wisdom of small patience that realizes that ordinary beings observe forms and so forth to be truly existent, although they do not truly exist. This small patience realizes a particular subject and object; the subject is ordinary beings, while the object is truly existent form and so forth. It realizes that ordinary beings observe form and so forth to be truly existent.

The observed object of middle patience is the form and so forth included in cyclic existence that are not generated truly and the nirvana that does not exist truly. The reason for this is that ultimately cyclic existence and nirvana do not exist because ultimately they are not generated naturally—meaning that ultimately they lack true existence. The aspect of middle patience is an exalted wisdom of middle patience that realizes that one will attain the purities, the body and so forth (body, speech, mind, and marks), by the meditation on form and so forth as not existing ultimately. With meditation or familiarity one will attain these purities in the future.

The observed object of great patience is all phenomena lacking the sign [of true existence] because ultimately there do not exist general characteristics and specific characteristics. The aspect of great patience is an exalted wisdom of great patience that realizes that the two mental attentions do not thoroughly realize their respective objects as having the sign [of true existence]. The two mental attentions are: (1) an attention to the visualized or to the believed (one visualizes emptiness and believes that one has realized it) and (2) an attention to the direct realization of emptiness. The first attention realizes emptiness only by way of a meaning generality while second realizes it
clearly or directly. The first attention reflects that there is no phenomena with the sign of true existence. This is an attention that realizes the emptiness of all phenomena only by way of a meaning generality. The second attention reflects on emptiness and is a direct realization of emptiness; it knows that there are no phenomena with the sign of true existence. Because it is an exalted wisdom meditating on emptiness its only object is emptiness; in other words, no sign of true existence or conventionalities appear to it.

Tuesday afternoon class, March 31, 1998

Concerning the great patience level of the path of preparation Gyeltsab says that the supports of the specifically characterized phenomena and generally characterized phenomena of form and so forth are necessarily free from true existence because they are all only in the nature of not existing ultimately.

Thus because of tolerance toward the great dharmas by not going to evil (destinies), “transformed to tolerance” possessing observed objects and aspects is of three types.

Gyeltsab comments on this saying that thus one has attained the patience of non-generation [of truly existing great dharmas] and a non-analytical cessation that blocks migration to the evil destinies. Therefore there are no more evil destinies (or bad migrations) and one is free from manifest fear with respect to the great dharmas (the non-true existence of the great dharmas). Therefore, it is called patience.

At the patience level one attains a non-analytical cessation of being born in the lower realms. A non-analytical cessation is so-called because it is a cessation that is attained automatically; for example, as a result of attaining the patience level automatically one no longer is born in the lower realms. On the contrary we should know that one attains an analytical cessation of rebirth in the lower realms by applying a particular antidote. Patience can also mean that at this level one is patient enough to not be frightened by emptiness.

Haribhadra in his Great Commentary says: “One who attains the patience level no longer migrates to the lower realms. Therefore, bodhisattvas should not generate patience.” This is to be reflected upon. However, it does not contradict the sutra that says: “One who has attained patience does not migrate to the lower realms,” because this is said with respect to karma. One should understand the meaning in this way because in sutra it says: “Shariputra, you and others, take Dzega and go to the hell realm.” Thus what was said by Haribhadra does not refute what Acharya Vasubandhu sayings in his commentary on the Abhidharmakosha, it only negates the assertion of the lower school with respect to the above mentioned sutra that says “One who has attained patience does not migrate to the lower realms.”

Someone else says: “The rhinoceros-like solitary realizers and bodhisattvas actualize their own respective nirvanas in one session beginning from the heat level of the path of preparation. Therefore, it is possible for a bodhisattva to take rebirth in the lower realms out of compassion only during the path of accumulation but not when abiding on or above the heat level of the path of preparation. Especially after the attainment of the heat level, not only do Hinayanists not take rebirth in the lower realm but also bodhisattvas do not take rebirth in the lower realm.” This discussion comes about because of the statement that one who has attained the patience level no longer migrates to the lower realms. Our tradition says that it means that one who has attained the patience level will no longer be reborn in the lower realms due to the force of karma and delusions. However, one can be reborn there for various reasons, for example Shariputra went to the lower realms together with Dzega following Buddha’s instructions. There is also the story of Shariputra and Maudagalyanaputra who went to the hell realm below the northern continent.
Possessing Light, to visit Shariputra’s mother who has been reborn there. When they went there they met a Tirthika teacher who had also taken rebirth in that hell realm. This teacher asked Shariputra and Maudagalyanaputra to tell his old disciples to no longer make sacrifices as every time they did so he experienced great suffering. Shariputra did not give them this message immediately but Maudagalyanaputra reminded him to do so. However, when those disciples were given this message they became very angry and beat Maudagalyanaputra. Later Maudagalyanaputra was questioned as to why he did not create a magical emanation to escape this punishment. He replied that the thought never even came to his mind; this was due to the karma of hitting his mother on the hand with a stick when he was still an ordinary being. The point here is that a bodhisattva can be reborn in the lower realm after reaching the patience level but does not do so due to karma and delusions. However, bodhisattvas can be reborn in the lower realms when they are still on the path of accumulation due to karma and delusions.

Someone says that since a person on the heat level of the path of preparation can attain nirvana in a single session, it is not possible for a bodhisattva to be reborn in the lower realms out of compassion except when he is on the path of accumulation. Our system says that it is not possible to attain nirvana in a single session when one begins it on the heat level. It may be said that nirvana can be attained in a single session in order to attract people to one of the vehicles.

Concentration, its mere activity, to prophesy and exhausting adherence, the three are mutually one entity, concentration not conceptualizing...

“Concentration, its mere activity, to prophesy and exhausting adherence, the three are mutually one entity, concentration not conceptualizing” presents the observed objects and aspects of the three levels of supreme dharma.

“Concentration” presents the observed object of the small supreme dharma, while “its mere activity” presents its aspect. “To prophesy” presents the observed object of the middle supreme dharma, while “exhausting adherence” presents its aspect. “The three are mutually one entity” presents the observed object of great supreme dharma, while “concentration not conceptualizing” presents its aspect.

Gyeltsab says that the observed object of small supreme dharma is the concentration that is to be meditated upon. The aspect of small supreme dharma is the fact of engaging effortlessly in the activity of concentration. There are some hundred types of activities of concentration; therefore, the observed object, the concentration, is also of a hundred types. Two of these concentrations are the “concentration of non-generation” and the “concentration of going heroically.”

The observed object of middle supreme dharma is the ultimate entitilessness of form and so forth. “Prophesy” explicitly presents the distinguished cause of middle supreme dharma and implicitly presents its aspect. The aspect of middle supreme dharma is an exalted wisdom that has exhausted the adherence/clinging to the three circles as ultimately existing.

The observed object of great supreme dharma is the three circles and their nature existing as one entity. The aspect of great supreme dharma is a mind that does not conceptualize any limit to the concentration of great supreme dharma.

Gyeltsab then quotes sutra with respect to the observed objects and aspects of the supreme dharma level of the path of preparation. The observed object of small supreme dharma is presented saying: “With respect to this, great bodhisattvas, concentration on the non-generation of
all phenomena.” The aspect of small supreme dharma is presented saying: “With which concentrations will one experience the objects of concentrations? The [concentration with which one will experience the objects of all concentrations] is called “the concentration of going heroically.”

The observed object of middle supreme dharma is presented saying: “Shariputra, the past tathagatas prophesied that the great bodhisattvas abiding on these concentrations will attain peerless enlightenment.” The aspect of middle supreme dharma is presented saying: “Do not have a mind of vanity thinking, ‘I will not see the concentrations as ultimate. I absorb in them. I will contemplate them. I will have contemplated them.’”

The observed object of great supreme dharma is presented saying: “Shariputra, the perfection of wisdom is [something] other. Concentration is also [something] other. The bodhisattvas are also [something] other. Saying so does not exist.” The aspect of the great supreme dharma is presented saying: “Venerable Subhuti, are the concentrations to be taken as an object of recognition? Venerable Shariputra, they are not to be taken as an object of recognition.”

2B2C-1A2B-2B2A-2D1B Summarizing the general meaning

...thus definite separation’s similitudes are the small, middling, and great.

Gyeltsab says that the statement “definite separation’s similitudes are the small, middling, and great” should be applied to each of the four divisions of the path of preparation. “The cause for attaining three vehicles together” (root stanza from the Ornament - see Commentary Clarifying the Meaning page 15), which was mentioned in relation to the heat level, is also to be applied to the remaining three levels of the path of preparation. Saying so allows for the omitting of many superfluous words.

Although this is finished the detailed commentary is yet to come. It was said that the heat, peak, patience, and supreme dharma levels observe their objects by way of cause, result, entity, dharma, and concentration. Within, for example, the three levels of supreme dharma, the observed object of the small level is concentration. Of the twelve observed objects of the twelve levels of the path of preparation, three observe their object by way of cause; two by way of result; two by way of entity; while the remaining nine observe them by way of dharma. However, the basic observed object is the four noble truths.

There is no pervasion that an observed object (mik pa) is necessarily observed. Also, that which is an object of observation (mik yul) is not necessarily observed, however that which is observed necessarily appears. For example, when we meditate on compassion, although all sentient beings are our objects of observation, we cannot observe all sentient beings, for example the sentient beings behind us. When we say “all sentient beings” and meditate on compassion, although we only observe a limited number of sentient beings we mentally encompass all sentient beings. Is there a difference between “all sentient beings” (sem chen tam che) and “all sentient beings without exception” (sem chen ma lu pa)? “All sentient beings” does not necessarily include all sentient beings, but all sentient beings without exception does encompass all sentient beings.

Wednesday morning class, April 1, 1998

2B2C-1A2B-2B2A-2D2 Commentary
A Explanation
B Summary

2B2C-1A2B-2B2A-2D2A Explanation

With regard to that, the observed object of the small is: “make meditation on the non-generation of all phenomena and on the concentration of going heroically and so forth.
The aspect is: “by the power of one’s prayers, merits, exalted wisdom, and the sphere of dharma, spontaneously, in accordance with the fortunes in all the realms of the world, to engage the activity of concentration”. The middling observed object is: ‘to the yogis who possess the concentration perfectly engaged, the buddhas prophesy This is the nature (dharma, of dependent arising)”’. The aspect is: since all conceptualizations are unsuitable, in regard to realizing the self entity of the bodhisattvas concentrations, “there do not arise consciousnesses which imagine, ‘I will engage in equipoise’.” The observed object of the great is: by the dharma, concentration, bodhisattva, perfection of wisdom, and the three meanings are mutually one entity. The aspect is: since all phenomena are merely non-existent, “the non-conceptualizing concentration is the holy method.”

The observed object of the small supreme dharma is the concentrations that are explicitly presented here [in Haribhadra’s text], the concentration on the non-generation of all phenomena up to the concentration of going heroically, and the form and so forth that are inseparable from them. In short, the observed object is the object of meditation: a concentration and the form and the so forth that are an inseparable entity with that concentration. There are 100 concentrations ranging from the concentration knowing the non-generation of all phenomena up to the concentration of going heroically. The aspect of the small supreme dharma is the exalted wisdom of small supreme dharma that knows that when one becomes a buddha one will be able to effortlessly engage in the activity of concentration according to the fortune of the infinite sentient beings of the worlds. A buddha is able to engage in the diverse activities of concentration without effort because he has previously actualized the powers of (1) having completed the two accumulations of merit and wisdom, (2) having completed prayer, and (3) having realized the pure sphere of phenomena.

The observed object of the middle supreme dharma is the distinguished cause that includes the prophecy made by Buddha saying, “You yogis who possess the concentration engaging in the meditation on non-inherent existence of apprehended and apprehenders will attain enlightenment.” This naturally applies to such yogis and the form and so forth that are ultimately inseparable from the distinguished cause or prophecy. When a bodhisattva on the level of the middle supreme dharma who has realized his own entity absorbs in meditative equipoise, he does not conceive of the three circles as existing truly, for example, he does not have the thought, “Now I am in meditative equipoise.” In short, the aspect of the middle supreme dharma is an exalted wisdom of a middle supreme dharma which does not conceptualize the three circles to be truly existent. When one is in meditative equipoise there are no manifest conceptions thinking, “Now I am absorbed in equipoise.”

The observed object of the great supreme dharma is set out in the form of a syllogism: the four noble truths that are qualified as being one entity with the three objects (the concentration on the dharma that is empty of true existence, the bodhisattva himself, and the perfection of wisdom which is to be meditated on) are the observed object because they are the basis upon which superimpositions are eliminated. These three objects were mentioned previously.

The aspect of the great supreme dharma is also set out in the form of a syllogism: the exalted wisdom of the great supreme dharma that realizes “since all phenomena [to be investigated are] merely non-existent, not conceptualizing concentration is the holy method [for attaining buddhahood]” is the aspect of the great supreme dharma, because it is an exalted wisdom of great supreme dharma that acts as an antidote to the superimposition which wrongly superimposes upon its observed object. In short, this means that there is an exalted wisdom of great supreme dharma which opposes superimposition upon its observed object. For example, on true sufferings, which are the contaminated appropriated aggregates, there are superimpositions such as happiness, permanence, and so forth; these superimpositions are counteracted by the exalted
wisdom of great supreme dharma. The wisdom that realizes true sufferings as suffering/misery counteracts the superimposition of happiness; the wisdom that realizes true sufferings as impermanent counteracts the superimposition of permanence; and so forth. The reason that proves the above syllogism is that the same objects to be investigated do not exist ultimately as objects to be investigated because of the sole reason that all phenomena are ultimately not existent. “They do not exist ultimately as objects to be investigated” means that when we look for something that exists ultimately it cannot be found.

Thus, because of being the supreme of all worldly dharmas, supreme dharma possessing observed objects and aspects three types.

Each of the divisions of supreme dharma, the small, middle, and great, has its own observed object and aspect.

Gyeltsab says that the uncontaminated exalted wisdom is directly generated from it, therefore it is supreme; and it is a mundane path, therefore it is the supreme mundane dharma.

This concludes the presentation of the observed objects and aspects of the twelve divisions of the path of preparation. To summarize, the path of preparation has observed objects and aspects. There are two types of aspects: the aspect which is the object (the object-aspect) and the aspect which is the subject, or which is a knower (the subject-aspect). The aspect which is the knower, that is, the subject-aspect, refers to the subject of the mode of apprehension of the path of preparation. Although there are these two types of aspects, that discussed here is the aspect which is the subject (subject-aspect). Both the subject-aspects and the object-aspects can be of 173 types.

In the example of an eye consciousness apprehending blue the object-aspect is the blue color itself, while the subject-aspect is the consciousness having a blue aspect (the consciousness that apprehends the blue). If we put a blue cloth on a table and then cover it with a transparent piece of glass, although the glass is not blue, it takes on the appearance of a blue appearance (the subject-aspect). In the same way, the consciousness takes on the appearance of blue.

Other than “referring to impermanence and so forth having the support of the truths”, although the distinguished observed objects and aspects are objects to be expressed by expressing their property possessors and properties, the distinguished observed objects and aspects, are expressed in all cases by the expression of their qualities.

Someone makes an objection saying that when presenting an object and its properties (or a qualified basis and its qualities) both of them should be expressed. However, in relation to the four noble truths, for example in the case of true sufferings, which are the object, and the impermanence, misery, empty, and selfless, which are its attributes, this was not done. In the context of the small peak level its observed object is clearly mentioned, but this is not the case for the middle peak level and upward. Our system responds saying “Referring to impermanence and so forth, having the support of the truths, its aspects...” (root text page 15 Commentary Clarifying the Meaning), the observed objects and aspects of the remaining eleven divisions are to be understood indirectly. If these had been taught in detail the commentary would have become very long.

When a qualified basis/property possessor and its qualities/properties are expressed, one expression should express the qualified basis and another should express its qualities. Therefore, there should be two expressions here. The root text (page 15 Commentary Clarifying the Meaning)
says “referring to impermanence and of forth, having support of the truths its aspects...” The expression “referring to impermanence” is an expression expressing qualities alone, for this reason someone objects saying that the qualified basis is not expressed. Here “impermanence” is a quality, while true suffering are the qualified basis. If the qualified basis is not expressed it creates confusion. This person says that the observed object is the qualified basis and the aspect is its qualities, and that both should have been expressed. It is not enough to present the qualities without the qualified basis since in this way one will not be able to understand the qualified basis. In the root text only qualities are expressed, and only one observed object is mentioned, not the remaining eleven. By just expressing the qualities one cannot understand the qualified basis and the remaining eleven observed objects and aspects. Therefore this person is saying there should have been two expressions, one expressing the observed object, the qualified basis, and one expressing the aspect, the qualities. Our system replies that although the root text “referring to impermanence...” is not a subject of argument we can consider it as such.

Various further objections are then set forth which are perhaps found in the Illumination of the Twenty Thousand, a commentary on the middle Perfection of Wisdom Sutra. Someone says: “The two lines of the root text that say “referring to impermanence and so forth, having the support of the truths its aspects” do express the observed object, the qualified basis, while the remaining lines imply qualities that are a different entity from the four noble truths; therefore it is difficult to realize that the remaining lines are about the qualified basis, the four noble truths.” Our own system replies saying: “Yours is an unrelated argument.”

Any sound/term that expresses something that is similar to a qualified basis is an expression expressing a qualified basis and any sound/term that expresses something similar to a quality/property is called an expression expressing a quality/property. For example, when someone says “red table” is it an expression expressing a qualified basis or an expression expressing a quality? When someone says “red table” we understand that the “table” is the qualified basis and “red” is the quality of that table. Therefore, this person making the objection is not foolish because in the case of the observed objects and aspects of the twelve divisions of the path of preparation it appears that only the quality (such as “red”) is mentioned, therefore he argues that if only the quality is mentioned, without the qualified basis, it becomes incomprehensible.

Wednesday afternoon class, April 1, 1998

Someone says: “It would have been suitable if the lines of the root text that present the remaining observed objects and aspects of the other [eleven levels of the path of preparation] would have expressed all the observed objects and aspects together with the qualified basis, the four noble truths but they do not express these; instead they express only quality. Yet there is no mistake in not understanding the qualified basis/property-possessor.”

“Since what the two statements express are not different subjects, think well how one of them does not contradict it being a message for understanding the qualified basis.”

“If the objects to be expressed by two statements were not different, it would contradict [the above mentioned lines of the root text] which do not express the qualified basis but express the quality alone.

Someone says that while sound has many qualities/properties for someone who only wants to know its impermanence it is enough to say “the impermanence of sound” since when this is expressed the possessive case “of” negates all other qualities of sound and presents only the qualities of sound which are the isolate of impermanence. Thus, impermanence is implied as a quality of sound. In other words, through the statement “the impermanence of sound” one is to understand that impermanence is a quality of sound. Other qualities are negated and only the specific quality of impermanence is expressed. Our system says making such a statement is the result of not thinking at all but just speaking motivated by one of the three mental poisons; it is wrong speech.
Keep in mind that this is the outline "objections" while our system’s replies will come in the section "replies."

2B2C-1A2B-2B2A-3B Replies
1 By not directly expressing (them) as depending on property-possessors: the four truths without the fault of excluding them there
2 Although not directly expressed like that, they are to be known by the meaning

2B2C-1A2B-2B2A-3B1 By not directly expressing (them) as depending on property-possessors: the four truths without the fault of excluding them there

Because, “except for rejecting and not rejecting other distinctions, there is not any difference in meaning regarding these,” arises in the tradition.

This tradition/system comes from Dharma-kirti who composed the text Pramanavartika. “Except for rejecting and not rejecting other distinctions, there is not any difference in meaning regarding these” is in fact a quote from Pramanavartika.

Our own system answers the objections saying that although the remaining observed objects and aspects are not explicitly expressed as having the support of the four noble truths this does not mean that there is the fault that one does not realize those observed objects and aspects. In Pramanavartika it says, “Except for rejecting and not rejecting other distinctions, there is no difference in meaning regarding these.” The quality/property depending on a basis and the qualified basis/property-possessor are different and the statements which express them are also different. These two statements are merely a question of negating something or not, but in reality there is no difference between them; this is the tradition of the great charioteer. The two statements differ in how they negate because the statement expressing the quality does exclude, while the statement expressing the qualified basis does not exclude. The illustration of this, given by our system, is that of a grinding stone used for grinding grain. Two circular stones, one laid upon each other, have a handle that is used to turn one of the stones (it is not clear whether the Tibetan term chigu refers to the handle or the metal axle of the lower stone). However, in the illustrations “the body which is the handle” and “the head which is [the planet] Rahula,” the “body” and the “head” are the qualified bases, while the “handle” and “Rahula” are the qualities of the basis. In the phrase “form which is a vase,” the form is the qualified basis and the vase is a quality of that base.

If someone says, “It is a beautiful form,” one then asks, “To what does the beautiful form belong?” The beautiful form is an attribute of the vase.

When one hears “form which is a vase” it could seem that the vase is the qualified basis and the form is its quality, but instead it is the form that is the qualified basis and the vase that is its quality; vase is a particularity of form. When we hear the phrase “form which is a vase” we understand that this statement expresses both the qualified basis and its quality, and that therefore this statement includes both types of expression.

In short, in the statement “form which is a vase,” form, a generality, is the qualified basis while the vase, a particularity of form, is its quality. When we hear this statement a vase appears to the mind, while the vase that is the qualified basis is negated; this is the meaning of “rejecting other distinctions.” The statement “form which is a vase” rejects “vase” as being the qualified basis and yet it does not reject “form” as being a quality.

If we talk about a statement that expresses both a quality and qualified basis we can posit sound as an illustration. In the statement “sound is impermanent,” the sound is the qualified basis and the impermanence is its quality. However, when we say “the impermanence of sound,” impermanence is the qualified basis and sound is its quality. Since both statements express the isolate of sound, in terms of the sound itself there is no difference but what appears to the mind is different. The statement “the impermanence of sound” rejects sound as being a qualified basis, while it does not reject impermanence as being a quality. The qualified basis, which is rejected, and the quality, which is not rejected, are to be understood for each individual example. For this reason if someone hearing “the impermanence of sound” were to think that impermanence is the
quality and sound is the qualified basis, it would mean that he has not understood the meaning of any of the great scriptures.

Gyeltsab says that here the discussion concerns the words “having the support of the truths” (root text page 15 Commentary Clarifying the Meaning).

Arya Vimuktisena in relation to the observed object and aspect of the small heat level of the path of preparation posits the four noble truths explicitly. If the argument here were about the fact that only the observed object and aspect of the first division of the path of preparation are mentioned while the other eleven are not mentioned, this would not be correct because even in the case of the peak level there is a presentation of the four noble truths as its observed object and aspect. The basis of argument here should be instead about “having the support of the four noble truths.” The principal point of argument is that with respect to the heat level of the path of preparation, the observed object and aspect are explained clearly as having the support of the four noble truths while the remaining observed objects and aspects are not explicitly said to have the support of the four noble truths, and therefore one cannot be sure whose qualities are being expressed. To eliminate this argument there are two answers found in Pramanavartika: whether we say “sound is impermanent” or “the impermanence of sound,” in both cases the sound is a single isolate of sound. Yet the way in which one understands these two phrases is different. If one understands sound as a quality there is no mistake as later on one will understand that it is also a qualified basis. In the example of “the impermanence of sound” we understand that sound is the quality and thereby also indirectly understand the qualified basis.

This is a presentation in accordance with the Buddhist scriptures but one can understand these two, qualified basis and quality, in terms of many other examples that are well known academically.

Thursday morning class, April 2, 1998

2B2C-1A2B-2B2A-3B2 Although not directly expressed like that, they are to be known by the meaning

In one way, although expressed differently in poetic verses, because the possession of an obstruction to strong clinging and so forth (the aspect of small heat which is related with its observed object, the four truths must) become the separation from positive and negative in thusness (the observed object of middling heat), solely included in the truths of suffering and so forth are the observed object and aspect objects. The latter ones should also be understood similarly.

One understands the aspect of small heat by realizing true sufferings and so forth. One also understands the aspect by negating strong clinging, excessive abiding, and so forth, the conceptions that hold the four truths to exist truly. The four truths are the qualified basis/property possessor. One should understand the aspects of the remaining [eleven] divisions of the path of preparation in the same way.

The observed object of middle heat is the different attributes of the four noble truths that are qualified by being free from being affirmative and negative. The observed object of great heat is to be known as was said before.

The remaining observed objects and aspects are established as relying upon the qualified basis, the four truths. There is a reason for not directly expressing “having the support of the truths” (see Ornament page 15 italic letters) at the conclusion of [setting out] each observed object and aspect because the person who actually wrote down the words of the Ornament only mentioned it one time thinking, “Writing that phrase at the end of each set of observed objects and aspects would be only a different way of expressing it which would make many words” and thus he left it out. With regard to the phrase “Although expressed differently in poetic verses...” the word “although” in the Commentary Clarifying the Meaning is simply a matter of grammar which in this
context means that there are many different ways of expressing a single thing without contradiction.

The point that is being discussed here is that only one set of observed objects and aspects (those of the heat level) has the words “having the support of the truths” joined to it. Since “having the support of the truths” is not joined to the other observed objects and aspect, it is not clear whether they also have the support of the truths. However, although “having the support of the truths” is not actually joined to the remaining observed objects and aspects, it is to be understood as so by way of the meaning. One understands this because by mentioning it one time, one is to understand the rest by way of the meaning. One should consider the statement expressing the qualified basis and the statement expressing the quality. The statement expressing the quality is a statement expressing something similar to a quality/attribute of an object, while a statement expressing a qualified basis expresses something similar to an object.

2B2C-1A2B-2B2B Characteristics of conceptualizations
1 General meaning
2 Meaning of the branches

2B2C-1A2B-2B2B-1 General meaning
A Recognition of the general
B Analyzing if they have aspects of either negative or positive (phenomena)
C The mode of becoming characteristics

2B2C-1A2B-2B2B-1A Recognition of the general

This is divided into three [kinds of conceptions]:
(1) An indicative conception that is not correct
(2) A mind having a rough aspect
(3) A conception apprehending the two as suitable to be mixed

(1) An indicative conception that is not correct
With regard to an incorrect indicative conception it says in the text Madhyantavibhanga by Maitreya: “The mind and the mental factors existing in the three realms.” These minds and mental factors are incorrect because they have dualistic appearance.

(2) A mind having a rough aspect is the mental factor investigation which engages its object in a rough manner. Investigation is the third mental factor among the four changeable mental factors.

(3) With respect to a conception apprehending the two as suitable to be mixed, “the two” are a meaning generality and a sound generality.

Of these three, that which is considered to be a usual conception is the last: a conception apprehending the two as suitable to be mixed.

2B2C-1A2B-2B2B-1B Analyzing if they have aspects of either negative or positive (phenomena)

Someone says: “It is not correct to say that here conception is solely a negative conception because both conceptions, that of this particular case and that of peak training, are presented as positive/affirmative conceptions.”

Someone else says: “It is not correct to say that here conception is solely an affirmative conception because there is a principal conception that is dualistic that is included among the obscurations to knowledge and is discussed in relation to two cases. In addition, if it were only presented as an affirmative conception we would not know to what it is an antidote. And if the conception presented here were a negative conception it would contradict the attribute which is the aspect.”

Our own system now clarifies negative and affirmative conceptions. If the object which a conception apprehends is negative it is said to be a negative conception. On the other hand, if the object which a conception apprehends is affirmative it is said to be an affirmative conception.
negative phenomenon is one that is to be realized by eliminating the object of negation with the conception apprehending it. An affirmative phenomenon is one that is to be realized by not eliminating the object of negation with the conception apprehending it. Saying that such-and-such is a negative conception and that such-and-such is an affirmative conception is a general presentation.

Gyeltsab then comments on negative and affirmative conceptions, saying that these conceptions are conceptions that are included among the obscurations to knowledge. The explanation concerning the conception of the apprehendeds and the conception of apprehenders is given as a partial illustration. All conceptions to be abandoned do not necessarily have the same type of object. Even the conception that apprehends the lower path (the hearers path) as something to be rejected is a conception that is to be abandoned. This is a very brief presentation of conceptions; in general, there are many types of conceptions.

The conceived object that is to be rejected is the same as that in the case of peak training. Furthermore, the object to be negated is not an existent. “In the correct sense what is negated is clear”; as said one should realize that both the conceived object and the conception do not exist truly, and one should know that any conception thinking that these two exist truly is to be abandoned. Both the conceived object and the conception should not be apprehended as truly existent. In terms of the two kinds of conceptions, the affirmative and the negative, a conception apprehending the true existence of the aggregates is an affirmative conception, while a conception apprehending the emptiness of the true existence of the aggregates is a negative conception. For this reason, at various times there exist both types of conceptions.

It is easy to realize that it is not right to say that the exalted wisdom of meditative equipoise of the path of preparation is a conception to be abandoned. Then there is commentary regarding a phrase found in a text by Arya Vimuktisena that says: “Whatever is the first conception, that of the apprehended, is the second.” However, this does not mean that all conceptions are necessarily a conception apprehending a thoroughly purified phenomenon. When someone observes a phenomenon of the thoroughly afflicted class and conceives it to be truly existent, his conception is pervaded by being a conception apprehending a phenomena of the thoroughly afflicted class to exist truly. But this does not mean that a conception apprehending a phenomena of the thoroughly afflicted class to exist truly is a conception apprehending a phenomena of the thoroughly purified class to exist truly. If we observe the mere apprehendeds of the thoroughly afflicted class and the thoroughly purified class and conceive them to be truly existent, such a conception is presented as being pervaded by the conception apprehending thoroughly purified phenomena to exist truly. Where saying that “a conception apprehending an thoroughly afflicted [phenomenon to exist truly] is presented to be pervaded by a conception apprehending a thoroughly purified [phenomena to exist truly]” has no relation to this context.

(1) Explanation of the recognition of the general
(a) Explanation of the recognition of the general conception of an apprehended and an apprehender

(b) Explanation of the recognition of the particular conception of an apprehender

(a) Explanation of the recognition of the general conception of an apprehended and an apprehender
There are many divisions of conceptions of apprehendeds and apprehenders. According to the great lama translator, Rinchen Sangpo, an apprehended is an object to be enjoyed/used, while an apprehender is that which enjoys/uses. The former, an apprehended, is of two types: an apprehended that belongs to the class of thoroughly afflicted phenomena and an apprehended that belongs to the class of thoroughly purified phenomena. Apprehenders are also of two types: an apprehender that belongs to the person and an apprehender that is a consciousness that knows. Each of these four is further divided into nine in terms of their observed objects.
This is the distinction of apprehended and apprehender. A conception of an apprehended is a conception that apprehends a truly existent object of enjoyment, and a conception of an apprehender is a conception that apprehends a truly existent enjoyer. Since the conception of an apprehended and the conception of an apprehender are both conceptions of true existence, they are therefore obscurations to omniscient mind. On the path of preparation these four types of conceptions are suppressed. At the heat level the manifest conceptions of apprehendeds of the thoroughly afflicted class are suppressed; at the peak level the manifest conceptions of apprehendeds of the thoroughly purified class are suppressed; at the patience level the manifest conceptions of apprehenders of a substantially existent are suppressed; and at the supreme dharma level the conceptions of an apprehender of an imputedly existent are suppressed.

Later we will discuss the nine divisions of each of these four conceptions.

Thursday afternoon class, April 2, 1998

(b) Explanation of the recognition of the particular conception of an apprehender

What is the meaning of a substantially existent person? What is the meaning of an imputedly existing being? If we say that the person is self-supporting substantially existent and that a being is designated on the basis of the collection of aggregates, it would follow that a conception of the first is an afflictive obscuration and could not therefore be said to be an obscuration to knowledge; while the conception of the second, that a being is designated on the basis of the collection of aggregates, apprehends an object that is established by a valid cognition and therefore it would not be correct to say that it is an object to be abandoned.

Someone says that a substantially existent is a truly existent person while an imputed existence is a person who is empty of true existence like an illusion. If this were the case it would follow that an innate conception of an apprehender that is a person would not be possible.

Therefore, what is the difference between the conception of substantial existence and the conception of imputed existence? The conception of substantial existence is of two types: one that apprehends the person as able to perform a function and one that apprehends self-supporting substantial existence. For ordinary beings it is not possible for the conceived object of the second conception to be eliminated by the force of experience; this is possible only for aryas. The conception of substantial existence is said to have the support of ordinary beings, while the conception of imputed existence is said to have the support of the continua of aryas. However, in general both conceptions can have the support of both, i.e., the conception of substantial existence can be present in both ordinary beings and aryas as can the conception of imputed existence.

The innate apprehension of imputed existence is a conception apprehending the collection of aggregates as an imputed being. This conception exists even in those beings who have not entered the path.

The conception apprehending a person who can perform a function and the conception apprehending a self-supporting substantially existent person are even easier for ordinary beings to have. Observing a person who is able to perform a function and a self-supporting substantially existent person and then apprehending both of them to be a truly existent user is called the conception apprehending the apprehender of the person to be substantially existent. Observing a being imputed on the collection of aggregates and conceiving that being to exist truly is called a conception apprehending an imputedly existent being. Observing a being as empty of true
existence and illusion-like and apprehending it as a truly existent user is a conception apprehending imputed existence. This kind of conception is of two types, the intellectually formed and the innate. If these two were to be distinguished from the point of view of their observed objects that would be very extreme. In other words, these two conceptions, the intellectually formed and innate, are not to be distinguished in terms of their observed objects.

There are four types of substantial existence:
(1) substantial existence that is the ability to perform a function,
(2) self-supporting substantial existence,
(3) unchanging stable substantial existence - the conception of a person as truly existent, like an illusion, is stable and unchanging
(4) substantial existence that is a conceptual imputation

Substantial and imputed existence are discussed even in the text Madhyamakavatara. The definition of substantial existence is: that which does not need any other basis in order for it appear as an object to a mind. The definition of imputed existence is: that which does need another basis in order for it to appear as an object to a mind. The aggregates are an example of substantial existence while the person is an imputed existent. To have a person appear to us, for example, Nyima Tondru, we have to depend on a basis, his aggregates, as otherwise Nyima Tondru will not appear to our minds. When we see someone’s aggregates, we perceive those aggregates without the need for any other basis to appear.

The illustration of person is the mental consciousness. Is it a substantial existent or an imputed existent? According to Svatantrika-Madhyamika the illustration of the person is both a being and a substantial existent. One text says that although the isolate of person is not a substantial existent this does not contradict the fact that the mental consciousness which illustrates the person is a substantial existent. However, if we say the mental consciousness, which is the illustration of person, is a substantial existent then it is also self-supporting substantial existent. But if we ask whether there is a self-supporting substantially existent person the answer is no. This discussion comes about because one text says that substantial existence and self-supporting substantial existence are synonyms. A substantial existent that is able to perform a function is so-called because it is substance and a collection of many particles which have the ability to perform a function. “Able to perform a function” is the definition of functioning thing, therefore functioning things are necessarily substantially existent.

Unchanging stable substantial existence is so-called because a substantial existence that is empty of true existence is eternal and unchanging. On the contrary, if it were not empty of true existence it would change.

To summarize, with regard to the conception of a substantial existent there are three steps:
(1) an object, a substantial existent; (2) a conception apprehending that object; and (3) a conception apprehending that conception to be a truly existent user. Also with regard to the conception of an imputed existence there is: (1) an object, an imputed existent; (2) a conception apprehending that object; and (3) a conception apprehending that conception to be a truly existent user.

With regard to the conception of a substantially existent existing only in ordinary beings and the conception of an imputed existent existing only in aryas, this was said because aryas realize that the being is imputedly existent whereas ordinary beings naturally conceive of the person to be self-supporting substantially existent. However, in reality both conceptions can be present in both ordinary beings and aryas.

Just as was explained above there is the conception of phenomena of the thoroughly afflicted class, these phenomena are the principal object to be abandoned. If we are able to abandon them these conceptions become an attribute for becoming a superior of that path. These conceptions are qualified by being an object to be abandoned. Does one become superior due to them? The answer is that if you say that you are obscured by a facsimile of logic as it would follow that the beings of
the hell realm would be superior due to their great suffering because this is their distinction. Our system says that the four levels of the path of preparation are superior to the hearer’s path of preparation because these levels have objects to be abandoned that are these conceptions which are obscurations to knowledge.

In other words, someone says that if the Mahayana path of preparation is superior because it has the four conceptions that are obscurations to knowledge is would mean that it is superior because of having the conception apprehending phenomena of the thoroughly afflicted class. It would follow that the beings of the hell realm would be superior to other beings because they have greater suffering than that of other sentient beings.

Someone else says: “If the path of preparation abandoned these conceptions would there not be the fault that there are not two determined objects to be abandoned?” These two objects are the afflictive obscurations and the obscurations to knowledge. Our system responds: “Does the mind of meditative equipoise of the path of preparation abandon manifest conceptions?” If they respond no, then we reply: “It would follow that a valid inferential cognizer realizing sound is impermanent would not even slightly harm the superimposition apprehending sound as permanent. If it were the first case, that the mind of meditative equipoise of the path of preparation does abandon manifest conceptions, then we return your consequence to you that it would follow that there would not be two determined objects, respectively that to be abandoned by the path of seeing (afflictive obscurations) and that to be abandoned by the path of meditation (obscurations to knowledge). You are completely wrong because the mind of meditative equipoise of the path of preparation abandons four conceptions.” This is called a logic that corresponds to the former disputant’s logic.

Someone says: “The seeds to be abandoned by the antidotes are determined to be two, therefore I accept that there are only two objects to be abandoned.” We answer that no one mentioned that the path of preparation abandons seeds.

Our system says the object to be desired is principally obstructed by these [conceptions]. The seeds of these conceptions are abandoned by the following two paths, the path of seeing and the path of meditation. At the level of the path of preparation one exerts effort to abandon the manifest conceptions, therefore the path of preparation is distinguished due to acting as a means to attain enlightenment. The general presentation is in terms of the qualities of the conceptions. The power of abandoning those seeds is actually included within the antidote, the path of preparation. Therefore the path of preparation can abandon manifest conceptions. All that is said here is regarding the differentiation of the capacities of the path of preparation.

To investigate whether or not the path of preparation has these various conceptions is not the principal point here. The meaning of the respective objects to be abandoned by the path of preparation is as was explained above. The path of preparation has four levels, heat, peak, patience, and supreme dharma, each of which abandons its own particular conception:
- the conception of the phenomena of the thoroughly afflicted class as truly existing objects of use
- the conception of the phenomena of the thoroughly purified class as truly existing objects of use
- the conception of apprehenders of a substantial existent as truly existing users
- the conception of apprehenders of an imputed existent as truly existing users

Friday morning class, April 3, 1998

QUESTIONS AND ANSWERS
Question: Please go through the important points of the teachings that were covered this week.
Reply: This week we looked at how the Mahayana path of preparation is superior to the Hinayana path of preparation in four, five, or six ways. When six ways are counted the Mahayana path of preparation is superior in terms of:
(1) its observed object
(2) its aspect
(3) its cause
The observed object of a Hinayana path of preparation is the four noble truths, while the observed object of a Mahayana path of preparation is the four noble truths which lack true existence. A Hinayana path of preparation does not have the aspect of apprehending the four noble truths as empty of true existence, while a Mahayana path of preparation has the aspect of realizing that the four truths are empty of true existence. Or it can be said to have the aspect of the emptiness of true existence, its apprehended object.

It is superior due to its cause because a Mahayana path of preparation acts as a cause that brings one closer to the realizations of all three vehicles, while a Hinayana path of preparation does not act as such a cause.

It is superior due to its tutor because someone on a Hinayana path of preparation does not have a tutor who is a supreme emanation body of a buddha and gives the entire set of teachings of method and wisdom, while a person on a Mahayana path of preparation does have such a tutor. A Mahayana path of preparation is superior in terms of its objects of abandonment because it has the capacity to abandon more objects of abandonment than a Hinayana path of preparation because it abandons the two conceptions concerning apprehendeds and the two conceptions concerning apprehenders. Although these are not totally abandoned by a Mahayana path of preparation, the manifest ones are suppressed. A Hinayana path of preparation does not have these four conceptions as objects of abandonment and is not capable of abandoning them. This is a brief summary of the Mahayana path of preparation.

There are four levels of the path of preparation, each of which has its own particular observed object and aspect:

The observed object of the small heat level is all sixteen attributes [of the four noble truths,] such as impermanence, having the support of the truths. The root text says: “Referring to impermanence and so forth, having support of the truths.”

The aspect of the small heat level is the exalted wisdom of small heat that realizes that these sixteen attributes do not exist truly. This exalted wisdom eliminates the sixteen perverse conceptions that conceive the sixteen attributes of the four noble truths to exist truly. The root text says: “Its aspects cease, strong settling and so forth.”

The observed object of the middle heat level is the four noble truths which are qualified by being free from form and so forth that are truly existent assembling and truly existent presenting. “Assembling” and “presenting” mean that the four noble truths are free from form and so forth that are truly generated and truly perish.

The root text says: “Assembling and presenting of form, and so forth.”

The aspect of the middle heat level is the exalted wisdom of middle heat that realizes that the continuation of name is free from truly existent abiding.

These in brief are the observed object and aspect of the middle heat level.

The root text says: “Separated from abidance, abidance.”

The observed object of the great heat level is the four noble truths which are qualified by form and so forth being merely designated with a label.

The root text says: “Imputations.”

The aspect of the great heat level is the exalted wisdom of great heat that realizes that the four noble truths are not to be expressed ultimately as being qualified by form and so forth that are merely designated by a label.

The root text says: “And inexpressible.”

The observed object of the small peak level is of two types:

(a) one that is not supported on [the four noble] truths
(b) one that is supported on [the four noble] truths  
(a) The observed object of the small peak level is the non-true existence of form and so forth which do not abide truly.

The root text says: “not abiding (in) form and so forth, they are without self nature as their entity.”  
The aspect of the small peak level is the exalted wisdom of small peak that realizes that form and so forth and their suchness are one nature, which is that of not existing truly.

The root text says: “they are the nature of one another”

(b) The other observed object of the small peak level is the four noble truths which are qualified by form and so forth that do not abide ultimately as impermanent.

The root text says: “not abiding in them as impermanent and so forth, they are empty by their own entity.”  
The other aspect of the small peak level is the exalted wisdom of small peak that realizes that form and so forth and their suchness as one nature, which is that of not existing truly.

The root text says: “they are the nature of one another.”

The observed object of the middle peak level is form and so forth qualified by the conception that does not conceive of form and so forth as having the sign of true existence.

The root text says: “whatever is not grasping any phenomenon.”  
The aspect of the middle peak level is the exalted wisdom of middle peak that sees form and so forth as not having the sign of true existence.

The root text says: “because they are not seen as sign.”

The observed object of the great peak level is the four noble truths that are qualified by being an object to be analyzed by a wisdom analyzing an ultimate.

The root text says: “By wisdom completely investigating.”  
The aspect of the great peak level is the exalted wisdom of great peak that realizes the three circles are not to be observed as truly existent. The three circles are the bodhisattva who meditates, the concentration, and the object, emptiness. These three are not to be observed as truly existent.

The root text says: “all as without observed.”

The observed object of the small patience level is the four noble truths qualified by form and so forth being ultimately entitiless.

The root text says: “form and so forth, mere non-entitiness.”  
The aspect of the small patience level is an exalted wisdom of small patience that realizes that although form and so forth are ultimately entitiless they do exist conventionally. This means that form and so forth are ultimately entitiless but do have an entity at a conventional level.

The root text says: “the mere non-existence, entitiness.”

The observed object of the middle patience level is the four noble truths qualified by form and so forth which are not truly generated and do not truly perish.

The root text says: “They do not grow, do not definitely emerge.”  
The aspect of the middle patience level is an exalted wisdom of middle patience that realizes that the realization of [form and so forth including,] the three doors of body, speech and mind, as empty of true existence is the cause for [attaining] the purities of body and so forth. Before we mentioned four purities: purity of body, purity of speech, purity of mind, and purity of marks. However, the fourth, purity of marks, is sometimes called “purity of place.”

The root text says: “pure and.”

The observed object of the great patience level is [all phenomena including] the three doors that do not have the sign of true existence.

The root text says: “They are signless.”
The aspect of the great patience level is an exalted wisdom of great patience that realizes that form and so forth do not have the sign of true existence. Or we can say that this exalted wisdom of great patience realizes that since form and so forth do not rely on the sign of true existence they are not to be visualized and discriminated as having the sign of true existence. The root text says: “By not relying on their signs are not visualized, are not discriminated.”

The observed object of the small supreme dharma level is concentration. Concentration is of a hundred types, but here only the concentration of non-generation and the concentration of going heroically are explicitly mentioned. The remaining 98 concentrations are listed between these two. The root text says: “concentration.”

The aspect of the small supreme dharma level is the exalted wisdom of small supreme dharma that realizes that these concentrations engage in activity effortlessly. The root text says: “its mere activity.”

The observed object of the middle supreme dharma level is form and so forth that are ultimately entitless which are the object of concentration. Or the observed object can be said to be the concentration itself which is a distinguished cause for receiving a prophesy. The root text says: “to prophesy and.” Here “to prophesy” explicitly presents the distinguished cause while the observed object is implied. Someone on this level has the distinguished cause to receive a prophecy, this however is said to be the observed object.

The aspect of the middle supreme dharma level is the exalted wisdom of middle supreme dharma that realizes the exhaustion of the gross mind of vanity concerning the activities of concentration thinking “I will concentrate. I am concentrating.” and so forth. “The exhaustion of the gross mind of vanity” refers to wrong pride, one of the seven prides, pride in our own unwholesome habits and qualities), that naturally includes the thought, “I exist truly.”

The root text says: “exhausting adherence.”

The observed object of the great supreme dharma level is the three circles which are mutually one entity in nature or dharmata, the emptiness of true existence. The root text says: “the three are mutually one entity.”

The aspect of the great supreme dharma level is the exalted wisdom of great supreme dharma that does not conceptualize any limit of the [object of] the concentrations as truly existent. The root text says: “the conception not conceptualizing.”

To each of these can be added that they are a cause for actualizing all the realizations of the three vehicles.

Question: Please say something about the third quality, inner knowledge/sciences, of the rare supreme sangha because their first and second qualities seem to be included in this.

Reply: The five sciences are medicine, grammar, arts, logic/dialectics, and scriptures (the three baskets of Dharma, or the five great volumes of literature/scripture: Abhisamayalamkara, Madhyamakavatara, Abhidharmakosha, Vinaya, and Pramanavartika). A single sangha does not necessarily know all these perfectly but has some knowledge of them. The foremost of these is the knowledge of the scriptures.

Question: Please clarify throwing karma which is said to be the mental factor intention.

Reply: We need to know what the various schools say about mental karma. The Vaibhashikas and Madhyamika Prasangikas do not say that karma is necessarily the mental factor intention, it is enough to say that it is a mental action. Throwing karma is the second of the twelve links [of dependent origination]. The throwing karma can be an action of body, an action of speech, or an action of mind. The mental action can be said to be the mental factor intention but actions of body and speech are not intention. For example, in the case of a butcher who kills a sheep, there is the motivation, the basis, the execution of the action, and the conclusion. Therefore, when the sheep

271
dies the butcher has committed a complete karma of killing. This karma is an energy that is a result of completing the preparation, actual action, and conclusion. Is this karma form, consciousness, or a non-associated compositional factor? I think that it is a non-associated compositional factor, although this is not said in the texts. During the action of killing the butcher created an action of body created with his hands. Also when one writes a book there are physical actions involved. When the book is produced, is it action or result? Also when a cook prepares food, while actually making the food there are actions of body involved. When the food arrives on the table, the action is finished, but we can ask whether the food is karma, or is the karma the movements involved in preparing the food? Think about this.

In Abhidharmakosha it says that karma is a mental action that leads to verbal and physical actions. For example, lying, which is a verbal action, comes from a motivation, which is the mental action intention. The speech itself is a verbal action but the motivation is not a verbal action. So the verbal action is only that expressed, for example harsh words such as: “You are an evil person.”

Question: Then please explain how the third and the fourth conceptions are opposed by the third and fourth attributes of true origins.

Reply: The third wrong conception related to true origins thinks that suffering arises due to a movement of the mind of Ishvara. When one comes to understand that craving acts as a cooperative condition to bring about suffering, this understanding opposes the mind thinking that suffering arises due to a movement of the mind of Ishvara.

The fourth wrong conception thinks that causes are naturally permanent but change temporally. By realizing that craving is a cooperative condition for suffering we come to understand that a cause cannot be permanent, as if it were permanent it would not be changed by a cooperative condition.

Karma and delusions, in particular craving, are strong production because they produce their results strongly. When one understands this, one will understand that sufferings are not produced by a movement of the mind of Ishvara. By knowing that sufferings are strongly produced from karma and delusions one understands that they do not arise as a result of a movement of the mind of Ishvara. One non-Buddhist school asserts that everything arises as a result of a movement of the mind of Ishvara. The three reasons for believing that the whole universe is produced by a movement of the mind of Ishvara are explained in the second chapter of Pramanavartika. One reason is because Ishvara is able to perform a function. Another is remaining and remaining, this is compared to the time of holding up an ax during the process of chopping wood.

Question: Please explain the third attribute of true paths stated in the syllogism: the exalted wisdom realizing selflessness has the aspect of being achievement because it unmistakenly achieves the nature of mind.

Reply: This means that the exalted wisdom realizing selflessness improves the mind. It achieves improvement of the mental state. The nature of mind can be the conventional nature and ultimate nature of mind. Here improving the mind means improving the conventional mental state, meaning that the conventional nature of the mind, its clarity and knowing, improves.

Monday afternoon class, April 6, 1998

2B2C-1A2B-2B2B-2 Meaning of the branches
A Making general connections
B Explaining the individual meanings
C Summarized meaning

In order to clarify the meaning also of possessing four conceptions, an interceding verse.

There is a reason that the path of preparation possessing the four conceptions is taught by one interceding stanza; it is in order to clarify the entity of the conceptions and the meaning of the following divisions.

2B2C-1A2B-2B2B-2B Explaining the individual meanings
1 Illustration/presentation
2 Explanation

A Explaining the conceptions of the apprehended
B Explaining the conceptions of the apprehender

2B2C-1A2B-2B2B-2B1A Explaining the conceptions of apprehenders
1 Root text
2 Commentary

2B2C-1A2B-2B2B-2B1A-1 Root text

By the basis and the antidotes of that, conceiving the apprehended: two types. Through the particulars (of) confusion and aggregates and so forth, there are individually nine types.

There are two conceptions of apprehendeds. “By the basis and the antidotes of that, conceiving the apprehended” presents the conception of apprehendeds that are (1) ever deluded phenomena and (2) thoroughly purified phenomena. “Through the particulars of confusion and aggregates and so forth, there are individually nine types” presents the first group of nine, confusion and so forth, and the second group of nine, the aggregates and so forth.

Gyeltsab says that the conception of apprehendeds is of two types: (1) a conception of an apprehended that has the support of an ever deluded phenomena and (2) a conception of an apprehended that has the support of its antidote, thoroughly purified phenomena. Each of these are divided into nine. An example of the first of the nine kinds of conception of an ever deluded phenomena is the conception observing confusion-ignorance. The first of the nine conceptions of thoroughly purified phenomena is the conception observing the aggregates. This is called a conception of an apprehended having the support of a thoroughly purified phenomena.

Conceptualized (objects) to be apprehended, by mere possession of the support of the basis of the fully deluded and the possession of the support of antidotes are of two types. By fine divisions of ignorance and the completely purified aggregates and so forth are of nine types.

Gyeltsab sets out a syllogism: the conception of an apprehended is of two types because there is one that has the support of ever deluded phenomena and one that has the support of the antidotes. Each of these two is of nine types. An example of each of the nine respectively is [a conception] observing ignorance and [a conception] observing thoroughly purified aggregates.
By having support of substantial and imputed, apprehenders is also accepted as two types, through supports independent self, and so forth, and aggregates and so forth, accordingly.

This means that there are also two types of conceptions of apprehenders: (1) the conception of an apprehender of a substantial existent and (2) the conception of an apprehender of an imputed existent. Each is of nine types. An example of the first group of nine is given in the root text saying “through supports independent self” and an example of the second group of nine is “aggregates and so forth accordingly.”

In short, there are two types of conceptions of apprehenders: a conception of an apprehender of a substantial existent and the conception of an apprehender of an imputed existent. Each is of nine types. An example of each is respectively the conception of an apprehender observing an independent self (the support of the first conception) and the conception of an apprehender observing the aggregates (the support for the second conception).

In brief, there are two types of conceptions of apprehenders and two types of conceptions of apprehendeds.

Gyeltsab sets out a syllogism: the conception of an apprehender is of two types because there is the conception of an apprehender of a substantially existent person and the conception of an apprehender of an imputedly existent being. Each is of these conceptions are divided into nine types. An example of each is respectively the conception of an apprehender observing an independent self (the support of the first conception) and the conception of an apprehender observing the aggregates (the support for the second conception).

In brief, there are thirty-six types of conceptions.
abiding on the arya path, 7) the observed object 8) the self and so forth, 9) completely
pure generation and so forth; conceptions of the apprehended.

Gyeltsab presents a syllogism: the conception of apprehendeds which have the support of the
basis of ever-deluded phenomena (subject) is divided into nine types of conceptions of
apprehendeds as truly existent objects of enjoyment because there are nine due to observing true
sufferings and true origins in general and their particularities. The conception of apprehendeds
[of the ever-deluded class] is divided into two in terms of observing their generalities:
(1) a conception of an apprehended; this conception observes deluded ignorance (as a generally
known delusion/true origin)
(2) a conception of an apprehended that observes contaminated aggregates (as a generally known
true suffering).

These two conceptions conceive these two apprehendeds to be truly existing objects of use. In
sutra it says: “Shariputra, these phenomena do not exist [truly] in the way that they are strongly
conceived to exist by childish beings.” And, “Shariputra, form does not exist apart from inner
emptiness up to the very entity of non-functioning phenomena.”

In this way Gyeltsab first presents a generality of true origins, deluded ignorance, and a
generality of true sufferings, the aggregates such as contaminated forms. Then he presents the
four observed objects which are particularities of delusions:
(1) craving for a wrong result, that is, strongly clinging to name and form
(2) craving for a wrong object of knowledge, that is, attachment to the two extremes
(3) non-faith, that is not knowing what to reject and what to adopt with respect to ever deluded
phenomena and thoroughly purified phenomena
(4) laziness of not abiding in the manner of great delight on the arya path

One observes these four particulars and conceives them to be truly existing objects of use. There
are sutra quotations with respect to these four particularities of delusions:
(1) “They investigate these phenomena which do not exist in that way and they strongly cling.”
(2) “Strongly clinging to those phenomena is to conceive of the two extremes as not existing.”
(3) “Do not know and do not see form to be an ever deluded phenomena; do not know and do not
see form to be a thoroughly purified phenomena.”
(4) “If there is the question, “If they do not abide, how do they not abide?” one is not abiding in
the perfection of generosity.”

Then there are the three particularities of true sufferings which are observed [by conceptions of
ever deluded phenomena]:
(1) contaminated feelings which are of three types: pleasant, unpleasant, and neutral
(2) the supports of feelings such as I and others
(3) when those different feelings are known one generates a pure depression regarding suffering

These are the nine objects which one observes to be truly existent objects of use. When suffering
feelings are produced one experiences depression and generates the wish for liberation. One then
seeks a path leading to that liberation. There are then three sutra quotations related to the
particularities of true sufferings:
(1) Great bodhisattvas when you practice the perfection of wisdom, train in not seeing the
perfection of wisdom as truly existent.”
(2) “Because there is the extremely pure, one should not observe nor see oneself as truly existent.”
(3) Shariputra, the extremely pure is without generation, without production, and without
manifest effort.”

Thus there are nine conceptions of apprehendeds belonging to the ever-deluded class which are
necessarily either true sufferings or true origins. Gyeltsab presents them in three groups: two,
four, and three. First he presents a generality of true origins, deluded ignorance, and a generality of true sufferings, contaminated forms; then four particularities of true origins and three particularities of true sufferings. These nine belong to true origins and true sufferings. In fact, a conception of an apprehended belonging to the ever-deluded class necessarily apprehends an object belonging to true sufferings or true origins, which can be either a generality or a particularity of them.

The particularities of delusions are craving and so forth. In particular they are: two attachments, non-faith, and laziness. When someone has laziness instead of progressing on the arya path he remains where he is as an ordinary being.

The presentation of the nine conceptions of apprehendeds belonging to the thoroughly purified class is similar to that of the conceptions of apprehendeds belonging to the ever-deluded class.

Regarding the ninth object, depression concerning true sufferings, one should consider whether it belongs to apprehendeds belonging to the ever-deluded class because it is said “completely pure generation [of depression].” One has to understand in this case what the observed object is; it is true sufferings themselves. Suffering itself enables one to generate the wish to achieve the cessation of suffering and to seek a path that leads to this cessation. “Pure suffering” does not refer to suffering being pure, but to the generation of a pure depression which is a feeling of suffering and the cause to become free from suffering. Suffering arises from ignorance.

The nine observed objects are the five related to true origins and the four related to true sufferings. There is ignorance, which is a generality of true origins, plus the four particularities of delusions which are the result of ignorance. Ignorance leads to (1) craving for a wrong result, strongly clinging to name and form; (2) craving to abide in the two extremes; (3) confusion regarding what to reject and what to adopt; and (4) laziness which prevents one from progressing on the arya path.

Wednesday morning class, April 8, 1998

(There were no teachings Tuesday, April 7, 1998 due to the exam)

Having the support of antidotes, 1) the aggregates, 2) avenues of generating, 3) class, 4) birth, 5) emptiness, 6) the meaning of the perfections, 7) the paths of seeing, 8) meditation, and 9) no more learning: conceptions of the apprehended.

Gyeltsab says that conceptions of apprehendeds having the support of antidotes (subject) are of nine types (predicate) because they observe the phenomena of the thoroughly purified class among which five are [general] objects of knowledge, one is conduct, and three are entity.

The first sign is established because there are four that belong to conventional truths: (1) the thoroughly purified aggregates (2) the avenues of generating (these belong to the empowering conditions that are the six entrances/sources) (3) the class that is the constituents (4) thoroughly purified birth which is that of the reverse order of interdependent origination (the twelve links) and one that belongs to ultimate truths: (5) emptiness

The conception of apprehendeds clings to these five as truly existent.
These are mentioned in sutra saying:
(1) “Because of not being skillful in method one conceptualizes forms and clings to them.”
(2) “One conceptualizes the eyes and strongly clings to them.”
(3) “One conceptualizes the eye, form, and eye consciousness constituents and strongly clings to them.”
(4) “One conceptualizes ignorance and strongly clings to it.”
(5) “One conceptualizes emptiness, from inner emptiness up to the emptiness of the very entity of non-functioning phenomena, and strongly clings to it.”

The second sign is established because one observes the practice of the perfections which are conduct and clings to them [as truly existent objects of use]. In sutra it says: “One conceptualizes the six perfections and strongly clings to them.”

The third sign is established because one observes the thoroughly purified entity of the path of seeing, the path of meditation, and the path of no-more-learning and then strongly clings to them as truly existing objects of use. It says in sutra:
(1) “One conceptualizes the thirty-seven factors of enlightenment and strongly clings to them.”
(2) “One conceptualizes the four concentrations, the clairvoyances, the immeasurable thoughts, and the formless absorptions and strongly clings to them.”
(3) “One conceptualizes the ten powers of the tathagatas up to omniscient mind and strongly clings to them.”

(1) The thoroughly purified aggregates
In Haribhadra’s commentary it says: “the aggregates.” Although in the sutra it says “forms,” which may make it seem that only the form aggregate is a thoroughly purified phenomena, in fact all five aggregates can belong to the class of thoroughly purified phenomena.

(2) The avenues of generating
In Haribhadra’s commentary when it says “avenues of generating” it refers to the six entrances. They are called “avenues of generating” due to their function, which is to act as a door for the consciousnesses through which [the consciousnesses go out and come in] and thereby increase (they increase in the sense of developing or expanding). All six entrances can belong to the class of thoroughly purified phenomena.

(3) The class
In Haribhadra’s commentary when it says “class” it refers to the constituents which include three groups of six. As it says in sutra there are the eye, form and eye consciousness constituents, then there are also the remaining groups of faculty, object, and consciousness.

(4) Birth
In Haribhadra’s commentary when it says “birth” it refers to the birth that belongs to the reverse order of dependent origination related to thoroughly purified phenomena. The twelve links can belong to the ever deluded class as well as to the thoroughly purified class, which can each be considered in regular or reverse order. The regular order of thoroughly purified phenomena means that if the first link is ceased the second ceases; if the second ceases, the third ceases; and so forth. The reverse order of dependent origination looks at the reason that the twelfth link ceases; it ceases due to the cessation of the eleventh link, rebirth; this ceases due to the cessation of the tenth link, existence/becoming, and so forth. The twelve links related to thoroughly purified phenomena present true paths and true cessations.

When the twelve links related to ever deluded phenomena are set out in the regular order of ignorance, karmic formations, and so forth, they present true origins. When they are set out in reverse order they present true sufferings. This is according to one assertion.
When the twelve links related to thoroughly purified phenomena are set out in the regular order (i.e., when ignorance ceases, karmic formations cease, and so forth) they present true paths. When the reverse order is set out, they present true cessations; for example, the twelfth link ceases due to the cessation of the eleventh link, rebirth; the eleventh link ceases due to the cessation of the tenth link, existence/becoming; and so forth.

In short, in regular order the twelve links present causes, while in the reverse order they present results. However, there is another interpretation that says that the regular order presents results, while the reverse order presents causes.

(5) Emptiness
In Haribhadra’s commentary when it says “emptiness,” it refers to either the sixteen or twenty divisions of emptiness.

(6) The meaning of the perfection of wisdom
In Haribhadra’s commentary when it says “the meaning of the perfection of wisdom,” it refers to conduct, which is the practice of the six perfections.

(7) In Haribhadra’s commentary when it says “the path of seeing,” it is related to the thirty-seven factors of enlightenment. Are the thirty-seven factors of enlightenment the entity of the path of seeing? Are they the entity of the path of seeing in terms of being its cause, entity, or result? Think about it!

(8) “The path of meditation” is related to the concentrations, clairvoyances, immeasurables, and formless absorptions. There are four concentrations, six clairvoyances, four immeasurables, and four formless absorptions which are the entity of the path of meditation. Are the four concentrations, six clairvoyances, four immeasurables, and four formless absorptions the path of meditation? No, yet think about their relationship.

(9) With respect to “the path of no-more-learning” in sutra it says “the ten powers of the tathagatas up to omniscient mind” which includes the four fearlessnesses, great love, great compassion, the four individual correct knowledges, and so forth.

To summarize, with respect to the conception of apprehendeds which are thoroughly purified phenomena Gyeltsab makes a presentation in three parts:
- in terms of observed objects
- in terms of conduct
- in terms of entity
This is why there are five observed objects that belong to the thoroughly purified class, one observed object which is conduct (the six perfections), and three observed objects which are entity.

Gyeltsab sets out a syllogism: a conception of an apprehender that has the support of a substantially existing person, which strongly clings to the apprehender as a truly existent user, is of nine types because it has one observed object that is the apprehender of substantial existence.
which has its (own) conceived-object (apart) and eight (more) divisions by way of conceived object.

The first part of the sign is established because the [first] apprehender observes the [second] apprehender which apprehends an independent self and conceives [that apprehender] to be a truly existent user. This independent self is the apprehended object of the apprehender of substantial existence, the observed object [of the first apprehender]. Repeating this same sentence in a different way would be: an independent self is the apprehended object of the second apprehender, which is an apprehender of substantial existence and the observed object of the first apprehender. That independent self is not the object of the mode of apprehension of a conception that is an obscuration to knowledge because if it were it would be an obscuration to liberation. In sutra it says: “Shariputra, just as not closely observing the I as truly existent, so too the sentient being, the life force...” In Ocean Playground it lists the twelve: self, sentient being, life force, self nourished (Tib. so ba), being, person, self born from strength (Sanskrit manu), son of Manu, creator, one who feels, one who knows, and the one who sees. These are not to be observed as truly existent. In Sanskrit these are given as epithets for “self.” These names come in non-Buddhist texts of the schools of Nirgrantha, Vaisheshika, Mimamsaka (Analysts) and others in the context of describing the self.

The second part of the sign is established because there are three which are posited in terms of being general apprehenders of a substantial existent and five that are posited in terms of a being particular apprehenders of a substantial existent. The three observed objects of apprehenders of a substantial existent are:
(1) a single independent self
(2) cause
(3) a self which views and knows
One observes these apprehenders of a substantial existent and conceives of them to be a truly existent user. These apprehenders observe three objects: the aggregates, entrances/sources, and constituents.

A single independent self is one that stands alone without a companion. The second, that of cause, is so because the entrances are said to be a door/entrance to the consciousnesses. The third, a self which views and knows, is merely different types of self: one that views, one that knows, and so on.

When we talk about the conception of an apprehender of a substantial existent, does the a substantial existent exist in reality? Madhyamika Svantrikas assert that substantial existents do exist, while Madhyamika Prasangikas assert that substantial existents do not exist because all phenomena are merely imputed. Madhyamika Svantrikas posit two objects of knowledge: substantial existents and imputed existents. Examples of these are respectively the aggregates and the person. The person is defined to be: an I imputed in dependence upon any of the five aggregates.

Wednesday afternoon class, April 8, 1998

Conceptions of apprehenders are of two types: a conception of an apprehender of substantial existence and a conception of an apprehender of imputed existence. In regard to these in sutra it says:
“Shariputra, do not observe from form up to omniscient mind as truly existent.”
“Just as one does not observe the eyes as truly existent, so too up to mentality.”
“One should not observe eyes, forms, and eye consciousnesses as truly existent.”
Although in the first quotation the sutra says “form” it refers to all five aggregates: forms, feelings, discriminations, compositional factors, and consciousnesses which are not to be observed as truly existent.

The second quotation includes all six entrances, the eye, ear, nose, tongue, body, and mental entrances, which are not to be observed as truly existent. It also includes the external entrances: visual forms, sounds, odors, tastes, tangible objects, and phenomena.

The third quotation includes all eighteen constituents: the eye, ear, nose, tongue, body, and mental constituents; the visual form, sound, odor, taste, tangible object, and phenomenon constituents; and the eye consciousness, ear consciousness, nose consciousness, tongue consciousness, body consciousness, and mental consciousness constituents.

The last sign is established. The five observed objects [of apprehenders of a substantial existent] are:

1. [a self having the support of ever deluded phenomena], ignorance and so forth of the ever deluded class, that is apprehended as an independent self
2. [a self] separated from worldly attachment
3. [a self having the support of] the path of seeing,
4. [a self having the support of] the path of meditation
5. [a self having] a support which has done or accomplished its goal.

The conception of an apprehender of substantial existent observes them and conceives them to be a truly existent user. “Ignorance and so forth of the ever deluded class” refers to the twelve links. This means that the self has the support of the ever deluded class. The twelve links can be classified in three: ever deluded phenomena that are delusions, ever deluded phenomena that are karma, and ever deluded phenomena that are generated. These three cover all twelve links because the first, eighth, and ninth links are delusions; the second and the tenth are karma; the remaining seven are that which is generated.

The five observed objects are posited in terms of instances/particularities. The second, separation from worldly attachment, is freedom from worldly attachment by way of a worldly path that sees the lower level as gross and the higher level as peace. For example, someone on the first concentration has observed the desire realm as gross and the first concentration as peaceful. This is the mundane path which is free from attachment to the lower level.

The third observed object is a self that has the support of the path of seeing, the supermundane path. A supermundane path thoroughly realizes the four noble truths and their attributes.

The fourth observed object is a self that has the support of the path of meditation, which comes from the path of seeing. The path of meditation has the entity of possessing the eight liberations and the nine final absorptions.

The fifth observed object is a self having a support which has accomplished its goal, the path of no-more-learning.

These five objects are apprehended as an independent self by the apprehender, while the conception of an apprehender of a substantial existent conceives those five apprehenders to be truly existent users.

There are quotes in sutra that mention the five observed objects:

“Do not observe dependent origination.”
“Do not observe the first concentration up to the formless absorptions.”
“The truths for aryas are not observed.”
“The eight types of liberation and the nine final absorptions are not observed.”
“The ten powers are not observed up to omniscient mind are not absorbed.”

The eight liberations are:
- three that are the embodied looking at form
- four that are the formless looking at form

280
The nine final absorptions are:
- the four which are the final absorptions of the first, second, third, and fourth concentrations
- the four which are the final absorptions of infinite space, infinite consciousness, nothingness, and the peak of existence
- the absorption of cessation

The ten powers up to omniscient mind include 39 aspects:
- the four individual correct knowledges
- the ten powers
- the four fearlessness
- the eighteen unshared qualities of a buddha
- the aspect of thusness
- the self-arising aspect
- the buddha himself
The last three aspects are also called the aspect knowing all, the aspect knowing the path, and the aspect knowing all aspects.

Gyeltsab sets out a syllogism: the conception of an apprehender that has the support of an imputedly existent being, which conceives [that apprehender] to be a truly existent user (subject), is of nine types because there are three divisions of observed objects in terms of general objects of that apprehender and six divisions in terms of instances/particularities. The first is established because the apprehender of the aggregates, entrances, and constituents as beings is observed [by the conception, the first apprehender]. In sutra it says:
"Subhuti, [regarding] that, how is it thought of? Is not form other, and illusion also other?"
"Is not eye other and illusion other."
"Is not the eye, form, and eye consciousness other and illusion other?"

There is a conception of an apprehender of an [imputed existent which means] an imputedly existent being. The apprehender apprehends the aggregates to be an imputedly existent person, the entrances to be an imputedly existent person, and the constituents to be an imputedly existent person; and the conception (the first apprehender) apprehends the apprehender to be a truly existent user.

The second is established because there are:
(1) the twelve links, including ignorance;
(2) thoroughly purified phenomena, including the 37 factors of enlightenment
(3) the path of seeing
(4) the path of meditation
(5) the distinguished path
(6) the path of no-more-learning
The conception (the first apprehender) observes the [six] apprehenders of the six above mentioned objects and strongly clings to them as being truly existent users. In sutra it says:
"Illusions are other, are not dependent originations also other?"
"Are not those included in the factors of enlightenment other and are not illusions other?"
"Are not emptiness, signlessness, and wishlessness other, and are not illusions other?"
"Are not illusions other and are not the concentrations and formless absorptions other?"
“Are not illusions other and are not emptinesses other?”
“Are not the ten powers of the tathagatas up to the eighteen unshared qualities of buddha other and are not illusions other?”

The nine which are posited as objects of the second type of apprehender are so listed. The last six include the twelve links, the 37 harmonies of enlightenment, the path of seeing which has the three doors of liberation, the concentrations and formless absorptions which are the entity of the path of meditation, the distinguished path which is related to all emptinesses, and the path of no-more-learning which is related to all the qualities of a buddha including the ten powers.

The three doors of liberation are emptiness, signlessness, and wishlessness. These three when applied to a basis are (1) that all phenomena are empty of true existence, (2) all causes are together with a pacified sign of true existence, and (3) all truly existent results are not to be wished for. The three doors can also be posited in connection with the four noble truths. On the basis of the Commentary Clarifying the Meaning emptiness is said to refer to the last two attributes of true sufferings, empty and selfless; signlessness refers to the four attributes of true cessations and the four attributes of true paths; and wishlessness, a result that is not wished for, refers to the first two attributes of true sufferings, impermanence and suffering, and the four attributes of true origins. This is a presentation of the three doors based on the Ornament, it differs from the presentation in Treasury of Knowledge (Abhidharmakosha).

The distinguished path is mentioned in the context of presenting four paths: (1) a path of preparation, (2) an uninterrupted path, (3) a liberated path, and (4) a distinguished path. It is not clear whether the distinguished path mentioned here is the same as in the context of the four paths. Here it means that the Mahayana path of preparation is superior to the hearer and solitary realizer paths of preparation because the Mahayana path of preparation has emptiness as its object.

There are nine kinds of illusions:
- four illusions related to actions
- five illusions related to exalted wisdom

This is mentioned in Lama Tsongkhapa’s Golden Rosary: the first four are karmic illusions and the remaining five are merely labeled on the generation of illusions of exalted wisdom. When the Madhyamika Svatantrikas discuss emptiness the illustration given is the illusions created by a magician, while in the case of Madhyamika Prasangika the best illustration of emptiness is a striped rope that appears to be snake. (Buddha’s mother was also named Maya (illusion)).

The four conceptions and the four similitudes of definite separation, according to the enumeration, are possessors.

In short, the four conceptions are explained here according to the four divisions of the path of preparation. Gyeltshab says that the path of preparation possesses the four types of conceptions (which are explained in accordance with the number of definite discriminations) in terms of their ability to suppress [these manifest conceptions]. These four divisions of definite discriminations possess the antidote that destroys the energy/capacity of the four conceptions.

Although the four are explained in this way one can ask why is the conception apprehending thoroughly purified phenomena explained second and not first, and why is the conception apprehending ever deluded phenomena explained first and not second, and so forth? The answer is that the conception apprehending ever deluded phenomena is explained first because we are more familiar with such phenomena than we are with thoroughly purified phenomena, and therefore this conception is easier to eliminate. In the same way we are more
familiar with substantial existence than we are imputed existence and therefore it is easier to eliminate the conception apprehending it. These conceptions are easier to eliminate from the point of view of our familiarity with their objects.

Thursday morning class, April 9, 1998

2B2C-1A2B-2B2C Explaining the tutor
1 Making a connection by showing the purpose of other arrangements
2 Root text
3 Commentary

2B2C-1A2B-2B2C-1 Making a connection by showing the purpose of other arrangements

Agreeably joining the stanza when the tutor was taught earlier and also because of demonstrating “what was explained will become distinguished by the force of that”, again at the end, an interceding stanza.

Someone says: “In the extensive explanation it is not suitable to explain the tutor again as a later [subject after a long explanation on the conceptions as a former subject] because to do so is discordant with respect to the order exposed in the brief presentation where the tutor was explained first and then the conceptions.” There is a purpose to explaining the tutor prior to the conceptions because it is presented according to the ease of making the stanzas. Although the tutor was taught first in the brief presentation there is purpose to explaining it again here at the end of the conceptions in the extensive explanation due to the following interceding stanzas. The purpose is to make known that all four (the observed objects, aspects, causes, and conceptions) explained previously become distinguished by the force of knowing about the tutor. In brief, this means that the tutor and the other five are all factors that distinguish the Mahayana path of preparation.

2B2C-1A2B-2B2C-2 Root text

Undaunted mind and so forth, demonstrates non-entitiness and so forth, discarding discordant classes of that, at all times are the tutor.

Gyeltsab sets out a syllogism: the exalted wisdom of the continuum of a bodhisattva on the path of preparation, (1) who is not separated from mental attention to omniscient mind, (2) who is skillful in the method of an undaunted mind regarding the profound meaning of emptiness and not frightened by it and so forth, and (3) who discards the discordant class of any of the mental attentions of hearers and solitary realizers, or the conception of true existence, (subject) is an inner tutor for a bodhisattva on the path of preparation at all times (predicate) because [that exalted wisdom] is a clear realization of that [bodhisattva] which eliminates the two extremes, that of cyclic existence and that of solitary peace (sign).

In sutra it says: “When a great bodhisattva practices the perfection of wisdom he has mental attention to omniscient mind and, although he conceptualizes [phenomena] individually such as [thinking], “Forms are impermanent,” he should not observe them [as truly existent].” And, “Subhuti, when a great bodhisattva practices the perfection of wisdom he should meditate on the perfection of wisdom and observe it while being free from a truly existent mental attention to omniscient mind.” Maybe this last sutra quotation means that if a great bodhisattva is separated from mental attention to omniscient mind when practicing the perfection of wisdom, he would meditate on it but would [have conceit in the sense that he] would observe himself and his practices as truly existent”; but I doubt this.

In the Ornament when it says “undaunted mind and so forth” this refers to the inner tutor, while “demonstrates non-entitiness and so forth, discarding discordant classes of that” refers to the outer tutor.
Gyeltsab presents the outer tutor in a syllogism: a buddha’s supreme emanation body who teaches all Dhammas, such as those that are ultimately entitiless, to such a one (a bodhisattva on the path of preparation) and also shows the path in which one gives up all misleading and evil friends who are the discordant class of virtuous spiritual friends (subject) is the outer tutor (predicate) because he is a virtuous spiritual friend who is the empowering condition that gives teachings to such a one (a bodhisattva on the path of preparation) on the complete set of method and wisdom (sign). In sutra it says: “Subhuti, furthermore a virtuous spiritual friend of a great bodhisattva is one who teaches Dharma to [a great bodhisattva] by way of not observing forms as permanent and truly existent and who does not allow the bodhisattva to dedicate all his roots of virtue to the grounds of hearers and solitary realizers but only to omniscient mind.” And, “A misleading friend of a great bodhisattva is one who separates him from the perfection of wisdom.”

2B2C-1A2B-2B2C-3 Commentary

1) With the skillful means of undaunted and unafraid minds and so forth, 2) in accordance with the thoughts, showing all things as selfless and so forth, 3) not possessing dharmas of the discordant class, miserliness and so forth by being the virtuous friend, are the tutor.

Gyeltsab says that a supreme emanation body who is the tutor of a bodhisattva on the path of preparation should teach the path in an ordered way, that is, as a king’s attendants speak softly when the king’s beautiful wife has died. Such a tutor is also skilled in teaching the Dharma in accordance with the thoughts of the disciples, and teaches the selflessness of persons and the selflessness of phenomena, mind generation, the six perfections, who are misleading friends and who are good friends. Misleading friends are those who cause one to give up the Mahayana scriptures and the Mahayana path. This tutor also teaches to not have miserliness and so forth, the discordant class of the six perfections. Such a tutor is the tutor of a bodhisattva on the path of preparation. He is a virtuous spiritual friend who teaches this bodhisattva the entire path.

Of the two tutors, the outer and inner, the inner tutor is the most important. The subject of the tutor is relevant not only to a bodhisattva on the path of preparation but should also be applied to ourselves. We need to develop the inner tutor.

A tutor should have three attributes:
(1) he should be expert in method
(2) he should be expert in giving teachings
(3) he should teach the method for abandoning adverse conditions

Chokyi Gyeltsen also comments on the tutor in his Ocean Playground saying that the presentation of the tutor in this context has six divisions:
(1) the characteristics of a virtuous spiritual friend who is to be followed
(2) the characteristics of the disciple who follows him
(3) how to rely on him
(4) the benefits of relying on him
(5) the disadvantages of not relying on him
(6) the way in which oral instructions are to be given

Chokyi Gyeltsen also comments on the tutor in his Ocean Playground saying that the presentation of the tutor in this context has six divisions:
(1) the characteristics of a virtuous spiritual friend who is to be followed
(2) the characteristics of the disciple who follows him
(3) how to rely on him
(4) the benefits of relying on him
(5) the disadvantages of not relying on him
(6) the way in which oral instructions are to be given

1) the characteristics of a virtuous spiritual friend who is to be followed
A Mahayana virtuous spiritual friend should possess ten characteristics in general:
(1) senses that are subdued by the higher training in morality
(2) a mind that is pacified by the higher training in concentration
(3) a mind that is totally pacified by the higher training in wisdom
(4) more knowledge or qualities than the disciple
(5) exert effort for others’ welfare, such as giving teaching
(6) rich in hearing many teachings
(7) wisdom that thoroughly realizes the suchness of reality
(8) being expert in giving teachings to disciples
(9) compassion that is the essence of the method, mercy
(10) patience that lacks sadness and tiredness in facing the difficulties of explaining Dharma and so forth to others

In Ornament for Sutra it says: “A virtuous spiritual friend is subdued, pacified, totally pacified, more knowledge, having effort, rich in scriptures, realization of thusness, expert in speaking, the entity of mercy, sadness and tiredness abandoned.”

A Mahayana virtuous spiritual friend should have three characteristics as taught in the Ornament:
(1) being expert in method
This means giving teachings on emptiness to disciples in such a way that they are not daunted or frightened by it. A Mahayana virtuous spiritual friend should know how to never frighten his disciples. Such skill in teaching the Dharma is a remedy for (a) those who are afraid of Dharma, such as the teachings on emptiness, (b) those who are continuously afraid of that (due to hearing about people who are frightened) and (c) those who are terrified by those very fears.
(2) teach Dharma
A Mahayana virtuous spiritual friend teaches the entitleness of all phenomena and so on according to the thoughts of disciples, just as a king’s attendant knows how to speak to the king when his beautiful wife has just died.
(3) teach the method for abandoning adverse conditions
A Mahayana virtuous spiritual friend teaches his disciples how to avoid conditions that are adverse to the six perfections, miserliness and so forth, and places them in the happy migrations and then in definite goodness.

In brief, those who desire liberation should seek a suitable virtuous spiritual friend who is superior to themselves. In Collected Sayings, which includes 36 texts, there is a text called Collected Sayings About Dear Friends in which it says: “By following an inferior, one will degenerate; by following an equal, one will remain where one is; by following the foremost, one will attain the sublime; therefore, I must follow one who is foremost and great.” In short, one who is observed to be a Mahayana virtuous spiritual friend having the three attributes is the definition of the tutor who is explicitly presented here.

This means that if one follows a teacher who is inferior to oneself, one will not gain qualities but instead will degenerate. If one follows a teacher who is equal to oneself, one will remain as one is. If one follows a teacher who has more knowledge and qualities than oneself, one’s own qualities and knowledge will improve.

(2) The characteristics of the disciple who follows him
A Mahayana disciple who listens to Mahayana instructions should possess three attributes:
(1) possess an upright mind in the sense of being free from dissimulation and pretension
(2) possess intelligence discriminating what is good and what is bad
(3) possess appreciation for and seek the Mahayana Dharma

In the Four Hundred Stanzas on the Middle Way it says: “One who abides honestly, possesses intelligence, and aspires is a correct receptacle to be a listener.”

However, a disciple who listens to the perfection of wisdom must have three special attributes:
(1) to have done extraordinary activities in his previous life such as having made offerings to the buddhas
(2) to have produced extensive roots of virtue with respect to those buddhas
(3) to never be separated from a protector who is a Mahayana virtuous friend. In chapter four of the Ornament it says: “To have acted especially with respect to the buddhas, to have produced roots of virtue in regard to them, to have protecting virtuous friends: these are the receptacles who listen to it.”

There are different kinds of receptacles: those who listen, those who retain the meaning, and so forth. In short, even the disciple should have specific qualities in order to retain, in order to think about the meaning of the words, and so forth. Such qualities of disciples are also taught in the text Pramanavartika by Dharmkriti in which it says: “Ordinary beings are attached to worldly activities and therefore their minds are not sharp. They do not seek the excellent explanation.” This means that disciples should be without attachment to this life, have perfect wisdom and an exercised wisdom, and have a mind seeking the excellent explanation. In Pramanavartika it says: “People of this time have aversion for each other and have the stain of being jealous of others’ qualities. One who is like this is not a suitable person to study this text.” Dharmakirti is saying that such people are not the ones for whom he has composed his text.

Thursday afternoon teachings, April 9, 1998

We have talked about the characteristics of the tutor and the disciple, now we will look at:
(3) How to rely on him
This is divided into two:
a) Relying by way of thought
b) Relying by way of action

a) Relying by way of thought
This means that one should see the teacher as being similar to a buddha. In sutra it says: “Recognize him as being like a buddha.” It also says: “How should one see the virtuous spiritual friend? One should see him as the Tathagata.” Saying that one should see the guru as similar to a buddha, even though he may not be an actual buddha, is in accordance with sutra, but in tantra it says that one should see the guru as an actual buddha. This way of recognizing the guru is similar to that mentioned in the teachings on the Stages of the Path which say that a disciple should listen to the guru with six proper attitudes
(1) considering oneself a patient
(2) considering the Dharma as medicine
(3) considering the Buddha as the doctor
(4) considering that one will live for a long time by emphatically practicing the Dharma
(5) considering the Tathagata as a holy being
(6) considering that the Buddha’s doctrine will remain for a long time

We should also listen to the teachings like a vessel free from the three faults:
- one should not be like an upside-down vessel
- one should not be like a smelly vessel
- one should not be like a vessel with a hole in it
To be like an upside-down vessel means to attend a teaching but to not listen to it, or to listen to it with a wandering mind, and so forth. To be like a smelly vessel means to listen to a teaching with a critical mind looking for faults. To listening like a vessel with a hole in it is to not recall any of the teachings afterward.

b) Relying by way of action
This is to offer food, clothes, and so forth to guru; to offer respect by making prostrations to him and standing up in his presence; and to offer religious service to him. In the Ornament for Sutra it says: “Devote yourself to your virtuous spiritual friend by making offerings, paying respect,
offering religious service and practice.” In the Fifty Stanzas on Guru Devotion it says: “With lucid faith in the supreme, I offer the flowers in my hand to the mandala in the three times. I make offerings to the guru who guides me and bow my head at his feet.” This verse shows that one should offer mandalas to one’s virtuous spiritual friend. If oneself is an ordained monk or nun but one’s virtuous spiritual friend is a lay person, although in general one should make prostrations to him, in a particular situation in which a monk or nun prostrating to a lay person would disturb others one can prostrate to Dharma texts placed near the guru rather than directly to him. In the Fifty Stanzas on Guru Devotion it says: “In order to avoid insult from worldly people through prostrating to a lay man or to a newly ordained person, you should place Dharma objects near the guru and physically prostrate to them while mentally prostrating to the guru.” The Dharma object can be a text, a statue, a stupa, and so forth.

(4) The benefits of relying on him properly
A disciple who properly relies on a sublime virtuous spiritual friend receives great benefit because (1) he will attain the temporal and ultimate attainments, (b) he will please his guru and thereby also all the buddhas of the three times, and (c) he will achieve buddhahood, which is difficult to find in countless eons.

The first is established because in Fifty Stanzas on Guru Devotion it says: “Attainments are achieved by relying on a master and the kindness of a vajra master. Knowing this, I will thoroughly please my virtuous spiritual friend with all material things.”

The second is established because in the Vajragarbha-alamkara Tantra it says: “Thereby, the method for all is the vajra guru who is the supreme virtuous spiritual friend. Thus, I will please him accordingly. By pleasing him, all the buddhas will be pleased.” It is correct just as it is said.

The third is established because in the Vajragarbha-alamkara Tantra it says: “The state of a buddha which is difficult to realize in ten million eons will be granted to those who put effort into it in this life.” In Fifty Stanzas on Guru Devotion it says: “Make prostrations to the vajra master from whom one receives supreme initiation thinking that one prostrates to all the tathagatas abiding in all the worlds of the ten directions in the three times.”

(5) The disadvantages of not relying on him properly
Abandon criticizing and disrespecting one’s master because if one does so one will create the cause to experience many shortcomings. If one belittles one’s guru from one’s heart it is similar to belittling all the buddhas and has the maturation result of everlasting unpleasant feelings in this life while in the next life one will be reborn in the hell realm. In Fifty Stanzas on Guru Devotion it says: “Having thought that the guru is one’s protector and having become his disciple, if one belittles him, one belittles all buddhas, whereby one will experience continuous suffering.” And, “Belittling the spiritual master brings contagious diseases, sickness from harm, demons, epidemics, and poisoning by which oneself, an ignorant one, will die. One will experience problems from fire, poisonous snakes, sky-goers, robbers and bandits, demons, adverse leaders which will cause one to die. One will go to the hell realm.” These and so forth will be experienced.

(6) The way in which the oral instructions are to be given
Such a disciple as that explained above relies on his virtuous spiritual friend by thought and action. Having done so, the virtuous spiritual friend gains the responsibility to take care of the disciple by giving whatever help is needed: material goods, Dharma teachings in accordance with his faculty, leading him to listen to and reflect on the Hinayana and Mahayana Dharma baskets. In Three Hundred Stanzas on the Vinaya it says: “One who possesses morality, knows the rules of the Vinaya, has mercy toward the sick, has inner purity, and endeavors to help others by giving them material things and Dharma, and instructs them from time to time is admired as a virtuous spiritual friend.”

In this way the subject of guru devotion is discussed in the Ornament.
Now we will go through the four conceptions again:
(a) a conception of an apprehender of a substantial existent observes an apprehender of a substantial existent
(b) an apprehender of a substantial existent observes a substantial existent
(c) a conception of an apprehender of an imputed existent observes an apprehender of imputed existent
(d) an apprehender of an imputed existent observes an imputed existent

Both the person being able to perform a function and a self supporting substantially existent person are the substantial existent of this case. A mind apprehending them apprehends a substantial existent.

An imputed existent is the being imputed on the collection of aggregates and the being imputed on the person being empty of true existence like an illusion. A mind apprehending either of these two is an apprehender of an imputed existent.

Now we will look at the definitions and divisions of the four conceptions according to Chokyi Gyeltzen. When the conceptions of this case, which are presented as obscurations to knowledge, are divided by way of their root there are four:
1. conceptions of ever deluded apprehendeds
2. conceptions of thoroughly purified apprehendeds
3. conceptions of an apprehender of a substantial existent
4. conceptions of an apprehender of an imputed existent

A conception of an apprehended that is an obscuration to knowledge is defined as: a conception that observes its own observed object, an apprehended, and conceives it to be a truly existent object to be used.

A conception of an ever-deluded apprehended which is an obscuration to knowledge is: a conception that observes its own observed object, which is a truth of the ever-deluded side, and conceives it to be truly existent object of use. When divided their are nine types, such as the conception observing a deluded ignorance that conceives it to be a truly existent object of use.

A conception of a thoroughly purified apprehended which is an obscuration to knowledge is: a conception that observes its own observed object, a truth of the thoroughly purified side, and conceives it to be a truly existent object of use; for example, a conception that observes the thoroughly purified aggregates and conceives them to be a truly existent object of use.

A conception of an apprehender that is an obscuration to knowledge is: a conception that observes its own observed object, which is an apprehender, and conceives it to be a truly existent user.

A conception of an apprehender of a substantial existent which is an obscuration to knowledge is: a conception that observes its own object, an apprehender of a substantial existent, and conceives it to be a truly existent user; for example, a conception that observes an apprehender of an independent self and conceives it to be a truly existent user.

A conception of an apprehender of an imputed existent which is an obscuration to knowledge is: a conception that observes its own observed object, an apprehender of an imputed existent, and conceives it to be a truly existent user; for example, a conception that observes an apprehender apprehending the aggregates and conceives it to be an imputed being and conceives it to be a truly existent user.

These conceptions are necessarily obscurations to knowledge. A conception can either be of an apprehender or it can be of an apprehended. Such a conception apprehends an apprehender to be a truly existent user and an apprehended to be a truly existent object to be used. An apprehender
can be an apprehender of a substantial existent or an apprehender of an imputed existent; they are so-called in terms of their object. An apprehended can be either an ever-deluded phenomena or a thoroughly purified phenomena.

This ends the discussion of the path of preparation which is the third topic of omniscient mind.

In summary, the Mahayana path of preparation is superior to the Hinayana because of its:
- observed object
- aspect
- cause
- conceptions
- tutor
- (divisions)

The tutor of a bodhisattva on the Mahayana path of preparation is not necessarily a person because the inner tutor is not a person. The tantra teachings present an interpretive guru, who is the guru who actually gives teachings, while the definitive guru is internal.

Although Atisha was a person abiding on the path of preparation and a follower of the Madhyamika school, his gurus were not necessarily followers of the Madhyamika school. In general, it is said that Atisha had many gurus but the ones who were most important to him were Dharmarakshita and Serlingpa. Dharmarakshita belonged to the Vaibhashika school, while Serlingpa belonged to the Chittamatra school; both these masters are said to have been abiding on the path of accumulation.

While it was said that a tutor of a bodhisattva on the path of preparation gives the complete teachings on method and wisdom, actually there is no such pervasion; for example, Serlingpa, who was a Chittamatin, and Dharmarakshita, who was a Vaibhashika, were the teachers of Atisha but neither of them gave the complete teachings on method and wisdom because they were unable to give complete teachings on the view since they did not accept the emptiness of true existence but instead asserted true existence. Dharmarakshita composed the text the Wheel of Sharp Weapons. These teachers were most important to Atisha because they gave him the complete set of teachings on the mind of enlightenment. It is said that Atisha had 150 teachers but that he cherished these two the most.

In terms of our daily life, we should try to understand and meditate on the apprehender and the apprehended and how they lack true existence. In this way we will leave imprints to gain the realization of emptiness without fear some time in the future. When people with little merit see emptiness they experience fear and discouragement. When one meditates on emptiness one should do so like catching a snake without fear but with a great technique. This means that one needs a lot of merit for in order to realize emptiness without fear upon seeing it. For instance if one does not have a method, such as a mantra against poison, there will be the risk of being bitten by the snake. There is a story of an American in Nepal who managed to catch thirty-eight snakes called “a seven step snake” (because one lives for seven steps after being bitten by it). However, when trying to catch the thirty-ninth snake he was bitten and died!

END

(There were no teachings Friday, April 10, 1998 due to the Easter holiday.)
Tuesday afternoon class, April 14, 1998

(There were no teachings Monday, April 13 and Tuesday morning, April 14, 1998)

2B2C-1A2C Explaining the achievements which accomplish the aim of the instructions accordingly
1 Supports of achieving
2 Observed object
3 Objects of intent
4 Entity of achieving

2B2C-1A2C-1 Supports of achieving
A General meaning
B Meaning of the branches

1 Entity
2 Divisions
3 Dispelling objections
4 The manner of leading accordingly through the lineage

2B2C-1A2C-1A1 Entity
A Through positing the Chittamatrin position, to analyze correct and incorrect
B Our own tradition

2B2C-1A2C-1A1A Through positing the Chittamatrin position, to analyze correct and incorrect

Gyeltsab says that according to the Chittamatris the lineage has three attributes:
(1) it comes from beginningless time from one continuum to another
(2) it is attained naturally/by birth
(3) it is in the sixth entrance/source

However, even among the Chittamatris there is a difference of opinion regarding whether the lineage is or is not in the sixth entrance. According to False Aspectarian Chittamatris, who do not accept a consciousness called a mind-basis-of-all, the lineage is an uncontaminated seed within the sixth entrance (the mental consciousness). On the other hand, True Aspectarian Chittamatris, who do accept a mind-basis-of-all, say that it is an uncontaminated seed that exists in the seventh consciousness, the mind-basis-of-all.

As long as such an uncontaminated seed does not meet the conditions of hearing and so forth it is called a naturally abiding lineage. When it meets the conditions of hearing and so forth it becomes the developmental lineage.

The Chittamatris assert that if the mind-basis-of-all is not posited, the uncontaminated seed exists within the sixth entrance, and when it encounters the conditions of hearing and so forth, it then becomes a potential upon which the realizations of any of the three vehicles can be generated. However, if a mind-basis-of-all is posited, the uncontaminated seed is said to be found within it; when it is not nourished by the conditions it is called a naturally abiding lineage, but when it is nourished by the conditions it is called a developmental lineage. That uncontaminated seed can become a Mahayana lineage if it encounters the condition of hearing Mahayana Dharma, such as the profound and extensive; but if it meets the condition of hearing the hearers’ Dharma it becomes a hearer’s lineage; and if it encounters the Dharma of non-duality and the Dharma below, it becomes a solo realizer’s lineage.

There are three kinds of lineage:
(1) definite
(2) indefinite
(3) broken

A definite lineage means that one is initially determined to become a follower of a specific vehicle among the three vehicles. For example, someone who is determined to become a bodhisattva and continues on this path until he attains the enlightenment of a buddha; in other words, he does not change vehicles and become a follower of, for example, the hearer’s vehicle. Or it can be someone who is determined to follow the solitary realizer path until its goal is achieved (the middle
enlightenment) and continues to do so even if in the meantime he encounters a Mahayana teacher. The same goes for someone who initially determines to follow the hearer path.

An indefinite lineage means that due to conditions the lineage becomes transformed into the cause of another vehicle among the three vehicles. For example, someone who initially follows the Mahayana path but later changes to the hearer’s path and works to achieve the enlightenment of a hearer.

A broken lineage is a lineage that is not nourished by the condition of hearing. This means that there is someone who does not belong to any of the three vehicles. However some assert that although a broken Mahayana lineage is possible a total broken lineage is not possible. The Chittamatrins, however, say that there are people who will not attain any of the three enlightenments.

In brief, according to the Chittamatrins the naturally abiding lineage and developmental lineage depend on the state of the uncontaminated seed. If the uncontaminated seed is not nourished by the condition of hearing it remains a naturally abiding lineage, but when nourished it becomes the developmental lineage.

Gyeltsab discusses lineage only from the point of view of the Madhyamikas and Chittamatrins, while Jetsun Chokyi Gyeltsen also discusses it from the point of view of the Vaibhasikas and Sautrantikas.

Arya Vimuktisena says that the uncontaminated seed is not a naturally abiding lineage because it does not have the complete meaning of a naturally abiding lineage. This reason is not established because it does have the complete meaning of naturally abiding lineage because it acts as a cause of an arya’s realization. However, if this were the case it would follow that even vows and the lineage that are correctly nourished by conditions would be naturally abiding lineages and could not be reversed. In other words, they would also be a naturally abiding lineage because they act as a cause to achieve an arya’s realization. Here the argument is about vows and so forth which are also nourished by conditions. Naturally abiding lineage is the uncontaminated seed that is not nourished by the condition of hearing, while when nourished it becomes the developed lineage.

According to the Madhyamika Svanatnikas the naturally abiding lineage is the very natural purity, that is the dharmata or suchness of sentient beings’ minds. Therefore, they say that the naturally abiding lineage posited by the Chittamatrins is only a designated lineage and is not a real naturally abiding lineage. The Ornament for Sutra explains the lineage according to the system of mere-aspect-cognizer [Chittamatrins] but this is not set out here.

Jetsun Chokyi Gyeltsen presents the lineage in four divisions:

1. the lineage according to the Vaibhashikas
2. the lineage according to the Sautrantikas
3. the lineage according to the Chittamatrins
4. the lineage according to the Madhyamikas

(1) The lineage according to the Vaibhashikas
The definition of the buddha lineage is: the virtue of non-attachment, which is a mental factor, in the continuum of a sentient being that acts as the substantial cause for the arya realizations which are its result. In a sutra about vinaya it says:
“The arya lineage is to be content with mediocre Dharma robes;
The arya lineage is to be content with mediocre food;
The arya lineage is to be content with a mediocre house and bedding;
The arya lineage is to be joyful in abandonment and meditation.”
The first three lines of this verse explicitly present the method which is the three types of non-attachment, a virtuous mental factor, that indirectly generate the arya realizations that are their results. The last line explicitly presents the virtuous mental factor that directly generates the arya realization which is its result. When someone has few desires and knows satisfaction he endeavors in abandonment and meditation; thus he abandons craving. By practicing the first three arya lineages, one turns away the manifest craving to mine; by practicing the last, one finishes forever the attachment to I.

In Abhidharmakosha it says: “From non-attachment, the arya lineage.” “The three presents the manner and the last is action.” And, “The craving for mine and the total pacification at that time.” The commentary to the Abhidharmakosha says: “From these are generated the aryas, therefore there are four arya lineages.”

The lineage can also be posited in terms of dull and sharp faculties. In Abhidharmakosha it says: “Some from the beginning, some after training.” This means that the last type of arya lineage, joy in abandonment and meditation, directly destroys the two graspings at an I and mine which are conceived to be self-supporting substantially existent. The previous three arya lineages indirectly destroy these two types of grasping. In short, the lineage is defined to be a mental factor, a virtuous mind, which is content with few clothes, little food, and a mediocre house and bedding.

(2) The lineage according to the Sautrantikas
Sautrantikas assert that the buddha lineage is: a seed of an uncontaminated mind in the continuum of a sentient being. In a text by Acharya Rajaputra it says: “The lineage posited by the Sautrantikas is a potential of the seed of the mind, that potentiality of the seed of the mind is an object of thorough degeneration while one is an ordinary being and a learner.”

(3) The lineage according to the Chittamatrin
Chittamatrin asserts that the lineage is qualified by three attributes:
(1) it has come from beginningless time through one continuum to another of a sentient being
(2) it is acquired by nature, or birth
(3) it is the seed of uncontaminated mind that exists in the sixth entrance or the mind-basis-of-all
Before it is nourished by the condition of hearing it is a naturally abiding lineage, while after it is nourished it becomes a developmental lineage. In a sutra about abhidharma it says: “With respect to that, the lineage of the bodhisattvas is that which has come continuously from continuum to continuum from beginningless time, acquired by nature, and a differentiation of the sixth entrance.” In the Bodhisattva Grounds it says: “What is lineage? It is of two types: that abiding naturally and that which is achieved correctly.” The naturally abiding lineage is the lineage that exists in the sixth entrance and comes from continuum to continuum continuously; it is acquired by birth or by nature. The lineage that is achieved correctly is that which has been obtained by familiarizing oneself with roots of virtue in the past.

According to the Chittamatrin the buddha lineage or buddha-nature is divided into nine in accordance with the Ornament for Sutra. These nine divisions are explained by way of four attributes. The nine are:
(1) existing
(2) superiority
(3) definition (of the naturally abiding lineage and the developmental lineage)
(4) sign of having activated the lineage
(5) divisions
(6) shortcomings
(7) benefit
(8) example of naturally abiding lineage
(9) example of the developmental lineage
(1) Existing is explained by the proof that establishes that sentient beings have the three different lineages of the three types of vehicles

(2) Superiority is explained by the proof that establishes the Mahayana lineage as superior to the Hinayana lineage

(3) definition is the entity/definition of the lineage

(4) sign of having activated the lineage is the sign of having activated the Mahayana lineage

(5) divisions are the classifications of the Mahayana lineage

(6) shortcomings are the shortcomings that are obstacles to activating the Mahayana lineage

(7) benefit is the benefits of activating the Mahayana lineage

(8) example of naturally abiding lineage is examples illustrating the naturally abiding lineage

(9) example of the developmental lineage is examples illustrating the developmental lineage

These nine are to be known by way of four attributes as will be explained.

(1) In proving that the sentient beings of all three vehicles have three different types of lineages for attaining their respective enlightenments it says in Ornament for Sutra: “Different predispositions, different beliefs, different divisions of achievement, and different results observed; therefore the very existence of lineage is expressed.” These are the four attributes.

There are three different types of lineages because before entering any path there are (1) three different types of predispositions; and having entered the path there are (2) three different beliefs, (3) three different achievements/practices, and (4) three different results.

(2) With respect to proving that the Mahayana lineage is superior to the Hinayana lineage it says in Ornament for Sutra: “Virtue is superior, everything is superior, even in terms of purpose it is superior, for the reason of it being inexhaustible it is called lineage.” This means that the Mahayana lineage is superior to the Hinayana lineage for the following purposes: a Mahayana virtue is superior to a Hinayana virtue, a Mahayana lineage is able to act as a supporting basis for all excellent qualities whereas a Hinayana lineage cannot do likewise; a Mahayana lineage is also superior because it acts as a cause for attaining the enlightenment in which all one’s own results, that is, the two collections, are completed, while the Hinayana lineage is does not do so; with the Mahayana lineage one’s roots of virtue are not exhausted when its respective enlightenment is attained, while when the Hinayana enlightenment is attained one’s roots of virtue cease. According to the Chittamatra school a final enlightenment is a Hinayana nirvana, a nirvana without remainder, at which time one’s roots of virtue cease. At that time all compounded phenomena cease and all that remains is dharmata, emptiness, therefore the roots of virtue also cease. Madhyamika Svatantrikas say that when enlightenment is achieved the roots of virtue do not cease.

Wednesday morning class, April 15, 1998

(3) The entity/definition of the Mahayana lineage is explained by way of four attributes

Jetsun Chokyi Gyeltse quotes Ornament for Sutra saying: “Natural and developing, that is the support and the supported, the very existing and not existing, that which is excellent is to be known as that which liberates.” This means that when the buddha lineage is divided by way of its entity there are two divisions:

(1) the naturally abiding lineage

(2) the developmental lineage

The naturally abiding lineage is the support, while the developmental lineage is the supported. The seed of uncontaminated mind that exists in the continuum of a sentient being is a lineage because when it is not nourished by hearing and so forth it is merely the naturally abiding lineage, not the developmental lineage. These two lineages exist on the learner’s path and do not have an entity that exists at the time of the buddha ground. Such a Mahayana lineage has the
excellent quality of liberating those who possess it in their continuia from cyclic existence because in dependence on it their excellent qualities increase more and more. “Lineage” in Sanskrit is “gotra”: ‘tra’ meaning to liberate and the buddha lineage being that which liberates sentient beings from cyclic existence.

(4) The sign of having activated the Mahayana lineage
In Ornament for Sutra it says: “Prior to joining, their is compassion, belief, and patience in correct virtuous activity. This is the sign of [having activated] the lineage.” This means that the signs of having activated the Mahayana lineage are of four types:
1. before joining the actual Mahayana path, one already has intense compassion observing all sentient beings,
2. strong belief in the Mahayana Dharma,
3. patience in bearing hardships for others’ welfare
4. striving in the virtuous activities, such as generosity, of the victors’ sons

(5) The divisions of the Mahayana lineage
In Ornament for Sutra it says: “The lineage is definite, indefinite, cannot be taken away by conditions, and can be taken away. In short, these are four divisions of the lineage.” The Mahayana lineage is of four types:
1. definite lineage
2. indefinite lineage
3. a lineage that cannot be taken
4. a lineage that can be taken away

Definite lineage refers to one who right from the beginning follows a specific one of the three lineages and progresses upward until he achieves the specific goal of his respective lineage. The indefinite lineage refers to one who changes vehicle. The lineage that cannot be taken away is a synonym of definite lineage in that it refers to one who does not change vehicle but goes on until he attains his goal. The lineage that can be taken away is a synonym of indefinite lineage in that it refers to someone who first follows one vehicle and then later changes to another.

(6) The shortcomings that are obstacles to activating the Mahayana lineage
In Ornament for Sutra it says: “Familiarity with delusions, evil friends, misfortune, being controlled by other; in brief the shortcomings of the lineage are to be known as being of four types.” The shortcomings that are obstacles to activating the Mahayana lineage are of four types:
1. great familiarity with delusions,
2. being sustained by evil friends,
3. being destitute, that is, lacking the necessities for practicing Dharma
4. being under the control of others and therefore lacking independence, such as being dominated by a king

These are the main obstacles to Dharma practice. Whenever we think to practice Dharma our minds easily move toward objects of attachment. Then when we are actually engaged in practice, we may encounter friends who have appear to be good but cheat us and lead us on a negative path. In addition, we often see that people have a problem to practice Dharma because they cannot pay for a house or find enough food or clothes; due to a lack of material objects they are obliged to work rather than practice Dharma. Then, although the text says “Under the control of others, such as a king,” we may not have this problem but may be dominated by our partner and therefore have to spend our time working and making money. There is an expression of the Tibetan nomads in this regard: “Going to the toilet cannot be blocked by kings; sexual activity cannot be blocked by parents...”

(7) The benefits of having activated the Mahayana lineage
In *Ornament for Sutra* it says: “A long time later one goes to the lower realm; one goes there but is quick liberated; even during that time small suffering is experienced; one ripens sentient beings by way of weariness.” This citation shows that the benefits of having activated the Mahayana lineage are of four types:

1. even though one has already created the karma to definitely experience suffering in the lower realm, one will not go there immediately but only after a long time
2. when [in the lower realms] one does not remain for a long time, but is quickly liberated
3. during the short time one remains [in the lower realms] one experiences only a little suffering
4. one ripens the sentient beings there by way of weariness regarding staying in cyclic existence

This is the scriptural source that proves that there are bodhisattvas who go to the lower realms due to karma. When a bodhisattva has created the definite karma to go to the lower realms and does not succeed in purifying it completely, although he will be reborn in the lower realm, he does not go there immediately but only after a long time. Then when he is reborn in the lower realm he remains there only for a short time and experiences only a little suffering and, in the meantime, he encourages the sentient beings there to develop weariness of cyclic existence and in this way ripens their minds.

(8) Examples illustrating the naturally abiding lineage

In *Ornament for Sutra* it says: “It is to be known as the lineage/class of gold: the source of immeasurable virtue, exalted wisdom, without stain, also the source of powers.” This means that the naturally abiding lineage is to be understood by way of the illustration that it is like gold in that, for example, a treasury of gold is full of a lot of gold which has a very clear light, is without stain, and has four types of function. Just as gold has these four characteristics so does the naturally abiding Mahayana lineage which is:

1. immeasurable virtue
2. perfect exalted wisdom knowing non-true existence
3. without the stain of delusions
4. the source of the clairvoyances and so forth and perfect concentration

(9) Examples illustrating the developmental lineage

In *Ornament for Sutra* it says: “[The lineage] is to be known as a supreme jewel for the reason of great enlightenment, great exalted wisdom, supreme concentration, and being the source of the welfare of many sentient beings.” This means that the Mahayana developmental lineage is like a mine of jewels because just as a mine of jewels has the four attributes of possessing perfect kinds of jewels, perfect shapes, perfect colors, and perfect sizes, so too does the Mahayana developmental lineage have four similar attributes:

1. it is a cause for great enlightenment, its result
2. it has the exalted wisdom realizing non-true existence sustained by distinguished method
3. it has supreme concentration
4. it is the source/mine of the welfare of many sentient beings

These are the nine sections concerning lineage. From the point of view of the Chittamatra school, although there exist these three kinds of lineages, sentient beings are not necessarily pervaded by having a lineage because there are sentient beings whose lineage is broken. There are four kinds of sentient beings in whom the lineage is broken:

1. sentient beings who solely live with misbehavior/vile conduct
2. sentient beings whose roots of virtue have been destroyed by anger
3. sentient beings who do not have virtues that are partially similar to liberation
4. sentient beings who have inferior virtue but not the potential which is the seed of the uncontaminated mind
In *Ornament for Sutra* it says: “Some engage only in vile [conduct], some have destroyed the white dharmas, some do not have virtue that is partially similar, and some, although having inferior virtue, are separated from the cause.” The first three lines of this citation explain how there are sentient beings in whom the three types of developmental lineage are broken, while the fourth line shows that there are sentient beings in whom the naturally abiding lineage is broken. This is explained in a commentary on *Ornament for Sutra*. This means that there are sentient beings who only have negative minds and negative conduct, that is, all their thoughts and actions are negative. “Sentient beings whose roots of virtue have been destroyed by anger” refers to sentient beings who are constantly angry and whose roots of virtue are consequently cut off. “Sentient beings who do not have virtues that are partially similar to liberation” refers to sentient beings who do not have any virtue that is a cause for attaining liberation. “Sentient beings who have inferior virtue but not the potential which is the seed of the uncontaminated mind” means that there are sentient beings who have inferior virtue but are totally separated from the right conditions to develop further. This explanation accords with the Chittamatra school while the Madhyamika Svatantrikas do not accept that there are sentient beings who have a broken lineage.

Chokyi Gyeltsen says that for all these reasons the Mahayana lineage is the essence of great excellent qualities and outstanding. It has excellent qualities at the time of its cause and at the time of its result. The causal outstanding qualities are that in dependence upon it one will have an extensive belief in the Mahayana Dharma and as a consequence one will accomplish the two perfect welfares. In *Ornament for Sutra* it says: “It is profound, extensive, a great Dharma taught to benefit others, extremely extensive belief although not knowing, patience in achievement; it reaches the two aspects of superiority (the two purposes); a bodhisattva is to be known as having the naturally [abiding lineage] and the developmental [lineage].”

With respect to the excellent qualities at the time of the result there are vast qualities such as the powers, the attainment of extensive joy and happiness, it acts to pacify great suffering, it is a source of a distinguished result that provides benefit and happiness for oneself and others. For example, a wish-fulfilling tree grows from a good root from which come its branches, leaves, flowers, fruit, and the delightful fragrance that dispels the suffering of heat and pain. In *Ornament for Sutra* it says: “Extremely great excellent qualities, the wood of great enlightenment is generated, the attainment of the pacification of great suffering and the attainment of happiness. It is great for the reason of its result, it benefits oneself and others; such a supreme lineage is like a good root.” It is like the good root of the wish-fulfilling tree.

The lower schools, the Vaibhashikas and Sautrantikas, as well as the Chittamatrins, assert the lineage to be a compounded phenomenon, whereas the Madhyamikas assert it to be an uncompounded phenomenon.

Gyeltsab says that in the Madhyamika system there are two types of lineage: (1) naturally abiding lineage (2) a lineage that is developed by the condition of correct practice.
The naturally abiding lineage is the dharmata, or very nature, which is the emptiness of true existence of a sentient being’s mind. It becomes a dharmakaya when all the stains are exhausted.

Within a sentient being’s mind there is a potentiality which can be separated from stains and which can generate the aryas’ realizations. That which is posited due to the condition of hearing and is also posited as an object to be nourished by the condition of hearing, is called the lineage that is developed by the condition of correct practice. When such a potentiality is changed and becomes perfect it becomes the form body. This is the developmental lineage.

The naturally abiding lineage is a lineage which is transformed into the uncompounded body of a buddha, while the developmental lineage is a lineage that is transformed into the compounded body of a buddha. Acharya Arya Vimuktisena says that the naturally abiding lineage posited by the Chittamatrins is merely a designated naturally abiding lineage, while the developmental lineage is asserted to be the actual lineage. Our own system agrees with the Chittamatrins’ assertion that “the previously explained naturally abiding lineage that acts as a support for the realizations of the individual vehicles and can be of three types temporally, because it can be transformed into a support of any of the three vehicles, is given the label indefinite lineage.” What is not correct is the part of the previous explanation that says that “there is a broken lineage.” This means that one can assert a definite and an indefinite lineage but not a broken lineage.

Wednesday afternoon class, April 15, 1998

There is a commentary by Asanga on the text Uttaratantra in which some sutras are quoted that would seem to mean that there does exist a broken lineage. But Gyeltsab says that that sutra has another intention. The commentary on Uttaratantra continues saying: “Thus, there are some who have wrong view and craving who do not go beyond sorrow forever.” This sutra passage is taught with the intention of turning around those who have hatred for the Mahayana Dharma. Such a passage is called “one with another object of intention.” There are four types of sutra with different objects of intention which will be explained later on. Although the sutra mentions a broken lineage, this was taught with the intention of a different time, that of changing the position of those who hate the Mahayana Dharma. While someone has hatred for the Mahayana Dharma it is not possible for his Mahayana lineage to be awakened. The object of intention of the Buddha saying that there is a broken lineage in this case is for such a person. When the person no longer has such hatred he will be taught differently.

On the contrary, our system says that everyone has a naturally abiding lineage and that it is not possible that some beings do not have the naturally abiding lineage forever. This is because the Bhagavan had the thought that all sentient beings without distinction do possess the purity, the naturally abiding lineage, and therefore he said: “Although there is no beginning, there is an end. That which is pure by nature and permanent is not seen due to being externally covered by a shell since beginningless time just as a piece of gold is covered.” In short, this means that all sentient beings without distinction have a nature that can become pure eventually—this is the naturally abiding lineage. It is said that although sentient beings do not have a beginning there is an end to their lives in cyclic existence. Such a naturally abiding lineage, which is the nature of the mind, its emptiness of true existence, a permanent object, cannot be seen because it has been covered by a shell or by stains since beginningless rebirths. The analogy is that of a golden statue inside a lotus which cannot be seen because it is covered by the lotus. There will be more explanations later on about this covering/obscuration. The sutra has three points to make:
- there is a basis of intention for the Buddha to have spoken of a broken lineage
- there is a purpose for the Buddha to have spoken of a broken lineage
- there is harm in accepting this literally
There is a basis of intention in that Buddha spoke of a broken lineage thinking that the path to liberation would not arise in some beings’ continua for many eons beyond number. The purpose of the Buddha saying so is to oppose those who have hatred for the Mahayana Dharma as otherwise they would continue to hold wrong views and have craving which would cause them to remain a long time in cyclic existence and to not attain enlightenment. In brief, this passage shows that hatred for the Mahayana Dharma must be opposed.

There is a harm in accepting the sutra passage literally because every sentient being has the possibility to attain purity. The opposite of this, that they cannot become pure, is not right because all sentient beings do possess the naturally pure state, the naturally abiding lineage, and the buddhas’ enlightened activities pervade all sentient beings without any difference. The reason for saying that all sentient beings experience the enlightened activity of buddhas is because at one time or other they all attain a high status; this shows that they have benefited from this enlightened activity. There are no sentient beings who have not attained high status at least one time.

Does the fact of stains becoming purified also take place for the stains that are permanent of some sentient beings? Or does it mean that they are impermanent but that there is no method to destroy them? Or does it mean that there is a method but no one knows this method? Or does it mean that although someone knows the method no one has interest in this method? Or does it mean that although there is interest there is no one who can guide that person with compassion? Or does it mean that although there is the generation of mental weariness in inferior beings they are not the object of a buddha’s compassion? There are many other reasons that refute the absence of a naturally abiding lineage in the continua of sentient beings. By way of these reasons one should understand that there are no sentient beings who cannot abandon stains and who cannot generate the antidotes. This means that all sentient beings are able to exhaust their stains and generate the antidotes in their continua. All the obscurations in sentient beings can be abandoned and all the supermundane paths can be generated — this is called potentiality and is the developmental lineage. This lineage is of three types, the indefinite lineage and so forth, which are only posited in terms of a temporal state. In terms of the final, or ultimate, state all sentient beings are to be understood as possessing the buddha lineage. In short, there does not exist a broken lineage in the continuum of any sentient being; all sentient beings can abandon the stains in their continuum and realize the supermundane path.

The commentary on Uttaratantra says that explaining the Uttaratantra from the point of view of the Chittamatra school alone is not suitable. An elaborate explanation is given in that commentary. In this commentary it quotes the Sutra on Abhidharma that says: “The sphere of time without beginning is the source of all phenomena. Due to it existing, all migrating beings will attain nirvana.” This passage is taken to be a proof establishing that all sentient beings have the buddha lineage. In other commentaries which explain the Chittamatra system by Acharya Asanga it is said that if that sutra passage is taken as a proof establishing that all sentient beings have the naturally abiding lineage then it cannot be taken as a proof establishing the mind-basis-of-all which is a different entity from the group of six consciousnesses.

Someone says that while all sentient beings have the tathagata essence, the Chittamatrins do not accept that they have the naturally abiding lineage. Our system responds to this saying: “This is talking senselessly and shows that you do not differentiate the texts written by the two charioteers from what is wrong, and are confused. It would be better for you to leave the supreme texts alone without mixing things up. If you knows that you cannot explain the meaning of the supreme scriptures, then instead of giving your own interpretation it would be better to keep yourself neutral.”

The tathagata essence is sometimes explained in accordance with that taught by, for example, Kunkyen Jonangpa, who said that sentient beings already possess a complete buddha body with all the 32 major and 80 minor marks in their continua. This interpretation however is
not correct. Only if the tathagata essence is explained in terms of the potential to become a tathagata is it acceptable.

2B2C-1A2C-1A2 Divisions

Gyeltsab says that the divisions of the lineage in general have already been explained but that the lineage that is explicitly presented here is divided into thirteen in terms of a temporal state. The relative support of the achievements is the bodhisattva; therefore that relative support of achievement is also divided into thirteen in terms of a temporal state. This subject about the support of the achievements will be explained under the outline “The meaning of the branches.”

The thirteen divisions of the lineage are:

(1-6) the six dharmas of realization: the four levels of the path of preparation, the path of seeing, and the path of meditation
(7) the achievement of antidotes
(8) the achievement of abandonment
(9) the achievement of completely reaching those
(10) the achievement of wisdom together with mercy
(11) the achievement of uncommon disciples
(12) the achievement of performing the welfare in sequence
(13) the achievement of engaging exalted wisdom effortlessly

The support of these achievements, emptiness, is also posited as having thirteen divisions.

The etymology of lineage is that it is so-called because one observes the emptiness of the six inner entrances as empty of true existence and meditates on this, and, as a result, generates the realizations of the aryas. When someone improves their familiarity with this lineage they also improve the previously explained developmental lineage; therefore it is called the developmental lineage.

We need to know what is the support of the achievements: it is the naturally abiding lineage which is emptiness. It is of thirteen types. When one develops wisdom regarding these, one develops the developmental lineage. The naturally abiding lineage explicitly presented in this context is specific—it is a lineage that exists from the time of the heat level of the path of preparation on up. However, in general the naturally abiding lineage exists at all times, even before the path of preparation. The difference is that this naturally abiding lineage is not the support of the achievements.

2B2C-1A2C-1A3 Dispelling objections

Gyeltsab quotes the Great Commentary by Haribhadra which says: “Someone asks why is the lineage not explained right at the beginning before mind generation, the path of accumulation, and the path of preparation? The answer is that, although you have a point, the order that is set out here is the order of the meaning. Here the result is explained first. Our system answers that what this person says is right because according to the order of generation first comes the lineage, then the mind generation, and so forth; however, there is no fault in setting out another order of explanation.” Gyeltsab says that this quotation means that first one awakens, or activates, the lineage, then one generates the mind, and so forth. This is the order of cause and result. However, once one has generated the mind and attains the path of accumulation and so forth, one comes to realize that one has a lineage, therefore this is the order in which they are explained here. In other words, although the lineage is generated first, it is explained after the path of preparation because a person on the path of preparation becomes free from most of the obstacles to the activation of his lineage. In fact, until one achieves the path of preparation one perpetually has the majority of the four obstacles: strong familiarity with the delusions, being sustained by evil friends, lacking necessities for Dharma practice, and being under the control of others. It is only on the path of preparation that one becomes free from most of these obstacles.
Therefore, in accordance with the presentation of the topics there is first mind generation, then precepts, then the path of preparation, and then the lineage. This is for the reason explained above. There is a question regarding this in *Illuminating the Twenty Thousand Stanza Perfection of Wisdom Sutra*: “Why have all the creatures who have naturally abiding lineage not gone beyond sorrow in spite of all the infinite buddhas who have descended to this world? It is because they have very strong familiarity with the delusions, are accompanied by evil friends, lack the necessities for life, and are under the control of others.” The lineage that is presented in this case, that which is the support of the Mahayana path of preparation, is free from the four obstacles to the lineage. A person on the path of preparation, who possesses it, observes the naturally abiding lineage and familiarizes himself with its emptiness and becomes an owner of the aryas’ Dharma. The boundary of the lineage explicitly presented here is from the path of preparation upward.

In this way, we understand why the lineage is explained as the fourth topic of omniscient mind; it is because its boundary is from the Mahayana path of preparation. However, we should know that the lineage explicitly presented in this context is the support of the Mahayana achievements. What is the support of the Mahayana achievements? It is the naturally abiding lineage. What is the naturally abiding lineage? It is the common locus of the suchness within the continuum of a bodhisattva and that which acts as a support for an actual Mahayana achievement. When divided there are thirteen suchnesses of the thirteen supported achievements. These thirteen achievements are:

(1-4) the four levels of Mahayana definite discrimination  
(5) the Mahayana path of seeing,  
(6) the Mahayana path of meditation  
(7) the achievement of antidote  
(8) the achievement of abandonment  
(9) the achievement of thoroughly reaching them  
(10) the achievement possessing wisdom and mercy  
(11) the achievement of the uncommon disciple  
(12) the achievement of acting for others welfare  
(13) the achievement of engaging [in knowing ultimates and conventionalities] without any effort of exalted wisdom

In summary:
- a mere naturally abiding lineage exists even before the path of accumulation  
- a naturally abiding lineage that is a support of the Mahayana achievements exists from the path of accumulation  
- a naturally abiding lineage that is a support of the Mahayana achievements explicitly presented in this context exists only from the Mahayana path of preparation upward

Thursday morning class, April 16, 1998

Gyeltsab says that first a guru needs a method to investigate what kind of faith the disciple has and then he should lead the disciple as explained in the text *Hearers’ Grounds* which is to cause him to hear the Hinayana and Mahayana Dharma baskets and then to lead him to understand the meaning. The disciple then becomes distinguished because of accumulating virtue and purifying his negativities on the basis of his lineage. Then he needs to be led through the three different scopes, that of the small, middling, and great beings. He should then be led to collect the extensive accumulation of merit for the realization of the Mahayana. When the faults which prevent the generation of the path are purified by many means, the disciple will have great joy in meditating on compassion even before he actually generates the mind of enlightenment, will make extensive generosity, observe morality greatly, have a firm belief in the extensive Dharma, and great joy in practicing patience. A person who finds a firm belief in the extensive Dharma becomes known as
“one abiding in the Mahayana lineage” and is also called “a bodhisattva who has not generated the mind of enlightenment.”

When such a disciple has a firm understanding of both the small and middling beings, he then generates the aspiration for others’ purpose and trains well in the aspiration for peerless enlightenment. Having trained in these two aspirations and reached stability, he then generates the mind of enlightenment. Then having checked whether he is able to train in the infinite practices of a bodhisattva and having seen that he can in fact observe the bodhisattvas’ vows without being stained by downfalls, the master should lead him to take the vows of practical mind generation. Here the text literally says “take the vows of engaging” but this refers to taking the bodhisattva vows because when one takes these vows one promises to engage in the practices of a bodhisattva.

In the case that a particular disciple has the tendency to emphasize the practices of hearers and solitary realizers—in that he has an intense desire for the pacification of the sufferings of cyclic existence because of strong weariness with regard to these sufferings—due to familiarity with these practices in previous lives, it would not be suitable to lead him in the practices of the extensive Dharma. Instead, he should first be led in the hearer and solitary realizer paths.

However, no matter what path a particular disciple enters, he needs to be shown the method of awakening his respective lineage; therefore a master should know the manner of leading him accordingly through the lineage. This means that before a disciple enters any of the three vehicles, a master should explain the path that is to be entered and show him the way to activate his lineage. Haribhadra in his text Great Commentary says: “That is the order of the meaning.” Here “the order of meaning” refers to the order of cause and result.

Gyeltsab says that the two paths, those of small and middling beings, are also to be known as methods and branches for entering the path sequentially once the lineage has been activated. Saying “these two paths are to be known as branches” means that they are to be understood to be causes for entering the path of a great being. Another, and better, way of interpreting this phrase is that the activation of the lineage is both a method and a branch, or factor, for engaging in the paths of small and middling beings.

Gyeltsab says that without having activated the Mahayana lineage one does not engage in the Mahayana activities, such as mind generation; but even if one does engage in these activities they are not stable. Therefore, the activation of the lineage is necessary. Those who posses the lineage that induces achievement will have the similitudes of definite discrimination, as were explained, and the arisal of other [qualities], such as the path of seeing and so on, which are yet to be explained. For this reason the lineage is explained here as a support of the achievements. Although the Mahayana path of accumulation is supported on the lineage and is a Mahayana achievement, it is not the main occasion in which one nourishes the lineage more and more and is also not the occasion in which one becomes free from all the obstacles to the activation of the lineage. For these reasons, the lineage is not explained in the context of the path of accumulation.
Six dharmas of realization, antidotes and abandonments, completely reaching those, wisdom together with mercy, learners, the uncommon itself, the sequence of the welfare of others, and engaging in exalted wisdom without exertion their support should be known as lineage.

The six dharmas of realization will be explained later on in detail, but, in brief, they are:
(1-4) the four levels of the path of preparation
(5) the path of seeing
(6) the path of meditation

Gyeltsab says that the suchness that is a support of the six dharmas of realization and is together with stain is called “lineage.” There are six citations in sutra with respect to the six dharmas of realization:
(1) “Subhuti, there are no tracks left by a bird in the sky and they are not observed, likewise there is no meaning of the word “bodhisattva” and it is not observed” (this is said in relation to the heat level of the path of preparation)
(2) “There is no abiding in the correct end and it is not observed.” (this is said in relation to the peak level)
(3) “There is no abiding on the form of an illusory being and it is not observed.” (this is said in relation to the patience level)
(4) “There is no meaning of the words “the practice of the inner emptiness of an illusory being” and they are not observed.” (this is said in relation to the supreme dharma level)
(5) “There is no meaning of the words “the form of a tathagata foe destroyer perfectly complete buddha” and they are not observed.” (this is said in relation to the path of seeing)
(6) “There is no meaning of the word “non-generation” and it is not observed.” (this is said in relation to the path of meditation)

When a bird flies in the sky he does not leave any tracks behind; likewise a truly existent path of preparation is not a track and is not observed. In the same way the meaning of the word “bodhisattva” is not truly existent. There are seven analogies representing non-true existence: (1) dream, (2) illusion, (3) mirage, (4) echo, (5) visual distortion (the reflection of a face in a mirror), (6) the city of the gandharvas, and (7) an emanation of a tathagata. Phenomena are said to be like these seven.

“Not abiding in the correct end”; the correct end is also known as suchness, unmistaken suchness, suchness that is none other, the very nature (or reality), the very sphere of phenomena, the very definite/definiteness, and the very truth of phenomena. There is no abiding on these synonyms, which means that the peak level of the path of preparation does not abides on them as truly existent.

“There is no abiding on the form of an illusory being and it is not observed” means that the patience level of the path of preparation does not abide on forms, the inner and outer entrances such as the eye entrance and so forth, as truly existent. In brief the patience level does not abide on the five aggregates, the twelve entrances, and the eighteen constituents as existing truly.

The statement “There is no meaning of the words “the practice of the inner emptiness of an illusory being” and it is not observed.” covers all phenomena of the thoroughly purified class and means that there is no meaning of these words which exists truly.

“There is no meaning of the words “the form of a tathagata foe destroyer perfectly complete buddha” and it is not observed.” means that uncompounded phenomena do not exist truly.

“There is no meaning of the word “non-generation” and it is not observed.” means that there is no meaning of the word non-generation that exists truly.

These quotations are more detailed in longer versions of the sutra.
Gyeltsab then comments on the words of the root text. “Antidotes” means that someone at the end of the path of preparation turns toward the generation of the antidote which is an uninterrupted path. “Abandonments” means that this same person directs himself toward the cessation of the seed that is to be abandoned. He abandons those seeds in a manner of looking toward the cessation of them; which are not actually abandoned. “Completely reaching those” means that such a person is about to put all the objects of abandonment to an end and thereby reaches a liberated path. “Wisdom together with mercy” means that such a person has the wisdom that ceases cyclic existence and the mercy that ceases solitary peace. “Learners, the uncommon itself” means that one is uncommon with respect to hearer learners. “The sequence of the welfare of others” means that one achieves various works for the welfare of others in sequence. “Engaging in exalted wisdom without exertion their support” refers to the activity for realizing conventional and ultimate truths without any effort of exalted wisdom.

There are then seven sutra citations with respect to the above:
(1) “There are no dark places left when the sun has completely risen, and it is not observed.”
(2) “No types of compounded phenomena remain when the fire of the eon blazes, and it is not observed.” The fire of the eon destroys all.
(3) “There is no place in which corrupt morality exists within the morality of a buddha who is a tathagata foe destroyer perfectly complete buddha.” This means that a buddha does not have any corrupt morality.
(4) “There is no abiding in the light of the sun and moon, and it is not observed.” This refers to the achievement of wisdom with mercy. The sun represents wisdom and the moon represents compassion. When these two arise they dispel the darkness of the world; due to wisdom one does not abide in cyclic existence and due to compassion one does not abide in solitary peace.
(5) “There is no abiding [of dark places] in the light of hearers, solitary realizers, constellations, stars, precious jewels, and lightning, and it is not observed.” When someone has reached this level, one is uncommon with respect to hearer learners and has a body light that is magnificent which eclipses that of hearers, the solitary realizers, constellations, and so forth.
(6) “There is no abiding [of dark places] in the light of the gods of the Four Great Kings, and it is not observed.” This means that a bodhisattva who acts “in the sequence of the welfare of others” has a light that eclipses that of the gods of the Four Great Kings. Or we can say that such a bodhisattva increases his excellent qualities according to the order of the formation of the realms of the gods, one being higher than the other.
(7) “There is no abiding [of dark places] in the light of a tathagata foe destroyer perfectly complete buddha, and it is not observed.” This citation is related to the thirteenth achievement, engaging in exalted wisdom without exertion, which belongs to a bodhisattva of the tenth ground.
In summary, just as there are thirteen achievements, or practices, there are also the thirteen suchnesses related to them.

We have been discussing the lineage which is the support of the Mahayana achievements. Think about whether this means that there is also a naturally abiding lineage which is a support of a hearer’s achievements and one which is a support of a solitary realizer’s achievements. How is the suchness/emptiness of the mind of a person on the heat level of the path of preparation the support of the Mahayana achievements? In relation to the cup and the table in front of us, we can see that the table is a support of the cup but how does the emptiness of true existence of the mind act as a support for achievement? Think about it. There are observed supports, physical supports, and mental supports. The observed support in this case is the emptiness of the mind, then one asks how it is a support of the achievements? It functions as a support of the achievements because one observes this emptiness and in this way one’s realizations increase. In other contexts the mind is the support and its emptiness is that which is supported. When discussing Mahayana achievements the emptiness of mind is said to be a support upon which the Mahayana achievements, the supported, are developed.

2B2C-1A2C-1B1C Commentary
1 Explanation
2 Summary

2B2C-1A2C-1B1C-1 Explanation
A Individual entities
B The sequence
C Definite enumeration

2B2C-1A2C-1B1C-1A Individual entities

(1, 2, 3, 4) A short while at the beginning, the mundane similitude of definite separation (5, 6) After that, the supermundane path of seeing and path of meditation. (7, 8) After that, by the force of generating those, like throwing out a thief and bolting the door at the same time, antidotes and hostile states generate and cease. (9) After that, by not referring to those, conceptions which possess (as objects) their generating and ceasing are abandoned. (10) After that, by the force of previous prayers and skillful means, charity and so forth, the characteristic natures of not abiding in samsara or nirvana; wisdom and method. (11) After that, by generating those, hearers and so forth and uncommon dharmas. (12) After that, in accordance with the thoughts, by means of an ulterior intention toward entering and so forth, the characteristic nature of setting in the paths of the three vehicles; the sequence of the welfare of others. (13) After that, without signs (of effort as long) as samsara exists, and in order to arise the exalted wisdom of the welfare of others spontaneously.

This refers to the thirteen achievings, each of which has thirteen realities (dharmata). The first four of these achievings are the four levels of the path of preparation.

Gyeltsab sets out a syllogism: the realities of the four achievings of the mundane similitude of definite separation (subject) are the support of these achievings (predicate) because one observes these four realities and meditates whereby the achievings increase more and more (sign). Then there is the reality of the path of seeing and the reality of the path of meditation which are [also] called lineage. The path of seeing comes after that of the similitude of definite separation and directly realizes emptiness newly. The path of meditation is that which realizes what has already been realized by the path of seeing. One should not think that the sixth achieving only covers the part of the path of meditation up to the seventh ground; rather it is the general path of meditation and therefore the other grounds are also discussed here.

Next are the seventh and eighth achievings which are those of antidote and abandonment. In this context, Gyeltsab explains how the uninterrupted paths of seeing and meditation oppose the seeds that they abandon and how the liberated paths of seeing and meditation have abandoned them. By the force of an uninterrupted path of seeing or of meditation its respective seed, which is to be abandoned, is pushed away, just as when the owner of a house on entering his home finds a thief and immediately throws him out and closes the door. The action of pushing out is likened to the uninterrupted path, while the thief is likened to the seed. These two, the owner of the house closing the door, and the thief about to go away, happen simultaneously. Another analogy is when a light is about to be switched on at night in a dark room; the switching on of the light and the light are likened to the uninterrupted path while the darkness is likened to the seed that is to be abandoned. The switching on of the light and the dispelling of the darkness are about to happen simultaneously. The finger on the switch is like the uninterrupted path which is about to come and the darkness is like the seed which is about to go. Here the uninterrupted path not only refers to the uninterrupted path of the eighth ground but includes all the uninterrupted paths of the path of seeing and the path of meditation.
When the uninterrupted path of the dharma forbearance of true suffering on the Mahayana path of seeing is about to be generated, the seeds that are to be abandoned by the path of seeing are about to cease. When the uninterrupted path becomes manifest, the seeds cease simultaneously. In this way the seeds to be abandoned are eliminated in such a way that there will no longer be any of similar type; in other words, they will not return again.

The liberated path arises when an antidote has been applied and its respective object of abandonment has been eliminated. A true cessation is achieved at the same time. One applies the antidote by way of which the result, a true cessation is achieved. The impression of the antidote includes both true paths and true cessations. A liberated path is generated by an uninterrupted path.

When one is on an uninterrupted path, although one does not have its respective objects to be abandoned in one’s continuum, still these objects of abandonment are not yet those that will not be generated again. This is because a condition is still missing; at this point an analytical cessation has not yet been attained. Therefore, although a bodhisattva on the final continuum of a sentient being on the tenth ground does not have even a slight stain of negative tendencies [of body, speech, and mind], one cannot say that these stains are completely extinguished “because he has not yet attained a path on which those stains become such that they will no longer be generated as a result of having applied an actual antidote.” Someone objects that this reason is not established. We reply that if it is not established it would follow that the cause (an uninterrupted path) and its result (a liberated path) would exist simultaneously.

Someone asserts: “At the time of an uninterrupted path of the path of seeing there is no object to be harmed, while on the uninterrupted path of the final continuum of a sentient being there is the subtle stain of negative tendencies.” This assertion is a mixture of two ideas: one that the afflictions are abandoned by the liberated path which is about to arise, and the other that the afflictions are abandoned by the uninterrupted path that is about to cease. Therefore, according to this person it would follow that the first moment of omniscient mind is an actual antidote against the subtle stain of the negative tendencies that exist on the final continuum of a sentient being. However, that is not correct because the first moment of omniscient mind is actually a liberated path attained as a result of an uninterrupted path. Therefore, the person who makes such an assertion is to be known as one who is not an expert in the abandonments and antidotes.

Someone asserts: “In Compendium of Knowledge it says: ‘It is not because the past has ceased.’” Although the meaning of this passage is not concluded to mean that the three ways (in which an object to be harmed is not abandoned) are not correct in relation to the manifest afflictions, this person asserts that the seed to be abandoned and the uninterrupted path, the actual antidote, exist simultaneously.” This assertion is also not correct because it would follow that one would have to accept that the darkness, which is to be opposed, and the light, which opposes it, exist simultaneously. In other words, the darkness, the object to be harmed, and the light, the object that harms, which are given as illustrations, would have to exist simultaneously.

When an uninterrupted path abandons its object to be harmed, a seed, it does not do so in the following three ways:
- it does not happen like a person destroying a vase with a hammer
- it does not happen like a hand pushing an object away
- it does not happen like when a dzo (the offspring of a female yak and a bull) bound together with another dzo falls down a precipice and pulls the other one with it

If an object to be abandoned is not abandoned in any of these three ways, how is it abandoned? It is abandoned in the following way: when an antidote is about to be generated in dependence on long familiarity with it, the seed that it abandons is also about to cease; when that uninterrupted path is generated, that seed to be abandoned ceases. This seed is abandoned in such a way that it will not be generated again. The meaning of an uninterrupted path harming a seed to be abandoned is that an uninterrupted path opposes the seed and renders it incapable of being generated again. Therefore, the meaning of the passage from the text Compendium of Knowledge is
not to be understood as being an explanation of the objects of abandonment of uninterrupted paths and the objects of abandonment of liberated paths.

Furthermore, asserting that this passage means that the time of the two actions—the throwing out of a thief and the bolting of the door—are not simultaneous is also not correct. In short, while the understanding that “throwing out a thief” refers to the uninterrupted path and “bolting the door” refers to the liberated path does accord with one system, another system says that it is not so. You can choose how you wish to understand it.

Next is the ninth achieving, which is that of thoroughly reaching [the liberated path]. At this point one familiarizes oneself with not observing the afflictions and their respective antidotes as being truly existent. Through familiarizing oneself with this, one abandons the conception of true existence and achieves a liberated path. The reality of this liberated path is called “lineage.” What does the conception of true existence observe? It observes the afflictions and their antidotes as, respectively, about to be truly ceased and about to be truly generated. This conception is abandoned slowly by familiarity.

Tuesday afternoon class, May 5, 1998

The ninth achieving is the liberated paths or the reality that is the support of the liberated paths. The liberated paths are attained by eliminating the conception of true existence.

The tenth achieving is that of wisdom with mercy. Gyeltsab says that the entity of the tenth is the achieving of wisdom with mercy which refers to the lineage that is the support of wisdom and method. Due to this wisdom one does not abide in the extreme of cyclic existence; due to method one does not abide in the extreme of nirvana. Wisdom and method come from training in the six perfections, such as generosity, and making prayers in the past such as wishing, “May I be able to enact others welfare without effort.” This lineage is attained on the eighth ground.

This wisdom is the means by which one does not abide in cyclic existence; one does not abide in cyclic existence because one sees its faults and generates dislike for it. One realizes the selflessness of persons and with this wisdom sees the faults of grasping at a self of persons. One realizes that there does not exist a determined object as is perceived by the grasping at a self of persons. There is also a wisdom that realizes that the person does not exist truly. In this context comes some debate: “Does this wisdom also see the faults of cyclic existence?” If someone says it does, we ask: “Does this mean it has the appearance of conventionalities?” This question comes because the faults of cyclic existence are conventional truths and therefore do not appear to a wisdom realizing the emptiness of true existence. However, according to the Svatantrikas-Madhyaamikas the selflessness of persons is a conventional truth while the selflessness of phenomena is an ultimate truth.

Due to method one does not abide in the extreme of nirvana because when one has compassion one sees the faults of abiding in nirvana for a long time. With this understanding and motivated by compassion, one gives up abiding in nirvana and proceeds to enlightenment. To be able to combine wisdom and method one has to have previously made prayers.

The eleventh achieving is that which is uncommon to the hearers and so forth. Through the generation of method and wisdom one is uncommon with respect to the hearers and so forth because one uses an uncommon achieving, such as that of the four individual correct knowledges, to ripen sentient beings. This is achieving is present on the ninth ground. The four individual correct knowledges are:
(1) the individual correct knowledge of phenomena
(2) the individual correct knowledge of the meaning
(3) the individual correct knowledge of courage
(4) the individual correct knowledge of the definite word
At this stage, one has correct knowledge of these four which are necessary for helping sentient beings. Individual correct knowledge of the definite word refers to knowing many different languages (there are said to be three hundred and sixty languages in the world). In relation to the individual correct knowledge of courage one has to understand the difference between courage and pride since courage can be mistaken for pride, and pride can be mistaken for courage. This will be discussed in detail further on. However, to think of oneself as being capable of doing anything is a type of mental strength.

In relation to this eleventh achieving there are many discussions because it is said that the four individual correct knowledges are attained on the ninth ground while some argue that they are found only on the buddha ground because they are characteristics unique to omniscient mind. If someone says that they are unique to a buddha’s mind one can quote Gyeltsab’s *Essential Explanation* and the chapter in *Madhyamakavatara* that discusses the ninth ground where it says that at this point one has the four individual correct knowledges.

The twelfth achieving is that of enacting others’ welfare in sequence. Gyeltsab sets out a syllogism: one on the tenth ground (subject) possesses the achieving of enacting others’ welfare in sequence (predicate) because he effortlessly enacts others welfare (1) by means of an ulterior intention, such as that of engaging in accordance with their thoughts, (2) by means of the definite meaning in order to lead sentient beings in the three vehicles, and (3) due to being a bodhisattva who has attained knowledge equal to that of a buddha.

“Sutras with an ulterior intention” and “sutras with [an object of] intention” refer to sutra which were taught by Buddha with a particular intention. These sutras are interpretive meaning sutras which, according to the Svatantrika-Madhyamikas, are those that either present conventional truths or those that present emptiness in a way that is not literally acceptable. On the other hand, sutras that teach ultimate truth and are literally acceptable are definitive meaning sutras. Gyeltsab gives the brief, middling, and extensive mothers as illustrations of definitive meaning sutras. An example of a sutra of interpretive meaning is one that presents all compounded phenomena as impermanent. Although the *Heart Sutra* explicitly presents emptiness, it is not literally acceptable, and is therefore not a definitive meaning sutra. This is because in the *Heart Sutra* it says that form is empty of inherent existence while according to the Svatantrika-Madhyamikas phenomena do exist inherently. There are four types of interpretive sutras that have an ulterior intention, or sutras that were taught with an ulterior intention:

(a) those related to characteristic
(b) those related to entering
(c) those related to antidote
(d) those related to transformation.

An example of a sutra with an ulterior intention related to characteristic is the *Sutra Unraveling the Thought* in which it says that other-powered and thoroughly established phenomena exist by their own character, while imaginary phenomena do not exist by their own character. According to the Svatantrika-Madhyamikas this is to be interpreted and was taught to guide disciples of the Chittamatra school. Buddha’s ulterior intention in teaching this sutra was to show the three natures:
- imaginary phenomena are entitless due to not existing by their own character
- other-powered are entitless due to not being independently produced or generated
- thoroughly established phenomena are entitless due to not having a self-existence of phenomenon

An example of a sutra related to entering is the sutra in which it says that the five aggregates are a load and that the person carries this load. This sutra was taught with an ulterior intention, that of hooking proponents of non-Buddhist tenets into Buddhism and making Buddhist proponents of tenets, in particular the Vatsiputriyas, enter a higher school. (The illustrations of the other two types of sutras will come later.)
Here for the moment we should know that there are also four types of sutras with four objects of intention. The four objects of intention are:

1. the three equalities
2. another time
3. another purpose
4. thought of persons

An illustration of the first is a sutra in which Buddha says, “At that time I was the Buddha Vipashvin.” Buddha said this related to the three equalities concerning himself and Buddha Vipashvin. Although Shakyamuni Buddha was not this buddha, they were equal in possessing three qualities: having completed the two collections, having attained the two bodies of a buddha, and performing enlightened activities to fulfill the welfare of sentient beings.

An illustration of the third type is the Sutra Dispelling Regret in which Buddha says, “Father and mother are to be killed. Even if one destroys the two Brahmins and all the villagers and their entourages one will be pure.” This was said regarding the particular situation of King Ajatashatru who had killed his father and as a consequence became very sad. Shakyamuni Buddha saw that King Ajatashatru was ripe to enter the perfect Dharma and so said these words to overcome his regret. King Ajatashatru then thought about the meaning of Buddha’s words and realized that father and mother did not refer to the parents who had given him his body but to the karma and afflictions that were the actual cause of his rebirth. He understood that destroying the Brahmins and their entourages meant to destroy the secondary afflictions and in this way become pure. Due to Buddha’s teaching King Ajatashatru became an arya and then a foe destroyer.

An illustration of the second type is the sutra in which Buddha said “One who prays to be reborn in the Joyous Land will be reborn there.” This was taught by Buddha to make lazy people pray.

An illustration of the fourth type is a sutra that belittles the practice of generosity and praises morality; this was taught by Buddha as an antidote for those who think that suffices to practice generosity alone.

An illustration of a sutra with an ulterior intention related to antidote can be any of the above four.

An illustration of sutras with an ulterior intention related to transformation are those sutras with well-known bad words that teach a profound meaning that is not well known. There is a quotation in Ornament for Sutra that says: “That which does not have essence is to be known as having essence. One should abide in the wrong way. By being afflicted, one becomes even more afflicted. In this way one will attain enlightenment.” Buddha by expressing well-known bad words to those particular disciples who think that the aggregates are pure, happiness, permanent, etc. makes them abide in morality. With these words Buddha mentions the afflictions but indirectly teaches the three higher trainings. Buddha says that by conceiving the contaminated appropriated aggregates to be pure, happiness, permanent, and having a self, one will slowly gain morality, concentration, and wisdom by means of which one will achieve enlightenment. Saying “that which does not have essence is to be known as having an essence” presents the higher training in concentration; saying “one should abide in the wrong way” presents the higher training in wisdom; and saying “by being afflicted, one becomes even more afflicted” presents the higher training in morality. Saying so Buddha leads sentient beings who are on a wrong path on the right path.

In brief, sutras are differentiated into those with an intention and those with an ulterior intention. Neither of these types of sutra are literally acceptable. However, a sutra taught with an intention is one that mainly emphasizes the object of intention, while a sutra with an ulterior intention is one that mainly emphasizes the purpose. In other words, sutras with an intention are those that principally have an object of intention, while sutras with an ulterior intention principally have a purpose.
Gyeltsab says that those who want to learn more about definitive and interpretive meanings should study Lama Tsongkhapa’s text *Definitive and Interpretive Meanings*.

If a sutra is an interpretive sutra is it pervaded by being a sutra with intention or a sutra with an ulterior intention? The answer is that there is no pervasion. An example of this is a sutra that presents compounded phenomena as impermanent which is neither of these two types. Such a sutra can be accepted literally. However, if a sutra is one that is taught with a basis of intention or one with an ulterior intention it is pervaded by being an interpretive sutra.

The thirteenth achieving is also presented by Gyeltsab saying: one who is on the tenth ground possesses an exalted wisdom with which he enacts the welfare of others without any sign of effort until the end of cyclic existence because the support of that is called lineage.

There are thirteen Mahayana achieving each of which has its support, called a naturally abiding lineage. These are realities that exist only from the path of preparation up. If someone asks, “Is there not a naturally abiding lineage which is the support of a Mahayana achieving, even on the path of the accumulation?” the answer is that there is but that there is no naturally abiding lineage that is the support of a Mahayana achieving of this case. Is the naturally abiding lineage which is a support of a Mahayana achieving necessarily together with stain? Think about it.

Wednesday morning class, May 6, 1998

**2B2C-1A2C-1B1C-1B** The sequence

This is the sequence.

Gyeltsab merely says that this is the sequence of the occasion of the achievingss; i.e., this is the order, or sequence, of the thirteen achievingss.

**2B2C-1A2C-1B1C-1C** Definite enumeration

Also, by these, all aims of beings are perfected.

Gyeltsab says that with these thirteen achievingss one can complete all the aims of the beings who seek the omniscient state. This means that the thirteen achievingss present a complete path from beginning to end. Although these achievingss are directly related to the path of preparation, the path of accumulation is understood indirectly.

**2B2C-1A2C-1B1C-2** Summary

By particulars of different contexts of the dharmas of achieving thirteen kinds of bodhisattvas having become the basis of the dharmas which were explained, to only the entitiness of the sphere of dharma (dharmadhatu) is lineage indicated.

Gyeltsab says that only the very entity, the sphere of reality, that exists in the continua of the thirteen types of bodhisattvas is called lineage. That very entity explained here is the sphere which is the basis of the achievingss. The bodhisattvas here are suitable to be divided into thirteen types because of the thirteen particulars, or instances, of the thirteen achievingss. These thirteen divisions are posited in terms of their function; but in terms of their entity these thirteen are not completely different. This means that, for example, the six achievingss from the eighth to the eleventh belong to the path of meditation; thus, they are one entity but different in terms of their functions. The eighth is the achieving of abandoning the object of abandonment; the ninth, the achieving of thoroughly reaching the liberated path; the tenth, the achieving of wisdom with mercy; the eleventh, the achieving that is uncommon to other disciples; the twelfth, the achieving...
of the sequence for the welfare of others; and the thirteenth, the achieving of engaging in exalted wisdom without effort. These six are one entity because they are particulars of the path of meditation.

The sixth and seventh achievings are generally particulars of the path of seeing but there is some differences of opinion among Indian masters regarding this point.

2B2C-1A2C-1B2A-1A  Expressing the assertion

If, “because the sphere of dharma is the cause which will transform into realizing the qualities of the aryas, the bodhisattvas who possess the self nature of that, are the naturally abiding lineage of the qualities of the highest buddhas”;

Someone says: “Because [of the reason] that the sphere of reality of sentient beings is the sole observed object that is the cause for realizing an arya’s qualities, bodhisattvas possessing that sphere of reality are holders of the Mahayana lineage and that reality (or sphere of reality) of sentient beings is the naturally abiding lineage, the source of the qualities of a buddha.” The objection being made here is that if this were the case, there would not be any need to assert lineage holders of the three vehicles.

2B2C-1A2C-1B2A-1B  Positing the consequence

“Then, at that time, because that is abiding in general, not only bodhisattvas are.” Through raising doubts in the presence of beings of inferior intelligence who consider (in that way), an interceding stanza.

Both these sections, “Expressing the assertion” and “Positing the consequence,” are points raised by someone.

If the sphere of reality is the lineage, it would abide in all sentient beings and it would also follow that all sentient beings abide on the buddha lineage. Even generally speaking, that reality abides in all three types of lineage holders. Therefore, one would have to accept that all three lineage holders would already be abiding on the lineage at the time of the path. So the objection is: are only bodhisattvas buddha lineage holders?

In this section doubts are aired. In short, the argument here is that if the sphere of reality is the lineage, it would follow that all sentient beings already abide in the buddha lineage because they all possess the sphere of reality.

2B2C-1A2C-1B2A-2  Root text

Because inseparable in the sphere of dharma, different lineages are not suitable.

The lineages of the three vehicles are not suitable to be different because it would follow that all the learners of the three types of lineage holder would abide in the Mahayana lineage because their spheres of reality are inseparable.

2B2C-1A2C-1B2B  Replies

1  The reply attained through the meaning
Gyeltsab says that in general in the *Ornament* there are three vehicles posited with respect to view. These three are:
- a great vehicle which posits an excellent view, that of the Middle Way (Madhyamaka)
- a middle vehicle which posits a middling view, that of the Chittamatra
- a small vehicle which posits a lesser view, that of the selflessness of persons, which is common

However, this is not necessarily so because these three levels can also be posited according to the level of a particular individual’s capacity. In terms of their ability to realize emptiness, disciples are posited as having sharp, middling, or dull faculties. The ability to abandon the conception of true existence is peculiar only to the Madhyamikas; it differentiates these lineage holders as superior.

Here we talk of two levels of realization: one that realizes an object is empty of true existence and one that realizes the subject-mind is empty of true existence. Solitary realizers are not able to realize that the consciousness is empty of true existence, but are only able to abandon the conception of the duality of the subject and object as different substances. There is a higher view but in the *Ornament* the realization of the solitary realizers is not the principal subject under discussion; nor does this text discuss the view of the Chittamatrin.

In this context (that of the *Ornament*) Arya Vimuktisena says that hearers and solitary realizers also realize the selflessness of phenomena. His commentary, *Lamp for the Twenty Thousand Stanza Perfection of Wisdom Sutra*, says: “With regard to that, the conception and the conceptualization are functioning things. One who does not strongly cling to them as truly existent is to be known as one without attachment. The fact that phenomena do not exist truly is the thusness of all phenomena; this very sphere of reality is the cause of all the aryas’ qualities. The naturally abiding lineage is the support of the achievings.” Things do not exist as they appear; thus, the emptiness of true existence is explained here.

The argument is repeated here that if the sphere of reality is the lineage it would follow that all sentient beings abide in this lineage because the sphere of reality covers all in general. The person making this objection thinks that abiding on the lineage means abiding on the lineage at the time of the path. Our own system replies that when one observes that lineage, that observation itself is a cause for the aryas’ realizations; this is what is to be known as the lineage. The objector cannot make a consequence with respect to this reply. Just because sentient beings have the sphere of reality they do not necessarily abide on the lineage at the time of the path. Only when one observes the sphere of reality and meditates on it does that meditation become a distinguished cause of an arya’s realizations; this is posited as the meaning of lineage. An arya observes and meditates on emptiness, whereby his realizations increase.

Before it was said that because their spheres of reality are posited as being inseparable, it is not suitable to posit three types of lineage holders. The reply is that because there are divisions of the paths supported on emptiness, it is suitable to posit different lineages. “The support” refers to the observed object and “the supported” to the one who observes it. Observers are followers of the hearer and solitary realizer vehicles. In order to observe the reality (dharmata) it must be an established phenomena for the observer. Without eliminating the appearance of true existence to the mind, the emptiness of true existence cannot be established for that mind. And if the emptiness of true existence is not established for one’s mind, the sphere of reality is also not established.

Furthermore, it is necessary to ascertain the reality in relation to a specific object; therefore, hearers and solitary realizers observe inner or outer phenomena and observe them to not exist truly. This means that there are solitary realizers that do realize the reality, which contradicts the
statement that solitary realizers are not able to abandon the conception that apprehends the consciousness to exist truly. Therefore, there is no pervasion that solitary realizers do not abandon the conception that apprehends the consciousness to exist truly.

Like the solitary realizers there are two types of hearers, one that realizes the reality and one that does not realize it.

Think about the following point: If the support of a Mahayana achieving is the naturally abiding lineage, is the basis of emptiness the mind? Is the naturally abiding lineage that which transforms into the nature truth body? This would mean that the basis of the naturally abiding lineage, the mind, would transform into the nature truth body, is that so? Does the aggregate of feeling transform into the body of a buddha? Does the person become a buddha? Does this mean that the emptiness of the person becomes the nature truth body of a buddha in that we say that the emptiness of the mind becomes the nature truth body? Is the emptiness of the person the naturally abiding lineage? Or is it the reality of the person? Think about this;

Wednesday afternoon class, May 6, 1998

Someone says: “I do not argue that there are different lineages of the three vehicles, but that the division into thirteen lineages is not correct. Thinking like this is not correct because in the commentary Lamp on the Twenty Thousand Stanza Perfection of Wisdom Sutra it says: “Thus, Manjushri, the reality is only one, thusness is just one, the perfect is just one. If there is just one how can one designate vessel and non-vessel?” Since in the sutra there is no mention of divisions of the sphere of reality, how should one determine whether one is a proper vessel for the Mahayana Dharma?” Our system responds that this argument is similar to the previous one in that when talking about the lineage in terms of thirteen divisions there is no reason to discuss who is a proper vessel for the Mahayana and who is not. In the commentary by Haribhadra there is a similar answer to the objection brought up by Arya Vimuktisena. The text, Commentary Clarifying the Meaning, summarizes the meaning of the answer given in Lamp on the Twenty Thousand Stanza Perfection of Wisdom Sutra saying that there is no fault in it. In both the Lamp on the Twenty Thousand Stanza Perfection of Wisdom Sutra and the Great Commentary there is a quotation from the Twenty Thousand Stanza Perfection of Wisdom Sutra: “All arya beings are thoroughly distinguished by uncompounded phenomena.” This quotation is cited to prove that the sphere of reality is the lineage that is discussed in relation to the three vehicles. There is also another quotation in this regard found in the Vajrachedhika: “The buddhas and the doctrine presented by them do not exist truly.”

Gyeltsab says that the citation “All arya beings are thoroughly distinguished by uncompounded phenomena” means that all aryas, both those of the great and lesser vehicles, directly realize reality, which is an uncompounded phenomena. Lamp on the Twenty Thousand Stanza Perfection of Wisdom Sutra simply presents the selflessness of persons at the beginning and at the end. In this case, the hearer path is presented. The selflessness of persons is discussed at the beginning and end to guide the followers of the lesser vehicle. These can be of two types, those who are a correct vessel and those who are not yet a correct vessel; the latter are more numerous. This text presents the need to familiarize oneself with the meditation on the common selflessness in order that one’s continuum quickly become ripen in order that one can become a proper vessel for the profound path. In other texts, these two types of disciples are often mentioned. This is done for the same reason that the teaching on the Chittamatra view is given in order to ripen one’s continuum so that it becomes ready for the view of the Middle Way School (Madhyamika). This is like someone who teaches the common selflessness again and again in order that his listeners slowly improve their understanding, their continua are ripened, and they are brought to an understanding of emptiness. According to the Prasangika-Madhyamikas in order to attain the hearer’s path of seeing one has to realize emptiness directly but this is not the case for the Svatantrika-Madhyamikas, although many do assert this. In other words, there is no pervasion that all arya hearers have directly realized emptiness but there are some who do so.
In the first and the second parts of *Lamp on the Twenty Thousand Stanza Perfection of Wisdom Sutra* it says that hearers do realize the profound meaning, emptiness; however, this is not correct although it is considered to be correct here. This may mean that although it is a wrong assertion, it is inserted here among the objections.

Gyeltsab says that there are people who do not please their virtuous spiritual friend for a long time and are also separated from the intelligence with which they would be able to discriminate what is right and what is not right without any mixing, like the petals of a lotus, concerning the teachings of the charioteers. Such people only look for gain, respect, and reputation in this life yet they feel superior to [the charioteers] saying that the aryas of the lower vehicle do have the realization of profound meaning and look at them miserably. Gyeltsab says: “You who make this kind of criticism, if you want to experience goodness in the future be conscientious of what you are doing.” In short, he tells such people not to criticize those who have different opinions concerning the Hinayana foe destroyers.

Gyeltsab says that if the reality together with stain is the buddha lineage there is no fault in dividing the lineages into three types because those following the hearer, solitary realizer, and bodhisattva vehicles have different levels of realization observing the sphere of reality due to the difference in their accumulation of merit and the difference in their faculties. Because observing reality is a cause for the arya realizations, the sphere of reality can be posited as a cause for these realizations. Thus, each of the three persons of the three vehicles abide in their own lineage. The reality of each of the three vehicles is designated as the lineage of that respective vehicle; for example, the reality of the hearer vehicle is designated as the “hearer lineage.”

The meaning of the argument is: with regard to the fact that all persons of the three vehicles observe reality and that reality with stain is posited as lineage, there is no fault in dividing lineage holders into three individually and no fault in dividing the lineage into three individually. Although that reality is an observed object which is the cause [of the different levels of] realization of the great vehicle and lesser vehicle, due to the difference in their accumulation of merit and faculty the division into three lineage holders and three lineages is correct (in terms of their different levels of realization). In this context there is no reason to talk about gross and subtle selflessness.

Gyeltsab says that this is an answer which is renowned in the world. There are two types of answers: that based on scriptures and that renowned in the world.

*By particulars of supported dharmas, their divisions are proclaimed.*
Gyeltsab says that although the reality that is observed by the persons of the three vehicles is not different, there is no fault in dividing lineage into three. Because the observation of the dharma is of different types, the supported dharmas are suitable to be divided just as supported phenomenon are usually renowned to be in the world. Therefore, it is correct to divide them into particulars.

For example, pots and so forth supports, manufactured from the same clay and baked in the same flames, differ merely as vessels containing honey, li.ka.ra, and so forth. Likewise, through supported dharmas the different (paths) to be realized included in the three vehicles, “are merely different supports” was indicated.

In short, if one makes a pot having molded clay and cooked it in the fire, having put honey in it, it becomes a honey pot; later on if sugar is put in it, it becomes known as a sugar pot; if yogurt is put in it, it becomes a yogurt pot. In the same way the lineages can be of three types: the hearer lineage, the solitary realizer lineage, and the bodhisattva lineage. This answer is one that is renowned in the world.

Thus, there are three levels of conception in dependence on which the lineage becomes of three different levels. It is just as if someone were to say that there is only one pot which would contradict the fact that we say “honey pot,” “sugar pot,” etc. Such a person does not know collection, continuity, and holds a wrong view regarding the positing of the grounds and paths.

In conclusion, there do exist three lineages of three vehicles. When these three lineages are posited they are:
(1) the hearer lineage, that which becomes the hearer enlightenment
(2) the solitary realizer lineage, that which becomes the solitary realizers’ enlightenment
(3) the bodhisattvas lineage, that which becomes the bodhisattvas’ enlightenment

This concludes the discussion of the naturally abiding lineage in Gyeltsab’s commentary. There is further information in Jetsun Chokyi Gyeltsen’s Ocean Playground which presents one set of nine, which are that which obscures, another set, which are that which are obscured in relation to the meaning, and another two sets in relation to their illustrations. In this way there are thirty-six divisions.

Thursday morning class, May 7, 1998

With regard to the subject of lineage Jetsun Choky Gyeltsen in his Ocean Playground (Rol-tso) sets out the following outlines:
1 The way it is taught in Uttaratantra
2 The way it is practiced

A Brief presentation
B Extensive explanation
C Purpose of presenting the buddha nature
1A Brief presentation

In Uttaratantra it says: “Because the body of a complete buddha radiates; because thusness is inseparable; because there is the lineage; all embodied beings always possess the buddha essence.” The meaning of this passage according to the Tathagata Essence Sutra is that all embodied beings always have the buddha nature because they always have a tathagata essence, which is the nature, or the sugata essence; all sentient beings are touched by the enlightened activity of the buddhas’ truth bodies; the nature of the minds of the buddhas and the minds of sentient beings, which is the emptiness of true existence, are inseparable; and the buddha lineage pervades all sentient beings. This means that all sentient beings have the buddha lineage and to prove this point there are three steps:

- buddhas radiate their enlightened activity to all sentient beings who are thereby touched, which means that the buddhas’ blessings are received by sentient beings and their minds improve and become virtuous
- the minds of buddhas and the minds of sentient beings in terms of being empty of true existence are inseparable (With respect to this one can ask: Is the emptiness of the minds of the buddhas and the emptiness of the minds of sentient beings one entity? Are sentient beings and buddhas one entity? Is not the emptiness of the buddhas’ mind not the nature truth body? If so, how can it be inseparable from the emptiness of sentient beings’ minds? Is the emptiness of a sentient being’s mind not that which transforms into the nature truth body? To this one answers that the emptiness of a sentient being’s mind is not that which transforms into the nature truth body because it is already one nature with a buddha’s minds and therefore there is no need to say that it will transform into a buddha’s nature truth body. This is some debate that occurs regarding this point.)
- that buddha nature pervades all sentient beings means that all sentient beings have buddha nature

When it is said that all sentient beings have the naturally abiding lineage it refers to the emptiness of sentient beings’ minds, which becomes the nature truth body. The developmental lineage refers to sentient beings’ minds, particularly the mental consciousness, which will become a buddha’s wisdom truth body. As long as stains are present the mental consciousness is the developmental lineage, while the emptiness of sentient beings’ minds is the naturally abiding lineage. When the stains are removed these transform respectively into the wisdom truth body and the nature truth body.

1B Extensive explanation

1 A presentation of the nature of the mind, which is clear light, by means of ten references

2 Establishing that obscurations are incidental by way of nine examples and meanings

1B1 A presentation of the nature of the mind, which is clear light, by means of ten references

In a sutra the Bhagavan says: “Bhikshus, the mind is not to be viewed as truly existent mind because its nature is clear light.” In Uttaratantra it says: “Entity, cause, result, action, possession, engaging, occasion, going everywhere, never changing, inseparable, these are the meaning of the Buddha’s intention concerning the ultimate.” This means that the sugata essence is to be established by these ten references:

(1) the meaning of entity
(2) the meaning of cause
(3) the meaning of result
(4) the meaning of action
(5) the meaning of possession
(6) the meaning of engaging
(7) the meaning of temporal thorough division
(8) the meaning of going everywhere
(9) the meaning of never changing
There is a purpose to establishing the lineage in this way: it is to understand that the nature of the mind is not completely mixed with obscurations and that the stains on the mind can be removed. To illustrate how the nature of the mind is clear there are the following illustrations:

- it is like the nature of water which is not mixed with sediment
- it is like the nature of gold which is not mixed with rust
- it is like the nature of the sky which is not mixed with cloud

As it says in Uttaratantra: “The mind is pure just like the nature of water which is not mixed with sediment, the nature of gold which is not mixed with rust, and the nature of the sky which is not mixed with cloud.”

1B2A Examples and meanings of that which is obscured and that which obscures

A brief presentation of this is: because there is lineage all sentient beings have the buddha nature. This statement says that the sugata essence exists in the continua of all sentient beings. How does it exist in their continua? The sugata essence exists in the continua of sentient beings covered by the shell of the afflictions. This is to be known by way of the nine examples and nine meanings. In Uttaratantra it says: “That abiding in the shell of the afflictions is to be understood by the examples.”

1B2B The way in which the nine that are obscured become manifest by eliminating the nine that obscure

This is to be understood by way of examples. How is it to be understood through examples? The sugata essence that exists in sentient beings continua is to be understood by the fact that the buddha nature is within the shell of the afflictions.

The nine examples are:

1. a tathagatha’s body with the major and minor marks inside an ugly colored lotus
2. honey inside a bad bee hive
3. grain inside a husk
4. gold in filth
5. a precious treasure under the ground
6. the potential of a seed to transform into a wish-fulfilling tree
7. a statue of a tathagata wrapped in rags
8. a potential universal king in the womb of an ugly woman
9. a tathagata statue in a clay mold

Just as the nine examples above are found covered in their nine respective obscurations, so too are there nine sugata natures obscured by nine incidental obscurations in the continua of sentient beings. In Uttaratantra it says: “A buddha in an ugly lotus, honey in a bee hive, grain in a husk, gold in filth, a treasure under the ground, a small result such as a sprout, the body of a victor in rags, a lord of men in the womb of an ugly woman, and jewels in clay; likewise one should understand that the tathagata essence of sentient beings is obscured by incidental stains.”

There is a purpose to proving, by way of the nine examples and meaning, that the incidental stains can be removed from sentient beings minds; it is in order that sentient beings put a lot of effort into attaining a buddha’s nature body, which is free from the two obscurations, upon realizing these examples.

In these analogies:
- the lotus that covers the statue of a buddha represents attachment
- the bees that cover the honey represent anger in that the sugata essence is hidden by hatred
- the husk that covers the grain represents ignorance
- the filth that covers gold represents the constant violence caused by the three poisons
- the ground that covers a treasure represents the imprints of ignorance
- the potential that becomes the sprout of a wish-fulfilling tree represents the objects of abandonment of the Hinayana path of seeing
- the rags that cover a statue of a tathagata represent the objects of abandonment of the Hinayana path of meditation
- the womb of an ugly woman represents the objects of abandonment of the seven impure grounds
- the clay mold represents the objects of abandonment of the three pure grounds

These are the examples that illustrate the nine things that obscure our minds. For example, when a buddha with all the major and minor marks is hidden inside a lotus he cannot be seen until the lotus opens; in the same way only when our mind becomes free from attachment will our buddha nature be revealed.

The buddha nature is present in spite of all the incidental obscurations. How is this possible? It is so because having first removed the incidental stains of the afflictions, the nature truth body appears. This is explained by the nine examples. How are the meanings explained by way of the nine examples?

The first of the nine examples is mentioned in Uttaratantra saying: "Just as a person with the stainless divine eye can see a buddha glowing with thousands of marks in a decaying lotus and takes that buddha out of the covering of the lotus petals, so too the tathagatas with their natural buddha eyes see the sugata essence even in the beings of Unceasing Torment (Avichi) and liberate them from their obscurations out of a compassion that abides on a boundary without obscruration." This means that the sugata essence that exists in the continua of all sentient beings can be transformed into a nature truth body when it is totally freed from all obscurations. This is because the sugatas see that even those abiding in the hell of Unceasing Torment have the sugata essence within the shell of the obscurations, and, having seen that, out of compassion teach the method for them to become free from stains. The sentient beings then put this into practice and eventually become free from stains and in this way attain the nature truth body. For example, when someone with a divine eye sees that there is a buddha’s body with complete major and minor marks inside a closed lotus he opens that lotus and reveals the buddha’s body. The point here is that the lotus is an analogy for attachment. The lotus in this example is said to be one of ugly color because usually flowers are beautiful and attract attention until they wilt and become objects to be thrown away. Just as a beautiful lotus gives rise to attachment so too do all attractive objects. Attachment does not arise in relation to ugly or repulsive objects. Just as lotuses wilt and become objects to be thrown away, in the same way other attractive objects change and become unattractive and our attachment for them decreases. Although in general the buddha nature is not seen, when we have attachment it becomes even less visible. This is verified even by our own experience in that when we have attachment we only see the object of our attachment. Our minds exaggerate the beauty of objects of attachment and as a result the attachment increases even more. We can ask ourselves what are the faults of attachment? We need to recognize these faults and then use various means to remove them. Eliminating attachment is similar to the analogy of opening the lotus and throwing it away so that the buddha’s body that was inside it becomes clearly visible. We have to recognize how attachment functions in our daily life, work to diminish it, and eventually eliminate it completely.

The second example is also presented first with a quote from Uttaratantra and then with an explanation. In Uttaratantra it says: “Honey is guarded by bees; someone who is expert in....” To extract honey from a hive one first needs to equip oneself with gloves, etc.; likewise, the intelligent sages who wish to manifest the honey-like buddha nature, which at the moment is guarded by
anger, work to remove this anger. When someone removes all the obscurations to the sugata essence it transforms into the nature truth body. Great sages, the buddhas, with the eye of exalted wisdom knowing all, see that all sentient beings have the sugata essence within the shell of afflictions and show the methods for sentient beings to become free from the afflictions. When the sugata essence becomes free from all the incidental stains it transforms into the nature truth body, just as when someone who is looking for honey, which is guarded by bees, first removes the bees and in this way the honey is revealed. Bees are similar to anger in that when bees are disturbed they immediately attack; in the same way when someone attacks us, we who are full of anger immediately generate a harmful mind and retaliate. The sugata essence, or the lineage, is likened to the honey, the taste of which is enjoyed by everyone. We have the sugata essence but it is completely obscured by anger. We can see how much anger we have based on our own experience and reactions when we are harmed. Anger is so very evident that we even harm those who have not harmed us. Anger even arises toward inanimate objects, such as when we throw away a pen that stops writing, kick a motorcycle or car that breaks down, or punch a computer that stops working!

Thursday afternoon class, May 7, 1998

The third example is presented in Uttaratantra saying: “Just as there is an essence in a husk, that essence is not abandoned by people. Anyone looking for food removes the husk and takes the rice, likewise sentient beings have a mind-nature that is not mixed with the stain of the afflictions. Until that mind-nature is liberated from the stain of the afflictions the buddhas will not cease putting effort into the three realms.” The element of the sugata essence that exists in the continua of all sentient beings can be transformed into the nature truth body because the victors see that the sugata essence in the continua of sentient beings is not mixed with the incidental stains, such as the afflictions, and therefore put effort into the methods for freeing them from these incidental stains. When the sugata essence is free from the incidental stains it transforms into the nature truth body. Likewise, those looking for food first remove the rice from its husk and reveal the grain of rice inside. The victors know that the nature of our minds is not completely mixed with the afflictions but that as long as the pollution of the afflictions is not removed one cannot become an enlightened being. “The three realms” is mentioned because as long as the stains are not removed there is no liberation from these realms. The husk represents ignorance; just as the husk obscures one to see the grain of rice, when there is ignorance it is not possible to see the nature of the mind. Due to ignorance we make many mistakes and remain in a state of unknowing. As long as we have ignorance we are impeded to see the nature of phenomena; therefore, we need to apply methods to counteract this ignorance.

With regard to the fourth example in Uttaratantra it says: “When [the gods travel] very much [in the sky] and see that in the human realm gold has fallen into filth, those with the divine eye show people were to find it and tell them to dig it up and clean it. Likewise, those having control, the buddhas, see the sugata essence sunk within the filth of the afflictions and let fall a rain of Dharma to wash away this filth.” The element of the sugata essence of sentient beings can be transformed into the nature truth body but the victors see that the sugata essence in the continua of sentient beings is sunk in the filth of the afflictions. Therefore, they let fall a rain of Dharma teachings upon the nine types of beings in order to clean this filth. When the sugata essence is purified of incidental stains it becomes the nature truth body. This is like when the gods, traveling in the sky, see that gold ornaments of human beings have fallen into mud. Although these ornaments have remained for hundreds of years in the mud, they have not changed in nature. The gods then tell human beings where these ornaments can be found and advise them to dig them up and clean them. Human beings then retrieve them and, having polished and cleaned them, the gold is revealed.
This fourth example, filth, represents the violent mind of the three poisons which needs to be cleaned away in order to reveal the gold of the sugata essence within all sentient beings.

With regard to the fifth example, that of a treasure under the ground, in *Uttaratantra* it says: “Just as a poor man does not know that a treasure lies under the ground and the treasure does not call out, “I am here”; likewise there is a precious treasure in our minds, the tathagata essence without stain, yet we do not realize this and so we continue to suffer.” The sugata essence in the continua of sentient beings can be transformed into the nature truth body because this sugata essence, which is like a precious treasure, is not naturally mixed with stains. The sugata essence is ultimately free from stains but because sentient beings do not realize the reality they remain lacking in the aryas’ knowledge and continue to experience suffering. However, by familiarizing oneself with this realization, one will attain the state of complete buddhahood. Similarly, for a poor man who digs in the ground but does not see the inexhaustible treasure that is there and the treasure does not call out “I am here,” that treasure cannot dispel his poverty. However, the gods can see where the treasure is and, having heard this from the gods, human beings dig up the ground and find the treasure which liberates them from the suffering of poverty. In other words, just as, for example, a poor person lives in a house under which a treasure is buried but does not know it, we too have a treasure buried in our minds but do not know it and the treasure does not call out, “I am here.” Although the treasure beneath his house can liberate that person from the suffering of poverty, if he does not know it is there it cannot help him. In the same way because we do not know that there is the treasure of the sugata essence within our minds we remain poor with respect to possessing the aryas’ knowledge. We need to recognize the impediments to attaining this knowledge.

This analogy represents the objects to be abandoned by the path of seeing.

With regard to the sixth example in *Uttaratantra* it says: “Just as the unvarying property of a seed’s sprout exists within the fruit of trees, such as a mango, and having gradually developed are the possession of the king whose cultivated trees they are; similarly, encased in the fruit’s peel, such as the ignorance of sentient beings, is the property of the element of virtue, which accordingly through [cultivation], gradually becomes the possession of the king of subduers.” The sugata essence in the continua of sentient beings can be transformed into the nature truth body because it is merely hidden under ignorance, just as rice is hidden in a husk. To eliminate the obscurations one has to exert effort in virtuous methods. In dependence upon purifying the stains, the sugata essence becomes a quality of the buddhas who are the lords of sages. This is compared to the potential within a mango seed and a banyan seed to give rise to sprouts which can become huge trees in dependence on water, manure, etc. These then becomes a tree that belongs to a king. This analogy represents the objects of abandonment of the path of meditation. Our minds are obscured by the afflictions that are objects of abandonment of the path of meditation which are of sixteen types: the six afflictions of the desire realm (attachment, anger, ignorance, pride, the view of the transitory collection, and extreme view) and the five afflictions each of the form and formless realms (the previous ones excluding anger).

In relation to the seventh example in *Uttaratantra* it says: “Just as a jeweled statue of a victor wrapped in rags and lost on a road is seen by the gods above who then tell those human beings on the road that there is such a jeweled statue and it is revealed; likewise the sugata essence has been completely enveloped in the various types of afflictions since beginningless time. The is the same for animals. Seeing this [the buddhas] put effort into freeing us.” This means that the sugata essence in the continua of all sentient beings can transform into a nature truth body because the victors see that that sugata essence is merely wrapped in the rags of the afflictions. This is seen to be common even to animals. Having seen this, the victors engage in diverse methods for liberating them. In dependence upon what they teach that sugata essence can become a nature truth body. For example, when a jeweled buddha statue is wrapped in rags and thrown on the road, it is not seen by human beings but only by the gods who then tell the humans on the road...
Having heard this message, those human beings unwrap the statue which is then revealed. This analogy represents the latencies of ignorance, or the level of the latencies of ignorance. This is represented by old rags wrapped around a statue. When the rags are removed the buddha statue is revealed and in the same way when the latencies of ignorance are removed one’s mind becomes a buddha’s nature truth body.

With regard to the eighth example in Uttaratantra it says: “Just as an ugly woman without a protector is lonely yet without her knowledge there is a being in her womb who is one who holds the glory of a king; likewise, sentient beings are born in cyclic existence without a protector in a house not knowing that there is a protector, the sugata essence, within them.” The sugata essence in the continua of all sentient beings becomes a buddha’s nature truth body because the stainless sugata essence that exists in the continua of impure sentient beings is temporarily obscured by incidental stains. In dependence upon the application of purification to those obscurations the sugata essence becomes free from stains and in that moment becomes a nature truth body. One who possesses such a nature truth body in his continuum is a protector of sentient beings. For example, if a woman with an ugly body is pregnant with a wheel-turning king but does not know it, when the baby is born it is free from the stains of the womb and then becomes a great protector for that woman, a universal king. In this analogy the stains of the mother’s womb represents the stains on the seven pure grounds. A woman can be pregnant with a fetus that can become a universal king or one of the world’s worst criminals but this is hidden by the mother’s womb. Because of being in a womb for a long time a newborn baby has this stain, in the same way bodhisattvas on the first to the seventh grounds still have the stains of these seven impure grounds which are caused by the self-cherishing mind. This is not eliminated until the pure grounds are achieved. This is a complicated subject, we will leave it like this for now.

Friday morning class, May 8, 1998

REVIEW

The principal topic of the past week of teachings has been lineage. The lineage is that which will become the body of a buddha. The lineage is divided into naturally abiding lineage and developmental lineage. The naturally abiding lineage is the emptiness of a sentient beings’ mind that is together with stains; it becomes a buddha’s nature body. This naturally abiding lineage, which is the support of the Mahayana achieving, can be further divided into two: the common and the uncommon. The common support of a Mahayana achieving is that which is common to all bodhisattvas. The uncommon support of a Mahayana achieving is the thirteen types of emptiness that exist from the path of preparation up; it is not present in the continua of all bodhisattvas.

The first six uncommon supports are the base, or support, of six dharmas of realizations: (1-4) the four levels of the path of preparation (heat, peak, patience, and highest dharma), (5) the path of seeing, and (6) the path of meditation. There are six emptinesses that are observed on these levels. The uncommon lineage is posited only from the path of preparation onward because these bodhisattvas are free from most of the obstacles to activating the Mahayana lineage. The remaining achievings are (7) the achieving of the antidote, (8) the achieving of abandonment, and (9) the achieving of thoroughly reaching. These three achievings are posited in different ways. According to one way, the achieving of antidote refers to the Mahayana uninterrupted paths on the path of seeing; the achieving of abandonment refers to the Mahayana uninterrupted paths on the path of meditation; and the achieving of thoroughly reaching refers to the Mahayana liberated paths on both the path of seeing and the path of meditation.

The tenth achieving, that of wisdom with mercy, refers to the realizations of the bodhisattvas on the three pure grounds. Such bodhisattvas have both wisdom and method; due to wisdom they do not abide in the extreme in cyclic existence because they have seen its faults, and
due to method they do not abide in nirvana because they know that they would remain there for a long time.

The eleventh achieving is the achieving that is uncommon to the hearers and so forth; i.e., it is not present in Hinayana practitioners. This achieving is the four individual correct knowledges which are used to ripen sentient beings’ continua. This realization is attained on the ninth ground.

The twelfth achieving is the achieving of enacting the welfare of sentient beings in sequence. It is attained on the tenth ground. At this point a bodhisattva is skilled in leading sentient beings and gives definitive or interpretive meaning teachings in accordance with their respective capacities. In this context it is important to understand the meaning of definitive and interpretive meaning teachings or scriptures. According to the Svetantrikas a definitive meaning scripture is one that mainly teaches emptiness and is literally acceptable. They posit two types of interpretive meaning scriptures: one that mainly teaches emptiness but is not literally acceptable and one that teaches conventional truth as its principal subject matter. According to the Prasangikas a definitive meaning scripture is one that presents emptiness as its principal subject matter, while an interpretive meaning scripture is one that presents conventional truths as its principal subject matter. In other words, if the subject of a scripture is conventional truth it is an interpretive meaning scripture, while if it is ultimate truth it is a definitive meaning scripture. According to the Prasangikas all phenomena are both definitive and interpretive meaning because both conventional and ultimate truth can be posited on all phenomena. According to the Chittamatra school a definitive meaning scripture is one that is literally acceptable with respect to the subject being presented, while an interpretive meaning scripture is one that is not literally acceptable with respect to the subject being presented.

In relation to the twelfth achieving one should remember the different kinds of interpretive sutras: sutras with an object of intention and sutras with an ulterior intention. Sutras taught with an ulterior intention are of four types:

(1) sutras with an ulterior intention regarding characteristics
(2) sutras with an ulterior intention regarding entering
(3) sutras with an ulterior intention regarding antidote
(4) sutras with an ulterior intention regarding transformation

(1) A sutra with an ulterior intention regarding characteristics is one that was taught to guide sentient beings who are intent upon the Chittamatra view. Buddha taught that all phenomena, ranging from form to omniscient mind, do not exist by their own character; the Chittamatrins interpret this to mean that imaginary phenomena do not exist by their own character, while thoroughly established and other-powered phenomena do exist by their own character. The Chittamatrins say that imaginary phenomena are entitiless in the sense of not existing by their own character; other-powered phenomena are entitiless in the sense of not arising independently; and thoroughly established phenomena are entitiless in the sense of not having a self of phenomena. Buddha taught the sutra that explains this in order to lead followers of the Chittamatra view.

(2) A sutra with an ulterior intention regarding entering is one taught with the intention of causing others to improve by leading those of lower tenets to higher tenets. An example of such a sutra is one that teaches that the aggregates are a load while the person is the one who carries the load. This sutra also says that the person is neither permanent nor impermanent, this was taught to lead non-Buddhists into the Buddhist tenets. Buddha also taught, for example, that there is a self of persons; this sutra was meant for the Vatsiputriyas.

(3) Sutras with an ulterior intention regarding antidote are of four types:
- three equalities
- different time
- different meaning
- person’s thought
An illustration of a sutra of ulterior intention regarding the three equalities is one in which Buddha says, “At that time I was a Buddha Vipashvin.” The three equalities are: having completed the two accumulations, having attained the two resultant bodies, and performing enlightened activities to ripen sentient beings.

An illustration of a sutra of ulterior intention regarding different meaning is the one in which Buddha said, “Father and mother are to be killed.” This does not mean that one is to kill one’s actual father and mother, but that one has to slay the karma and the afflictions that cause one to be reborn in cyclic existence.

An illustration of a sutra of ulterior intention regarding different time is a sutra in which it says: “If you make a prayer to be reborn in the Joyous Land, you will be reborn there.” This sutra was taught to counteract laziness.

An illustration of a sutra of ulterior intention regarding a person’s thought is, for example, one of Buddha’s teachings in which he belittles generosity and praises morality. This was meant for people who overemphasize the practice of generosity.

(4) An example of a sutra with an ulterior intention regarding transformation is the one in which it says: “Know that which is without essence as having essence.” This means that if one lives in distraction there is no essence, while the higher training in concentration is the opposite. There is another passage that says “Abide in the wrong way,” which was meant for those who consider the aggregates to be permanent, happiness, pure, and having self; Buddha intended that they train in the higher training in wisdom. Buddha also said: “Those with affliction have even more affliction,” which means that one should train in the higher training in morality. After that he said: “One will then attain sublime enlightenment,” which means that having trained in the three higher trainings one will become an enlightened being.

Gyeltsab says that to understand the subject of definitive and interpretive meanings one should study Lama Tsongkhapa’s text Definitive and Interpretive Meanings.

At this point in the text there are objections regarding the subject of lineage. Someone says that lineage is not suitable to be divided because the sphere of reality (dharmadhatu) is only one. This objection comes in Maitreya’s Ornament (Commentary Clarifying the Meaning page 24) saying: “Because inseparable in the sphere of dharma, different lineages are not suitable.” The answer follows saying: “By particulars of supported dharmas, their divisions are proclaimed.” There are thirteen supported achievings, and likewise there are thirteen realities (dharmata). In other words, there are thirteen achievings observing emptiness and therefore there are thirteen emptinesses. The naturally abiding lineage can be of thirteen types because their are thirteen minds observing them. For example, when a pot is made out of clay and cooked it is only a single pot but, in dependence on what is put in it, it can be labeled in different ways: honey pot, molasses pot, yogurt pot, etc. This is said to be an answer that is known to the world.

It is also suitable to divide lineage into three:
- the lineage of the hearer vehicle
- the lineage of the solitary realizer vehicle
- the lineage of the bodhisattva vehicle
because all of them observe a particular reality.

Question: In the case of a non-returner who will migrate to the form realm, how is it possible that he does not have the projecting karma to be reborn in the form realm but does have the actualizing karma?

Reply: Aryas no longer create new karma to be reborn in cyclic existence because there is a text that says “By seeing the truth there is no more throwing...” When a non-returner takes rebirth in the form realm he does so because previously, in other lives, he created the karma to be reborn
there. When he becomes a non-returner this karma to be reborn in the form realm is nourished by the alternating meditations that consist of three, six, nine, twelve, and fifteen alternations. When one engages in the small level of alternating meditation one meditates first on an uncontaminated actual concentration, then on a contaminated actual concentration, then on an uncontaminated actual concentration. In this way, there are two uncontaminated actual concentrations and one contaminated actual concentration in a set.

What is the actualizing cause, the tenth link, to be reborn in the form realm? It is a pure actual concentration that nourishes, or activates, previously created karma. A pure actual concentration is a mere actual concentration, but it is given the name “pure one.” We usually say a special actual concentration and a pure actual concentration, but a pure actual concentration refers to a mere actual concentration. Only for the first concentration are there mere and special actual concentrations. A pure concentration cannot be an uncontaminated actual concentration; while a special concentration can be an uncontaminated actual concentration. A pure concentration can degenerate due to the arisal of four types of afflictions: attachment, pride, ignorance, and doubt. For example, when absorbed in concentration, if attachment for the pleasure of concentration arises it causes the concentration to degenerate or transforms it into an afflicted concentration.

The throwing karma that throws rebirth in the form realm is a contaminated preparation. The actualizing karma is an actual concentration, which nourishes the karma created in the past to be reborn in the form realm.

Question: When one of the four levels of sangha is on a liberated path how do they have an aspiration for a higher result?

Reply: A mere abider in the result of stream enterer is one who is not exerting effort to attain a higher result, while a distinguished abider in the result of stream enterer is one who is exerting effort to attain a higher result. That special abider in the result of stream enterer simultaneously attains two types of results: one that is compounded and one that is uncompounded. The uncompounded result refers to the liberated path and the compounded result refers to a true cessation. When he engages in daily activity there is no need for the liberated path to be manifest, but when he exerts effort to achieve a higher result he abides on an uninterrupted path. How can one who is abiding on a liberated path manifest an uninterrupted path? While applying the antidote, the uninterrupted path is manifest as long as he exerts effort to achieve the higher result. At this time the liberated path is present but not manifest; it has not been lost.

Question: Please explain the pure realms, for example, there is both a Joyous Land existing in the five pure realms of the form realm as well as another one.

Reply: Within the Joyous Land that belongs to the desire realm there is an area called Yiga Chodzin (Mental Joy Upholding Dharma). The Joyous Land is like a city, while Yiga Chodzin is a pure land on the outskirts of the city. When one makes prayers to be reborn in the Joyous Land, one is actually making prayers to be reborn here. For example, Rome can be likened to the Joyous Land, while the Vatican can be compared to Yiga Chodzin. The Vatican is an autonomous region with their own police force, etc.

The form realm is divided into seventeen levels of which the last five are called pure, but only one is actually a pure land, Akanishta. This is the place in which all enjoyment bodies abide, while all the members of their retinues are arya bodhisattvas. For this reason it is called a pure land. Etymologically it is called pure because it is pure of true sufferings: the impure vessel, the environment, and the impure contents, the beings. However, in general Sukhavati (Dewa Chen) is the real pure land. Sukhavati is the abode of Buddha Amitabha; here there is the actual Potala. It is said that Amitabha and Avalokiteshvara abide in the upper story of the Potala, while Tara abides in the lower story. This is the reason the Tibetan’s call the Potala in Lhasa the “second Potala.” In Amitabha’s pure land, unlike Akanishta, there are ordinary sentient beings. When we make prayers to be reborn in a pure land, it is to be reborn in a lotus in Amitabha’s pure land, Sukhavati. This seems to be similar to the description of Shambala, where the deity Kalachakra lives.
In brief, Yiga Chodzin is in the desire realm while the pure land of Akanishta is the seventeenth level of the form realm.

Question: Does a non-returner who takes rebirth in Akanishta take rebirth among the enjoyment bodies?
Reply: Akanishta is also composed of a larger area, like a city, and a more specific area where the enjoyment bodies reside, which is called Land of Dense Trees. The best thing would be to be reborn there in order to find out all this information!

Question: Is a special abider in a result one that has generated an uninterrupted path that abandons the afflictions?
Reply: A special abider in the result of once returner became an abider in the result of once returner when he abandoned the sixth level of desire realm afflictions. An abider in the result of once returner who is content to have achieved this result and is not striving to achieve another result is called a mere abider in the result of once returner. A special abider in the result of once returner is one who is not content with the result he has attained and is striving to abandon further levels of afflictions by generating their antidote, a mundane path. If he is using a mundane path to abandon the afflictions it follows that it is a preparation: the mental contemplation of final training which is divided into three uninterrupted paths and three liberated paths. These correspond to the seventh, eighth, and ninth level of afflictions. When the seventh level of afflictions is opposed by the first uninterrupted path, the first liberated path is achieved. The second set of uninterrupted path and liberated path corresponds to the abandonment of the eighth level of afflictions. The uninterrupted path that abandons the ninth level of afflictions is a preparation, while the liberated path is an actual concentration. The uninterrupted paths that abandons the seventh and eighth levels of afflictions are called preparations because they are preparations to achieving an actual concentration.

Question: Does a special abider in the result of stream enterer realize the selflessness of persons directly?
Reply: Yes, he does. According to the Svatantrika-Madhyamikas immediately after the sixteenth moment of the path of seeing one achieves the exalted wisdom of subsequent attainment (i.e., one arises from meditation) and engages in activities. This person later returns to meditation and contemplates the selflessness of persons. It could be said that he is still on the path of seeing. The path of seeing is of three types: the exalted wisdom of meditative equipoise, the exalted wisdom of subsequent attainment, and an exalted wisdom which is neither. The exalted wisdom of meditative equipoise can be divided into an exalted wisdom that is an uninterrupted path, an exalted wisdom that is a liberated path, and an exalted wisdom of meditative equipoise that is neither. Having gone through the path of seeing up to the sixteenth moment and having arisen from meditation and engaged in activities, such a stream enterer returns to the meditation on the selflessness of persons; this is called an exalted wisdom of meditative equipoise of the path of seeing. In the same session he achieves the path of meditation. He then exerts effort in attaining a higher result.
Monday afternoon class, May 11, 1998

With regard to the ninth example, that of a clay mold, it says in Uttaratantra: "Just as a statue made from molten gold that is externally covered by earth, when seen, can be uncovered from beneath the external obscuration and revealed, likewise the natural clear light which is stainless is also seen by the buddhas who then grant the methods of purification to the gem-like sentient beings." The sugata essence existing in the continua of all sentient beings can be transformed into the nature truth body. The buddhas know that the natural clear light, the element of the sugata essence, is merely obscured by afflictions which are incidential, and, seeing that, show the method to sentient beings who are like gems and actually possess the sugata essence. In dependence on this method they become free from stains and become arya buddhas. For example, when someone wants to make a buddha statue manifest from within a mold made of clay he removes the mold whereby the statue becomes manifest. As long as the statue is within the mold it cannot be seen, but when the mold is removed it is revealed. Likewise, when a bodhisattva eliminates the respective stains of the three pure grounds his mind transforms into the body of a buddha.

In brief, when the nine stains that obscure [our minds] are eliminated, a nature body free from the two obscurations becomes manifest. The stains that obscure are likened to a lotus, a hive, a husk, impurity, the ground, the potentiality of fruit, rags, the womb of a woman, and a clay mold. On the other hand, that which is obscured is likened to a buddha’s emanation body, honey, the essence of grain, stainless gold, a treasure of all that is desired, a wish-fulfilling tree, a jeweled statue, a wheel-turning king, and a golden buddha statue. According to Uttaratantra the nine obscuring and nine obscured are: “A lotus, a hive, a husk, impurity, the ground, a husk of grain, rags, a woman’s womb, a clay mold; likewise inside it, a buddha, honey, essence, gold, a treasure, a wish-fulfilling tree, a jeweled statue, a wheel-turning king, a golden statue.”

1B2C Examples and meanings of that which obscures

There are nine things that obscure the mind:
(1-3) the three dormant poisons
(4) the constant violence of the three poisons
(5) the imprint of ignorance
(6) the objects of abandonment of the Hinayana path of seeing
(7) the objects of abandonment of the Hinayana path of meditation
(8) the objects of abandonment of the seven impure grounds
(9) the objects of abandonment of the three pure grounds.

These are what actually obscure us. Illustrations of them are the nine given above: a lotus, a hive, and so forth. The element of sugata essence is obscured by dormant attachment just as a buddha’s body is hidden inside a lotus. The element of sugata essence is obscured by dormant hatred just like honey is hidden in a bee hive. The element of sugata essence is obscured by ignorance just as rice is covered by a husk. The element of sugata essence is obscured by the constant violence of the three poisons just like gold covered by impurity. The element of sugata essence is obscured by the imprints of ignorance just as a treasure is covered by the floor of a house. The element of sugata essence is obscured by the objects of abandonment of the Hinayana path of seeing just as a husk of grain hides the potentiality to give rise to a sprout and so forth. The element of sugata essence is obscured by the objects of abandonment of the Hinayana path of meditation just like a golden buddha statue covered by rags. The element of sugata essence is obscured by the respective objects of abandonment of the seven impure grounds just like the potential of a wheel-turning king is hidden by his the mother’s womb. The element of sugata essence is obscured by the respective objects of abandonment of the three pure grounds like a clay mold containing molten gold to make a buddha’s statue.
In short, those that obscure are attachment, hatred, ignorance, constant violence, imprints, and the objects of abandonment of the path of seeing, the path of meditation, the seven impure grounds, and the three pure grounds.

In *Uttaratantra* it says that the following are the nine meanings of the example of a lotus and so forth as being like that which obscures the sugata essence. A lotus is similar to attachment that is generated by an improper mental attention. Upon seeing a beautiful lotus, which arises from water and mud, joy arises in us; but when the lotus wilts that joy disappears. Similarly, when attachment arises due to improper mental attention to a beautiful woman, joy arise; but when the woman loses her beauty our joy also decreases. In *Uttaratantra* it says: “Just as a lotus born in front of us produces mental joy, which later disappears; similarly, the joy from attachment disappears.” The lotus is an object of attachment in that as long as it is young and attractive it produces joy, but when it ages and wilts the joy disappears.

The bee hive symbolizes hatred. When hatred is dormant it does not produce problems, but when activated it harms by causing ourselves and others to suffer, just as a swarm of bees harms us when disturbed. In *Uttaratantra* it says: “Just like bees when disturbed, one hits and bites others and generates aversion which produces much suffering in one’s heart.”

Dormant ignorance is likened to a husk which covers a grain of rice and makes it non-manifest in that the conception of true existence, which arises due to ignorance, hides our sugata essence and prevents it from being seen. In *Uttaratantra* it says: “Just as the essence of the rice is obscured by the external husk, so too the tathagata essence is obscured by the husk of ignorance.”

The constant violence of the three poisons is likened to impurity, the semen and ovum of the parents which are not favorable for those without desire, for example, arya beings yet are necessary as a cause to give birth to a baby. In the same way, the constant violence of the three poisons is not compatible with the aryas but does exist in the continua of ordinary beings and acts as a principal obstacle to the attainment of the arya path. In *Uttaratantra* it says: “Just as impurity is incompatible [for the detached] but is a cause for those with desire, similarly constant violence is like this.”

The imprint of ignorance is likened to the ground because just as the ground hides a treasure such that it cannot be seen by ordinary beings, likewise, the imprint of ignorance hides the sugata essence, which is innate. As long as there is this obscuration there is no attainment of the nature truth body; only when one becomes free from it can one attain the nature truth body. In *Uttaratantra* it says: “Just as material gain is obscured, there is an innately produced sugata essence which is obscured by the imprint of ignorance.” Who has the level of the imprint of ignorance? Hinayana foe destroyers since they have abandoned all the afflictions but not the imprints of the afflictions.

The sugata essence is also obscured by the objects of abandonment of the Hinayana path of seeing. These objects of abandonment are likened to the potentiality of a seed to give birth to a sprout. When the husk of a seed is broken the sprout is revealed. Likewise, when a Hinayana uninterrupted path of seeing realizes the selflessness of person it cuts off the objects of abandonment of the path of seeing and a Hinayana liberated path of seeing is achieved. In *Uttaratantra* it says: “Just as the sprout growing slowly breaks the husk of the seed and the sprout itself is seen; likewise, the objects of abandonment of the path of seeing are turned away.”

The objects of abandonment of the Hinayana path of meditation are illustrated by old rags. The Hinayana path of seeing, an arya path, directly realizes the selflessness of persons and overcomes the intellectually-formed view of the transitory collection; therefore, the Hinayana path of meditation has only to abandon its objects of abandonment with the exalted wisdom of the vajra-like concentration. In *Uttaratantra* it says: “In relation to the arya path, the view of the transitory collection is destroyed and that which is to be abandoned next is by the path of meditation, which is likened to rags.”

The objects of abandonment of the seven impure grounds are likened to the stains of the mother’s womb because there is a non-conceptual exalted wisdom of the eighth ground which is free from the objects of abandonment of the seven impure grounds. Such an exalted wisdom is likened to a baby that will be born from a mother’s womb who will become a wheel-turning king.
When this baby is born from the mother’s womb his existence begins and, likewise, when one becomes free from the stains of seven impure grounds one attains a non-conceptual exalted wisdom of the eighth ground. In *Uttaratantra* it says: “The stains that are on the seven grounds are like the stains of a mother’s womb; an exalted wisdom that is free from those stains is non-conceptual and full ripened.”

The objects of abandonment of the three pure grounds are likened to a clay mold in that when it is removed the statue of gold hidden inside it becomes manifest, and, similarly, when the respective objects of abandonment of the three pure grounds are removed by the vajra-like concentration possessed by a bodhisattva on the final continuum of a sentient being his three bodies become manifest. In *Uttaratantra* it says: “The stains related to the three grounds are to be known as the mold which is to be removed, such stains are to be abandoned by the great vajra-like concentration.”

In whom are the nine obscurations found? The three poisons and the constant violent mind of the three poisons are present in the continua of ordinary beings. The imprint of ignorance is present in hearer and solitary realizer foe destroyers. The objects of abandonment of a Hinayana path of seeing and a Hinayana path of meditation are present in those on a Hinayana path of seeing and a Hinayana path of meditation. The stains of the seven impure grounds exist in bodhisattvas on these seven grounds. The stains of the three pure grounds exist in the bodhisattvas on these three grounds. In *Uttaratantra* it says: “These nine obscurations exist in ordinary beings, foe destroyers, learners, and intelligent bodhisattvas; four of them in ordinary beings, one in Hinayana foe destroyers, the sixth and seventh in the two, and the eighth and ninth in the two intelligent beings (those on the seven impure grounds and those on the three pure grounds).” In Haribhadra’s *Great Commentary* it also says that the nine obscurations are found in four types of beings: ordinary beings, foe destroyers, Hinayana learners, and bodhisattvas.

The minds of ordinary beings are completely obscured by obscurations, the three poisons and the constant violent mind of the three poisons, that obscure the sugata essence. Even foe destroyers remain obscured due to the imprints of ignorance. The sugata essence of those on the Hinayana path of seeing and path of meditation are obscured by their respective objects of abandonment. The sugata essence of bodhisattvas on the seven impure grounds and those on the three pure grounds are also obscured by their respective objects of abandonment. Therefore, the nature of the mind of all sentient beings is obscured. Only when the mind becomes free from all these obscurations does one become a buddha. All these obscurations are incidental and can therefore be removed; in this way it is established that we can become a buddha. Even in our daily life one new knowledge eliminates one ignorance. This means that the more we remove the darkness, the less obscurations we will have until eventually all the stains are removed. Thus, the nature of our minds can be compared to the nature of the sky which is not mixed with cloud, water which is not mixed with sediment, and gold which is not mixed with rust.

Tuesday morning class, May 12, 1998

1B2D Examples and meanings of that which is obscured.

In *Uttaratantra* it says: “The buddha in an ugly lotus, the honey in a bee hive...” If this passage explains the nine obscurations, what is it that is obscured? The element of the sugata essence is that which is obscured in this context because the sugata essence in the continua of sentient beings is covered by nine afflictions, such as attachment. There is a reason for illustrating the sugata essence with the nine examples: it is because there are three natures that include the sugata essence. The three natures are the truth body, thusness, and the buddha nature. Illustrations of these are:

- the truth body is illustrated by the example of a buddha’s form body, honey, and a grain of rice
- thusness is illustrated by gold
- the buddha nature is illustrated by the five remaining examples, such as that of a treasure of jewels

In Uttaratantra it says: “Since the element is included in the three natures they are similar to the examples such as that of a buddha’s form body. The three natures are the truth body, thusness, and the buddha nature. They are to be known by three groups of examples composed of three, one, and five examples.”

If there are these three groups of examples, how are they related to the three natures? First of all the truth body which is explicitly presented is of two types: a truth body that is a realization and a truth body that is supported. The truth body that is a realization is that which is fully developed and directly realizes the sphere of reality of the mind as ultimately without any stain. The supported truth body is of two kinds: a definitive meaning sutra that takes the profound subject of emptiness, a cause that is concordant with the exalted wisdom of the truth body, as its main subject to be explained and an interpretive meaning sutra which takes the variety of conventional phenomena as its main subject. In Uttaratantra it says: “The truth body is of two types: the sphere of reality which is extremely stainless and that which presents the profound similar cause and diverse modes.”

Jetsun Chokyi Gyeltsen sets up a syllogism to explain why the body of a buddha alone represents the wisdom truth body: the final exalted wisdom that directly realizes the sphere of reality of the mind as ultimately stainless (subject) is illustrated only by the tathagata’s statue because in the world there is no other illustration that can represent this fully developed wisdom because the exalted wisdom is a culminated supermundane wisdom. In Uttaratantra it says: “Because of having gone beyond the world (i.e., being supermundane) there is no [other] example observed as right for that exalted wisdom.” A tathagatha’s statue is presented here to represent the sugata essence. In short, this means that the exalted wisdom of a buddha realizing the sphere of reality can only be represented by the statue of a tathagata.

Regarding the second type of truth body, a definitive meaning sutra, the syllogism is: a sutra that presents ultimate truth as its main subject is similar to honey because just as honey has a unique sweet taste so too does a definitive sutra have a unique subject, emptiness, which does not have a different entity. In Uttaratantra it says: “The subtle profound way is similar to the unique taste of honey.”

Regarding an interpretive meaning sutra the syllogism is: a sutra that takes the diversity of conventionalities as its principal subject to be explained is illustrated by a grain of rice inside a husk. There is an essence in this sutra which is the method for realizing the meaning of emptiness. In Uttaratantra it says: “The various modes in which diverse aspects are presented is to be known as diverse husks of rice.”

With regard to the illustration of thusness, the second kind of nature, it says in Uttaratantra: “Thusness is similar to gold which does not change into other entities, can be transformed into different objects, such as ornaments, and whose nature is free from rust. Likewise, the sphere of reality is also without change, the exalted wisdom observing the sphere of reality is virtuous, and the nature of the sphere of reality is free from all stains. In Uttaratantra it says: “Not changing nature, virtuous, and completely pure; thusness is expressed here as being similar to gold.”

In this context of the illustration of the buddha nature, the third nature, the buddha nature that is explicitly explained is the naturally abiding lineage, which has been with us since beginningless time, and the developmental lineage, which is developed through correct conditions such as hearing. The naturally abiding buddha nature is similar to a treasure of jewels in that such a treasure is a cause of joy and so too is the naturally abiding lineage which is the source of a buddha’s qualities, such as the ten powers. The developmental lineage is similar to a tree with
fruit because when a tree with the capacity to give a lot of fruit is cultivated and watered, it gives a lot of fruit and similarly when the developmental lineage is nourished by hearing and so forth, qualities increase more and more. With these two lineages, the naturally abiding and the developmental, one will attain the three bodies. One will attain a nature truth body through observing the naturally abiding lineage and meditating on it, whereby an accumulation of exalted wisdom is created. Through the developmental lineage one will attain the two form bodies of a buddha, and by developing and sustaining the developmental lineage with love and compassion, the mind of enlightenment. Through the accumulation of merit one attains a buddha’s form body. From these two lineages one will attain the three bodies of a buddha. Through the naturally abiding lineage the first type of body is attained, while through the second, the developmental lineage, two types of bodies are attained.

In short, there are two types of lineage: the naturally abiding lineage and the developmental lineage. Through the first one attains the truth body, and through the developmental lineage one attains the two form bodies of a buddha.

With regard to the first type of body, the truth body, the nature truth body in particular is likened to a statue of a buddha made of precious material in that the nature truth body is not constructed but is that which is attained by removing incidental stains. Just as a buddha’s body fulfills the wishes of sentient beings, the nature truth body which is not artificially constructed fulfills the wishes of sentient beings. In Uttaratantra it says that the beauty of the nature truth body is similar to a precious statue; it is natural, not artificial, and is a treasure of many precious qualities.

The enjoyment body is similar to a universal king because just as such a king uses his wheel so too does the enjoyment body use the Mahayana Dharma. In Uttaratantra it says: “Because the enjoyment body possesses a great kingdom of Dharma, it is similar to a fully matured universal king with his wheel.”

The emanation body is similar to a buddha statue made from gold because when a buddha statue is made of gold although it always remains the entity of gold yet it has the aspect of a buddha statue, and, just as the entity of gold can have many aspects, so too the emanation body of a buddha is the entity of a buddha’s exalted wisdom yet can appear in many aspects to the eye consciousness of disciples. It shows diverse emanations to sentient beings. In Uttaratantra it says: “Because of the buddha’s body appearing in many forms it is similar to a statue made of gold.”

This concludes the three natures that include the sugata essence; however, in short, they are the natural truth body, thusness, and the buddha nature. These three are explained with nine examples. Three examples illustrate the truth body, one illustrates thusness, and five illustrate the buddha nature; in this way, there are a total of nine.

Within each one of us there is a sugata essence that is temporarily obscured by incidental obscurations. When these are removed the sugata essence will be revealed. To understand what kind of incidental obscurations we have there are nine examples. The nine stains are:
- the three poisons, attachment, hatred, and ignorance
- the constant violent mind due to the three poisons
- the imprint of ignorance
- the objects of abandonment of a Hinayana path of seeing
- the objects of abandonment of a Hinayana path of meditation
- the objects of abandonment of the seven impure grounds
- the objects of abandonment of the three pure grounds

The nine stains are present in:
- ordinary beings possess the first four: the three poisons and the constant violence due to these three
- Hinayana foe destroyers possess the imprints of ignorance
- Those on a Hinayana path of seeing and a Hinayana path of meditation respectively possess the objects of abandonment of a Hinayana path of seeing and the objects of abandonment of a Hinayana path of meditation
- Bodhisattvas on the seven impure grounds and three pure grounds respectively possess the objects of abandonment of the seven impure grounds and the objects of abandonment of the three pure grounds

   In *Uttaratantra* it says: “Sequentially they have four, one, two, and two.”

1C Purpose of presenting the sugata essence (buddha nature)
2 Objection
3 Reply

1C1 Objection

   In *Uttaratantra* it says: “All objects of knowledge are empty, like a cloud, a dream, or an illusion. Having said this, why is it that all sentient beings have the buddha nature?” Someone says: “The *Tathagata Essence Sutra* says that all sentient beings have the buddha nature, but that is not correct because the *Perfection of Wisdom Sutra* says that all phenomena are empty of true existence and are like dreams and so forth.”

   In *Uttaratantra* it says: “Discouragement and belittling other sentient beings are not correct. Those having these are exhorted to have the correct Dharma. The five faults, such as being extremely attached to oneself, are to be abandoned.” This means that the argument has no pervasion because when the *Tathagata Essence Sutra* says that all sentient beings have the buddha nature it is with the purpose of preventing discouragement and the habit of belittling sentient beings. The purpose of the *Perfection of Wisdom Sutra* saying that all phenomena are empty of true existence is to avoid the remaining three of the five faults: being extremely attached, underestimating the quality of a phenomena which is the emptiness of true existence, and conceiving that all phenomena are truly existent.

The five faults listed in *Uttaratantra* are
- discouragement or cowardice
- belittling other sentient beings who are inferior
- conceiving phenomena to exist truly
- underestimating the quality of phenomena, which is the emptiness of true existence
- having extreme attachment to oneself

   In short, the *Tathagata Essence Sutra* says that in the continua of sentient beings there is already a buddha body with all the major and minor marks; this was said with the intention of helping sentient beings with a cowardly mind become courageous and to stop the belittling of other sentient beings who are inferior through understanding that they have a buddha body within their continua. When the *Perfection of Wisdom Sutra* says that all phenomena are like illusions it was with the intention to stop the conception that phenomena exist truly, to stop underestimating the quality of phenomena, and to stop the attachment to the self.

2 The way it is practiced (see transcript of May 7, 1998)

This has nine divisions:
A The method for awakening the lineage
B The sign of having awakened the lineage
C The way of guiding others after the lineage has been awakened
D The benefits of awakening the lineage
E The definition of lineage
F Divisions
G Boundaries
H Epithets
I Etymology
A  The method for awakening the lineage
This is engage in the practice of refuge correctly. By making a formal pledge of refuge one does proper purification and accumulation. There is a pervasion that the awakening of the lineage is always preceded by purification and accumulation.

B  The sign of having awakened the lineage
When a Hinayana lineage is awakened there is a particular sign: the hairs of the body stand on end and tears come to the eyes when one hears teachings about the disadvantages of remaining in cyclic existence and the advantages of liberation. When there is such a sign one has awakened the Hinayana lineage. Also when the Mahayana lineage is awakened there is a sign: tears fall upon hearing the profound and extensive Dharma even before entering the path (one can understand by this sign that there is the awakening of the Mahayana lineage). As is said in the Sutra on the Hearers’ Grounds and the Sutra on the Ten Grounds: “The existence of fire is known from the presence of smoke and the existence of water from the presence of water birds; the lineage of an intelligent bodhisattva is known from the presence of the sign.” Inner knowledge is inferred on the basis of an external sign, it cannot be realized directly; for example, it is inferred on the basis of a distinguished sign related to body and speech.

In Ornament for Sutra it mentions the signs of having awakened the lineage:
- much compassion before entering the path
- much appreciation for the Mahayana Dharma
- patience with regard to the Mahayana Dharma
- being able to accept the difficulties of working for other’s purpose.

Tuesday afternoon class, May 12, 1998

A correct sign of result on the side of example is inferring that there is fire in dependence on the sign smoke. For example, if someone sees smoke coming from behind a hill, he can infer that there is fire on the other side of the hill. Another correct sign of result on the side of example is inferring that there is water in a garden in the eastern direction because of the presence of soaring water birds in that direction.

A correct sign of result on the side of meaning is proving that someone has great compassion because tears fall from his eyes and the hairs of the body stand on end when seeing suffering sentient beings. Another correct sign of result on the side of meaning is proving that someone has great compassion because he verbally expresses words of lamentation when he hears of the suffering of others. However, in this regard the monks in the monasteries debate asking: “If someone cries does he necessarily have great compassion?” No, because there are many hypocritical people who cry to fool others.

C  The way of guiding others once the lineage has been awakened
The way to lead disciples just after having awakened the lineage is to train their mind in the paths of the three beings, small, middling, and great. Then those who are initially determined to be Hinayanists should be given teachings on the Hinayana Dharma baskets and in this way be led in the Hinayana. To those who have awakened the Mahayana lineage one should give teachings on the Mahayana Dharma baskets together with commentaries and lead them in the Mahayana. The great vehicle is not a shortcut for those who are initially determined to be a Hinayanist because if they are led in the Mahayana there is a risk that they will pollute themselves with the downfall of degenerating the Mahayana mind generation. Therefore, teachings are to be given in accordance with the level of sentient beings; in this way they become methods to lead them to perfectly complete buddhahood. If one teaches in this way, there is no superiority and inferiority in the Buddha’s Dharma because all the teachings are for one person. For example, medicines are not classed as higher or lower but are given in relation to particular patients. In the Descent from Lanka Sutra it says: “What is not suitable to be explained to someone should not be presented. For example, a particular medicine is given according to the needs of the sick; likewise, the Buddha
taught the Chittamatra view alone to certain sentient beings.” In relation to a particular patient a
skilled doctor gives one medicine at first and then later changes to another. In the same way, the
Buddha first taught the Chittamatra view to those whom it suited and only later taught them the
higher view. In short, when a spiritual guide is skillful he should teach that which is appreciated
by the disciples. If the disciple appreciates the Hinayana the teacher should teach this, while if the
disciple appreciates the Mahayana the teacher should guide him in this vehicle.

D Benefits of awakening the lineage
There are special benefits of awakening the lineage:
- the mind that observes enlightenment becomes extremely stable
- increased effort in one’s practice
- one quickly becomes free from the lower realms if one falls into them

E Definition of the lineage
A phenomena that will become a buddha body is the definition of buddha lineage/nature.

F Divisions of the lineage
The term lineage appears often in general scriptures. One context is, for example, that of the king’s
lineage, the brahma lineage, the common lineage, the cobbler lineage, the lineage of a buddha’s
body, speech and mind, the lineage of the five beings, the lineage of the six beings. Even the
generality of a phenomena is sometimes said to be a lineage.

However, the lineages that are presented here are the naturally abiding lineage and the
developmental lineage. The naturally abiding lineage is a support, the reality (dharmata) of a
mind that is together with stain, that will transform into an uncompounded buddha’s body. The
developmental lineage will transform into a buddha’s body which is a compounded phenomena.
Naturally abiding lineage is of two types: one that is not explicitly presented here and one that is
explicitly presented here. The first is the reality (dharmata) of the mind of someone who has not
yet entered the path; the second is the naturally abiding lineage that is the support of the hearer
vehicle, solitary realizer vehicle, and Mahayana vehicle. The naturally abiding lineage that is the
support of the hearer vehicle and the solitary realizer vehicle are illustrated by the reality of the
mind of learner hearers and the reality of the mind of learner solitary realizers,. The illustration of
the naturally abiding lineage that is the support of the Mahayana is divided into one that is not
explicitly presented here, the reality of the mind of a bodhisattva on the path of accumulation, and
one that is explicitly presented here which is divided into one that is not presented explicitly as a
principal [subject] and one that is presented explicitly as principal [subject]. The illustration of the
first is the reality of the mind of a bodhisattva on the Mahayana path of preparation who
previously attained a Hinayana arya realization, while an illustration of the second is the reality of
the mind of a bodhisattva who has attained the Mahayana path of preparation who initially was
determined to be a Mahayanist. The reality of the mind of this bodhisattva and the naturally
abiding lineage that is presented explicitly as a principal [subject] are synonyms.

The support, the lineage, is divided into thirteen from the point of view of the achievings
that the support.

G Boundaries of the naturally abiding lineage
A general naturally abiding lineage exists from before entering the path up to the final continuum
of a sentient being. The boundary of a naturally abiding lineage that is a support of a Mahayana
achieving is from the Mahayana path of accumulation up to the final continuum of a sentient
being. The boundary of a naturally abiding lineage which is a support for the Mahayana
achievements that are explicitly presented here is from the Mahayana path of preparation up to the
final continuum of a sentient being.

H Epithets
There are many epithets of lineage, for example, in *Bodhisattva Grounds* it says: “The lineage is also called basis, founder, cause, support, closely abiding, prerequisite, and also place.”

I Etymology
The lineage is so-called because it is a source from which arya qualities arise. Acharya Dharmamitra says that the fifth exists on the path of seeing; the sixth on the path of meditation; the seventh and ninth are separation from themselves (their respective objects of abandonment) and attainments of separation; the eighth exists from the third ground, Luminous, to the sixth ground; the tenth, on the seventh ground; the eleventh, from the ninth ground, Immovable, to the tenth, Cloud of Dharma; the twelfth lineage is a lineage that is blocked by only one life which is the last life in cyclic existence; the thirteenth lineage belongs to the distinguished concentration called the vajra-like concentration.

There are many ways of explaining the lineages however Haribhadra does not accept all of them. According to Haribhadra the thirteen lineages are those presented before, the six dharmas of realization and so forth.

This concludes the subject of lineage. The next topic of omniscient mind, the fourth, is the observed objects of Mahayana achievings.

2B2C-1A2C-2A Making a connection

If asked, “What are the observed objects of the previously explained supports of achieving?”

Gyeltsab says that the observed objects of the supported phenomena, the achievings, rely on the support, the lineage that has been explained.

2B2C-1A2C-2B Root text

1 Meaning of the words
2 Examining the limits

2B2C-1A2C-2B1 Meaning of the words

The observed objects are all phenomena, namely, they are virtue and so forth, mundane realizations and those considered supermundane, contaminated and uncontaminated phenomena, those compounded and uncompounded, qualities common to learners and those exclusive to the sage.

This sets out the eleven observed objects. Generally speaking the observed objects of Mahayana achievings can be any object of knowledge whatsoever.

Although Gyeltsab gives eight divisions there are actually eleven observed objects. The eight divisions are:

(1) virtue
(2) non-virtue
(3) neutral
(4) path
(5) abandonment
(6) antidote
(7) truth
(8) result
When we count the eleven observed objects there are: the first three, virtue, non-virtue, and neutral; two divisions of the path, mundane and supermundane; abandonment and antidote are contaminated and uncontaminated phenomena; two divisions of truth, the compounded and uncompounded; and two divisions of result, the result that is common to the hearer and solitary realizer learners and the result that is exclusive to the sages.

The first three observed objects, virtue, non-virtue, and neutral are explained in *Ocean Playground* by Jetsun Chokyi Gyeltsen:

Virtue is a predicted phenomena that abides in the class of white fully ripening phenomena. It can be divided into two, mundane virtue and supermundane virtue.

Non-virtue is a predicted phenomena that abides in the class of black fully ripening phenomena.

Neutral/unpredicted phenomena are phenomena that is distinguished by not having been predicted to be either virtue or non-virtue.

The definition of a mundane path is that which is thrown by karma and afflictions and is distinguished by abiding in the class of an object that one has strongly familiarized with in cyclic existence since beginningless lives. An illustration is the contaminated appropriated aggregates.

The supermundane path is an uncompounded phenomenon which is distinguished by abiding in a class of phenomena with which we have not even slightly familiarized ourselves with in cyclic existence since beginningless lives. An illustration is the four concentrations in an aryas continuum.

A contaminated phenomenon is that which has arisen due to karma and afflictions and is readily distinguished by abiding in the class of not being an antidote against the view of self existence. An illustration is the five contaminated aggregates.

An uncontaminated phenomena is one that has not arisen from karma and afflictions and is readily distinguished by abiding in the class that acts as an antidote against the view of self existence. An illustration is true paths.

A compounded phenomenon is one which is generated from its respective causes and conditions.

An uncompounded phenomenon is one that is not generated from its respective causes and conditions.

Common excellent qualities are those that abide in the class of excellent qualities that are to be attained in the continua of all aryas. An illustration is the four concentrations.

Uncommon excellent qualities are those that abide in the class of excellent qualities that are to be generated in the continua of only fully accomplished buddhas. An illustration is the ten powers.

The way in which a bodhisattva observes these eleven observed objects is quite easy to understand, therefore we will return to Gyeltsab’s commentary.

Those eleven are the observed objects of the Mahayana achievings because they are the basis on which all the doubts concerning superimposition are eliminated.

If something is an observed object of a Mahayana achieving it is not pervaded by being observed by a Mahayana achieving. For example, there is an observed object of a Mahayana path of seeing but the Mahayana path of seeing does not necessarily observe that object. An example of that which is an observed object of an uninterrupted path of seeing but is not necessarily observed is the ten directions. Also, while great emptiness, which is the emptiness that covers all, is the
explicit object of a Mahayana path of seeing it is not necessarily observed by a Mahayana path of seeing. If a Mahayana uninterrupted path of seeing observes something it should appear directly to it. However, all that appears directly to a Mahayana uninterrupted path of seeing is emptiness. There is no appearance of conventional truth to a Mahayana uninterrupted path of seeing because a Mahayana uninterrupted path of seeing is focused single-pointedly on emptiness.

Wednesday morning class, May 13, 1998

2B2C-1A2C-2B2 Examining the limits

(First disputant:) In his Great Commentary Haribhadra says: “Any sphere of reality which is permanently pure is taken as an observed object of exalted wisdom.” So how is it possible to say that the sphere of reality can become more and more pure since it is already very pure? It is also said that while the water element, gold, and the sky are pure they become even more pure.

(Second disputant:) Your argument seems to say that “purity is the exalted wisdom of suchness.” In this case you strongly cling to the side of the antidote and a strong clinging to the discordant side is implied, whereby the strong clinging to both the discordant class and the antidote class is not abandoned so it would follow that there is only one partial purity (which is that of suchness).

(First disputant:) According to you what is the final observed object when in sutra it says: “Subhuti, also the observed object of omniscient mind is a non-truly existent phenomenon”? 

(Second disputant:) There is no fault. Since there is no truly-existing phenomenon that follows logic, non-truly-existing phenomena are asserted to be real conventional truths. The nature of the reality that is obscured is to be realized gradually as an illusion and that very realization is explained to be “complete purity.”

2B2C-1A2C-2B2A Incorrect meaning of this posited by others
2B2C-1A2C-2B2B Our tradition

2B2C-1A2C-2B2A Incorrect meaning of this posited by others
1 The stated assertion of others is not the assertion of outsiders
2 Incorrect presentation of our tradition

2B2C-1A2C-2B2A-1 The stated assertion of others is not the assertion of outsiders

(First disputant:) “Chittamatrins assert that only thusness, the emptiness of the apprehended and apprehender being different substances, is the observed object of the exalted wisdom of meditative equipoise. (However), this is negated.” What is the meaning of this?

(Second disputant:) ??The Chittamatrins do not assert that an arya’s meditative equipoise on the emptiness of the apprehended and apprehender being different substances, is the observed object of the exalted wisdom of meditative equipoise. (However), this is negated.” What is the meaning of this?

(First disputant:) If you say that, it means that you have not understood well the Chittamatra system because there is no Chittamatra charioteer who asserts such a thing. When the Chittamatrins’ assertion is explained in the Seven Sections (the treatises on valid cognition) there is a passage that says: “It has been established several times that the basis, the observed object of an actual harmer and the [respective] superimposition to be harmed, should be consistent or compatible; and you would have to accept that apprehended and apprehender do appear as different substances to an other powered phenomenon (a consciousness), therefore it would be impossible to directly realize that that apprehended and apprehender do not exist as they appear.” Even if there were such a direct realization it would follow that you assert that there is a
direct perceiver of an ordinary being that realizes that those two do not exist as they appear. To a logical consciousness (an inferential cognizer) it is possible that a qualified basis and its quality appear as different substances, whereas to an arya’s meditative equipoise, there is no appearance of other-powered phenomena. Therefore, other-powered phenomena are not directly realized to not exist as they appear. An arya’s meditative equipoise only observes thusness.

Second disputant: Then, even in [your own tradition] it would follow that either a sprout appears to the meditative equipoise that directly realizes a sprout to be non-truly existent, or that only the emptiness of true-existence appears without directly realizing the sprout as non-true existent. If you say that the sprout [does appear to that meditative equipoise] it would follow that [a meditative equipoise] that directly realizes the conception of true-existence as empty of being truly existent has superimposition. This will be negated afterward.

(First disputant:) I think that the Chittamatrins assert that objects, such as a sprout, do appear to the sight meditative equipoise, therefore, the fault that you are [pointing out] and negating in the Chittamatrins’ assertion is not consistent.

(Second disputant:) It is totally not permissible for a Madhyamika person to say so. If a true suffering appears to the path of seeing that directly realizes true suffering as empty of true existence, does it appear in the way of water poured into water or dualistically? If the true suffering appears to that path of seeing in the way of water poured into water it would follow that true suffering is an ultimate truth; such is the absurd consequence that you can not avoid or reject. On the other hand, if the true suffering appears to that path of seeing as dualistic it would follow that true suffering should also appear to the sight of the meditative equipoise that realizes the emptiness of true existence as dualistic; thereby comes the absurd consequence, which you can not avoid, that true suffering is a different substance from the meditative equipoise itself.

Furthermore, while true suffering appears to that path of seeing as a different [substance], does ultimate truth [actually] appear as water poured into water or is it realized implicitly? If it [actually] appears as water poured into water [while true suffering is appearing] it would follow that there are appearances of both ultimates and conventionalities to the sight (zig gnor) of a single meditative equipoise of an arya bodhisattva, but this is not logical. You would need to say that a meditative equipoise and a subsequent attainment are one entity.

If the ultimate truth is realized implicitly while true suffering appears as a different substance to the above mentioned path of seeing, what would be the object that is explicitly realized? If you say that it would mean that what is explicitly realized is the object, the suffering itself, and it would then follow that that suffering is an ultimate truth; which is another absurd consequence that you can not even think of rejecting.

In conclusion, there are no Prasangikas or Svatantrikas that assert that a compounded object appears to the meditative equipoise of an arya learner.

What is “the mind that appears as the entity of an illusion that comes below” mentioned in the Great Commentary? This mind is the meditative equipoise itself which is like an illusion; this is extremely clear since it is said in several places in the Great Commentary.

In short, the Madhyamika schools do not assert that conventional truths appear to an arya learner’s meditative equipoise, but assert that during meditative equipoise only emptiness appears. The Chittamatrins make a similar assertion.

Our tradition asserts that all the consciousnesses of ordinary beings, such as the sensory consciousness apprehending an apprehended, are other-powered phenomena. To that sensory consciousness apprehendeds and apprehenders appear as different substances, yet an arya’s
meditative equipoise realizes that apprehendeds and apprehenders do not exist as they appear. This means that a sensory consciousness does not appear to an arya’s meditative equipoise; all that appears is changeless thoroughly established phenomena as water poured into water. An arya’s meditative equipoise directly realizes that the sensory consciousness does not exist as it appears. We do not assert that an arya’s meditative equipoise does not directly realize that the sensory consciousness does not exist as it appears. The conclusion that is meant by the Great Commentary is that the sphere of reality which is permanently pure is the observed object of a non-conceptual exalted wisdom. The Madhyamikas refute the Chittamatrin’s assertion that the observed object, other powered phenomena, and changeless phenomena (thoroughly established phenomena) exist truly.

Our tradition then says that when aryas arise from meditative equipoise, subsequent attainment, it follows that when they observe other-powered phenomena there is no improvement in purity, i.e., the conception apprehending apprehendeds and apprehenders as different substances does not diminish because the mistaken appearance and the conception of the apprehendeds and apprehenders as different substance are mixed with the nature of other powered phenomena and the mixture itself is truly existent. So how can there be improvement with regard to true existence? There is no improvement regarding true existence. If there is no improvement of meditative equipoise in terms of it becoming more pure it would follow that also the seed to be abandoned does not decrease.

(First disputant) The Chittamatrin’s say that water, gold, and the sky are naturally pure yet they can gradually become pure of dust, rust, and so forth; therefore, also the stains can be purified by the antidotes.

(Second disputant:) The Madhyamikas say that that is not correct because the purity which is reality, the emptiness of the apprehendeds and apprehenders being different substances, is said to exist truly; therefore, this type of discordant class cannot be abandoned. This kind of true existence is mixed with the nature of other powered phenomena to which apprehendeds and apprehenders appear as different substances and other powered phenomena themselves are asserted to exist truly. In this case the apprehendeds and apprehenders that appear to be different substances to the other powered phenomena do exist as they appear because they appear to be so and they do exist truly. There is a pervasion: there is no occasion in which that which is embraced by the false exists truly. If someone accepts this it would follow that the conception of apprehendeds and apprehenders as different substances, which is said to be an obscuration to knowledge, cannot be abandoned because that conception of true existence would not be mistaken with respect to its determined object and therefore it would be without fault. Therefore, if you assert that the comprehension object is truly existent it would follow that the object of the discordant class cannot be abandoned. You would therefore have to deny the meditative equipoise that is extremely pure.

Wednesday afternoon class, May 13, 1998

If the object to be comprehended in meditative equipoise is asserted to exist truly, then indirectly you have to assert that the object to be abandoned, the discordant class, cannot be abandoned and therefore there is no way to attain the extremely pure, true cessation. The extremely pure is explained in the second chapter of the Ornament.

(First disputant) The Chittamatrin’s say that if the observed object of omniscient mind is a non-truly existent phenomenon according to you a sprout that is empty of true existence does exist truly because it exists to the sight of someone who is logically analyzing an ultimate truth. This reason has been asserted by you. If that person agrees then there is the argument: the previous fault would return because if something exists to the sight of an ultimate mind it should exist in that way, i.e., it should exist ultimately.
(Second disputant) The Madhyamikas say that if someone says so that there is no fault because a sprout that is empty of true existence does exist to the sight of logic. The sprout does not exist truly because the emptiness of true existence abides as false and as an illusion. It is also said, “Since there is no object of negation, emptiness is clearly not negated”.

There are two types of logical knowledge, conceptual and non-conceptual. This logical knowledge, although it is asserted to be an ultimate and a real conventional truth, is not asserted to exist truly. This means that a conventional truth is of two kinds, the real and unreal; logical knowledge is a real conventional truth. This topic of logical knowledge is discussed under the topic of achieving through accumulation.

As an elaborate explanation about logical knowledge it says in the Great Commentary: “If asserted in this way, that which is the principal nature is the lineage and that which is the principal aspect is the observed object; therefore, both of them can be both and there is no negation.” That the principal nature is the lineage means that when someone observes the emptiness of true existence of the inner entrances, the object-possessor [that possesses the emptiness] cannot be left out. The object-possessor not being that which is to be abandoned means that when one works on the observed object, one is acting on a principal basis upon which one eliminates superimposition while observing thusness. This means that while one observes the basis, conventional truth, one is also observing its thusness, an ultimate truth. In this context it is important to understand that lineage can have two aspects, one that is ultimate and one that is conventional.

2B2C-1A2C-2C1  Shown in general

For a while at the beginning, in general, virtue and non-virtue and unspecified, then sequentially the mere manner of the ordained (trainee in virtue) and taking of life and so forth and unspecified actions of body and so forth.

This presents the first three observed objects: virtue, non-virtue, and unpredicted phenomena (or unspecified phenomena).

Gyeltsab says that bodhisattvas reflect for a while that in general there are three phenomena; they think how to practice them and come to ask the question: “What is the virtue to be practiced? What is the non-virtue to be discarded? What is the unpredicted to be left alone?” In this way they understand that it is necessary to train in virtue sequentially; for example, they first learn that there is the taking of life and so forth and unpredicted actions of body and so forth.

These three, virtue, non-virtue, and unpredicted, are the observed objects of the achievings because they are the basis upon which superimposition is eliminated. When the bodhisattva reflects on what these three are, he comes to understand that there is virtue, which is the manner of training in virtue; that there is non-virtue which includes killing and so forth; and that there are unpredicted actions. These are the first three of the eleven observed objects of the achievings.

2B2C-1A2C-2C2 Explained individually

After that, with regard to just those, mundane and so forth, by just four (pairs) of divisions of two aspects, the remainder, according to number: 4) the five aggregates connected with all childish beings, 5) the four absorptions included by all arya beings, 6) the five appropriated aggregates which are not antidotes of viewing a self, 7) the four close establishments of mindfulness antidotes of viewing that, 8) subject to causes and conditions, the desire realm and so forth, 9) not relying on causes, thusness, 10) the four absorptions which arise in the continua of all arya beings, and 11) the
property-possessor’s ten strengths which arise in the continua of perfect complete buddhas.

Gyeltsab says that after realizing the three general phenomena one then analyzes the eight remaining observed objects. How should this be done? One takes those very three phenomena as a basis of division, from them comes the four pairs of divisions such as that of the two aspects, the mundane and so forth. The four pairs are:
- the mundane and supermundane
- the contaminated and uncontaminated
- the compounded and uncompounded
- the common and uncommon qualities

Furthermore, in accordance with the enumeration, the five appropriated aggregates that are included within the mundane path related to childish beings are mundane objects because they have been familiarized with since beginningless cyclic existence. The five aggregates are those of forms, feelings, recognitions/discriminations, compositional factors, and consciousnesses. These five aggregates have their individual definitions:
- a form is ‘that which is suitable to be a form’
- a feeling is ‘the entity of experiencing’
- a discrimination is ‘that which recognizes marks/signs’
- a compositional factor is ‘that which actualizes’
- a consciousness is ‘that which cognizes its own object individually’

These definitions are found in *Madhyamakavatara* and slightly different definitions are found in *Abhidharmakosha*.

The four uncontaminated concentrations that are included in the continua of all arya beings are supermundane because they are phenomena with which one has not familiarized in cyclic existence since they are an antidote against cyclic existence.

One reflects that in order to abandon the discordant class what is the contaminated object that is to be abandoned? The five appropriated aggregates are contaminated because they arise from the root that is the view of the transitory collection and they are not the class of antidote against the view of a self.

The four close placements of mindfulness which are antidotes to the view of the self are uncontaminated phenomena because they are antidotes to the seed to be abandoned.

Compounded and uncompounded:
Those very uncontaminated phenomena (mentioned above) are to be analyzed by dividing them into two parts: the causal and the resultant. When one analyzes them there arise the syllogism: the true path that relies on cause and condition and the desire realm and so on is the causal part because it is a means for attaining true cessation.

The cessation which is free from the seed that is to be abandoned is the resultant part because it is a result of separation achieved in dependence on a true path.

Common and uncommon qualities:
What is the result to be attained? The four concentrations that arise in the continua of all aryas of the three vehicles are common excellent qualities because they are qualities that arise in the continua of all the aryas of the three vehicles.

The ten powers are uncommon excellent qualities because they are excellent qualities that only arise in the continua of perfectly complete buddhas.

The word ‘property-possessor’ mentioned [in the *Commentary Clarifying the Meaning*] is to note that it is a support of all the excellent qualities of a buddha.
This concludes the topic of the eleven observed objects of the achievings.

The explanation of contaminated and uncontaminated phenomena differs in different contexts. Contamination refers to the afflictions; that which is together with afflictions is contaminated while that which is free from the afflictions is uncontaminated. Another way of interpreting contaminated phenomena is: those phenomena with regard to which contaminations increase either by way of observation or concomitance/association. Uncontaminated phenomena are: those phenomena with regard to which contaminations do not increase either by way of observation or concomitance/association. Another way of interpreting these is that contaminated phenomena are those that are related to the six doors of contaminations; uncontaminated phenomena are those that are not related to the six doors of contaminations (this is found in Abhidharmasamucchaya). The six are the observed object of contaminations, that which is subsequently related to the contaminations, and so forth. There is a fourth way of interpreting contaminated and uncontaminated in relation to conceptual and non-conceptual: the contaminated are conceptual while the uncontaminated are non-conceptual.

The pair of mundane and supermundane is quite clear. In general mundane is related to ordinary beings while supermundane is related to the aryas who have gone beyond the ordinary level. Another way of interpreting these is that mundane refers to lay people, while supermundane refers to the ordained. Of these interpretations that set out in the syllogism above is the most relevant.

The pair of compounded and uncompounded is also quite clear. Compounded phenomena are those that depend on causes and conditions, while uncompounded phenomena are those that do not depend on causes and conditions.

The common excellent qualities refer to the four concentrations. To prove that they are common it is said that all those who are aryas and all those who will become aryas have these qualities. However, if we debate this there is no pervasion that if someone is an arya he necessarily has the four concentrations. There are even foe destroyers who have not attained the concentrations. In one text it says that there are Hinayana followers who become foe destroyers without attaining an actual concentration in spite of demons with bulging eyes who try to harm them. Among the twenty sangha there are some who do not achieve an actual concentration. For example, with respect to once returners and non-returners there are those whose predominant practice is calm abiding and there are those whose predominant practice is special insight. Those whose predominant practice is calm abiding give up the objects of abandonment by the mundane path, while those whose predominant practice is superior insight give up the objects of abandonment by the supermundane path of meditation.

The topic of whether the four concentrations are possessed by all aryas can be further discussed asking whether or not there are aryas who do not possess them. This will come again when the twenty sangha are discussed in further detail.

Although the ten powers are mentioned as an example of the uncommon excellent qualities of a buddha there are many others, such as the four fearlessnesses. The property possessors, such as the ten powers, are mentioned to show that they only exist in the continua of arya buddhas.

2B2C-1A2C-2C3 Shown as referring sequentially to the eleven observed objects

Through referring by stages of realization to all phenomena, like those and so forth, accordingly eleven types of observed objects.

Gyeltsab says just as there are those that have been mentioned as being observed sequentially, there are the eleven observed objects. A great lama translator says that these eleven observed
objects are not observed sequentially but are observed in another way. In other commentaries on
the Ornament by Indian masters the order is also set out differently.

Here it is important to understand why there are eleven observed objects: it is in order to have a
complete set of paths up to omniscient mind; for example, to understand what is to be practiced,
what is to be discarded, and what is to be left alone from now up to buddhahood. For example,
virtue should be understood in detail from that which is to be created before entering the path
and upon entering the path; or before entering the hearer’s vehicle and after entering the hearer’s
vehicle; and so forth up to buddhahood. Virtue can be of various types:
- natural virtue
- virtue due to concomitance
- virtue by motivation
- ultimate virtue
Virtue by motivation is the one that is usually discussed in the context of generating a good
motivation, as just by doing so the action becomes virtuous. Natural virtues are non-attachment,
non-hatred, non-ignorance, shame, embarrassment and so on; they are virtue merely due to the
absence of attachment, hatred, and so forth. Virtue due to concomitance refers to the primary
mind becoming virtuous due to being concomitant with virtuous mental factors or the mental
factors becoming virtuous due to being concomitant with a virtuous primary mind. The five
concomitances, or similarities, are those of support, observed object, aspect, time, and substance.
Ultimate virtue is nirvana or liberation.

Thursday morning class, May 14, 1998

2B2C-1A2C-3 Objects of intent
This is the sixth topic concerning omniscient mind.
A Making a connection
B Root text
C Commentary

2B2C-1A2C-3A Making a connection

If asked, “What are the objects of intent of achieving the observed objects like those?”
Objects of intent.

What is the purpose of observing and meditating on the observed objects? The purpose is to attain
the three greatnesses.

2B2C-1A2C-3B Root text

Mind of all sentient beings’ supremacy, abandonments and realizations, the three should
be known as these objects of intent of the self-arisen: the three greats.

Gyeltsab says that one has to know what the objects of intent are. Who do these objects of intent
belong to? They belong to the bodhisattvas who have these objects of intent and are labeled
“innate” as they arise innately. What are the three greatnesses? They are
(1) the great heroic mind,
(2) the great abandonment of self purpose
(3) the great realizations which are considered supreme by all sentient beings.
Great heroic mind is the great compassion of a buddha, great abandonment is true cessation, and
great realization is the exalted wisdom realizing the selflessness of persons or the selflessness of
phenomena.

2B2C-1A2C-3C Commentary
By means of completely knowing the knower of all aspects in all ways, the buddhas who will come, the bodhisattvas, from the point of view of 1) greatness of mind of the supreme state of sentient beings (for) all sentient beings, 2) greatness of abandonment, and 3) greatness of realization because of which (they) engage in achieving accordingly by possession of the three greatnesses, the objects of intent should be known as three.

With regard to this Gyeltsab says: the future buddhas who are bodhisattvas should know the three types of objects of intent because there is someone who possesses the three greatnesses that are the three objects of intent. The three greatnesses are posited from the point of view of three finalities for which one engages in the achievings. What are these three greatnesses for? They are for sentient beings who desire to become a buddha. The great heroic mind is the buddha’s great compassion; great abandonment is the final abandonment; and great realization is the final realization. By means of what do sentient beings become a buddha? They become a buddha by thoroughly knowing always all the aspects [of phenomena] including the ten topics which represent the omniscient mind. The engaging of a bodhisattva in the achievings is similar to a king who engages in battle, who conquers the antagonistic side without remains, who attains all that is to be attained without exception, and who is considered as supreme by all; these are the three objects of intent.

In brief, when we meditate on the eleven observed objects the object of intent is to attain the three greatnesses. Even without mentioning meditation on the eleven observed objects, the intent of doing any meditation whatsoever is to achieve the three greatnesses whereby we will become of benefit to other sentient beings.

(First disputant:) “To practice the three knowers as an object means to take the three knowers as an object and then to mainly hear teachings on and reflect on them. The practice of the four trainings as a particular means to mainly practice the six perfections, such as generosity.”

(Second disputant:) That is not right because if a subject that is mainly heard and thought of is said to be only an occasion for establishing it as an object of knowledge without applying it to the practices, such as generosity, then it is not the right moment to answer this argument since [that type of hearing and thinking] also exists before entering a path. If a subject that is mainly heard and thought of is meant to perpetuate mental familiarity with that very established subject (through hearing and thinking), it is not right because there is not even the smallest teaching on this that is not a practice related to generosity and so forth. Everything said in this teaching on the three knowers and four trainings are to be taken as objects of practice.

(Another first disputant:) “To practice the three knowers means to practice the view, and to practice the four trainings means to practice the conduct.”
(Another second disputant:) Making such a statement is a sign which shows that there is not much to say; this is extremely clear. There is not even the slightest proof which says that the three knowers are mainly about view and the four trainings are mainly about conduct. There is not even a single bodhisattva’s practice of the three exalted knowers which is not one of the practices of the four trainings. When a bodhisattva engages in the achievings it is necessarily one of the four trainings. Regarding this argument, if I were to say that “the four trainings are the practice of view and the three knowers are the practice of conduct” what would you reply? Open your eyes wide and examine the first three chapters [in the Ornament] on the three exalted knowers and the four following chapters on the four trainings to see whether they actually say that the four trainings are conduct while the three knowers are view.

In the case of condensing the meaning of the Ornament into six categories, there is not even one line that talks about dividing the very practice of the three exalted knowers into six.

(Another first disputant), a scholar of the past says: “The practice of the three knowers and four trainings means (1) whether or not to practice the six perfections beginning with the generosity of giving away one’s own eyes and head, or (2) whether or not each of the six individual perfections are sustained by the determining characteristic, the action of the thought to practice.”

(Second disputant:) This too does not forbear analysis because [regarding, for instance, the second option you have just posited] if the practice of the three exalted knowers as an object and the practice of the four trainings as a particularity is to see whether there is “an action of the thought to practice” or not, it would follow that the first achieving, the achieving through armor, exists before entering the path of accumulation. This is because beginning from the first moment of attaining the achieving through armor there is “the action of the thought to practice” that observes six perfections.

If you say that the first achieving does indeed exist before entering the path of accumulation, you would contradict the answer to the question “what is the entity of achieving?” that affirms that there are “two divisions of achieving.”

Regarding the first option you stated—that the practice of the three exalted knowers as an object is that one acquires the six perfections, such as generosity, in one’s continuum and that the practice of the four trainings as a particularity is that one does not acquire them in one’s continuum—you contradict the fact that the four trainings are posited as achievings in particular because a bodhisattva right from the beginning of entering the path acquires the training in complete aspects.

Therefore, you posit a wrong presentation which is a contradiction only in terms of expression, but is taken as a contradiction in terms of reality. This means that if one makes a contradiction only in terms of the mode of expressing but takes it as a contradiction in terms of reality this is a wrong presentation.

If we actually talk about it in terms of reality the practice of the three knowers as an object is the same as the practice of the three knowers as a generality, while the practice of the four trainings as a particularity is just that they are particular practices. If something is a practice of the four trainings as a particularity it is necessarily a practice of the three knowers as a generality; it is only a question of general and particular. If someone says that these two practices are contradictory, it is because that person does not know the division of [the meaning of expressing in] reality. There is one division of expressive term called a term that expresses its object through elimination. A term is said to engage through elimination because a term only engages a specific object by eliminating others; for example, if there are a hundred people but someone says “Sherab, come here” this phrase engages its object Sherab while eliminating the other ninety-nine people in the room. Whenever a term is expressed there is no pervasion that it expresses everything.

Then what is [the meaning of the three exalted knowers as an object and the four trainings as a particularity?] One could say that while the first three chapters present the three knowers as an object of practice, one should know that each of these chapters also presents a complete practice of the six perfections. Except in the case of the achieving of armor where the practice of all
six perfections is clearly presented, with regard to the other four achievings these six are not clearly presented.

The definition of the achieving of armor is: a bodhisattva’s yoga which is sustained by the thought of the extensive deed desiring to practice by means of including all the six perfections, such as generosity, within each of the six perfections. In this case the six perfections are explicitly mentioned while this is not so for the other achievings. Even the trainings that are presented in the remaining four chapters present the practice of the three knowers as an object and these chapters clearly present that one has to practice all six perfections within each of the four trainings.

In order to prove that all six perfections are included in each of the four trainings:
- in the fourth chapter with regard to the first training it says: “....and by behaving with charity, morality and so forth....” (part of the sixth stanza of this chapter)
- in the fifth chapter with regard to the peak training it says: “In each of charity and so forth...” (part of the twenty-second stanza of the fifth chapter)
- in the sixth chapter with regard to serial training it says: “Charity through wisdom” (part of the sole stanza of the sixth chapter)
- in the seventh chapter with regard to momentary training it says: “also by each of charity and so forth...” (part of the first stanza of the seventh chapter)

It is to be understand that both the practices of the three exalted knowers as a generality and the four trainings as a particularity are presented within the achieving of armor.

Now comes the actual question in Gyeltsab’s commentary under this outline: Having expressed the support of the achievings, the observed objects of those achievings, and their objects of intent, what is the entity of those achievings?

Reply

With regard to the objects of the three exalted knowers of all, in general having the support of virtuous dharmas, and with regard to the four types of clear realizations, manifestly and completely realizing all aspects and so forth the actions which have the support of each clear realization and the six perfect (practices), (are) achievings.

In Gyeltsab’s commentary it says: in the first three chapters which present the aspects of the three exalted knowers which are the nature (the agent) that ascertains individually [all their own aspects], the aspects of the exalted knowers, none (of the thirty topics, the ten, eleven, and nine, of) the exalted knowers except the achieving of armor, [the seventh of the first ten], clearly presents an achieving or practice by way of possessing the six perfections due to the different modes of expression. They just present the aspects that have a support of a virtuous dharma belonging to a general exalted knower which is an object-possessor. Therefore we say “the practice of the three exalted knowers as an object or generality.”

In the fourth to seventh chapters in which the four trainings, such as the training in complete aspect, are explained, each of the four respective clear realizations is presented to have the support of the six perfections. Therefore, here the practice of the six perfections as a support for the four clear realizations is “the practice of the four trainings as a particularity.”

The entities of the achievings are two: (1) taking generally the three exalted knowers as an achieving and (2) actualizing the achieving itself together with the six perfections, or the practice of the particular due to the different ways of presenting them.
It is important to understand:
- the practice of the three knowers as an object
- the practice of the four trainings as a particularity
The debate regarding these are of less importance.

Regarding this Gyeltsab sets out syllogisms:
According to the concordance with reality, the Mahayana path of accumulation (subject) is the practice of the exalted knowers as an object because this path takes any aspect of any of the three knowers as an object of meditation and practice. 
The Mahayana path of accumulation (subject) is the practice of the four trainings as a particularity because it is a practice that is sustained by either of the two, thought or action, that are together with the six perfections.

The first three chapters teach the practice of the three knowers as an object. The fourth to seventh chapters teach the practice of the four training as a particularity. The eighth chapter teaches the result of practicing the three knowers and four trainings.

When it says dividing into two by means of the mode of presentation it takes the three knowers as an object of practice and the four trainings as particulars of that practice.

Question: What is the relation between “object” and “particularity”?
Reply: These two are mutually pervasive. The object of mediation is the aspect of any one of the three knowers. Here it talks about them in a different way but the point is that the three knowers are the object of meditation and practice. “Particularity” means that each of the four trainings is to be meditated upon in a different way. Each training has a different purpose: the first is to gain control so as to be able to meditate on the 173 aspects of the three knowers, the second is to gain control over this meditation so that in one session one can meditate on all 173 aspects sequentially, and so forth. Saying the three knowers as an object of practice is just another way of talking. The four trainings are particular practices because one engages in them individually; however, all four trainings work on the aspects of the three knowers. The first three chapters present the three knowers, while the next four present the four trainings individually. In the fourth chapter there is the complete training in all aspects and all 173 aspects are set out, this is why it is said to be a particular practice. Within the first three chapters only the general aspects of the three knowers are explained, they are elaborated upon in the next four chapters.

In other words, in the first three chapters thirty topics are presented: the ten related to omniscient mind, the eleven related to the knower of paths, and the nine related to the knower of bases. These three chapters do not specify the subject-aspect and the object-aspect.

2B2C-1A2C-4A2 Dividing into four by means of illustrations
The four are:
- the achieving of armor
- the achieving of engaging
- the achieving of accumulation
- the achieving of definite emergence
This is divided into
A Meaning of presenting the achievings as an entity of effort
B Differences of the four achievings

2B2C-1A2C-4A2A Meaning of presenting the achievings as an entity of effort

There is a quotation that says: “First there is the armor-like effort, then the effort to engage formally, the effort of not being discouraged and not being disturbed, and the effort that is not content with what one has learned.” There are armor-like effort, the effort of engaging in the
training, the effort of not being discouraged regarding the Mahayana Dharma and not being disturbed by the discordant side, and the effort of not being satisfied. When one develops effort in this way one becomes distinguished. Having done so, if one generates the supreme mind of enlightenment but there is no achieving with effort, all that one has achieved is a good heart; but with this alone one cannot achieve enlightenment. All achievings are not pervaded by effort, just as there are distinctive cognizers and many petals on a lotus. Effort is to be considered principal here.

In *Ocean Playground* a Mahayana achieving is defined as: a yoga of a bodhisattva that possesses the six greatesses which in dependence upon a Mahayana mind generation acts to actualize the two perfect welfares. The six greatesses are:

1. great abiding
2. great effort
3. great arisal of result
4. great continuous promise
5. great patience
6. great welfare

Great abiding is so-called because a bodhisattva at this level abides on the Mahayana mind generation.

Great effort is so-called because this bodhisattva puts great effort into both his own and others’ welfare.

Great arisal of result is so-called because through the Mahayana achieving one will definitely achieve the deliverance of great enlightenment.

Great continuous promise is so-called because a bodhisattva at this level promises to accomplish the great welfare of all sentient beings.

Great patience is so-called because one volunteers to confront all sufferings that arise while working for other’s welfare.

Great welfare is so-called because at this point the bodhisattva dispels all the sufferings of sentient beings and works to bring them benefit and happiness.

In *Ornament for Sutra* it says: “Abiding, effort, great arisal of result are the achieving of the victors’ sons, making a permanent great promise, great patience, acts to accomplish the great perfect welfare.”

Within the training as a practice what is principal is to have effort, this is what is to be underlined here. Without effort one cannot succeed in any activity. Gyeltsab says that without effort there is no attainment of enlightenment.

Gyeltsab says that in order to practice all the Mahayana Dharma, the cause, result, and so forth, it must be preceded by the extensive thought of the achievings. Without this it is not possible for oneself to wish to do a great practice. Therefore, without being preceded by an extensive thought of practice one can either be someone with much study of Dharma baskets or a person knowing nothing. In addition, when people generate the wish to do some practice, they may have certain bad thoughts: for example, some may think that if one were to train in so many Dharma baskets one will have many practices to do while if one does not know much one will not have many practices to do; and some may think that it is better not to study the philosophical texts because there is no difference between those who have studied and those who have not. However, this is not true. Even in our daily life if someone were to say that there is no difference between someone who has studied and one who has not studied when looking for a job, this would be a mistake. It
would be absurd because it is contrary to reality in that those with many qualifications and a good education can find a job. Without these one can only find simple menial jobs.

Gyeltsab says that if one has previously generated an extensive mind then one will also have an extensive training. Due to extensive thought and extensive action one will have an extensive and complete collection of merit and wisdom and one will definitely emerge into the omniscient state. Therefore, one has to have the four achievings in order to attain enlightenment. These four achievings are just right in number, there is no need for any more than four nor for any less than four. When one puts the meaning of this into practice and becomes expert in the achievings one should learn them from the fourth chapter because here there is an explanation of the path of accumulation: “Faith referring to the buddhas and so forth, joyous effort ranging over charity etc., mindfulness of fulfillment of thought, meditative stabilization not conceptualizing, wisdom that knows all phenomena in all ways: five types. Complete enlightenment is accepted as easy to realize by the sharp; difficult to realize by the dull.” With the five objects, faith and so forth, one should put the meaning into practice with the help of this explanation.

The four achievings are posited in the same order that they are achieved:
(1) the achieving of armor
(2) the achieving of engaging
(3) the achieving of collection
(4) the achieving of definite emergence

The action of extensive thought exists even on the final continuum of a sentient being, therefore the boundary of the achieving of armor is from the path of accumulation up to the final continuum of a sentient being.

Saying that the Ornament for Clear Realization explains only the boundaries of the four achieving is not correct because just by saying that “they exist [here and there]” without negating [where they do not] exist, one would not realize their boundaries easily. Even if one were to say that the Ornament for Clear Realization does present the boundaries, one has to explain them in terms of the order of the generation of the four achievings, not just conjoining it with the boundaries.

In the Great Commentary it says: “Even if one cites Acharya Dignaga’s text one can talk about the boundaries but it is not completely right to talk about them only in terms of the boundaries. It is difficult to assert them exactly in the way it is said in Dignaga’s text.” Gyeltsab then explains the meaning of the quotation. When someone indirectly reaches the Mahayana path of seeing first there is the entity of the path of accumulation on which the achieving of armor is generated. After that one engages in the path of preparation which is the achieving of engaging. There is an achieving between those of mercy and retention which pertains to the highest mundane dharma and it is with this that one directly progresses to the path of seeing. This is the achieving of collection. There are also other achievings of collection such as those included in the first ground. The achieving on the three pure grounds is the achieving of definite emergence/issuance. Therefore one has to know that this shows the four achievings with their divisions and illustrations.

Syllogisms:
The achieving on the path of preparation which has come in sequence is the achieving of armor because it is an achieving together with a great extensive thought of practicing the six perfections. The achieving included in the path of seeing is the achieving of engagement because it is an achieving that is distinguished by effort with which one directly enters the Mahayana to destroy the discordant class of the six perfections. The discordant class of the six perfections are miserliness, immorality, anger, laziness, distraction, and corrupt or harmful wisdom. The Mahayana path of meditation of the seventh ground and below are the achieving of collection/accumulation because it is an achieving distinguished by effort in completing an extensive support of the two accumulations.
The definition of the achieving that is the very entity of the distinguished paths of the eighth ground and of those above is the achieving of definite emergence because it is a yoga of a pure land that inevitably delivers one to the omniscient state.

The achieving of armor is extensive thought, the achieving of engaging is extensive application, the achieving of collection/accumulation is the two extensive accumulations, and the achieving of definite emergence is the inevitable deliverance of the omniscient mind.

The achieving of the three knowers as object and the achieving of the four trainings as a particularity are mutually inclusive but have different names. Why? Because they are given different name in dependence on the way in which they are presented. Concerning the achievings, they are discussed in terms of different illustrations; there are four because there are four illustrations. The achieving of armor is from path of accumulation up to the final continuum of a sentient being; the achieving of engagement is from the path of preparation up to the final continuum of a sentient being; the achieving of collection is from highest mundane dharma up to the final continuum of a sentient being; the achieving of definite emergence is from the eighth ground up to the final continuum of a sentient being. The achieving of armor, in simple terms, is the practice of the six perfections in such a way that the practice of each one includes all six perfections.

The achieving of engagement is a yoga of a bodhisattva that is the practice of any causal or resultant Mahayana subject by taking effort as the principal action. When it is divided there are nine objects in which it engages:

1. the concentration and the formless
2. the six perfections such as generosity
3. the superior paths of seeing, meditation, and no-more-learning
4. the four immeasurables such as love
5. the possession of the non-observable object
6. the pure aspects of the three spheres
7. the objects of intent
8. the six clairvoyances
9. the knower of all aspects

Friday morning class, May 15, 1998

REVIEW

Question: Please review the subjects covered during this week’s teachings.

Reply: We have looked at the observed objects of Mahayana achievings of which there are eleven. There were also various objections posited; for example, the Chittamatrins say that other powered phenomena are an observed object. However, the final observed object of a Mahayana achieving is the emptiness of true existence of the apprehender and the apprehended. Imaginary phenomena are of two types: one that is an object of negation and one that is not an object of negation. We then ask what are thoroughly established phenomena? They are the other powered phenomena’s emptiness of the imaginary phenomena that is the object of negation. This is the assertion of the Chittamatra school. Other powered phenomena and thoroughly established phenomena are both observed objects but other powered phenomena are an observed object that does not help to purify the meditator’s stains, while thoroughly established phenomena are an observed object that does help to purify the meditator’s stains.

According to the Svaatantrika-Madhyamikas all objects are observed objects of the Mahayana achievings but emptiness alone is an observed object that purifies the meditator’s stains in that by observing and meditating on emptiness the two obscurations can be eliminated.
There are eleven types of observed objects; these include virtue, non-virtue, and so forth. Just as virtue can be divided into four so too can non-virtue. One needs to know what is to be practiced and what is to be discarded. Virtue includes natural virtue, virtue by concomitance, virtue by motivation, and ultimate virtue. Likewise, non-virtue can also be divided into natural non-virtue, non-virtue by concomitance, non-virtue by motivation, and ultimate non-virtue. Natural non-virtue is present in the desire realm. Non-virtue by motivation is, for example, the motivation to kill. Non-virtue by concomitance is when the mental factors non-shame and non-embarrassment are present in the mind, whereby the primary mind that is concomitant with them also becomes non-virtuous. Ultimate non-virtue is cyclic existence; because ultimate virtue is nirvana it would follow that cyclic existence is the ultimate non-virtue.

Then there are the eight remaining observed objects: the mundane and supermundane, the contaminated and uncontaminated, the compounded and uncompounded, and the common and uncommon qualities.

Then there is the sixth topic, the objects of intent. These are divided into the three greatnesses:
- great heroic mind
- great abandonment
- great realization

The illustration of a great heroic mind is the great compassion of a buddha which is constantly present in his continuum and seeks to benefit all sentient beings. If sentient beings’ continua are not ripe there will be no effect even if a buddha gives many teachings out of compassion. In the eighth chapter of the Ornament it says: “If the seed is impotent even if the god’s make it rain there will be no effect. Likewise, even if the buddhas descend those who are not fortunate will not become noble.”

The illustration of great abandonment is the final abandonment: the complete abandonment of the two obscurations. These two obscurations are the afflictive obscurations, which impede the attainment of liberation, and the obscurations to knowledge, which impede the attainment of the omniscient state. The obscurations to knowledge are the obstacles to knowing the two truths simultaneously. Omniscient mind is one that knows the two truths clearly and simultaneously. The abandonment of the omniscient state has three qualities:
- abandonment
- abandonment such that it will not return
- abandonment without exception

The illustration of great realization is the realization of the selflessness of persons and the selflessness of phenomena. The realization of the omniscient state also has three qualities as does abandonment:
- realization
- realization of all
- realization without exception

The abandonments and realizations are said to be the achievement of the perfect welfare of others.

According to the Svatantrika-Madhyamikas the selflessness of persons is the emptiness of the person being self supporting substantially existent, while the selflessness of phenomena is the emptiness of phenomena being truly existent. This is so because this school posits the two selflessnesses in terms of the bases of emptiness and not in terms of the object that is to be negated.

The definition of the objects of intent is: the final result that one is intent on and in which one engages. The three greatness are the final result.
Who are others and what is their welfare? Others are sentient beings, while their welfare is the achievement of high status and definite goodness in their continua. This means that enacting the welfare of others is to lead other sentient beings to high status and then to definite goodness. In the context of mind generation it says “the aspiration for others’ welfare”; others are other sentient beings, while their welfare is their enlightenment.

The definition of a Mahayana achieving is: a yoga of a heroic mind that possesses the six greatnesses which is achieved in dependence on a Mahayana mind generation in order to accomplish the perfect welfare. A Mahayana achieving, therefore, includes the six greatnesses, which are six important things.

When the Mahayana achievings are divided by way of their presentation there are two: the achieving of the three knowers as an object and the achieving of the four trainings as a particularity. In the first chapter of the Ornament, in the section on the achieving of armor, there is a clear explanation of the six perfections but other than this there is no explanation of the six perfections in the first three chapters. “The achieving of the three knowers as an object” is said because there is only a presentation of the thirty topics representing the three exalted knowers in the first three chapters. “The achieving of the four trainings as a particularity” is said because in the fourth to seventh chapters there is a detailed explanation of the six perfections in detail. The conclusion regarding these two divisions is that they are divided only in terms of the way they are presented. It is important to know that if something is an achieving of the three knowers as an object it is pervaded by being an achieving of the four trainings as a particularity; and if something is an achieving of the four trainings as a particularity it is pervaded by being an achieving of the three knowers as an object. In short, in terms of presentation there are these two divisions of achieving but in terms of illustration there are four:

(1) the achieving of armor
(2) the achieving of engagement
(3) the achieving of collection
(4) the achieving of definite emergence

These are yet to be explained, however, we can ask: if something is a Mahayana achieving is it necessarily an achieving of armor? If something is a Mahayana achieving of armor it is necessarily a Mahayana achieving. Is the achieving of engagement an achieving of armor? Is the achieving of collection an achieving of armor? Is an achieving of definite emergence an achieving of armor? The answer is that if something is one of last three achievings it is necessarily also an achieving of armor. This is because if something is one of the last three achievings it is necessarily an exalted wisdom of a bodhisattva, while an achieving of armor and the exalted wisdom of a bodhisattva are mutually inclusive.

The definition of an achieving of armor is: a bodhisattva’s yoga that is sustained by an extensive thought of action desiring to practice inclusively the complete six perfections, such as generosity, within each of the six perfections. It is mutually inclusive with a bodhisattva’s exalted wisdom.

We can think how, for example, to combine the eating of breakfast with the practice of the six perfections, how to combine dressing with the practice of the six perfections, and so forth. If one can include all six perfections within the daily activities of washing our face, dressing, eating breakfast, and so forth, one has a Mahayana achieving. This depends entirely on one’s motivation. Any action such as typing, washing, etc. can be done in combination with the six perfections by motivating correctly and knowing how to include generosity and the other perfections in this action. For example, to combine the six perfections with the action of eating breakfast we can think of the 80,000 organisms in our body and, rather than merely thinking to fill our stomachs, eat to feed all these tiny organisms. While eating one can also practice the perfection of morality by thinking to observe the morality of abandoning miserliness. The perfection of patience is to remain undisturbed while eating breakfast; the perfection of effort is take pleasure in making the offering of food and practicing morality; the perfection of concentration is to eat breakfast with
single-pointed concentration; the perfection of wisdom is to develop the wisdom that knows individually by, for example, analyzing the benefits of eating correctly and the faults of not eating correctly. How to practice the six perfections while eating is explained in Pabongka Rinpoche’s Liberation in the Palm of the Hand. In short, we can combine the practice of the six perfections even with the simple action of eating breakfast. The six perfections can also be combined with the practice of the Guru Yoga of Lama Tsongkhapa. Absorb the guru into one’s heart where he remains and while eating imagine making offerings to Lama Tsongkhapa and in this way practice the perfection of generosity. When dressing we can think that we offer the clothes to the Lama Tsongkhapa in our heart or that we cloth the organisms in our body.

Question: Why does the definition of Dharma eye include the word “arya” while the other definitions do not?

Reply: In the definition of the Dharma eye the word arya is included because the Dharma eye is only possessed by aryas. Or else the word arya is included to distinguish it from the other eyes; while a buddha’s eye is possessed only by a buddha. The wisdom eye is also possessed only by aryas: its definition is a non-conceptual direct realization of all phenomena as non-truly existent. Saying that it is a non-conceptual exalted wisdom shows that it is possessed by an arya. A Dharma eye is that which realizes the sharp faculties and dull faculties of arya beings; because the object is an arya the word “arya” is also included in the definition. An ordinary being cannot realize the sharp and dull faculties of arya beings. A higher level of being can know lower levels clearly and precisely, while a lower level being cannot know higher levels clearly; this is related to faculty, ground, and person. A being with a lower faculty cannot realize the faculties of beings of a higher faculty. Beings of equal level understand their own level.

Question: Is an approacher to stream enterer who begins the path of preparation on a single seat an approacher to stream enterer when he reaches the highest mundane dharma?

Reply: Yes, because the boundary of approacher to stream enterer is the highest mundane dharma.

Question: Is non-returner who attains peace in that life one who migrates to the formless realm?

Reply: No, he is not. A non-returner who attains peace in that life is one who is born in the desire realm and after attaining the path of seeing goes on to attains nirvana. A person who has attained the path of seeing only has the support of the desire realm. During the life in which he attains the path of seeing he also goes to nirvana.

2B2C-1A2C-4B Explaining the individual natures
(see outline 14)
1 The extensive thought: achieving of armor
2 The extensive application: achieving of engagement
3 The extensive two collections: achieving of collection
4 Undoubtedly issuing the knower of all aspects: achieving of definite emergence

2B2C-1A2C-4B1 The extensive thought: achieving of armor
A Making a connection
B Root text: explanation of that which is achieving of armor
C Commentary

2B2C-1A2C-4B1A Making a connection

From among these, through the mere entity of joyous effort, the first, achieving of armor, is taught.

Gyeltsab says: “From among the achievings...” (and leaves it at that). Here the connection that is being made is between the general presentation of the achievings and the achieving of armor.

The definition of an achieving of armor is a yoga of a heroic mind sustained by the extensive action of a thought desiring to practice the six perfections by including all six perfections in each perfection.

2B2C-1A2C-4B1B Root text: explanation of that which is achieving of armor

By their combinations in six ways (with) generosity and so forth individually, that which is achieving of armor is explained like that by six sets of six.

The “six sets of six” means that when a bodhisattva has the achieving of armor he practices all six perfections in each perfection. For example, he practices the generosity of generosity, the morality of generosity, the patience of generosity, the effort of generosity, the concentration of generosity, and the wisdom of generosity and so forth, for all six perfections for a total of thirty-six achievings of armor.

Gyeltsab comments on the achieving of armor saying that it is explained in six groups of six. The achieving of armor is suitable to be divided into six because each of the six perfections includes all six perfections, such as the generosity of generosity and so forth. In sutra it says: “When a great bodhisattva practices the perfection of wisdom he mentally pays attention to omniscient mind for which he practices generosity and so forth. These activities are done perfectly and the roots of virtue created are taken as a common object to be dedicated to peerless enlightenment. Making such a dedication is the practice of generosity. This is the armor of the perfection of generosity.”

This passage presents the three attributes of generosity:
(1) its entity: the intention to give
(2) its companion: a non-conceptual exalted wisdom
(3) the merit from generosity is dedicated to the final goal, omniscient mind
Applying in the same way to others

Both outlines ‘2B2C-1A2C-4B1C-1A Applying to generosity’ and ‘2B2C-1A2C-4B1C-1B Applying in the same way to others,’ seem to be contained in the following paragraph:

1) When making charity such as generosity of Dharma, 2) abandon the mental attention of hearers and so forth, 3) patiently accept unpleasant speech by all beings, 4) generate aspiration, and 5) (by) one-pointedness which is unmixed with other vehicles, 6) dedicate for highest perfect complete enlightenment respectively, act by the very armor which 1) does not refer to the objects to be given and so forth, and similarly 2) safeguards ethics, 3) completes tolerance, 4) applies joyous effort, 5) achieves the concentrations, and 6) meditates on wisdom.

The entity of generosity is the intention to give. The objects to be given can be of many types: Dharma, protection against fear, and material things. It is important to have the intention to give these to others. The generosity of Dharma means to give teachings with a good motivation and the intention to give Dharma. In brief, it means to explain Dharma. The generosity of Dharma can also be practiced by reciting by heart a text or prayer out loud while imagining that all sentient beings listen to one’s words. The generosity of giving protection means to protect others’ lives or to protect them from danger. It is also called the generosity of giving freedom from fear. The generosity of giving material things includes giving such objects as food, clothes, bedding, and so forth. It is important that the object benefits the recipient; if one gives an object that harms it is not generosity. Whatever object is given it is important to have the sincere intention to give and to understand that the donor, the recipient, and that given are not truly existent. Having practiced generosity we should dedicate the merit to the attainment of peerless complete enlightenment.

Morality in this context refers to the bodhisattva vows. When we have these vows we should not think to practice generosity merely in order to achieve our own liberation as do the hearers. Gyeltsab says that one should not engage in these practices for one’s own welfare alone; in other words, one should do them out of self-cherishing. Although Gyeltsab only mentions the morality of keeping the bodhisattva vows, the practice of morality includes all three types:

(1) the morality of restraining from non-virtue
(2) the morality of collecting virtue
(3) the morality of working for the welfare of sentient beings

The practice of patience is to be patient, for example, when hearing unpleasant words spoken by others. As it says in Haribhadra’s text: “Patiently accept unpleasant speech by all beings.” There are three types of patience:

(1) the patience of not retaliating against harm, this includes patiently accepting the unpleasant speech of other beings
(2) the patience of voluntarily bearing difficulties regarding Dharma which includes patience regarding the meaning of emptiness
(3) the patience of accepting suffering or hardships

In each case one must have a mind that is undisturbed and opposes anger. Patience should be sustained by a wisdom realizing, for example, the selflessness of phenomena. Mainly one should refrain from verbally or physically harming others, therefore, when someone harms us we should be patient. In this way, one should benefit others as much as one can. These are the different aspects of practicing patience.

In regard to effort one should generate an aspiration for all Mahayana Dharma and joyfully engage in its practice. There are various types of effort such as armor-like effort, the effort of continuous application (action), the effort of application (action) with respect, and the effort of
working for the benefit of sentient beings. In all cases, this effort is characterized by joy in practicing virtue.

Gyeltsab says that one should develop concentration with which one can dedicate all one’s merit single pointedly to the bodhisattva vehicle for the attainment of complete enlightenment. In addition to these other perfections, one also needs a wisdom that knows that the three spheres are empty of true existence. One should not observe the three spheres as truly existent; in this way one puts on the armor of the six perfections. The wisdom realizing the emptiness of the three spheres is applicable to all six perfections. For example, in the practice of generosity where there is a donor, a recipient, and the action of giving, all these should be seen as empty of true existence. Just as these three spheres are seen to be like this, so too should one practice the remaining five perfections. For example, when practicing morality one should include the practice of all six perfections in it and practice it with the understanding that the three spheres lack true existence.

Concentration is of different types:
1. the concentration abiding happily in this life (seen phenomena)
2. the concentration achieving higher excellent qualities
3. the concentration of working for the welfare of sentient beings

The concentration abiding easily and happily in this life means that someone with calm abiding knows that the body is a visible phenomena of this life and through concentration abides easily and happily in this life. The concentration achieving higher excellent qualities is a concentration on the basis of which one can attain higher qualities. The concentration of working for the welfare of sentient beings means to remain undistracted while benefiting other sentient beings.

Wisdom is also of three types:
1. the wisdom analyzing a conventionality
2. the wisdom analyzing an ultimate
3. the wisdom analyzing the welfare of sentient beings

A wisdom analyzing a conventionality is a wisdom with which one analyzes an object that is a conventional truth. A wisdom analyzing an ultimate is a wisdom that reflects on the selflessness of persons or the selflessness of phenomena. A wisdom analyzing the welfare of sentient beings is a wisdom that knows that there are numberless ways of helping sentient beings.

Summary

Thus, when the perfection of generosity and so forth, combine with generosity and so forth individually, although by six sets of six there are indeed thirty-six types, because of concordant qualities, generosity and so forth, achieving of armor is of six types.

Gyeltsab says that if they are classified by way of their isolates there are thirty-six achievings of armor which are the six of generosity up to the six of wisdom. Each of these six includes a set of six, therefore there are a total of thirty-six. However, one can also say that there are the following six achievings of armor:
1. the achieving of the armor of generosity
2. the achieving of the armor of morality
3. the achieving of the armor of patience
4. the achieving of the armor of effort
5. the achieving of the armor of concentration
6. the achieving of the armor of wisdom

Here there are only six because in terms of being an armor for oneself the six perfections included in the perfection of generosity have the same features as generosity itself. Likewise, the six groups of six belonging to morality have the same features as morality and so forth.
First disputant: Saying that “the six generosities have the same features as generosity and so forth up to the six wisdoms having the same features as wisdom” is a proof that establishes that there are thirty-six [achievements of armor]. Taking that as a proof for establishing that the achieving of armor is definite to be [only] six is wrong. [If it were not wrong] you would have to say that the practice of the compendium of the six generosities is an achieving of armor of generosity.

Second disputant: That is because I think that the armor of generosity included in the achieving of the armor of generosity and generosity are one.

We say that in reality it is true that there is a difference between the generosity included in the achieving of the armor of generosity and ‘generosity. We can ask ourselves: “Are the generosity included in generosity and generosity the same or different?” There is no fault in this, one can say that the generosity of generosity and generosity are one.

Gyeltsab explains that the passage “When practicing generosity, such as the generosity of Dharma, abandon the mental attention of hearers and so forth” means that abandoning the aspiration for personal liberation is to be known as the uncommon branch; this is mentioned in the explanation on the bodhisattva vows. In the case of the vows of individual liberation the uncommon branch is to abandon harmful actions and their bases. Harmful actions include the three non-virtuous actions of body and the four of speech. By killing, stealing, or committing sexual misconduct, one causes harm to others. Also by lying, divisive speech, harsh words, and idle talk one harm others. The bases of these actions is the three non-virtuous actions of mind: covetousness, malice, and wrong view. These too are to be abandoned. The way of practicing the six perfections, from generosity onward, is to be learned in dependence on the presentation of general behavior; this refers to Lama Tsongkhapa’s Great Exposition of the Stages of the Path (lam rim chen mo).

In his text Ocean Playground Jetsun Choky Gyeltsen explains why there are six perfections, rather than five or seven. These six are explained in detail on the basis of quotations from the Ornament for Sutra.

We should think about how, in our daily life, to practice the six perfections in each of the perfections.

Tuesday morning class, May 26, 1998

PART TWO

2B2C-1A2C-4B2 The extensive application: achieving of engagement
A Making a connection
B Root text
C Commentary

2B2C-1A2C-4B2A Making a connection

With regard to wearing armor like that, since engagement arises, second, achieving of engaging.

Gyeltsab says, after wearing such armor one has to engage in the practices of the Mahayana path. Just as when a king has organized his army he then engages in battle, likewise a bodhisattva first puts on the armor of the six perfections and then engages in practice.

2B2C-1A2C-4B2B Root text

Concentrations, formless, generosity and so forth, path, love and so forth, possessing non-reference, completely pure three spheres, objects of intent, six clairvoyances, and exalted
The achieving of engaging is also called ascendancy because by way of it one ascends to higher qualities. There are nine divisions of the achieving of engaging listed in the root text:

1. the concentrations and formless absorptions
2. generosity and so forth
3. path (path of seeing, path of meditation, path of no-more-learning, and the distinguished path)
4. the four immeasurables (immeasurable love, compassion, joy, and equanimity)
5. possessing non-reference (engaging an object that is not truly existent)
6. the three completely pure spheres (of each of the six perfections)
7. the objects of intent (the object sought)
8. the six clairvoyances
9. the mode of achieving of engaging of an exalted knower of all aspects

Gyeltsab says that the engaging itself in the cause is an engagement in result. Although this is so, when divided in terms of objects there are nine divisions. Gyeltsab sets out a syllogism: the concentrations and formless absorptions included in the Mahayana path and the practices of the path, such as generosity, these eight, and the practices belonging to the result which is the mode of achieving of engagement of an exalted knower of all aspects (subject) are to be known as ascendancy because these practices are an achieving with which one increases one’s realizations of the Mahayana included in causes and results. The nine achievings of engaging can be condensed into causes, or path, and result; these are the subject of the syllogism. These are to be known as ascendancy because with them one goes upward in the sense that one’s realizations increase. In sutra it says: Shariputra asked, “Venerable Pourna, what is the meaning of engaging and ascending in the bodhisattva vehicle?” Pourna replied, “Venerable Shariputra, with regard to this a great bodhisattva should practice the perfection of generosity and should be isolated from desire. He should also be isolated from non-virtuous dharmas. He should have investigation and analysis. He should have joy and happiness that come from the isolation [from the afflictions of the desire realm]. He should thus actualize the first concentration and abide with it.”
(3) the achieving that distinguishes both the mundane and supermundane path from the Hinayana vehicle
The mundane path belonging to a Mahayana support is a support, while the supermundane path is the supported. The supermundane path includes the four immeasurables and so forth.

Engaging in a supermundane path is of four types:
(1) the practices of the six perfections which are the means to attain the perfect welfare of oneself
(2) the path of seeing and so forth which are the means to attain perfect abandonment
(3) immeasurable love and the other three immeasurables which are the means to accomplish the welfare of others
(4) the realization of emptiness, which observes phenomena as not existing truly, purifies and perfects the welfare of others

In brief, the means of perfecting the welfare of others is not only the realization of emptiness but also the four immeasurables.

The achieving that distinguishes both the mundane and supermundane path from the Hinayana vehicle has three characteristics:
(1) total purity of the three spheres of true existence - this is applied to all six perfections
(2) a dedication of all one’s roots of virtue to the attainment of highest enlightenment - this covers the three greatnesses, the objects of intent, whereby all one’s roots of virtue are transformed into a means to attain the objects of intent
(3) the training in the six clairvoyances in order to quickly complete the two collections

(b) That engaging in the result of the Mahayana path is that which observes all the aspects of omniscient mind, to abide perfectly with this observation, and to achieve them.

2B2C-1A2C-4B2C-2 Explanations about the difficult realization in particular (Explaining the concentrations and the formless absorptions)

This outline does not appear in Haribhadra’s Commentary Clarifying the Meaning. To explain the concentrations and formless absorptions in detail Gyeltsab divides this subject into:

A Cause
B Entity
C Effect

2B2C-1A2C-4B2C-2A Cause

First one has to become expert in the sequence for developing the calm abiding and superior insight that are included in the preparation of the first concentration. Without knowing this sequence well, one will not understand the general presentation of the path; therefore analyze these well. In general, one first achieves calm abiding and then meditates on superior insight. However, before achieving an actual calm abiding one can attain an approximation of superior insight. In the Bodhisattvacharyavatara Shantideva says: “By possessing excellent calm abiding one will attain superior insight through which one will understand that all the afflictions are to be destroyed. Therefore, first seek calm abiding.”

Calm abiding and superior insight are included among the preparations for the first concentration. The calm abiding that is included in the preparations for the first concentration is called “the mental contemplation of a mere beginner that is a preparation for the first concentration.” The preparation of the first concentration that is superior insight is called “a preparation that destroys the afflictions”; however, there is no pervasion that such a preparation always destroys the afflictions.

In brief, one first attains calm abiding followed by the attainment of superior insight. With the attainment of calm abiding alone one cannot destroy the afflictions, one merely achieves a single pointed concentration. Only with superior insight can one actually begin to destroy the afflictions; however, one must first attain calm abiding. In the Heap of Jewels Sutra (Ratnakutasutra)
it says: “Abiding in pure morality, one will attain a concentration after which one should achieve wisdom.” This shows that calm abiding is to be generated on the basis of certain conditions, such as the place and so forth. However, the main condition is the keeping of pure morality. In his *Stages of Meditation* Kamalashila says: “Those who would like to gain a thoroughly pure exalted wisdom through abandoning all obscurations should abide in calm abiding. Then they should meditate on wisdom.” This quotation also shows that one must first attain calm abiding before attaining superior insight.

Gyeltsab says that this is merely the order of newly attaining calm abiding and superior insight, i.e., this is the way they are attained for the first time. However, having attained them there is no longer a definite order. If someone says that one can realize superior insight before an actual calm abiding, he is to be known as one who is motivated by ignorance.

Someone asks: “What about the citation in *Abhidharmasamuccaya* that says: ‘Some attain superior insight without attaining calm abiding. A person who attains superior insight then exerts effort in calm abiding.’?” This passage does not mean that that person has not attained a calm abiding included in the preparation of the first concentration. It only means that that person has not attained a calm abiding that belongs to the first actual concentration and those above. That person directly realizes the four noble truths in dependence upon the superior insight that belongs to the preparation of the first concentration, after which he achieves the calm abiding that belongs to the first actual concentration.

Also in the *Actual Grounds* (one of the five treatises of Asanga) it says: “Furthermore, one realizes well (the subjects) from true sufferings up to true paths according to their correct meaning (there is a superior insight belonging to the preparation of the first concentration, the Not Unable preparation, that is a superior insight observing the four noble truths) but still [a superior insight belonging to] the first concentration and so forth are not attained. Immediately after reaching the first concentration one does not have a discrimination of phenomenon (superior insight). Only by depending on a higher wisdom one can join oneself to a higher mind (insight).” This means that there is a preparation of the first concentration that is superior insight which is attained as a first step before attaining the first concentration. Since there is a calm abiding belonging to the actual absorption of the first concentration it may appear that first comes superior insight and then calm abiding.

Someone who has not studied well the presentation of the path according to the *Abhidharma* says: “The first step of the preparation for the first concentration is the mental contemplation of individual knowledge of the character.” However, that is not right. The first step is the mental contemplation of a mere beginner that reflects on the preparation for the first concentration. The person who says that is someone who has not understood that there are two sequences of attaining calm abiding and superior insight. This means that first there is the mental contemplation of a mere beginner that reflects on the preparation for the first concentration; this is a preparation of the first concentration belonging to calm abiding. Only after gaining this preparation, which is calm abiding itself, does one go on to the preparation that destroys afflictions. This person has also not understood the meaning of the stanza in the *Ornament for Sutra* regarding calm abiding that says: “Through familiarity one has non-application. Then one attains a great pliancy of body and mind and a mental contemplation.” This passage refers to the preparation that is calm abiding and the preparation that destroys afflictions. The calm abiding taught here in *Ornament for Sutra* is the same as that taught in *Hearer’s Grounds* regarding the nine stages of calm abiding. Having attained an actual calm abiding one goes on to the mental contemplation of individual knowledge of the character. In *Hearer’s Grounds* it says: “As long as one does not have a single-pointed concentration one cannot achieve the mental contemplation of individual knowledge of the character. When one attains single-pointed concentration, calm abiding, one is a beginner. From being a beginner one goes on the mental contemplation of individual knowledge of the character. For this reason, first one needs calm abiding and only then can one go on to the next step, the mental contemplation of individual knowledge of the character.” In *Hearer’s Grounds* it also says: “A yogi who wishes to be free from attachment to the desire realm should exert effort in the seven types of mental contemplation.”
What are the seven types of mental contemplation?
(1) the mental contemplation of individual knowledge of the character
(2) the mental contemplation arisen from belief
(3) the mental contemplation of thorough isolation
(4) the mental contemplation of withdrawal or joy
(5) the mental contemplation of analysis
(6) the mental contemplation of final training
(7) the mental contemplation that is the result of final training

The mental contemplation of individual knowledge of the character is not actual superior insight. Superior insight is only attained with the mental contemplation arisen from belief.

Tuesday afternoon class, May 26, 1998

Jetsun Chokyi Gyeltsen says: “If the attainment of superior insight is preceded by the attainment of calm abiding, what is the mode of achieving that calm abiding?” Regarding this, there is one mode taught in *Madhyantavibhanga* and a second mode taught in *Abhidharmasamucchaya* and *Ornament for Sutra*. The first mode is to achieve calm abiding by means of applying the eight antidotes against the five faults. In *Madhyantavibhanga* it says: “Calm abiding arises from a cause which is the eight applications of [the antidotes against] the five faults”.

The five faults are (see *Ocean Playground* page 401):
(1) laziness which is adverse to the development of concentration
(2) forgetting the instructions that one has received about entering concentration
(3) mental laxity and excitement while concentrating
(4) not applying an antidote when laxity and excitement occur
(5) applying an antidote when there are no obstacles, laxity and excitement, to the concentration

In *Utanamche* it says: “Laziness, forgetting the instructions, mental laxity and excitement, not applying when necessary, and applying when not necessary: these are the five faults.”

There are eight antidotes, the first four of which counteract the first fault, laziness, while the remaining four counteract the other four faults. When one has attained pliancy but experiences unhappiness in concentration this is laziness. It should be removed by generating (a) pliancy. To do so one should exert (b) effort in the concentration. To generate this effort one needs (c) the aspiration seeking concentration. To generate this one needs (d) the faith that is happy upon seeing the benefits of concentration. In *Madhyantavibhanga* it says: “Abiding, abiding on that, cause, and result: these are the four against the first fault.” “Abiding” means that one needs an aspiration seeking concentration; “abiding on that” means that one needs effort; “cause” is the cause of aspiration which is faith; “result” is the result, pliancy, that comes from exerting effort. The remaining four antidotes against the four faults are (e) mindfulness which counters the fault of forgetting the instructions; (f) introspection which counters laxity and excitement as with this one checks to see if these have arisen; (g) the intention of applying the antidote which counters the non-application of the antidote to laxity and excitement; and (h) remaining in equanimity which counters the application of the antidote when neither of the two obstacles have arisen, by this the mind remains in its own state. In *Utanamche* it says: “Not forgetting the observed object, checking whether laxity and excitement arise, applying the antidote to the obstacles, and remaining in the natural state when there are no obstacles.” This equanimity is that of non-application, it is the eleventh of the eleven virtuous mental factors.

The second mode accords with the teaching in *Abhidharmasamucchaya* and *Ornament for Sutra* that one has to achieve calm abiding through the nine mental stages. All nine mental stages are meditative stabilization, although the beginning stages are not stable while the later ones are stronger.
The nine mental stages taught in *Abhidharmasamucchaya* are:

1. setting the mind
2. continuously setting
3. setting with interruption
4. close setting
5. subduing the mind
6. pacifying the mind
7. thorough pacifying
8. single-pointed setting
9. meditative equipoise

Setting the mind means to place the mind on any object, such as a statue, and observe it. This observation should be done carefully with a meditative stabilization. In *Ornament for Sutra* it says: “Paying attention to the observed object.”

Continuously setting the mind means to continue to meditate on the observed object. In *Ornament for Sutra* it says: “The continuation should not be distracted.”

Setting with interruption means that having set the mind on an object there is interruption and one needs to reset the mind on the object of meditation. In *Ornament for Sutra* it says: “Realizing quickly that there is distraction once again one sets [the mind] on the object of meditation.”

Closely setting means that the concentration on the object is intensified. In *Ornament for Sutra* it says: “One with intelligence should increase his concentration more and more by bringing the mind inside.”

Subduing the mind means to generate pleasure in concentrating on an object that has been kept since the beginning especially when there are obstacles such as excitement and laxity. One keeps one’s attention on the observed object and tries to subdue the mind. In *Ornament for Sutra* it says: “Subduing the mind means that by seeing the excellent benefits of concentration one subdues one’s mind through concentration.”

Pacifying the mind means that while one meditates if one has mental excitement one thinks of the disadvantages of distraction and does not dislike continuing the concentration. In this way one maintains the observed object of one’s concentration. In *Ornament for Sutra* it says: “By seeing the disadvantages of distraction one dispels a lack of joy.”

Thoroughly pacifying means that while one concentrates if mental unhappiness arises one pacifies this obstacle and carries on. In *Ornament for Sutra* it says: “Whenever covetousness or mental unhappiness arises one immediately pacifies it.”

Single-pointed setting means to keep one’s mind on the object and with effort to continue the meditation as long as one wishes. In *Ornament for Sutra* it says: “One has the effort with which one easily concentrates.”

Meditative equipoise is to be able to effortlessly continue the concentration as long as one wishes. In *Ornament for Sutra* it says: “This familiarity does not require the application of antidotes.” The ninth mental stage, single-pointed concentration, is a mind of the desire realm. With this one is able to continue to concentrate as long as one wishes.

When one attains calm abiding one achieves (1) a pliancy of body and mind, (2) a preparation for the first concentration, (3) a wisdom arisen from meditation, and (4) a consciousness of an upper level. In *Ornament for Sutra* it says: “After that pliancy of the body and mind are attained, at which point a mental contemplation is attained.”

On the basis of calm abiding one analyzes an object. After some time, through the force of that analysis, a wisdom individually realizing the object sustained by a physical and mental pliancy arises; when this happens a mental contemplation of individual knowledge of the character is attained. This will be explained later.

The definition of calm abiding is: a result of developing the nine mental stages and having great pliancy of body and mind.

This physical and mental pliancy enables one to keep the mind on an object as long as one wishes. In short, when in dependence on the nine mental stages one gains the capacity to concentrate as
long as one wishes together with a physical and mental pliancy one has attained calm abiding. There are two types of calm abiding: one that observes conventional truth and one that observes ultimate truth.

The etymology of calm abiding is that one has a calm mind that does not stray from its object of meditation and is controlled; with this calm mind one is able to remain single-pointedly on the object.

With calm abiding one analyzes the observed object, that analysis induces bliss, and with this one achieves a wisdom that is able to individually analyze all objects; when such a wisdom arises one has attained superior insight. This superior insight is of two types: one observing conventional truth and one observing ultimate truth. It is so-called because this wisdom sees higher than others.

We have gone through these two modes in order to clarify what Gyeltsab only briefly mentions. Gyeltsab then says that having generated the physical and mental pliancy that is calm abiding, one should go on to develop the mental contemplation of individual knowledge of the character and the remaining six mental contemplations mentioned previously in order to overcome the afflictions of the desire realm.

The first mental contemplation, the mental contemplation of individual knowledge of the character, functions to see the desire realm as coarse and the first concentration as peace. On this basis one then analyzes this and comes to understand that the desire realm is coarse because there are many sufferings, such as sickness and a short life, while the first concentration is peaceful in that it is free of manifest suffering. Therefore, one thinks the desire realm is unpleasant and the first concentration is pleasant. The mental contemplation of individual knowledge of the character is an approximate superior insight; it is not an actual superior insight. This analytical thought is a mixture of hearing and thinking. Such a person analyzes the particulars of the two realms, when this wisdom of analysis induces a bliss on the basis of calm abiding one achieves superior insight and the mental contemplation of belief. With the mental contemplation arisen from belief one attains a wisdom arisen from meditation. At this point one also has a union of calm abiding and superior insight.

Then comes the mental contemplation of thorough isolation and the mental contemplation of withdrawal-joy which abandon respectively the two groups of afflictions of the desire realm: the group of the great great, middle great, and small great afflictions and the group of great middle, middle middle, and small middle afflictions.

The mental contemplation of thorough isolation can be divided into six parts: three uninterrupted paths and three liberated paths. The order of the three uninterrupted paths is: small small, middle small, and great small. These three respectively oppose the great great, middle great, and small great afflictions at which point a liberated path arises after each abandonment. Then there is the group of great middle, middle middle, and small middle afflictions which are opposed by the mental contemplation of withdrawal-joy which is also composed of three uninterrupted paths and three liberated paths. When the small middle uninterrupted paths opposes the great middle afflictions a liberated path arises, when the middle middle uninterrupted paths opposes the middle middle afflictions a liberated path arises, and when a great middle uninterrupted paths opposes the small middle afflictions a liberated path arises.

Then comes the fifth mental contemplation, the mental contemplation of analysis. At this point the person thinks that perhaps all the afflictions of the desire realm have been abandoned and checks whether this is in fact so. However, he discovers that he has not yet abandoned all the afflictions of the desire realm and that there are more to be abandoned. The remaining afflictions are the great small, middle small, and small small ones. He then goes on to the mental contemplation of final training which abandons these small afflictions using the three great levels of uninterrupted paths. The small great mundane path opposes the great small afflictions of the desire realm and achieves a liberated path; the middle great mundane path opposes the middle
small afflictions and achieves a liberated path; the great great mundane path opposes the small small afflictions and achieves a liberated path.

Therefore, there are nine uninterrupted paths and nine liberated paths. If we ask “To what does the ninth liberated path belong? To the preparation or to the actual concentration?” The answer is that it belongs to the actual absorption of the first concentration. However, there is some discussion about this; for example, in the Vaibhashika school it is said that for some people it belongs to the actual absorption of the first concentration while for others it belongs to the preparation of the first concentration. They say that if a person on this ninth liberated path is dull facultied he does not have the capacity to transform his sense faculties from those of the level of the preparation to those of the actual concentration. The feeling that exists in the preparations is equanimity while the feeling in the mere actual first concentration is happiness. A dull facultied person is unable transform this equanimity into happiness. However, a sharp facultied person on the ninth liberated path already has the happiness feeling of the first concentration.

In short, the mental contemplation that of the result of final training is the ninth liberated path; it is the actual absorption of the first concentration. A person on the mental contemplation of analysis checks whether there are any more afflictions present in his mind and sees that the small level of afflictions of the desire realm are still present and goes on to the mental contemplation of final training. Then passing through the three uninterrupted paths and three liberated paths he achieves the mental contemplation of the result of final training which is the actual absorption of the first concentration.

When progressing from one concentration to another and up through the formless absorptions one has to pass through each of the eight mental contemplations each time. Therefore, for each of the remaining levels there are also eight mental contemplations: the seven mental contemplations of (1) individual knowledge of the character, (2) arisen from belief, (3) thorough isolation, (4) withdrawal-joy, (5) analysis, (6) final training, and (7) the result of final training plus (8) the mental contemplation of a mere beginner which is calm abiding. Although we generally say “seven” mental contemplations one can also say eight depending on whether or not one counts the mental contemplation of a mere beginner, which is calm abiding. The last mental contemplation, that of the result of final training, is the actual absorption of the respective concentration or formless absorption that has been achieved.

In addition, there is the preparation called Not Unable which is unique to the first concentration; it is not present in the preparations of the other concentrations nor those of the formless absorptions.

Wednesday morning class, May 27, 1998

The first of the eight mental contemplations is calm abiding itself; it is known as a basis branch because it is free from attachment to the lower level. Haribhadra, the author of Commentary Clarifying the Meaning, does not assert a mind-basis-of-all, a seventh consciousness, that is separate from the six divisions of consciousness. Those who do assert such a consciousness assert that the preparations of the first concentration suppress all manifest afflictions of the desire realm except for afflicted mind. In the Thirty Stanzas on Chittamatra it says: “Wherever one is born, one belongs to that level.” In other words, wherever one is born, one’s support (body) belongs to that level. Furthermore, that afflicted mind is explained to not be manifest only on three occasions: Without Discrimination, the Absorption of Without Discrimination, and the absorption of cessation. On other occasions the afflicted mind is manifest.
B Formless

2B2C-1A2C-4B2C-2B1A Concentrations
1 Cause: absorption
2 Effects: by particulars of rebirth are two

The definition of a causal absorption is: that which is concomitant with a single-pointed mind that has gone beyond the lower level by means of its branches. An actual absorption of a concentration that is a causal absorption is one that is characterized by its respective branches.

2B2C-1A2C-4B2C-2B1A-1 Cause: absorption

"Effects by particulars of rebirth" refers to the innate qualities that are attained merely by being reborn in a particular level. There is a maturation result due to meditating on a concentration that is a causal absorption and a result similar to the cause; for example, the rebirths beginning from Brahma Class up to Akanishta (Not Low). Sentient beings who take rebirth in these levels have the respective qualities of that level. The maturation cause is meditation on an actual concentration in a previous life; it brings the result of rebirth in these concentrations.

2B2C-1A2C-4B2C-2B1A-2 Effects: by particulars of rebirth are two

The formless absorptions that are causal absorptions are explained in terms of their observed objects. A causal absorption of a formless absorption is one that is concomitant with a single-pointed mind that has gone beyond the lower level. In the case of the formless absorptions "gone beyond the lower level" is defined in terms of their observed objects; while in the case of the form realm "gone beyond the lower level" is defined by the branches of the concentrations. In order to attain the result of rebirth in the formless realm there is a maturation cause and a cause similar to the result. These two causes created in a previous life bring rebirth in the various levels of the formless realms. Beings born there have the innate qualities of their respective level.

One emerges from a lower concentration to a higher concentration in dependence upon their respective coarse branches. The concentrations are called "gone beyond by means of the branches" because each of the four levels of concentrations has its own particular branches. In the formless absorptions there are no such branches, one goes beyond a lower level to a higher level in terms of their observed objects, therefore one is said to "go beyond due to the observed object."

2B2C-1A2C-4B2C-2B2 Divisions

There are four concentrations, beginning from the first, and four formless absorptions, beginning from Limitless Space. The four concentrations are the first, second, third, and fourth concentrations. The four formless absorptions are Limitless Space, Limitless Consciousness, Nothingness, and Peak of Existence. The Peak of Existence is also called Without Discrimination Not Without Discrimination because while there is no gross discrimination there is still subtle discrimination at this level.

The actual absorptions of the four concentrations and the first three of the four formless absorptions are of three types: afflicted, pure, and uncontaminated. The Peak of Existence is either afflicted or pure, it cannot uncontaminated because its observed object is not clear and therefore it not suitable as a support for a supermundane path which is very clear. According to both Abhidharmasamucchaya and Abhidharmakosha there is no Peak of Existence that is uncontaminated. We can also say that both Hinayanists and Mahayanists agree that there is no uncontaminated absorption of the Peak of Existence. However, Haribhadra says that a bodhisattva who is skilled in method can use the mind of the desire realm and the mind of the Peak of Existence as a support for the uncontaminated path. But such a meditation is not possible for those following the hearer's vehicle. According to the common assertions of Abhidharmakosha and Abhidharmasamucchaya a person on the hearer's vehicle cannot generate an uncontaminated path on the support of a mind.
of the desire realm or a mind of the Peak of Existence because the mind of the desire realm is very
course and cannot be transformed into the entity of an uncontaminated path while the mind of the
Peak of Existence is not clear with respect to its observed object and therefore cannot be
transformed into the entity of an uncontaminated path. However, a bodhisattva can do this; this
will be discussed in the fifth chapter in the context of the alternations of a final absorption, one
which is mixed with the mind of the desire realm and one which is mixed with the absorption of
cessation. There are nine final absorptions: the four concentrations, the four formless absorptions,
and the absorption of cessation. One can alternate these with a mind of the desire realm. Another
way to alternate is to generate the absorption of cessation in the interval between the
concentrations and formless absorptions; for example first concentration, absorption of cessation,
second concentration, absorption of cessation, third concentration, absorption of cessation, and so
forth up to the fourth formless absorption. Therefore, a bodhisattva who relies on the mind of the
desire realm and the mind of the Peak of Existence is one who engages in these alternating
meditations.

The preparations for the first concentration are of two types: uncontaminated and pure. The
preparations for the remaining concentrations are not uncontaminated but only pure. The
preparation for the first concentration that is uncontaminated is called Not Unable. There is no
such preparation among the preparations for the other concentrations. This is asserted because
while this preparation of the first concentration takes the four noble truths as an object of
meditation no other preparation does so. The preparations are not afflicted because the
preparations are an antidote to the afflictions. Gyeltsab says that there are no afflicted
preparations because they are the means by which one becomes separated from attachment. For
example, the attachment which is an affliction of the desire realm cannot be an antidote to
attachment.

There is an uncontaminated preparation of the first concentration because a stream enterer
and so forth who have not attained an actual concentration generate the supermundane path on
the support of a preparation of the first concentration (Not Unable). There is no need to depend on
other preparations in order to generate a supermundane path.

The actual concentrations do not need to act as a means to separate from attachment to a
lower level because it is only by way of the preparations that one becomes free from the lower
level and at the time of an actual concentration one is already separated from attachment. Actual
concentrations that are contaminated do not act as an antidote to the afflictions of their own or
higher levels. Actual concentrations that are uncontaminated do oppose the afflictions of their
own and higher levels, therefore they are paths that separate from attachment. Therefore, with an
uncontaminated actual concentration one can achieve higher excellent qualities and they are also
a path to abiding happily in this life (literally in seen phenomena). Contaminated actual
concentrations and uncontaminated actual concentrations refer respectively to the mundane path
and supermundane path; each of which has its’ own respective objects of abandonment. One
object of abandonment is to be abandoned by a mundane path and one is to be abandoned by a
supermundane path. The manifest attachment to the desire realm is an object to be abandoned by
a mundane path. Other objects of abandonment are to be abandoned by the uninterrupted
supermundane paths. With a supermundane path one can eliminate the afflictions of its own and
higher levels.

The first concentration is of two types:
(1) a mere actual concentration
(2) a special actual concentration
A mere first actual concentration is one that is concomitant with a single-pointed mind that is
distinguished by being separated from the attachment of the desire realm through the branches of
antidote, investigation and analysis, and by possessing the benefit branch, the joy and happiness that are generated from isolation.

A special first actual concentration is one that is concomitant with a single-pointed mind that is distinguished by being separated from the attachment to investigation by the branch of the antidote, analysis, and by possessing equanimity feeling.

The first actual concentration has five branches:
(1) investigation
(2) analysis
(3) joy
(4) happiness/bliss
(5) meditative stabilization

When condensed there are three branches:
(1) antidotal branch
(2) benefit branch
(3) basis branch

The antidotal branch is composed of investigation and analysis; the benefit branch is composed of joy and happiness; and the basis branch is meditative stabilization.

The difference between the mere and special first actual concentrations is that the special first actual concentration considers investigation as gross and abandons it with the antidote of analysis. The special first actual concentration is said to possess equanimity feeling because one abandons investigation by way of analysis, which is together with equanimity feeling. Suffering feeling was abandoned previously and if there was happy feeling there would be the risk of generating attachment; for this reason the feeling here is that of equanimity.

Beginning from the second concentration upward there is no division into mere and special actual concentrations because the branches of the second concentration upward cannot act as antidotes to other branches of their own level.

The second concentration is distinguished by internal clarity, which is an antidotal branch by which one is separated from attachment to investigation and analysis, and by possessing the benefit branch that is the joy and happiness that are generated from meditative stabilization.

The second concentration has four branches:
(1) internal clarity - antidotal branch
(2) joy and (3) happiness - benefit branch
(4) meditative stabilization - basis branch

The third concentration is distinguished by being separated from attachment to joy by the antidotal branch, which is mindfulness, introspection, and equanimity, and by possessing the benefit branch, happiness which is isolated from joy.

The third concentration has five branches
(1) mindfulness, (2) introspection, and (3) equanimity - antidotal branch
(4) happiness of mind (*sem de*) - benefit branch
(5) meditative stabilization - the basis branch

The first two concentrations have mental happiness (*yi de*) while the third concentration has happiness of mind (*sem de*).
Wednesday afternoon class, May 27, 1998

The fourth concentration is distinguished by being separated from attachment to happiness by the antidotal branch of completely pure mindfulness and equanimity and by possessing the benefit branch of equanimity feeling.

The fourth concentration has four branches:
(1) completely pure mindfulness and (2) completely pure equanimity - antidotal branch
(3) equanimity feeling - benefit branch
(4) meditative stabilization - basis branch

These branches will be explained further in the future, here they are merely listed without any commentary. Just as is said in *Abhidharmakosha* on reaching the fourth concentration one is free of the eight faults of concentration:
(1-2) investigation and analysis
(3-4) exhalation and inhalation
(5-6) contaminated feelings: happiness and mental happiness
(7-8) suffering and mental unhappiness.

Therefore when one reaches the fourth concentration there is no longer any gross breathing. The mind does not move from meditative stabilization. The fourth concentration remains even at the time of the eon of destruction while the lower concentrations are destroyed at this time. During the eon of destruction there are a series of destructions by fire, water, and wind. With the destruction by fire, the desire realm up to the first concentration are destroyed; with the destruction by water the second concentration and below are destroyed; with the destruction by wind, the third concentration and below are destroyed. However, the beings in the fourth concentration are not harmed by any of these due to the fact that they do not rely on gross breathing.

Then there are the four formless absorptions.

The entrance of limitless space is that having seen the discrimination of form and obstruction as coarse, again and again one destroys this discrimination and thinks “space is limitless” and familiarizes with this discrimination repeatedly whereby one attains the absorption of limitless space and comes to possess a mind that is concomitant with a single-pointed mind.

While preparing for limitless space one cancels the discrimination of form and obstruction and finally attains the actual absorption of limitless space.

The entrance of limitless consciousness is when the mind of a person considers the mental attention thinking “space is limitless” an object to be ceased and thinks consciousness is limitless and manifests that state.

The entrance of nothingness is the mental attention thinking that there is no object to be apprehended below that, whereby one manifests nothingness. Such a person trains thinking that nothing exists and by familiarity with this thought manifests this state.

The entrance of without discrimination not without discrimination is free from the coarse discrimination of sickness, cancer, and pain. Having no discrimination at all would be complete ignorance; however, the peak of existence is without coarse discrimination but not without subtle discrimination. At this stage a person has only the mental attention thinking ‘this is peace, this is auspiciousness,’ whereby he comes to possess a mind concomitant with single-pointed mind. In short, in the Peak of Existence there is no coarse discrimination but there is subtle discrimination.
An afflicted concentration is one that has either intense craving for the taste of bliss; intense view, which is the generation of bad view due to having had extreme view in the past; intense pride, which is a mind that is puffed up due to having achieved a concentration; or intense doubt thinking that this concentration is liberation. These four afflictions make the concentrations that are causal absorptions afflicted. If when one has a causal absorption the craving for the bliss of concentration arises and continues, the actual concentration becomes afflicted. Also due to bad view an actual concentration can become afflicted. In addition, due to achieving an actual concentration one can generate pride whereby the concentration becomes afflicted. Or someone who has achieved the first actual concentration may think that he has attained liberation but later through clairvoyance come to understand that upon dying he will be reborn in the lower realm and as a result think that there is no path to liberation or no liberation.

A pure one (a pure concentration) is a concentration that is not polluted by the afflictions of its own level and is concomitant with a single-pointed mind. It has four divisions:

1. A concentration concordant with degeneration,
2. A concentration concordant with abiding
3. A concentration concordant with enhancement
4. A concentration concordant with definite discrimination

A concentration concordant with degeneration is a pure concentration that is concordant with the generation of afflictions of its own level immediately after itself.

A concentration concordant with abiding is a pure concentration that induces another pure one of its own level immediately after itself.

A concentration concordant with enhancement is a pure concentration that induces another pure one of a higher level immediately after itself.

A concentration concordant with definite discrimination is a pure concentration that induces a supermundane path immediately after itself.

In Jetsun Chokyi Gyeltsen’s Ocean Playground it says:

A pure actual absorption of a higher level is an actual absorption of an upper realm that observes mundane virtue and is not polluted by the afflictions of its own level. In Abhidharmakosha it says: “Mundane virtue is pure.” This can be of eight types: the four concentrations (the first to the fourth) and the four formless absorptions (Limitless Space up to the Peak of Existence). The above definition of a pure one is to be applied to each one.

Seven of these actual absorptions, the four concentrations and the first three formless absorptions, have the divisions of a meditative absorption concordant with degeneration, concordant with abiding, concordant with enhancement, and concordant with definite discrimination. The eighth, the actual absorption of the Peak of Existence, does not have the division of concordant with enhancement.

The definition of an actual absorption concordant with degeneration is a pure actual absorption of a higher level that is concordant with the generation of afflictions that belong to its own level immediately after itself.

The definition of an actual absorption concordant with abiding is a pure actual absorption of a higher level that induces another pure actual absorption of its own level immediately after itself.

The definition of an actual absorption concordant with enhancement is a pure actual absorption of a higher level that induces another pure actual absorption of a higher level immediately after itself.

The definition of an actual absorption concordant with definite discrimination is a pure actual absorption of a higher level that induces an uncontaminated path immediately after itself.
Gyeltsab says that these four concordances should be applied in the same way to the formless absorptions other than that at the Peak of Existence. In the Peak of Existence there is actual absorption concordant with enhancement (or advanced distinction) because there is no level higher than it. According to both the higher and lower Abhidharmas, the *Abhidharmasamucchaya* and the *Abhidharmakosha*, there is also no actual absorption concordant with definite discrimination at the Peak of Existence because an arya who has attained the mind of Peak of Existence still generates an uncontaminated path by actualizing the mind of Nothingness.

The first concentration has five branches:
(1) investigation
(2) analysis
(3) happiness and (4) joy generated from isolation
(5) single-pointed mind

The second concentration has four branches:
(1) internal clarity
(2) joy and (3) happiness generated from meditative stabilization
(4) single-pointed mind

Internal clarity is the name given to mindfulness, introspection, and equanimity.

There is a difference between the joy and happiness of the first and second concentrations: those of the first concentration are generated from isolation while those of the second are generated from meditative stabilization. “Isolation” means an absence of suffering and mental unhappiness; due to this there is joy and happiness.

The third concentration has five branches:
(1) mindfulness
(2) introspection
(3) equanimity
(4) happiness
(5) single-pointed mind

Mindfulness, or memory, refers to retaining something in one’s mind; it is one of the five determining mental factors (these being aspiration, belief, mindfulness, meditative stabilization, and wisdom). Mindfulness is also mentioned in terms of the stages of calm abiding in that it functions as an antidote to forgetfulness. Introspection watches what is arising in the mind. The happiness in the context of the third concentration is the happiness of mind (*sem de*).

There are five kinds of feeling: (1) suffering feeling, (2) happy feeling, (3) equanimity, (4) mental unhappiness, and (5) mental happiness. Or they can be grouped into three: pleasant feeling, unpleasant feeling, and equanimity feeling, in which case pleasant feeling includes both physical and mental happiness and unpleasant feeling includes both physical and mental unhappiness.

The fourth concentration has four branches:
(1) completely pure mindfulness
(2) completely pure equanimity
(3) equanimity feeling
(4) single-pointed mind

Mindfulness is as above. Completely pure equanimity is the equanimity of non-application. The feeling existing at the time of the fourth concentration is definitely equanimity feeling.

The branches can be posited as four or five from the point of view of the antidotal branch which opposes harm [to the development of concentration], the benefit branch which achieves benefit, and the basis branch which is both of these. If the branches of all four concentrations are added
together there are eighteen. Here there is a discussion concerning the presentation in *Abhidharmakosha* which posits branches in terms of substance. When the branches are counted in terms of substances investigation and analysis, for example, are each counted as substances. When they are counted in terms of substance there are eleven:

1. The five branches of the first concentration
2. The internal clarity of the second concentration
3. The first four branches of the third concentration
4. The equanimity of (non-)application of the fourth concentration

Thursday morning class, May 28, 1998

While those in the formless absorptions can have superior insight calm abiding predominates in the formless absorptions; therefore one is absorbed in the single taste of calm abiding. For this reason, the formless absorptions are not posited by way of branches but only in terms of their observed object. Those in the concentrations only seek a definite emergence from manifest suffering and happiness feeling, both the gross and subtle; they are not seeking a definite emergence from equanimity feeling. It is very difficult for ordinary beings to realize that pervasive compositional suffering is the nature of suffering.

Gyeltsab posits the order of the concentrations in terms of freedom from attachment to the lower level. Suffering feeling and happy feeling are divided into gross and subtle:

1. Gross suffering feeling is mental unhappiness
2. Subtle suffering feeling is the unfortunate state of suffering feeling (page 199)
3. Gross happy feeling is mental happiness
4. Subtle happy feeling is the faculty of happiness, which is happiness of mind (this is present in the third concentration as the benefit branch)

Those in the first concentration seek freedom from gross suffering feeling, mental unhappiness. Those in the second concentration seek freedom from the subtle suffering feeling that is the unfortunate state of suffering. Those in the third concentration seek freedom from gross happy feeling, mental happiness. Those in the fourth concentration seek freedom from attachment to the subtle happy feeling, the faculty of happiness.

Contaminated manifest discrimination has two divisions:

1. The discrimination of external form as gross
2. The apprehension of inner consciousness which is subtle

The discrimination of external form as gross is further divided into:

1. The discrimination of obstructive forms to be abandoned
2. The discrimination of Infinite Space as an antidote to the obstructive forms to be abandoned

The apprehension of inner consciousness which is subtle is further divided into:

1. The conception of a consciousness that is a discordant class
2. The discrimination of Nothingness as an antidote to the conception of a consciousness that is a discordant class

Those in the formless realm seek freedom from attachment to these discriminations. Those on the level of infinite space oppose or abandon the discrimination of obstructive forms to be abandoned.

Those on the level of infinite consciousness oppose the discrimination of infinite space.

Those on the level of nothingness oppose the discrimination of infinite consciousness.

-One at the level of without discrimination and not without discrimination oppose the discrimination of nothingness. Therefore, there are four discriminations.
To repeat the above divisions and their respective opponents in a different way is as follows.
There are four discriminations to be abandoned which are:

1. the discrimination of obstructive form
2. the discrimination of infinite space
3. the discrimination of infinite consciousness
4. the discrimination of nothing

Just as there are four discriminations there are four states of formless absorptions which abandon them:

1. Infinite Space opposes the discrimination of obstructive form
2. Infinite Consciousness opposes the discrimination of infinite space
3. Nothingness opposes the discrimination of infinite consciousness
4. Peak of Existence opposes the discrimination of nothing

The four levels of formless absorptions are posited in terms of opposing a lower level and thereby reaching a higher level; one sequentially abandons the respective objects of abandonment.

The main subject here is the feelings and discriminations that characterize the different levels. In fact, feelings and discriminations, which are mental factors, are set apart as separate aggregates because they are the basis of much discussion and debate. In Abhidharmakosha it says: “They are the root of discussion and the sequential cause of cyclic existence.” Because they are the basis of discussion, those in the concentrations abandon feelings while those in the formless realm abandon discriminations.

Through meditating on the small, middle, and great levels of the first concentration, one will be reborn respectively in the three abodes of the first concentration, Brahma Class, Spokesperson of Brahma, and Great Brahma; through meditating on the small, middle, and great levels of the second concentration one will be reborn in Little Light, Limitless Light, and Bright Light; through meditating on the small, middle, and great levels of the third concentration one will be reborn in Little Virtue, Limitless Virtue, and Vast Virtue; and through meditating on the small, middle, and great levels of the fourth concentration one will be reborn in Cloudless, Born from Merit, and Great Result. These twelve levels of the form realm are the result of different levels of concentration.

By meditating on the formless absorptions one will die and be reborn in the corresponding level of the formless realm where one will have the four aggregates called the aggregate of name. Of the five aggregates one does not have form, which is the aggregate of from; the remaining four aggregates are given the name “aggregate of name.” The beings of the formless realm are not differentiated into upper and lower places, but through meditating on the small, middle, and great levels they are differentiated in terms of a high rebirth, low rebirth, bad rebirth, and good rebirth. As a result of one’s meditation one will have a different quality of rebirth.

What is the meaning of high, low, bad, and good rebirth? High and low rebirth mean respectively a long life span and a short life span. Bad and good rebirth mean respectively to have many afflictions and few afflictions.

The four immeasurables are easy to realize, while the differentiation of compassion will be explained later on.
Jetsun Chokyi Gyeltsen in his *Ocean Playground* (page 441) explains the four immeasurables as follows:

I Explaining the four immeasurables in particular

(1) Cause
The immeasurables come from their own causes which are four conditions:
(a) object condition - sentient beings who do not possess happiness
(b) causal condition - the seed of uncontaminated exalted wisdom that exists in the mental consciousness
(c) empowering condition - a virtuous spiritual friend who teaches subjects such as the four immeasurables
(d) immediately preceding condition - any of the four cognizers that existed just before them

In *Ornament for Sutra* it says: “Those lacking happiness and having suffering are the cause from which comes the compassion of a bodhisattva. From the cause that is a virtuous spiritual friend comes the compassion of a bodhisattva.”

(2) Definitions
The definition of an immeasurable is: a distinguished cognizer that is concomitant with a concentration that contemplates any aspect of the four, such as compassion, in dependence on the mind of an actual concentration which is its empowering condition.

In *Abhidharmasamucchaya* it says: “How is it achieved? Anyone, even non-Buddhists, as well as hearers, solitary realizers, and bodhisattvas, is suitable to accomplish the immeasurables by depending on the four pure concentrations.” “Prostration to the one with compassion for sentient beings who wishes them to encounter happiness and be free from suffering and wishes them to not be separated from the happiness they have.” The four immeasurable are to be achieved on the basis of an actual concentration of the form realm.

(3) Divisions
There are four divisions:
(i) immeasurable love
(ii) immeasurable compassion,
(iii) immeasurable joy
(iv) immeasurable equanimity

(4) Individual entities
The individual entities of the four immeasurables are now set out.
The definition of immeasurable love is: an immeasurable that abides in the distinguished class due to having the wish thinking, “May all sentient beings have happiness.”

In *Abhidharmasamucchaya* it says: “What is love? It is a quality of a mind and mental factor supported on a concentration and concomitant with any meditative stabilization and any wisdom that perfectly consolidate the state of thought ”May all sentient beings encounter happiness”
Immeasurable love is divided into three:
1) love observing mere sentient beings
2) love observing phenomena
3) love observing the unobservable (phenomena that are not observable as truly existent)

1) The love observing sentient beings observes mere sentient beings and wishes them to have happiness.
2) The love observing phenomena observes the nature of sentient beings; that they are impermanent, empty of permanence, and empty of being self-supported substantially existent and wishes them to have happiness.
3) The love observing the unobservable observes sentient beings as non-truly existent and wishes them to have happiness.

The definition of immeasurable compassion is: an immeasurable that abides in the distinguished class due to wishing sentient beings to be free from suffering.
In Abhidharmasamucchaya it says: “What is compassion? It is a quality of a mind and mental factor supported on a concentration and concomitant with any meditative stabilization and any wisdom that perfectly consolidate the state of thought “May all sentient beings be free from suffering.”

Immeasurable compassion is of three types:
1) compassion observing mere sentient beings
2) compassion observing phenomena
3) compassion observing the unobservable
This is explained in Madhyamikavatara in the section on homage to compassion.

The definition of immeasurable joy is: an immeasurable that abides in a distinguished class due to wishing sentient beings not to be separated from happiness.
In Abhidharmasamucchaya it says: “What is joy? It is a quality of a mind and mental factor supported on a concentration and concomitant with any meditative stabilization and any wisdom that perfectly consolidate the state of thought “May all sentient beings never be separated from the happiness they have.”

Immeasurable joy is divided into three:
1) joy observing mere sentient beings
2) joy observing phenomena
3) joy observing the unobservable

The definition of immeasurable equanimity is: an immeasurable that abides in the distinguished class due to wishing that sentient beings be free from afflictions.
In Abhidharmasamucchaya it says: “What is equanimity? It is a quality of a mind and mental factor supported on a concentration and concomitant with any meditative stabilization and any wisdom that perfectly consolidate the state of thought “I consolidate myself perfectly with the thought of benefiting sentient beings.”

Immeasurable equanimity is divided into three:
1) equanimity observing mere sentient beings
2) equanimity observing phenomena
3) equanimity observing the unobservable

In the case of immeasurable joy there is the thought that wishes sentient beings not to be separated from the happiness they have, while immeasurable equanimity is the wish that sentient
beings be free from afflictions. Although it says afflictions it means that one wishes sentient beings to be free from attachment and hatred.

(5) Attributes
Each of the four immeasurables possesses four attributes:
1) the attribute of opposing the discordant side
2) the attribute of being an antidote
3) the attribute of having an observed object
4) the attribute of having a function

1) The attribute of opposing the discordant side is mentioned because each immeasurable has a discordant side which are respectively:
(a) harmful mind
(b) malice
(c) dislike
(d) harmful mind (hatred) and attachment
Immeasurable love opposes harmful mind as it wishes sentient beings to have happiness; immeasurable compassion opposes malice because it wishes sentient beings to be free from suffering; immeasurable joy opposes dislike; and immeasurable equanimity opposes hatred and attachment.

Thursday afternoon class, May 28, 1998

2) The attribute of being an antidote
The four immeasurables are sustained by their companion, a non-conceptual exalted wisdom, by way of which they become an antidote against the four discordant sides: harmful mind and so forth.

3) The attribute of having an observed object
The four immeasurables observe sentient beings, phenomena, and the unobservable.

4) The attribute of having a function
The four immeasurables ripen sentient beings. In Ornament for Sutra it says: “The purity upon which one relies abandons the discordant side and one comes to possess a non-conceptual exalted wisdom. They engage three observed objects. They thoroughly ripen all sentient beings.” “The purity upon which one relies” is liberation, the four immeasurables being called the pure abode or Brahma’s abode. In Abhidharmasamucchaya it says: “Immeasurable love and so forth are presented as having four or five attributes: place, observed object, aspect, entity, and companion.”
The first attribute is established because the four immeasurables depend upon a pure actual concentration which is its empowering condition.
The second attribute is established because the four immeasurables observe respectively sentient beings who do not possess happiness, sentient beings with suffering, sentient beings who have happiness, and sentient beings who possess the cause of being close and distant, attachment and hatred.
The third attribute is established because the four immeasurables are respectively the wish for sentient beings to encounter happiness, the wish for sentient beings to be free from suffering, the wish for sentient beings to not be separated from happiness, and the wish for sentient beings to be free from attachment and hatred.
The fourth attribute is established because the four immeasurables are included in either meditative stabilization or wisdom.
The fifth attribute is established because the four immeasurables are qualities of mind and mental factors (for the reason that they are helped by their companion, a non-conceptual exalted wisdom, in the sense of being sustained by it).

(6) Etymology
The reason that the four immeasurables are called the abode of Brahma is that by meditating on them one will be reborn among the gods of Brahma. Immeasurable love is so-called because it observes immeasurable sentient beings. Immeasurable compassion is so-called because it is the cause of immeasurable collections. Immeasurable joy is so-called because it is a cause for attaining immeasurable qualities. Immeasurable equanimity is so-called because it is an object of immeasurable exalted wisdom.

(7) Meaning of the text
The achieving of engaging is of nine types because there is the achieving of engaging which engages in the concentrations and formless absorptions up the achieving of engaging which engages in omniscient mind.

2B2C-1A2C-4B3 The extensive two collections: achieving of collections
This is the ninth topic of omniscient mind.
A  Shown in general
B  Explaining the three collections in particular
The collections are of exalted wisdom, the ground, and antidote.

2B2C-1A2C-4B3A  Shown in general
1  Making a connection
2  Root text
3  Commentary

2B2C-1A2C-4B3A-1 Making a connection

With regard to engagement like that, since collections generate, third, achieving of collections.

Gyeltsab says that likewise after engaging in all the Mahayana Dharmas with emphasis by way of action in one’s continuum one comes to generate the two extensive collections.

2B2C-1A2C-4B3A-2 Root text

Mercy, the six such as generosity, calm abiding along with special insight, that path of unification, whatever is skill in means, exalted wisdom, merit, paths, retentions, the ten grounds, and antidotes these should be known as the stages of achieving of collections.

Here in the root text are listed the seventeen types of achieving of collections:
1) great compassion
2) generosity
3) ethics
4) tolerance
5) joyful effort
6) concentrations
7) wisdom
8) calm abiding
9) special insight
10) the path of unification
11) skillful means
12) exalted wisdom
13) merit
14) the paths of seeing and so forth  
15) retentions (dharanis) of words and so forth  
16) the grounds  
17) the antidotes  

According to Gyeltsab these seventeen can be condensed into five groups:  
1) behavior together with support (1-7)  
2) meditative equipoise and subsequent attainment (8-11)  
3) the divisions of the two collection (12-13)  
4) achieving the result and retaining the observed object (14-15)  
5) acting as a support for excellent qualities (16-17)  

All seventeen, such as compassion, have the characteristic of abandoning obscurations.  

In sutra there are two sets of questions; the first set contains only one question whereas the second contains five questions. The question of the first set from sutra is: “Beginning with mercy up to unification, these ten, are an elaboration of the putting on of great armor, to what extent can one consider oneself to have put on the armor?” The answer to this first question of the first set is actually also given in sutra but that answer is not quoted here. However, Gyeltsab says that the answer to that question is given in terms of the etymology of armor referring to [the first ten achievings of collection (1-10)].  

The remaining seven achievings of collection, from the eleventh to the seventeenth, are an elaboration of the achieving of engaging; thus these seven achievings are covered in the answers in sutra given to the five following questions of the second set. The five questions of the second set are:  

(1) “Bhagavan, what is the great vehicle of a great bodhisattva?”  
(2) “To what extent can one consider oneself to have correctly entered the great vehicle of a great bodhisattva?”  
(3) “Where do these vehicles come from?”  
(4) “With these vehicles where will one abide?”  
(5) “What will one become with these vehicles?”  

There are also answers given to the above five questions in sutra, but they are not quoted here. However, the answers in sutra were given to the five question in terms of the realizers (those who possess the second group of seven achievings of collections which are an elaboration of the achieving of engaging). The actual answer is in five parts:  

(a) the training in wisdom and compassion (*11)  
(b) the two are indifferent (*12-13)  
(c) the two have passed beyond the discordant side (*14-15)  
(d) the occasion is certain (*16)  
(e) having extremely trained oneself in the training of the antidote side (*17)
The answer given to the first question of the second set covers the five achievings of collections (11-15) whereby an entity of Mahayana is taught. The answer given to the second question covers the achieving of the collection of ground (16). For the remaining three questions, only one answer is given, the achieving of the collections of antidote (17).

When we go through the seventeen divisions we should know that the first seven are called the achieving of collections belonging to perfect thought and perfect actions. Perfect thought is great compassion while perfect actions are the remaining six of the seven divisions. Gyeltshab says that a bodhisattva who wants to put on the armor as a practice that contains the six perfections should first meditate on compassion, wishing all sentient beings to be free from suffering.

An aspect of [a mind] that observes mere sentient beings and wishes them to be free from suffering and an aspect of a compassion observing sentient being are identical. A compassion observing phenomena means observing sentient beings who are qualified by the appearance of lacking a gross self. In other words, sentient beings appear to be empty of a gross self [of persons]. The compassion observing the unobservable means observing sentient beings who do not exist truly; it observes sentient beings who are qualified by the aspect of being free from fabrication. In this way, there is the compassion observing phenomena and the compassion observing the unobservable.

Gyeltshab says that a person who says “the third compassion realizes emptiness” is one who does not know the observed object and aspect of compassion.

To review the seventeen divisions of the achieving of collection in terms of their functions:

(1-7) With heartfelt compassion one achieves happiness in this life through generosity, by observing morality one will achieve a rebirth of high statues, by practicing patience, effort, and concentration one will attain the happiness of meditative stabilization (this is called the achievement of unique happiness), and by achieving wisdom one will achieve eternal happiness and in this way take care of others.

(8-11) Within meditative equipoise (8, 9, 10) and during the subsequent attainment (11) there are a total of four: calm abiding, superior insight, the path that unifies calm abiding and superior insight, and skillful means. In the Great Commentary by Haribhadra there is a quotation from the Compendium of Doctrine Sutra (Dharmasamgitisutra) which says: “By setting the mind in meditative equipoise one will know in accordance with reality.” There are four that are included in meditative equipoise and subsequent attainment; three in meditative equipoise and one in subsequent attainment, that of skillful means. Meditative equipoise is calm abiding whereas knowing in accordance with reality is superior insight.

Someone asks: Since calm abiding is that which abides without fluctuation, whereas superior insight means a mind that analyzes, these two are not compatible so how can they be unified?” Our system says that only when one’s mind has become very stable on the observed object of calm abiding can one analyze that object with wisdom. From analysis with a focused mind there arises the light of exalted wisdom that realizes the meaning and dispels the darkness; in this way obscurations are abandoned. If calm abiding and superior insight where not one entity one could not abandon all manifest objects of abandonment without exception; therefore calm abiding and superior insight are the eyes and the light whereby one can see an object. Calm abiding and superior insight are concordant with meditative stabilization because of generating a correct exalted wisdom. These two are not incompatible as are light and darkness.

When one possesses the path that unifies calm abiding and superior insight one mentally attends to omniscient mind in order to work for others welfare, whereby one comes to possess the achieving of the collection of skillful means.

(12-13) By familiarizing oneself with the activity of meditative equipoise and subsequent attainment one comes to possess the achieving of the collection of exalted wisdom and merit. (14) Through familiarity with the two collections one comes to have the achieving of the collection of
path, such as the path of seeing and so forth. (15) If one has the achieving of the collection of path one comes to have the achieving of the collection of retention by which one is able to retain or remember words and meanings for eons without forgetting them. In other words, one attains a depthless memory.

What is the entity of retention? It is the memory and wisdom that are concomitant with calm abiding. In relation to secret mantra retention is a case of the name of a result being given to its cause. Retention is of four types:
1) patience
2) secret mantra
3) word
4) meaning

The retention of patience is to analyze the meaning of many mantras such as the mantra A RA PA TSA NA DHIH and that of forty-two syllables. The letter A of A RA PA TSA NA DHIH is the door to all phenomena, it is ungenerated. One meditates on the meaning of A and the meaning of emptiness, reality, whereby one achieves an fearless meditative stabilization and gains a retention of patience whereby one is able to bear the fear of meditating on emptiness. The retention of patience is attained on the patience level of the path of preparation.

(There were no teachings May 29, 1998)
Monday afternoon class, June 1, 1998

The retention of patience refers to not being afraid of meditating on emptiness. Sometimes when someone negates true existence that person becomes afraid. On the patience level of the path of preparation one is free from this fear.

The retention of secret mantra is the ability to compose secret mantras for protecting others from their negativities. Protection means that through reciting a mantra one’s negativities are purified. This retention is attained on the patience level of the path of preparation and the distinguished path of seeing.

The last two retentions, the retention of word and the retention of meaning, are the ability to retain the words of Dharma and the meaning of these words for eons without forgetting them. These two retentions are also attained on the patience level of the path of preparation and are subsequently present on higher levels.

The last two achievings of collections are that of ground and antidote. That of ground is so-called because it functions as a support of excellent qualities; that of antidote is so-called because it opposes the discordant side.

2B2C-1A2C-4B3A-3B  Reason of presenting as collections

By not referring to them, not passing beyond the conventional truth, through achieving all the aims of the great vehicle, these, compassion and so forth, as entities of perfect achieving, because of issuing forth the great enlightenment since great compassion and so forth are the collections.

The seventeen achievings of collection (subject) are collections of causes that issue forth great enlightenment (predicate) because with these seventeen collections, such as compassion, one will have the entity that quickly accomplishes enlightenment and holds it as a result (sign). With these seventeen, one holds final great enlightenment because one realizes phenomena as not being truly existent without passing beyond ultimate truth. With these seventeen, one also practices all the stages of the path that are included in the vast side of the Mahayana path without passing beyond conventional truth. In short, with these seventeen achievings of collection one includes all the stages of the profound and vast paths that are to be practiced by bodhisattvas.

2B2C-1A2C-4B3A-3C  Definite enumeration

Achieving of collections are of seventeen types

Gyeltsab says that the achievings of collections are of seventeen types. These seventeen achievings of collections are the collection of causes that are completely free from the faults of being either too many or too few causes that are needed for the generation of omniscient mind. However, there is a lot of debate in the monasteries concerning this statement that seventeen are just the right amount.

2B2C-1A2C-4B3B  Explaining three collections in particular

1  Explaining the collection of exalted wisdom in particular
2  Explaining the collection of grounds in particular
3  Explaining the collection of antidotes in particular

2B2C-1A2C-4B3B-1  Explaining the collection of exalted wisdom in particular

With regard to that, the collection of exalted wisdom: 1) internal, 2) external, 3) both, 4) empty, 5) the great 6) the ultimate, 7) products, 8) non-products, 9) passed beyond
extremes, 10) without beginning or end, 11) non-rejection, 12) self nature, 13) all phenomena, 14) definitions, 15) non-observable, 16) entitiness of non-things, 17) things, 18) non-things, 19) one’s own entity, and 20) entity of others are by way of particulars of emptiness twenty types. Propounded here: “Internal and external, both and empty’s property, directions, paths passed sorrow, conditioned birth and the other, passed extremes, without beginning or rejection, nature, all phenomena, dharmas born, the past and so forth, having and the other’s entity, space and so-called empty and other dharmas’ entitiness: since they are emptied by their entity, emptiness is said to twenty.”

A Twenty emptinesses by division of the bases of negation
B The twenty exalted wisdoms which realize those subjects
C Analyzing what are the referents of exalted wisdom

2B2C-1A2C-4B3B-1A Twenty emptinesses by division of the bases of negation

The first of the twenty emptinesses that are taught here is (1) the emptiness of the internal. A syllogism regarding inner emptiness is: the six inner entrances do not exist truly because they are free from being a truly existent one or a truly existent many. This kind of reasoning, the predicate and the sign, can be applied to the remaining nineteen emptiness. In the case of (2) the emptiness of the external the syllogism is: the six outer entrances do not exist truly because they are free from being a truly existent one or a truly existent many. In the case of (3) the emptiness of the internal and external the syllogism is: the sensory organs upon which both the inner and outer entrances depend do not exist truly because they are free from being a truly existent one or a truly existent many.

(4) the emptiness of emptiness is the emptiness of true existence of all phenomena
(5) the emptiness of the great is the emptiness of true existence of the ten directions
(6) the emptiness of the ultimate is the emptiness of true existence of nirvana

Ultimate emptiness and the other emptinesses above negate that cyclic existence and solitary peace are truly existent.

(7) the emptiness of the compounded is the emptiness of true existence of compounded phenomena that arise from conditions, for instance, the three realms
(8) the emptiness of the uncompounded is the emptiness of true existence of space and so forth
(9) the emptiness of the passed beyond extremes is the emptiness of true existence of the middle way, the extremes being eternalism and nihilism
(10) the emptiness of the beginningless and endless is the emptiness of true existence of mere cyclic existence
(11) the emptiness of the indestructible is the emptiness of true existence of both the objects to be practiced and the objects to be rejected (the basis of negation in this case can also be the six perfections)
(12) the emptiness of nature is the emptiness of true existence of reality, or the mode of existing (te lug), of any phenomenon
(13) the emptiness of all phenomena is the emptiness of true existence of all phenomena that are subject to change and their aspects
(14) the emptiness of definitions is the emptiness of true existence of the definitions, or characteristics, of phenomena; for example, generation, cessation and so on (these characterize an impermanent object); another example is ‘that which is suitable to be a form’ which is what characterizes form itself
(15) the emptiness of the unobservable is the emptiness of true existence of the three times
(16) the emptiness of the very entity of non-functioning things is the emptiness of true existence of the entity of dependent arising
(17) the emptiness of functioning things is the emptiness of true existence of phenomena that have causes and conditions
(18) the emptiness of non-functioning things is the emptiness of true existence of uncompounded space
(19) the emptiness of self-entity (or the entity of being itself) is the emptiness of true existence of
the natural emptiness (or state) of phenomena, which is not created by a consciousness that is
unmistaken and non-conceptual
(20) the emptiness of other’s entity is the emptiness of true existence of a reality (or simply
emptiness) which is empty of being created by others (it is an entity seen by the far-sighted, as
opposed to the short-sighted)
These twenty emptinesses are empty of true existence.

This division into twenty is extensive but they can be condensed into sixteen. When
further condensed the sixteen can be included in the last four:
(1) the emptiness of functioning things (those created by causes and conditions)
(2) the emptiness of non-functioning things (such as uncompounded space)
(3) the emptiness of self-entity
(4) the emptiness of other’s entity
If emptiness is posited in terms of the bases on which it is established it can be further condensed
into the seventeenth and eighteenth emptinesses: (1) the emptiness of functioning things and (2)
the emptiness of non-functioning things. If emptiness itself is taken as a basis of emptiness they
can be condensed into the last two: (1) the emptiness of self-entity and (2) the emptiness of other’s
entity.

According to those who assert the basis of emptiness regarding the fourth, the emptiness
of emptiness, as being an exalted wisdom, there are three ways of taking emptiness as a basis of
emptiness:
- natural emptiness which is the result of negating the thought that the mode of existence of
phenomena is newly produced by the knowledge of arya beings
- the emptiness of self-entity
- the emptiness of other’s entity
Some think that the entity of self exists truly while some think that other phenomena are created
by a separate creator.

Emptiness of the internal, emptiness of the external, and the emptiness of the internal and external
have a corresponding wisdom that realizes them. These three exalted wisdoms negate the
conception of true existence of three respective objects: (1) the enjoyer/user, the six inner
entrances; (2) the object, the six outer entrances; and (3) the six organs. These three exalted
wisdoms are posited as existing on the path of accumulation.

In his Great Commentary Haribhadra says: “The one that enjoys.” With respect to this
Gyeltsab says that the first three exalted wisdoms can be posited during the first three levels of the
path of preparation. The realization of the fourth emptiness can be posited in relation to the fourth
level of the path of preparation. However, although the first four emptinesses can be posited in
relation to the four levels of the path of preparation, it is also possible to posit the first three in
relation to the path of accumulation without any contradiction. The exalted wisdom realizing the
emptiness the internal corresponds to the small level of the path of accumulation, the exalted
wisdom realizing the emptiness of the external corresponds to the middle level, and the exalted
wisdom realizing the emptiness of the internal and external corresponds to the great level of the
path of accumulation. The exalted wisdom realizing the emptiness of emptiness corresponds to
the path of preparation. The realization of the wisdom arisen from mundane meditation is posited
as a realization of the path of preparation.

The exalted wisdoms are posited in this way because some things are easier and more
familiar; for example, it is easy to realize the inner entrances and therefore it is relatively easy to
establish and realize their emptiness. For this reason, this realization is said to correspond to the
small level of the path of accumulation. Because it is more difficult to realize the outer entrances,
the realization of their emptiness is harder to achieve and therefore the wisdom realizing this
emptiness is of a higher level and corresponds to the middle level of the path of accumulation.

The wisdom realizing the emptiness of emptiness corresponds to the path of preparation
because it is at this level that one achieves a wisdom arisen from meditation on emptiness.

The fifth and sixth exalted wisdoms that realize respectively the emptiness of the great and the
emptiness of the ultimate are posited on the level of the path of seeing because a bodhisattva on
the path of seeing has an exalted wisdom realizing the nature that precedes everywhere. The fifth
exalted wisdom corresponds to the first ground, while the sixth corresponds to the second. These
two emptinesses induce respectively an exalted wisdom that realizes the sphere of reality that
pervades all, and an exalted wisdom that realizes the sphere of reality as the supreme meaning.
Because the bases of emptiness, nirvana, true cessations, and true paths, are supreme, the exalted
wisdom realizing these is also supreme.

The exalted wisdom realizing the seventh emptiness, the emptiness of the compounded,
realizes the sphere of reality as an object similar to a cause. The eighth, the emptiness of the
uncompounded, induces an exalted wisdom that realizes the sphere of reality as an object that can
not be thoroughly apprehended [as truly existent]. ‘Realizing the sphere of reality as an object
similar to a cause’ and ‘realizing the sphere of reality as an object that can not be thoroughly
apprehended [as truly existent]’ are merely labels given to the seventh and eighth wisdoms. The
seventh and eighth exalted wisdoms are posited respectively with respect to the third and fourth
grounds.

Realizing the sphere of reality as an object similar to a cause could refer to the fact that all
compounded phenomena arise from a similar cause. Realizing the sphere of reality as an object
that can not be thoroughly apprehended [as truly existent] could mean realizing a sphere of
reality that is not to be thoroughly grasped. All uncompounded phenomena are not apprehended
as having causes and conditions.

The emptiness of the passed beyond extremes, the ninth, and the emptiness of the
beginningless and endless, the tenth, induce respectively an exalted wisdom that realizes that the
sphere of reality is not a different continuum (entity), and an exalted wisdom that realizes that
thoroughly afflicted phenomena and thoroughly purified phenomenon are empty of true
existence. These two are posited respectively on the fifth and sixth grounds.

The ninth exalted wisdom, that which realizes that the sphere of reality is not a different
continuum (another name for that passed beyond extremes), refers to the extremes of eternalism
and nihilism. The state free from this is the middle way; this cannot be a different
continuum/entity, it is only one. The emptiness of the beginningless and endless generally refers
to cyclic existence but Gyeltsab explains it in reference to both the thoroughly afflicted class and
completely pure class since the thoroughly afflicted class and completely pure class are related to
cyclic existence in relation to the twelve links: the twelve belonging to the afflicted side and the
twelve related to the purified side. In general, cyclic existence is beginningless and endless but in
the context of a particular single person, although there is no beginning, there is an end because
having realized the selflessness of persons there will be no further lives in cyclic existence. In the
text Four Hundred Stanzas it says: “Cyclic existence is beginningless, but it does have an end.”

Tuesday morning class, June 2, 1998

The eleventh exalted wisdom is induced by the emptiness of the indestructible and corresponds to
the seventh ground. The twelfth and thirteenth exalted wisdoms are induced by the emptiness of
nature and the emptiness of all phenomena; they correspond to the eighth ground. The fourteenth
and fifteenth exalted wisdoms are induced by the emptiness of definitions and the emptiness of
the unobservable; both correspond to the ninth ground. The sixteenth and seventeenth exalted
wisdoms are induced by the emptiness of the very entity of non-functioning things and the emptiness of functioning things; both correspond to the tenth ground.

The last three exalted wisdoms of the twenty, the seventeenth, eighteenth, and nineteenth, are induced by the emptiness of non-functioning things, the emptiness of self entity, and emptiness of other’s entity; they are exalted wisdoms of the buddha ground.

The emptiness of the indestructible refers to the emptiness of the thirty-seven harmonies with enlightenment. They are not to be discarded, but are to be practiced.

The emptiness of nature refers to the emptiness of true existence of the entity of any phenomenon which is free from fabrication or elaboration.

The emptiness of all phenomena is the emptiness of all phenomena ranging from form up to omniscient mind.

The emptiness of definition/self characteristic is the emptiness of the 108 phenomena that range from form up to omniscient mind. Each of these phenomena has its own particular definition/characteristics which is empty of true existence. For example, the definition of the form aggregate is ‘that which is suitable to be form’; this definition is empty of true existence. The definition of the feeling aggregate is ‘the entity of experiencing’, this too is empty of true existence. Likewise, the definitions of the remaining 106 phenomena are empty of true existence.

The emptiness of the unobservable is the emptiness of the three times, past, present, and future, which are not observed to be truly existent.

The emptiness of the very entity of non-functioning things is the emptiness of the entity of, for example, uncompounded space. Uncompounded space is empty of true existence and the very entity of uncompounded space is also empty of true existence.

The emptiness of functioning things is the emptiness of any phenomena that is qualified by the definition ‘suitable to perform a function.’

The emptiness of non-functioning things is the emptiness of any phenomena that lacks ‘the ability to perform a function.’

The emptiness of self entity is the self’s emptiness of self existence.

The emptiness of other entity is the emptiness of being created by another, a creator.

The exalted wisdoms realizing the last three are a support, or basis, on which the two obscurations together with their imprints are extinguished. The exalted wisdom of functioning things, of self entity, and of other entity are called self-arisen exalted wisdoms in that they are the exalted wisdoms of a buddha that arise spontaneously on the buddha ground.

The first seventeen wisdoms are only partially free from their objects of abandonment; some are free from the manifest objects of abandonment and some are free from only the seeds of the objects of abandonment. They are posited on the tenth ground and below (but not on the buddha ground). The fact that the seventeen exalted wisdoms are partially free from obscurations means that some of them have abandoned the manifest objects of abandonment, while some have also abandoned the seeds of the manifest objects of abandonment.

Gyeltsab then reviews a point mentioned above saying that the exalted wisdom that is induced by the emptiness of the great which pervades all the sphere of reality can be posited as an exalted wisdom of the first ground and that if it is interpreted in this way there is no contradiction because this exalted wisdom is also called ‘that which pervades all the sphere of reality.’ In the Great Commentary by Haribhadra it gives the reference “With regard to that, at that time all phenomena are selfless,” and then says: “By meditating thus on this subject, the bodhisattvas have already realized the sphere of reality that has no parts. Yet, in terms of the generation of an ascertainment, there is an individual realization that pervades all phenomena. As a result of this, one will have an extremely clear consciousness that directly realizes all phenomena as entitiless. At this point, the bodhisattva enters the faultless path and thereby attains the path of seeing.” The sphere of reality is said to be partless. Although it is not taught in the same way that the color blue

383
and the color yellow are said to appear differently to the consciousness, yet the sphere of reality is suitable to be divided by way of its isolate. As many objects as exist, there are also that many parts existing. This means that on the basis of its isolate, or name, the sphere of reality is of many types; for example, if there are a hundred bases there are a hundred spheres of reality. However, the entity of the sphere of reality itself is not divisible because the sphere of reality is a non-affirming negative that is the mere negation of the object of negation.

Even the meditative equipoise of an arya learner can induce the ascertainment of the sphere of reality of a buddha since there is not even a slight difference between the sphere of reality of sentient beings and that of buddhas. These ascertainments are explained sequentially here because the ten exalted wisdoms of the meditative equipoise of the ten grounds sequentially remove the seeds of the two obscurations by which bodhisattvas in post-meditation, or subsequent attainment, possess different levels of ascertainment of the diverse dependent arisings, such as the dependent arising that appears as an illusion. In post-meditation that which is opposite to dependent arisings appearing as an illusion gradually decrease for bodhisattvas each time they attain a higher ground. In other words, the appearance of objects as truly existent diminishes for bodhisattvas as they progress on the ten grounds. Since there is still the appearance of true existence it is said that phenomena still appear to be truly existent rather than like an illusion, but at each level this appearance of true existence decreases.

Analyzing what are the referents of exalted wisdom

In the Great Commentary it says: “What are the observed objects that are observed by this non-conceptual exalted wisdom?” Gyeltsab says that if I were to explain this, I would divide it into five divisions:

(1) Stating the two assertions of the two systems
(2) Proving the latter tradition as correct
(3) Rejecting the brawls of others
(4) Negating the former system
(5) The reason for not expressing other divisions of exalted wisdoms

(1) Stating the two assertions of the two systems
Mere Aspectarian Chittamritins assert that thoroughly established phenomena which are truly existent—other-powered phenomena that are empty of the apprehender and apprehended being different substances—are objects of comprehension of the meditative equipoise of arya beings. The others, the Madhyamikas, assert that all phenomena are to be realized as empty of true existence. This second assertion is correct.

The Chittamritins say that the observed object of the meditative equipoise of an arya is truly existent non-duality, the emptiness of apprehender and apprehended being different substances. The Madhyamikas say that the observed object of the meditative equipoise of an arya is the emptiness of true existence of all phenomena. Of these two systems, the latter is correct.

(2) Proving the latter tradition as correct
No matter what consciousness it is, its object of comprehension is pervaded by being empty of true existence; like the appearance of a horse or an elephant to a dream [consciousness]. Similarly, a non-conceptual exalted wisdom is also a consciousness; this statement is a sign of nature. In a syllogism one could say: the non-conceptual exalted wisdom (subject) observes its own object which is empty of true existence (predicate), because it is a consciousness; for example, a dream consciousness that observes a horse, elephant, and so forth.

In Ascertainment of Valid Cognition it says: “If the observed object is not directly observed what is seen is not established.” If the observed object is not observed it is not realized; however, [here the observed object is observed and is realized], therefore the above mentioned syllogism is a correct sign because the ‘subject’s property’ (a non-conceptual exalted wisdom being a consciousness) is ascertained and is established. [Therefore, the above mentioned syllogism can not be a ‘reasoning where the subject’s property is not established’.]
In the above mentioned syllogism, the subsequent pervasion is also established because there is a valid cognition that ascertains the sign ‘consciousness’ to exist only in a class similar to the stating-mode. [The sign ‘consciousness’ exists only in a class that is similar to ‘observing one’s own object which is empty of true existence’.] Therefore, the syllogism is not a ‘reasoning where the sign is contradictory [to the predicate of the probandum.’]

In that syllogism the reverse pervasion is also established because there is a valid cognition that realizes that the sign ‘consciousness’ does not exist in a class dissimilar to the stating-mode. [The sign ‘consciousness’ does not exist in a class dissimilar to ‘observing one’s own object which is empty of true existence,’ or another way of saying this same thing is that a consciousness does not exist that does not observe its object which is empty of true-existence.] Therefore, the above mentioned syllogism also cannot be ‘a reasoning where the sign is not ascertained’ to not exist in a dissimilar class.

Gyeltsab is actually saying the true existence of objects of knowledge will be negated in a passage that comes later : “Baseless, without going, unborn...” (which is part of the thirtieth stanza of the fourth chapter).

When reasonings are set out they can be established or not established. Of those that are not established there are three kinds:
- a reasoning where the sign is contradictory
- a reasoning where the sign is not ascertained
- a reasoning where the sign is not established

The syllogism set out before is none of these three.

(3) Rejecting the censure of others (the Chittamatrins)
The Chittamatrins say:
In that case all phenomena, which are empty of true existence, would follow as being empty of true existence because they are observed objects; for example, like one moon appearing to be two. If you accept this it would follow that all phenomena are truly existent because the emptiness of true existence of all phenomena which is asserted to be their mode of abiding would also be empty of true existence.
The Madhyamikas say:
There is no fault because if the killer Dharmadatta were a part of Devadatta, who is to be killed, Devadatta could still come back even after the killer Dharmadatta is killed (whether Dharmadatta actually killed Devadatta or not). However, the murderer is not any part of the victim; therefore, once the victim is killed by the murderer there is no possibility for the victim to come back to a life even if his murderer were killed. Just like this example, ‘all phenomena are empty of true existence’ (=Devadatta), which for you is the extreme of depreciation, is also ‘established to be empty of true existence’ (=Dharmadatta), which further for you is the extreme of superimposition. This very extreme of superimposition from your point of view is negated by logic to exist truly (=a third anonymous person). Due to that, it does not follow that I accept that ‘all phenomena are truly existent’ which is an object of negation. Because true existence does not pervade the emptiness of true existence, it (true-existence) is not any part of the entity of the emptiness of true existence.

In the previous illustration Devadatta is to be killed, while Dharmadatta is the killer. Dharmadatta kills Devadatta but later on someone else kills Dharmadatta. Although the third person kills Dharmadatta there is no risk that Devadatta will return even though his killer has been killed. In the same way, there is a truly existent consciousness (which is likened to Devadatta) which is negated, and that which negates true existence (which is likened Dharmadatta); the consciousness having been negated to be truly existent there is no risk that a truly existent consciousness will return. This is explained in the text Grounds and Paths (sa-lam).

(There were no teachings Tuesday afternoon.)
Wednesday morning class, June 3, 1998

When logic negates that the emptiness of true existence is truly existent there is no need to assert an object of negation once again that is ‘all phenomena existing truly exist truly’. There is no need because true existence does not pervade the emptiness of true existence nor is it one nature with the emptiness of true existence. Such true existence cannot pervade the emptiness of true existence and cannot be the same nature as the emptiness of true existence because true existence does not exist. However, the Chittamatrin asserts that it does exist because they say that if something is an other-powered phenomena or a thoroughly established phenomena it is pervaded by being truly existent. They say that if other-powered phenomena or thoroughly established phenomena were not truly existent it would follow that they would not exist. However, there can be discussion as to whether or not this would mean that all-imputed, or imaginary, phenomena would not exist. Imaginary phenomena are divided into two: imaginary phenomena whose thorough characteristic is broken and enumerated imaginary phenomena. Or it can be said that there are imaginary phenomena that are acquired by the object of negation and imaginary phenomena that are acquired by the basis of emptiness. An illustration of ‘an imaginary phenomenon that is acquired by the object of negation’ is the apprehender and apprehended being different substances, which is an object of negation. An illustration of ‘an imaginary phenomenon that is acquired by the basis of emptiness’ is a form that is a basis for the conception apprehending form. A form that is a basis for the conception apprehending form does not exist by its own character; it does not exist truly. This non-existence is a thoroughly established phenomena. Therefore, the basis of emptiness is a form that is a basis for the conception apprehending form; this is a thoroughly established phenomena.

An illustration of an imaginary phenomena that exists is uncompounded space; an illustration of an imaginary phenomena that does not exist is the self of persons. Therefore, there is no pervasion that imaginary phenomena necessarily exist.

Here we need to understand what is the final observed object of an aryā’s exalted wisdom of meditative equipoise. [According to the Chittamatrin] the final observed object of a pure path is defined as a thoroughly established phenomena; it is the emptiness of form and the valid cognizer apprehending it being different substances. They say that by meditating on the emptiness of form and the valid cognizer apprehending it being different substances one purifies one’s obscurations. However, the Svatantrika-Madhyamikas say that the final observed object of a pure path is the emptiness of true existence of all phenomena. A yogi who observes and meditates on this becomes free of obscurations.

The first disputant, a Chittamatrin, says:
If something is an ultimate truth it must exist ultimately, therefore it would contradict it being conventionally existent.
The second disputant, a Madhyamika, says:
Expressing this error is not right because it is not correct that the observed object of meditative equipoise exists ultimately. The observed object of meditative equipoise does not exist ultimately because it is a final consciousness that is supported on a basis that is falsely established by a conventional valid cognizer. A final consciousness is a mind that realizes, or sees, the emptiness of true existence of an object, such as a sprout. Such a mind is one that analyzes an ultimate truth but it is based on an object that is falsely established by a conventional valid cognizer. Although a sprout is false, the conventional valid cognizer that establishes it is false, and the mind that establishes true existence is false, yet there is no fault in it being a final consciousness that realizes the emptiness of true existence. A sprout, a conventional valid cognizer, and a final consciousness are said to be false because they are conventional truths. A truth and ultimate truth are mutually inclusive; a falsity and conventional truth are mutually inclusive. True existence relying on a falsity would be contradictory. A false object, such as a sprout, does exist, but if we were to say that true existence is supported on it this would not be correct because true existence does not exist at all.
When we talk about a ‘support’ and ‘supported’ there are two interpretations. One illustration is a table, which is a support, and a cup on it, which is the supported. What is the way in which the table supports the cup? The table supports the cup in the sense of holding it up and therefore not allowing it to fall. Or we can say that the cup is a support and the tea in it is the supported. The supported phenomenon, the tea, is held, or supported, by the cup in the sense that it keeps it from flowing. Are the support, the cup, and the supported, the tea, one entity or two entities? They are two different entities because these two appear to a direct perceiver as separate.

Another illustration of supported is the aggregates while the support in this case is the person. Is the relationship the same? It is not because in this case the support and supported are one entity because they do not appear separately to the sight of a direct cognizer, but instead appear to be identical.

(4) Negating the former system
The Madhyamikas say: “If truly existing emptiness is asserted to be the observed object, it would follow that a non-conceptual exalted wisdom and the non-duality of apprehender and apprehended would be either one substance or different substances because emptiness would exist truly and would therefore be a functioning thing. If you assert that a non-conceptual exalted wisdom and the emptiness of the apprehender and apprehended being different substances are either one substance or different substances you would have to accept that:
- two things are different substances even from other-powered phenomena and
- a non-conceptual exalted wisdom is a partial object-possessor that only apprehends an emptiness that has no relation to other-powered phenomena.

And therefore wrong superimposition upon the basis, an other-powered phenomena would not be eliminated.

On the other hand, if a non-conceptual exalted wisdom and the emptiness of apprehender and apprehended being different substances were one substance is would follow that emptiness would be a compounded phenomena. If you accept this, it would follow that one cannot abandon the seeds of obscurations by observing and meditating on that emptiness.

This is a hypothetical argument set forth by the Svatantrika-Madhyamikas; in fact, the Chittamatrins do not say that a non-conceptual exalted wisdom and the emptiness of apprehender and apprehended being different substances are one substance.

Are a non-conceptual exalted wisdom and the emptiness of apprehender and apprehended being different substances one entity or different entities? We can definitely say that they are one entity, but this does not mean that they are one substance. This is because if two things were to be one substance they would have to be a substance and therefore a functioning thing. The emptiness of apprehender and apprehended being different substances cannot be a compounded phenomena since it is a thoroughly established phenomena.

Someone who accepts Haribhadra’s assertion that an arya’s exalted wisdom of meditative equipoise directly realizes false dependent arisings as an illusion is someone who has not studied the two systems, the Svatantrika and Prasangika Madhyamika, well; who explains Haribhadra’s assertion wrongly; and who clearly demonstrates that he does not know how to uphold the side of view. An arya’s exalted wisdom of meditative equipoise does not explicitly realize false dependent arisings as an illusion because an arya’s exalted wisdom of meditative equipoise only sees an emptiness and does not see conventional truths. Therefore, someone who makes the previous assertion is one who has not understood the Svatantrika and Prasangika schools, who does not understand Haribhadra’s assertion, and who does not know how to meditate on view.

(5) The reason for not expressing other divisions of exalted wisdoms
The reason for not explaining other divisions of exalted wisdom, such as the mirror-like exalted wisdom, is because here only a mere enumeration of the general divisions of the collection of exalted wisdoms that explicitly observe emptiness is taught. If all the particularities of exalted wisdom were to be explained this would be an obstacle to understanding the meaning in this case,
that of clear realization. Therefore, only some general divisions are set out here. Other divisions, such as the mirror-like wisdom, wisdom of equality, wisdom of accomplishing activities, wisdom of individual realization, and the wisdom of the sphere of reality, are not explained here. This is not the occasion for explaining them; they will be explained in the eighth chapter.

The Chittamatrins assert that emptiness is truly existent. Someone says: “An ultimate truth does not depend on the elimination of an object of negation, yet it is a permanent functioning thing; for example, a vase is a permanent functioning thing that does not depend on being a ‘bulbous bellied, flat bottomed water holder’.” The differences in these statements should be understood just as the difference between a mountain and a grain and the difference between space and the palm of one’s hand is understood. One should understand these differences from the extensive explanation in the Mahayana text Uttaratantra.

This concludes the outline ‘Explaining the collection of exalted wisdom in particular.’

2B2C-1A2C-4B3B-2 Explaining the collection of grounds in particular
A General meaning
B Meaning of the branches

2B2C-1A2C-4B3B-2A General meaning
1 Entity
2 Divisions
3 Characteristics
4 Manner of transference
5 Meaning of the name

These divisions are not related to actual words in Haribhadra’s Commentary Clarifying the Meaning.

2B2C-1A2C-4B3B-2A1 Entity

The collection of ground is a non-conceptual exalted wisdom of meditative equipoise that directly observes thusness and is thoroughly sustained by great compassion and so forth. It is called ‘ground’ because it is a source or support of all excellent qualities. Just as the earth supports trees, crops, and so forth; likewise, a ground in this case is a support for all excellent qualities.

2B2C-1A2C-4B3B-2A2 Divisions

Because there are ten stages there are ten grounds which are differentiated in terms of different levels of ability to eliminate the various levels of objects of abandonment. The ten grounds are related to the ten perfections. When it is said that they have different levels of ability it means that each ground has the specific ability to gain the realization of a particular perfection.

2B2C-1A2C-4B3B-2A3 Characteristics
A Characteristic of entity
B Characteristic of objects of abandonment
2B2C-1A2C-4B3B-2A3A Characteristic of entity

When a bodhisattva reaches the first ground he attains twelve groups of excellent qualities:
(1) in one moment he can see a hundred buddhas
(2) in one moment he knows that he is blessed by them
(3) in one moment he is able to enter a hundred concentrations
(4) in one moment he is able to shake a hundred world systems
(5) in one moment he is able to go to a hundred world systems
(6) in one moment a hundred world systems appear to him
(7) in one moment he is able to ripen a hundred sentient beings
(8) he is able to abide for a hundred eons
(9) in one moment he is able to know the end of the beginning and the end of the end
(10) in one moment he is able to open a hundred Dharma doors
(11) in one moment he is able to manifest a hundred bodies
(12) in one moment he is able to give Dharma teachings to a hundred bodhisattvas who surround each of his hundred emanated bodies.

On the first ground these twelve qualities are in terms of a hundred, on the second ground they are in terms of one thousand, and so forth. In this way the number of qualities on each ground increases more and more. In addition, the bodhisattva also has increasing power to eliminate stains and to travel. On the first ground the bodhisattva attains the great perfection of generosity. A bodhisattva on the first ground has control over the southern continent, Jambudvipa, while a bodhisattva on the second ground has control over all four continents. As the bodhisattva reaches higher levels of ground his rebirths as a universal kings increase.

Wednesday afternoon class, June 3, 1998

The 108 obscurations to knowledge to be abandoned by the path of seeing are:
- the nine conceptions apprehending the nine Mahayana engagements to exist truly
- the nine conceptions apprehending the Hinayana vehicle to be a truly existing path to be rejected
- the nine conceptions apprehending an apprehender of substantial existence
- the nine conceptions apprehending an apprehender of imputed existence

for a total of 36; these being present in each of the three realms there are a total of 108 obscurations to knowledge that are abandoned by the path of seeing.

There are sixteen afflictions to be abandoned on the path of meditation from the first to the tenth grounds: six afflictions of the desire realm, five afflictions of the form realm, and five afflictions of the formless realm. The six afflictions of the desire realm are attachment, anger, pride, ignorance, view of the transitory collection, and view holding an extreme. The five in the form and formless realms are the same excluding anger.

There are 108 innate obscurations to knowledge to be abandoned by the path of meditation. These are similar to the intellectually acquired afflictions that are abandoned by the path of seeing:
- the nine conceptions apprehending the nine Mahayana engagements to exist truly
- the nine conceptions apprehending the Hinayana vehicle to be a truly existing path to be rejected
- the nine conceptions apprehending an apprehender of substantial existence
- the nine conceptions apprehending an apprehender of imputed existence
Gyeltshab quotes the *Great Commentary* by Haribhadra in which it says: “The clear realization of the truth is just one; for this reason the first moment of the first ground is the path of seeing, while the remaining moments from the second moment up to the last uninterrupted path called “expressing like a vajra” is the path of meditation.”

**Manner of transference**

Gyeltshab says that the manner of transference means that as long as one has not finished the subject of the training one will remain on the same ground. When the subject of the training is completed one will transfer to a higher ground.

The subject of the individual trainings on the grounds will be explained later on.

**Meaning of the name**

The word “ground” in Sanskrit is *bhumi*; it is so-called because:
- of providing immeasurable *bhutas* (a kind if spirit) an experience without fear or
- because on it immeasurable excellent qualities increase more and more.

**Meaning of the branches**

1 Making general connections
2 The individual natures

With regard to the collection of grounds, in order to indicate those which are the qualities that will become the complete trainings on that ground, twenty-three interceding stanzas are taught.

Here a connection is made between the collection of exalted wisdom and the collection of the grounds.

The meaning of ‘complete training in the grounds’ is to extinguish the faults of the respective ground and to complete all its qualities.

**The individual natures**

A The nine causal grounds
B Tenth ground: the effect ground

1 The first of the nine: the first ground
2 The second ground
3 The third ground
4 The fourth ground
5 The fifth ground
6 The sixth ground
7 The seventh ground
8 The eighth ground
9 The ninth ground

2 By ten types of complete training, the first ground will be attained: thought; the very things of use, impartial mind toward sentient beings, giving away, serving the friend, seeking the holy Dharma observed object, always intending definite emergence, joyous desire for the body of Buddha, and to teach dharma and truth’s words, are asserted to be the ten; by not referring to their self nature, should be known as complete training.
This is a list of the ten complete trainings that must be completed in order to transfer from the first ground to the second. Complete training means to extinguish all the faults of the respective ground and to complete the excellent qualities of that ground.

The first of the ten trainings is called ‘thought.’ How does one train in this? All the trainings of this ground are to be sustained by great compassion and the wisdom realizing that phenomena are not truly existent. In sutra it says: “What is the meaning of the complete training in thought while abiding on the first ground?” up to “That which is taught in this way is the complete training in words of truth.” “Thought” can mean motivation because a bodhisattva when he trains should do so with great compassion and the wisdom observing phenomena to be non-truly existent.

The second complete training is “the very things of use” or that which is beneficial. The third complete training is “impartial mind toward sentient beings” which means to have a mind that is impartial with respect to all sentient beings without thinking. “I am his brother-in-law,” “I am his nephew,” and so forth. Such a thought would be being partial.

The fourth complete training is “giving away” which is to give away whatever one possesses.

The fifth is “serving the friend” which means to respect one’s virtuous spiritual friend.

The sixth is “seeking the holy Dharma observed object.”

The seventh is “always intending definite emergence” which means going forth from one’s home with a mind of definite emergence.

The eighth is “joyous desire for the body of Buddha” which means to desire to attain a buddha’s body.

The ninth is “to teach Dharma.”

The tenth is “truth’s words,” or words of truth.

Thus, there are a total of ten complete trainings on the first ground.

Gyeltsab explains the complete trainings in the form of a syllogism: the excellent qualities existing in the continuum of a bodhisattva on the first ground who takes pleasure in upholding the Dharma and whose thought is without any hypocrisy regarding all sorts of bases, like sentient beings and virtuous roots (subject), is the training in the first ground (predicate) because it is the excellent quality of one on the first ground that destroys its respective discordant side and acts to complete its excellent qualities (sign).

One should apply the same formula to the remaining grounds.

Gyeltsab then goes through the ten complete trainings in detail. (2) To uphold the Mahayana Dharma means that one mainly emphasizes others’ welfare and is beneficial for oneself and others. (1) Thought means to not have a hypocritical mind toward others, as was said before. (3) Having an impartial mind means that one has a single-pointed mind on the four immeasurables and always has the intention to enact the welfare of others. On this first ground one extremely increases the practice of generosity whereby one (4) gives away all one’s possessions, body, and
roots of virtue without developing the slightest miserliness. (5) To please one’s virtuous spiritual friend is to respect him with one’s three doors since he is the root of all the path. (6) To seek the holy Dharma as an observed object means to observe the three vehicles that include the extensive Dharma baskets. (7) To be strongly displeased to dwell at home means to see the disadvantages of living at home and to develop a strong dislike for it. (8) To desire a buddha’s body means to mentally remember buddha and wish to never be separated from him and to desire to attain a buddha’s body. (9) To excellently teach the Dharma means to teach the Dharma without holding back some for oneself. (10) Words of truth are those that cause one to fulfill one’s promises; therefore one should always speak truthful words. With these ten complete trainings one completes all the qualities of the first ground, Extremely Joyous, without exception.

Furthermore, these causal complete trainings are to be observed as lacking true existence. Realizing this, one will complete these trainings. One should complete the ten complete trainings by not observing them to be truly existent; in this way, one completes the first ground.

In short, there are ten complete trainings on the first ground.

2B2C-1A2C-4B3B-2B2A-2A The second ground
A Root text
B Commentary

2B2C-1A2C-4B3B-2B2A-2ARoot text

Ethics, to repay deeds, tolerance, very joyful, great affectionate heart, respect, to listen devotedly to the guru, eighth: to make effort in generosity and so forth.

There are eight complete trainings on the second ground. While on the first ground the predominant practice is that of generosity, on the second ground it becomes morality.

Gyeltsab briefly comments on the root text saying that with the eight complete trainings, beginning with morality/ethics, one can complete the second ground because with these eight complete trainings one can destroy its respective discordant side and develop all its qualities. On this ground a bodhisattva does not have any stain of morality even in his dreams. This does not mean that a bodhisattva does not practice the other perfections, it just means that he emphasizes the practice of morality. In sutra it says: “What is pure morality? Not mentally attending to the hearers and solitary realizers...” up to “There do not exist perfections other than those that are sought. This bodhisattva exerts effort in the remaining perfections.” Pure morality refers to the bodhisattva vows. One who has taken the bodhisattva vows should not mentally attend to the solitary peace of the hearers and solitary realizers.

2B2C-1A2C-4B3B-2B2A-2B Commentary

1) The ethics of (gathering) virtuous dharma, benefiting sentient beings and of restraint, 2) to remember the benefits done by others, 3) to be tolerant of the harms done by others and so forth, 4) to not regret achieving virtuous dharma, 5) love toward all beings, 6) to bow to the abbot and so forth, 7) to achieve the qualities taught by the virtuous friend, and 8) to delight in the six perfections, generosity and so forth, the complete trainings like the aforesaid, by eight types of distinctions which completely train, the second ground, the Stainless, is attained.

Here Haribhadra lists the eight complete trainings on the second ground.

Gyeltsab says that on the second ground one has a distinguished completion of the perfection of morality. The first complete training here is to observe all three moralities: (1) the morality of gathering virtuous dharmas, (2) the morality of working for the welfare of sentient beings, and (3) the morality of restraining oneself from misbehavior. The second, “to remember the benefits done by others,” means to remember the good done by others as a means to perfect one’s morality; this remembrance should be kept alive. The third, “to be tolerant of the harms done by others and so forth,” means to practice the patience of voluntarily accepting suffering and
of bearing difficulties in Dharma practice. The fourth is the training of delighting in practicing virtuous dharmas without any regret. The fifth is to develop love for all sentient beings without ever rejecting them. The sixth is to bow to higher beings, such as abbots. The seventh is to listen respectfully to the teachings of one’s virtuous spiritual friend. The eighth is to take pleasure in practicing all the six perfections, beginning from generosity, with the motivation of great compassion and the wisdom that observes phenomena to not exist truly. Having completed these, one concludes the complete trainings in the second ground.

REVIEW

There are ten complete trainings on the first ground and eight on the second ground. The eight on the second ground are: (1) the morality of gathering virtuous dharmas and so forth, (2) remembering the benefits done by others, (3) practicing the different types of patience, (4) being happy to practice virtuous dharmas, for example, to lead others in the paths of the three vehicles without regret, (5) having love for other sentient beings (a bodhisattva on the second ground develops love for all sentient beings, this love is so great that he can remain for eons in the Hell of Unceasing Torment for the sake of one single sentient being as is said in the lam-rim prayer in the Guru Puja), (6) bowing to higher beings, including abbots, gurus, and so forth (this is done in order to diminish one’s pride), (7) practicing the Dharma taught by one’s virtuous spiritual friend, and (8) taking pleasure in practicing the six perfections.

One engages in these eight complete trainings on the second ground.

Thursday morning class, June 4, 1998

2B2C-1A2C-4B3B-2B2A-3 The third ground: Luminous
A Root text
B Commentary

2B2C-1A2C-4B3B-2B2A-3A Root text

Not satisfied by hearing, generosity of Dharma without material, thoroughly purifying a buddha realm, undistressed by cyclic existence, so-called shame and embarrassment, and non-adherence five types of essences.

The third ground has five complete trainings:
(1) “not satisfied by hearing” - a bodhisattva on this ground can receive teachings from the buddhas of the ten directions and is never satiated by the amount of teachings he can hear
(2) “generosity of Dharma without seeking material” - a bodhisattva on this ground gives teachings without any hope of receiving any kind of material reward
(3) “thoroughly purifying a buddha realm” - a bodhisattva on this ground thoroughly purifies his future buddha realm. This purification is of two types: purification of the buddha realm, the vessel, and purification of the buddha, the contents of the vessel. When we create virtue we should dedicate it to the place where we will be enlightened, since this is the means to purify the buddha realm.
(4) “undistressed by cyclic existence” - a bodhisattva on this ground does not become distressed when sentient beings treat him badly by physically striking him, criticizing him, and so forth. Instead, this bodhisattva intensifies his practice of patience.
(5) “shame and embarrassment” - a bodhisattva following the Mahayana has shame with regard to himself adhering to the Hinayana and embarrassment with regard to others adhering to the Hinayana.

Gyeltsab says that on the third ground a bodhisattva trains in the five complete trainings such as not being satisfied with hearing and in this way eliminates the faults of this ground and gathers its excellent qualities. In sutra it says: “Great bodhisattva, when one abides on the third ground,
one should abide in the five dharmas. What are they? They are to not be satisfied with hearing and to not cling to the letters [of the words] that explain Dharma...

2B2C-1A2C-4B3B-2B2A-3B Commentary

1) Not knowing satisfaction by listening to the holy Dharma, 2) with a mind which does not behold profit and so forth, to thoroughly teach the holy Dharma, 3) to thoroughly purify one’s own supporting and supported buddha realm, 4) undistressed by seeing disagreeable sentient beings and so forth who were benefited, and 5) through reliance upon oneself and others, to not enact non-virtuous dharmas: the five types of complete trainings like the aforesaid, as before, through not conceiving entitiness, the third ground, the Luminous, is realized.

Gyeltsab says that the five complete trainings are:
(1) to exert effort in hearing a lot of teachings and to never reject those that have been heard
(2) to teach the holy Dharma to others without seeking material offerings, respect, or fame
(3) to purify one’s own future buddha realm by accomplishing the vast collections which are the cause of the future supporting and supported buddha realm
(4) on the third ground by the predominant perfection of patience one is able to tolerate the bad actions of those to be subdued and one completes the other two patiences that benefit sentient beings
(5) to have shame and embarrassment with respect to oneself and others engaging in the Hinayana and with respect to committing non-virtuous dharmas

One trains in these five complete trainings sustained by great compassion and the wisdom that observes the five complete trainings as non-truly existent.

Here we could discuss the etymology of the names of the grounds, such as Extremely Joyous, Stainless, Luminous, Radiant, and so forth, but we will do this later.

2B2C-1A2C-4B3B-2B2A-4 The fourth ground: Radiant

Dwelling in a forest, few desires, contentment, rely on observing the perfect trainings, not forsaking practices, contempt toward all desire, nirvana, to give away all possessions, undiscouraged, and without view.

(1) “dwelling in a forest” - here the word “forest” can be interpreted in different ways since it does not necessarily mean to live in an actual forest. In this context it is an example of living in an isolated place far from the distractions of life in a town. Here distractions refers to the goal of the Hinayana.
(2) “few desires” - a bodhisattva on this ground does not seek material gain that he has not yet acquired
(3) “contentment” - a bodhisattva on this ground knows how to be content with what he has already acquired
(4) “rely on observing the perfect trainings” - a bodhisattva on this ground abides firmly with the twelve types of knowledges, such as those concerning food, clothes, dwelling (this can be a mansion, a cave, a tree, etc.), and so forth
(5) “not forsaking practices” - a bodhisattva on this ground who has taken vows guards them even at the cost of his life and possessions
(6) “contempt toward all desire” - a bodhisattva on this ground despises desirable objects through seeing the disadvantages that they bring. We need to train in this as we tend to continually follow our attachment to objects of desire.
Gyeltshab says that to abide in a forest isolated from the mental attention of hearers and solitary realizers, to have few desires, to know satisfaction, to have a mind firmly set on the twelve excellent qualities which are a field of study, to rely on perfect vows, and so forth are the ten complete trainings. One should train in them in order to eliminate the faults of this ground and to collect its excellent qualities. In sutra it says: “Great bodhisattva, one who dwells on the fourth ground should not give up the ten trainings. What are the ten? They are abiding in an isolated place…”

2B2C-1A2C-4B3B-2B2A-4B Commentary

1) To dwell in a solitary place, 2) not to have strong desire toward goods not attained, 3) regarding goods attained, not to strive for more, 4) perfectly observing (binding) the qualities of training, just begging alms and so forth, 5) not to forsake, even for one’s life and so forth, the adopted practices, 6) to despise the qualities of desire by viewing its shortcomings, 7) appropriate to those to be subdued, to set toward nirvana, 8) to relinquish all possessions, 9) not to be dismayed with regard to accomplishing virtue, and 10) not to view toward anything: the complete trainings like the aforesaid, as before, by the ten types the fourth ground, the Radiant, is overcome.

(1) to abide in isolated place that is far (five hundred arm spans, or about a kilometer) from a city in which there is a lot of hustle and bustle
(2) to have few desires is to not desire that which one has not yet acquired.
(3) to know satisfaction is to not seek that which one does not have.
(4) to have a firm mind bound to the ten excellent qualities, such as that of begging food
(5) to not forsake the adopted practices is to keep one’s vows without any stain from downfalls
(6) to belittle the qualities of desirable objects and see their shortcomings and abandon them
(7) to set those to be subdued in accordance with their respective capacities on the path to nirvana
(8) to give away one’s outer and inner possessions
(9) since on the fourth ground one has completed the perfection of effort one should know that one is able to engage in all types of virtue; for this reason one trains oneself not to be discouraged
(10) not to view all phenomena with the conception of true existence

These ten complete trainings are to be sustained by great compassion and the wisdom realizing emptiness.

In short, there are ten complete trainings on the fourth ground.

The twelve excellent qualities are called:
(1) begging food
(2) one seat
(3) not repeating the same meal
These three are in relation to food.
(4) three Dharma robes
(5) woolen cloth
(6) clothes that are abandoned
These three are in relation to robes.
(7) living in isolation
(8) living near a tree
(9) living without a roof
(10) living in a cemetery
(11) [remaining] seated
(12) being [happy with] whatever basis one has
These six are in relation to the dwelling.

The last of the twelve means that one should not change cushions once it has been arranged, whether it is made of leaves, straw, and so forth. This serves to abandon attachment to a cushion.

These twelve are specific to the ordained but it is good for all to live in this way. [There are three excellent qualities related to food.] Whether one goes to one home or three homes to beg, one should be satisfied with whatever one receives. One should eat the food on only one seat. One should not accept further offerings of food when one has already had one meal. In short, the first three are: to beg for food, to eat all the food on a single seat, and to not accept further food once one has finished eating.

There are three excellent qualities related to clothes, which refers to the robes of a monk. One should possess the three robes of a monk: chogo (yellow shawl), namjar (second yellow shawl of a fully ordained monk), and the lower garment (thango or shamtab). The second is to wear clothes made of wool; and the third is to wear discarded rags found in a cemetery that have been washed and dyed.

The remaining six excellent qualities are related to the dwelling: to abide in an isolated place such as a forest; to abide under a tree; to abide in a place without a roof; to abide in a cemetery; to abide sitting in an upright position; and to abide on a whatever cushion one has been using. These twelve are mentioned in the texts on vinaya. Sitting in an upright position is, for example, following the example of Kagyu practitioners who sit, sleep, eat, and so forth on the same cushion in a meditation box.

2B2C-1A2C-4B3B-2B2A-5 The fifth ground, Difficult Training
A Root text
B Commentary

2B2C-1A2C-4B3B-2B2A-5ARoot text

*Intimacy, possessive toward laity, places which bring commotion, praising oneself, belittling others, ten paths of non-virtuous actions, inflated by conceit, perversity, inferior intellects and consent to delusions when these ten are abandoned, the fifth ground is perfectly attained.*

Gyeltsab says “Intimacy...” and so forth, when these ten are abandoned the fifth ground is perfectly attained and all the qualities of this ground are completed.

(1) “intimacy” - this is to become ordained and so forth for the purpose of gaining offerings and respect from householders by associating intimately with them. A bodhisattva on this ground abandons desire for these. If one abandons this intimacy, one will naturally become a perfect disciple of the buddha without any need to wear saffron Dharma robes or shave one’s head and mustache, and one will be reborn miraculously in a buddha realm.

(2) “possessive toward laity” - this is to prevent the ordained from going to the homes of faithful benefactors or general householders out of jealousy at their receiving offerings and so forth. A bodhisattva on this ground abandons this attitude by thinking, “I should not stop the ordained from having a relationship with their benefactors because by having this relationship the benefactors create merit through making offerings to them.” In short, such a bodhisattva abandons jealousy.
(3) “places which bring commotion” - external commotion is caused by many people moving around and talking, while internal commotion is due to the arising of many conceit caused by hearing others talk about the aim, solitary peace, of hearers and solitary realizers which leads one to pay attention to that aim; both these types of commotion are abandoned by a bodhisattva on this ground.

(4) “praising oneself” - this is to express one’s own qualities

(5) “belittling others” - this is to express the faults of others
A bodhisattva on this ground abandons these two.

(6) “ten paths of non-virtuous actions” - a bodhisattva on this ground trains in abandoning the excessive development of the ten paths of non-virtuous actions. The three negative actions of body and the four of speech are considered to be both paths and actions because they bring unpleasant maturation results. The three non-virtues of mind, covetousness, harmful mind, and wrong view, are not actions because they are not intention; however, they are the basis of the other seven actions and thus are paths of actions, but not actions. The Svantrika-Madhyamikas says that an action must be the mental factor intention which is the third of the omnipresent mental factors. However, a question can be raised as to whether the three actions of body and the four of speech are action since they are not intention. Someone could argue that these seven actions are not actions because they are not the mental factor intention. The answer according to the Svantrika-Madhyamikas is that these are actions because they are motivated by intention; for example, due to the intention to kill or steal one engages in these actions.

(7) “inflated by conceit” - due to one’s knowledge, qualities, the hearing of many teachings, and so forth, one becomes conceited or haughty, whereby one’s respect for others decreases. A bodhisattva on this ground abandons this conceit.

(8) “perversity” - a bodhisattva on this ground trains in abandoning the perverse idea that virtue is to be discarded while non-virtue is to be practiced. “Perversity” can also mean that such a bodhisattva abandons apprehending truly existent virtue and truly existent non-virtue.

(9) “bad intellects” - the view of the transitory collection and other wrong views are abandoned by a bodhisattva on this ground.

(10) “consent to delusions” - a bodhisattva on this ground trains in abandoning the habit of turning toward the afflictions. In general, we tend to indulge in attachment, hatred, and so forth; such a bodhisattva trains to abandon this habit.

Gyeltsab says:
(1) Due to craving for gain and respect [one associates with householders].
(2) One prevents others, for example, monks and nuns, from approaching the home of faithful householders (benefactors).
(3) Due to liking hustle and bustle one abides in cities and so forth.
(4) One praises oneself for the purpose of [obtaining] offerings and respect.
(5) One belittles others (missing from text).
(6) One develops the ten paths of non-virtue due to craving and so forth
(7) One becomes inflated, or haughty, due to hearing and so forth, and belittles others.
(8) One perversely conceives the objects to be practiced and those to be abandoned.
(9) One holds wrong view, the view of the transitory collection, and so forth, which are bad intellect.
(10) One turns toward all the afflictions, such as attachment.

These ten dharmas that are so defined are to be thoroughly abandoned. These ten faults imply the ten antidotes; these are to be trained in while sustained by great compassion and the wisdom realizing emptiness.

The wrong view of deprecating the law of action and result together with its seeds was already abandoned on the first ground. Therefore, the wrong view that is discussed here is only in relation to the beings in the retinues of bodhisattvas on this ground, or else the view holding to an extreme is labeled wrong view in this context, or else wrong view is discussed here only in order to generate an antidote so that the wrong view that has already been abandoned is made even more distant. The remaining nine are probably no longer manifest at this stage but are discussed in order to understand that some of their seeds are abandoned on this ground.

Gyeltsab says that by completing the six qualities, “Generosity...” and so forth, and by abandoning the six faults, one perfectly attains the sixth ground. It is perfectly attained because the bodhisattva of this level has eliminated the faults of this ground and has completed all its excellent qualities. In sutra it says: “By abiding on the sixth ground, one perfectly completes the six dharmas; likewise, the six perfections. Furthermore, one completely abandons the six dharmas. What are the six? To completely abandon the mind of hearers and so forth.”

Gyeltsab says:
(1-6) Having completed the six perfections, one has abandoned the six objects to be abandoned, miserliness and so forth.
(7-8) Having completed the perfections of morality and concentration, one has abandoned the desire to attain the aims of hearers and solitary realizers.
(9) Having completed the perfection of patience, one has abandoned fear of observing all phenomena as entitlessness.
(10) Having completed the perfection of generosity, one is not discouraged even if asked for [one’s head, etc.] by a mendicant.
(11) Having completed the perfection of effort that enjoys practicing generosity, one abandons unhappiness in giving one’s possessions away naturally and spontaneously.
(12) Having completed the perfection of wisdom, one abandons the mind that abandons being a mendicant although one is poor.

In this way the six antidotes are completed and the six objects to be abandoned are abandoned, whereby the twelve trainings are complete.

Friday morning class, June 5, 1998

REVIEW

The achieving of armor has thirty-six divisions which can be condensed into six because a bodhisattva practices all of the six perfections in each one of the perfections. Although the achieving of armor is a practice of actual bodhisattvas, in our daily life we can try as much as possible to practice each of the six perfections within each one, beginning with generosity. For example, while eating we can practice all six perfections by thinking to offer food to the numberless organisms that live in our bodies. While doing this, we can increase our intention to give and meanwhile also practice morality by eating correctly, for example, without excessive noise and so on. By maintaining an undisturbed mind while eating, we can practice patience. In other words, we should avoid, for example, becoming disturbed by the food we are about to eat. We can include the practice of effort by thinking that we can create virtue by eating with a good motivation and then delighting in doing so. Concentration can be practiced by focusing one’s mind, without distraction, on the action of eating food. We can include the practice of wisdom by meditating that the person eating, the food itself, and the action of eating do not exist truly. Likewise, we can include the practice of the six perfections in such daily actions as getting dressed and so forth.

With respect to the achieving of armor, I will not explain the six perfections and their natures again since you already know them. However, what is important is to put them into practice as much as we can in our daily life. The boundary of the achieving of armor is from the Mahayana path of accumulation on up.

The boundary of the second achieving, the achieving of engaging, is from the Mahayana path of preparation on up. When one actualizes this achieving, one gains control over the aspects of the three exalted knowers; it is for this reason that its boundary ranges from the path of preparation on up. The achieving of engaging has various divisions:

(1) the achieving of engaging in the concentrations and formless absorptions

This topic is discussed to enable us to understand that we need to develop calm abiding and superior insight. Generally one precedes up through these concentrations and formless absorptions from one level to another, but what is important to understand here is that all these various levels of mind are based on the development of calm abiding and superior insight.

There are four levels of concentrations, the first, second, third, and fourth, each of which has a preparation and an actual absorption. The preparation of the first concentration can be of three aspects: (i) a preparation that is predominantly calm abiding, which is called the mental attention of a mere beginner, (ii) a preparation that eliminates afflictions, and (iii) a preparation that is predominantly superior insight called Not Unable.

There is no need to discuss calm abiding as it has been explained before; however, it is important to understand that when one attains calm abiding for the first time one attains the first preparatory stage of the first concentration. A preparation that eliminates afflictions is of two types: (i) a preparation that eliminates afflictions that is actual superior insight and (ii) a preparation that eliminates afflictions that is an approximate superior insight. [An example of a preparation that eliminates afflictions which is an approximate superior insight is the mental attention of individual knowledge of the character], which is included mainly in hearing and thinking. A preparation that eliminates afflictions that is actual superior insight is of five types: (I) the mental attention arisen from belief
(2) the mental attention of thorough isolation
(3) the mental attention of collecting joy
(4) the mental attention of analysis
(5) the mental attention of final training

The mental attention of a mere beginner is the first preparatory stage in general. The mental attention of individual knowledge of the character, which is the second preparatory stage, lasts as long as one continues to analyze the individual characteristics of the desire realm and first concentration but has not yet attained physical and mental pliancy. When one attains the pliancy that is the result of analysis one attains an actual superior insight and changes levels to the third preparatory stage. This third preparatory stage is called the mental attention arisen from belief, at which point one has attained a union of calm abiding and superior insight.

One then progresses to the mental contemplation of thorough isolation which is divided into small, middle, and great. These three divisions oppose the three great levels of attachment of the desire realm that are to be abandoned by the mundane path of meditation: the small small level of mental contemplation of thorough isolation opposes the great great afflictions of the desire realm, the middle small level opposes the middle great, and the small great opposes the small great.

The three levels of the mental contemplation of withdrawal or joy oppose the three middling levels of afflictions of the desire realm to be abandoned by the mundane path of meditation; the small middling level opposes the great middling level of afflictions; the middling middling opposes the middling middling, and the great middling opposes the small middling. At this point one has overcome the six levels of afflictions of the desire realm, but one thinks that perhaps one has abandoned all the attachment of the desire realm. Therefore, on the mental contemplation of analysis one checks whether or not this is actually the case. Having done so one finds that one has not abandoned all the levels of attachment of the desire realm.

One then progresses to the mental contemplation of final training which opposes the small levels of afflictions of the desire realm. The small great mental contemplation of final training opposes the great small; the middling great opposes the middling small; and the great great opposes the small small.

Thus one generates nine liberated paths, the ninth of which is the result and corresponds with the achievement of an actual concentration.

The eight preparations of the first concentration overcome all nine levels of afflictions of the desire realm. Therefore, at the level of the actual first concentration one is free from these manifest afflictions. One then precedes upward by engaging in the preparations for the second concentration which overcome the afflictions of the first concentration; then the preparations of the third concentration which overcome the afflictions of the second concentration; the preparations of the fourth concentration which overcome the afflictions of the third concentration; the preparations of Infinite Space which overcome the afflictions of the fourth concentration; the preparations of Infinite Consciousness which overcome the afflictions of infinite space; the preparations of Nothingness which overcome the afflictions of infinite consciousness; and finally the preparations of the Peak of Existence which overcome the afflictions of nothingness.

The first concentration has the Not Unable preparation while the others levels from the first second concentration upward do not have this preparation. The Not Unable preparation is able to abandon the eighty-one afflictions of the three realms easily, in that it simultaneously abandons all the great levels of afflictions, then simultaneously all the middling levels, then simultaneously all the small levels. This is called a preparation having the aspect of the truths. It is an uncontaminated preparation. It has the capacity to abandon all eighty-one afflictions of the three realms easily because it is a supermundane path.

The other preparations are called paths having the aspect of coarseness and peacefulness; they are a mundane path and therefore cannot simultaneously abandon all levels of afflictions.

One can also actualize an uncontaminated path on the support of an actual concentration. A supermundane path supported on a level refers to the fact that a supermundane path takes on
the aspect of the level on which one is; for example, if someone on the first concentration generates a supermundane path, this path takes on the aspect of that level.

An actual absorption can be pure, uncontaminated, or afflicted.

There are four types of concordances:
(i) a concentration concordant with degeneration
(ii) a concentration concordant with abiding
(iii) a concentration concordant with enhancing
(iv) a concentration concordant with definite emergence

(i) A concentration concordant with degeneration is, for example, when having attained the first concentration an affliction then arises.
(ii) A concentration concordant with abiding is while abiding on a pure concentration another pure concentration of the same level is generated.
(iii) A concentration concordant with enhancing is when one generates a concentration of a higher level than one's own.
(iv) A concentration concordant with definite emergence is when one generates a supermundane path on the basis of a concentration.

In this context there are many topics to discuss, such as the achieving of engaging in the six perfections and so forth, but we will leave this and continue on with questions.

QUESTIONS AND ANSWERS
Question: Are both the acquired and innate manifest conceptions of true existence abandoned on the path of preparation? If so, then how are the impure and pure grounds posited?
Reply: The path of preparation only suppresses the manifest conceptions of true existence; it does not abandon it.

The innate conception of true existence has nine levels: three great, three middling, and three small. The great great level is further divided into gross and subtle; in this way there are ten conceptions of true existence. The gross great great level of the innate conception of true existence is abandoned by an uninterrupted path of the first ground; as a result one attains a path of release which is the second ground. Having attained the second ground, one develops an uninterrupted path of the second ground which abandons the subtle great great level of the innate conception of true existence; as a result one attains a path of release which is the third ground. Then one generates an uninterrupted path of the third ground which abandons the middling great level of the innate conception of true existence; as a result one attains a path of release which is the fourth ground. Then one generates an uninterrupted path of the fourth ground which abandons the small great level of the innate conception of true existence; as a result one attains a path of release which is the fifth ground. Then one generates an uninterrupted path of the fifth ground which abandons the great middling level of the innate conception of true existence; as a result one attains a path of release which is the sixth ground. Then one generates an uninterrupted path of the sixth ground which abandons the middling middling level of the innate conception of true existence; as a result one attains a path of release which is the seventh ground. Then one generates an uninterrupted path of the seventh ground which abandons the small middling level of the innate conception of true existence; as a result one attains a path of release which is the eighth ground. Then one generates an uninterrupted path of the eighth ground which abandons the great small level of the innate conception of true existence; as a result one attains a path of release which is the ninth ground. Then one generates an uninterrupted path of the ninth ground which abandons the middling small level of the innate conception of true existence; as a result one attains a path of release which is omniscient mind and thus the buddha ground is achieved.
It is important to understand that according to the Svatantrika-Madhyamikas an initially determined bodhisattva, one who right from the beginning enters the bodhisattva vehicle, simultaneously abandons both the afflicted obscurations and the obscurations to omniscience.

The division into impure and pure grounds is made because during the first seven grounds a dull facultied bodhisattva, although he is indeed a bodhisattva, still has stains of the self-cherishing mind. Therefore, these grounds are called impure because of the presence of the stains of self-cherishing. However, from the eighth ground onward there are no more stains of self-cherishing, and, therefore, the last three grounds are called pure. A bodhisattva on the first seven grounds is also considered to still have the stain of the mother’s womb. However, from the point of view of the Prasangika-Madhyamikas the first seven grounds are called impure because there are still afflicted obscurations on these grounds, while from the eighth ground onward there are no more afflicted obscurations and therefore the last three grounds are called pure.

Question: When does a sign of irreversibility occur?
Reply: A sign of irreversibility occurs when a sharp facultied bodhisattva attains the path of preparation. This is of two types: a sign of irreversibility in relation to thought and a sign of irreversibility in relation to action. A sign of irreversibility in relation to thought means that such a bodhisattva no longer has any thought seeking solitary peace. A bodhisattva of middling faculty attains this sign of irreversibility only on the path of seeing. A bodhisattva of dull faculty attains this sign of irreversibility only on the eighth ground. However one can debate about the measurement of pure and impure ground.

END
Monday afternoon class, June 8, 1998

2B2C-1A2C-4B3B-2B2A-6B Commentary (continued)

Due to the fact of the six perfections [at this stage] being sustained by the mind of enlightenment one abandons the first three of the six faults. Due to having completed the perfection of generosity one abandons the last three faults. Because of having completed the perfection of concentration on the fifth ground, one completes the perfection of wisdom on this, the sixth, ground. The order of these last two perfections is known as the usual sequence, which is that one first attains an actual calm abiding that is common and only after that one attains superior insight. These two will be explained later on.

The six faults are:
1) the wish to actualize the object of attainment of hearers
2) the wish to actualize the object of attainment of solitary realizers
3) to be afraid of meditation on emptiness
4) to be discouraged when someone begs one for something (for example, one’s head)
5) to not be joyful when giving away one’s belongings
6) to not have the intention of giving to beggars

Gyeltsab says “having attained an actual calm abiding one attains superior insight” because in the explanation of the teachings on the stages of the path to enlightenment, calm abiding is explained in relation to the perfection of concentration, while superior insight is explained in relation to the perfection of wisdom.

2B2C-1A2C-4B3B-2B2A-7 The seventh ground: Gone Afar
A The twenty objects of abandonment
B Showing the application of the twenty antidotes

2B2C-1A2C-4B3B-2B2A-7A The twenty objects of abandonment
1 Root text
2 Commentary

2B2C-1A2C-4B3B-2B2A-7A1 Root text

To grasp at self and sentient beings, life, persons, nihilism, eternalism, signs, causes, aggregates, spheres, entrances, abidance in and longing for the three realms, very depressed mind, the three jewels and ethics strong settling which views those, and to dispute about emptiness and the contradiction to that their faults are completely cut from those twenty. By that, the seventh ground is attained.

The twenty faults, such as grasping at a self and sentient beings, are explained. By thoroughly ceasing them one will attain the seventh ground. One also attains this ground by completing the twenty dharmas of qualities. In sutra it says: “Great bodhisattva, one who abides on the seventh ground does not have the twenty dharmas. What are these? They are grasping at a self, grasping at life, grasping at sentient beings…”

In short, on this ground there are twenty objects to be abandoned and twenty antidotes to them.

2B2C-1A2C-4B3B-2B2A-7A2 Commentary

Strong settling which views: 1) self, 2) sentient beings, 3) life-force, 4) persons, 5) nihilism, 6) eternalism, 7) signs, 8) causes, 9) aggregates, 10) spheres, 11) entrances, 12) abidance in and 13) longing for the three realms, 14) very depressed mind, 15) buddha 16) Dharma, 17) sangha, and 18) ethics and grasping, 19) to dispute about emptiness, and 20) to express contradictions; having separated from the twenty faults like these
through full abandonment, by the twenty types of complete training indicated by the meanings the reversed features, the seventh ground, the Gone Far, is to be fully known.

Gyeltsab sets out a syllogism: the seventh ground (subject) abandons some of the seeds of grasping at a self because one has familiarized oneself for many eons with the direct realization of emptiness, the door of liberation. Similarly, apply the same to the other [nineteen objects of abandonment]. This will be explained later on in the context of antidotes.

Disputing about emptiness and grasping at it as a disintegrater of functioning things and grasping at the expression ‘emptiness and the conventional are contradictory’ are to be thoroughly abandoned. Emptiness is an integrator of functioning things; one has to abandon thinking that emptiness and the conventional are contradictory. The twenty antidotes, the counteracting phenomena that are separated from the twenty faults, are indirectly presented. These twenty will be explained in the section on the twenty antidotes.

Knowing three doors of complete liberation, complete purity of the three spheres, compassion, non-adherence, equality of phenomena, knowing one system, knowing non-generation, and tolerance, teaching all phenomena in one way, always conquering conceptions, abandoning discrimination, views and delusions, reflecting on calm abiding, penetrative skilled, taming the mind, to everything unimpeded exalted wisdom, no ground of longing, wherever wished to go to other realms together, and one’s entity everywhere exhibited, are the twenty.

Having completely trained in the twenty complete trainings of the seventh ground, knowing the three doors of liberation and so forth, one eliminates its faults and completes its excellent qualities. In sutra it says: “Great bodhisattva, by abiding on the seventh ground one thoroughly completes the twenty dharmas. What are the twenty? They are the complete realization of emptiness and ...”
view of the transitory collection and so forth, and to abandon afflicting emotions such as attachment and so forth, 14) to meditate on calm abiding, 15) to enact wisdom and skillful means, 16) to pacify finely the mind, 17) unpimbed exalted wisdom toward and so forth, 18) not being an abode of strong grasping, 19) just as one wishes, at the same time, to go to all buddha realms, and 20) in accordance with those to be subdued, to exhibit one’s body everywhere; by these twenty types of complete training also, as before, the seventh ground is to be realized.

1) emptiness
The first antidote is the realization of the emptiness of entity of all phenomena. This realization of the lack of a truly existent self is the first of the three doors of liberation.

2) signlessness
The second antidote is the knowledge that signs, such as the gender signs which distinguish males and females, do not exist truly.

3) wishlessness
The third antidote is the knowledge that the life-force of all sentient beings do not exist truly. This topic of life-force comes here because in the list of twenty objects of abandonment, the third is life-force. All the sentient beings in the desire realm, form realm, and formless realm are alive due to having a life-force; without it they could not live. Such a life-force is empty of true existence. The life-force is not under our control since if we did have control over it we could live as long as we wish.

Someone who is on the seventh ground familiarizes himself with the three doors of liberation: emptiness, signlessness, and wishlessness. These are respectively the emptiness of true existence of entity, cause, and result, and they abandon respectively the grasping at a self of persons, sentient beings, and life.

4) regarding the paths of action of the ten virtues, not to refer to an object to be killed, a killer, of the killing and so forth
The fourth antidote is the antidote to the fourth object of abandonment, the person, which refers to an independent, permanent, and partless person. To generate this antidote, one has to avoid killing and so on by which one directly realizes that the three spheres, the killer, the one to be killed, and the action of killing, do not exist truly. There are ten paths of virtue, such as abandoning killing and so forth. When abandoning killing, if one directly realizes that the killer, the action of killing, and the one to be killed do not exist truly, one abandons the grasping at a person that is independent, permanent, and partless.

5) an affectionate heart which refers to all beings
The fifth antidote is to possess mercy, or compassion, that observes all sentient beings who have been tortured by suffering for many past lives. This antidote abandons the conception thinking that sentient beings cease at death, which is nihilism.

6) non-observance toward things
The sixth antidote counteracts the conception grasping at sentient beings as permanent, which is eternalism. One understands that if phenomena were to exist truly they would exist permanently, but since they do not exist truly they do not exist permanently.

Thursday afternoon class, June 11, 1998

(There were no teachings Tuesday, Wednesday, Thursday morning, and Friday morning.)
7) to realize all phenomena as merely equal
The seventh antidote is the realization of all phenomena of cyclic existence and nirvana as equal in the sense of there not existing truly. This realization abandons the seventh object of abandonment, “signs,” which refers to grasping at the signs of the objects to be abandoned and the objects to be practiced as truly existent.

8) to realize the Mahayana as one
The eighth antidote is to realize that there is only one final vehicle. This antidote abandons “causes,” which means that it abandons grasping at the three different lineages which are the cause of the three vehicles.

9) to realize fully non-generation
The ninth antidote is a mind realizing that the phenomena included in name and form are not generated ultimately. This antidote abandons “aggregates,” in the sense of abandoning grasping the aggregates to exist truly.

10) to bear in mind the tolerance of definitely realizing the profound dharma
The tenth antidote counteracts “constituent,” the conception grasping the eighteen constituents as existing truly without depending on causes and conditions. The antidote is a knowledge of patience which is definitely not afraid of profound phenomena, emptiness.

11) to thoroughly teach all objects of knowledge by means of Mahayana method
The eleventh object of abandonment is “entrances,” the conception grasping the entrances to exist truly. The antidote to this is to teach that apprehenders and apprehendeds do not exist truly. This is a subject that is a method used in the Mahayana which includes everything.

12) to cut off all conceptions
The twelfth object of abandonment is “grasping at the three realms as a basis (to abide on),” the conception grasping the three realms as a basis to abide on to be truly existent. The antidote is to cut off all conceptions of true existence.

13) lack of conceptions which grasp at signs, and to reject the five, view of the transitory collection and so forth, and to abandon afflictive emotions such as attachment and so forth
The thirteenth object of abandonment is “grasping at the three realms to be abandoned.” Its antidote is to not have conceptions that are improper mental attention that apprehend signs of purity, happiness, and so forth. These conceptions are to be abandoned. Also the view of the transitory collection and so forth are to be abandoned. The object to be abandoned is attachment; when defined it is the grasping at the three realms as truly existent. The antidote to this is to not have conceptions that are improper mental attention and to give up the five wrong views and the three afflictions, attachment and so forth.

14) to meditate on calm abiding
The fourteenth object of abandonment is “a very depressed mind.” The antidote is to gain control over the qualities of special calm abiding. By gaining calm abiding one abandons the discouragement that thinks, “I am unable to gain higher qualities.”

15) to enact wisdom and skillful means
The fifteenth object of abandonment is “buddha,” which means clinging to buddha as truly existent. The antidote is a distinguished wisdom included in superior insight and to be skilled in the method that understands that all dependent arisings are like an illusion.
16) to pacify finely the mind
The sixteenth object of abandonment is “Dharma,” which means grasping the Dharma as truly existent. The antidote is to separate from the haughtiness that views the observed object and to have a pacified mind that directly realizes reality.

17) unimpeded exalted wisdom toward and so forth
The seventeenth object of abandonment is “sangha,” which means grasping at the sangha as truly existent. The antidote is the exalted wisdom that is unimpeded in regard to the form and so forth which are included in conventional and ultimate objects of knowledge.

18) not being an abode of strong grasping
The eighteenth object of abandonment is “attachment towards moral discipline,” which means grasping at morality as truly existent. The antidote is the realization that knows that nothing exists as a basis for true existence.

19) just as one wishes, at the same time, to go to all buddha realms
The nineteenth object of abandonment is “to dispute about emptiness.” The antidote is to discriminate phenomena well in order to possess the quality of being able to come and go as much as one wishes.

20) in accordance with those to be subdued
The twentieth object of abandonment is “seeing the conventional and emptiness as contradictory.” The antidote is to have total control over one’s body by way of which one can exhibit any form in order to guide sentient beings who conceive the observed object to exist truly.

With these twenty complete trainings, one realizes the seventh ground, the Gone Afar. These should be engaged in while held by great compassion and the wisdom realizing emptiness.

The two excellent qualities of great compassion and the wisdom realizing emptiness are the basis of all the complete trainings. The definition of a complete training is: an exalted wisdom that dispels the faults of its respective ground and completes its qualities.

Knowing the minds of all sentient beings, playing through clairvoyance, establishing an excellent buddha realm, in order to fully investigate devotion to Buddha, knowing faculties, a buddha’s realm purified, illusion like abidance and taking rebirth as wished, these types of actions are explained as eight.

Knowing the minds of all sentient beings and so forth, the two sets of four, are the eight complete trainings of the eighth ground because they eliminate the faults of the eighth ground and complete its qualities. In sutra it says: “Great bodhisattva, by abiding on the eighth ground one completes the four dharmas. What are the four? To know the minds of all sentient beings...” and “Furthermore, to complete the four dharmas.”
investigated the dharma in all ways, to please the Buddha, 5) to generate the divine eye, 6) to completely purify the supported sentient beings of the buddha realm, 7) to always abide in the illusion-like, and 8) having seen the benefit of all sentient beings, to fully uphold a predetermined rebirth; through eight types like the aforesaid features of complete training, as before, the eighth ground, the Immovable, will be attained.

1) To know just as it is, the mental behavior of all sentient beings
The first of the eight complete trainings is a mind knowing just as it is the mental behavior of all sentient beings in terms of whether they have or do not have attachment and so forth.

2) to play in the mundane realms through clairvoyance of magical emanations
The second complete training is to transfer oneself to many buddha realms. For example, through one’s clairvoyance one can know where buddhas exist and do not exist and then magically emanate oneself before those buddhas to receive teachings.

3) to fully transform the supporting buddha realm into the entity of gold and so forth
The third complete training is to transform one’s vast roots of virtue into the entity of one’s future buddha realm, the support made of gold and lapis lazuli and so forth.

END
Monday afternoon class, June 15, 1998

2B2C-1A2C-4B3B-2B2A-8B Commentary (continued)

4) having fully investigated the Dharma in all ways, to please the Buddha
The bodhisattva investigates the meaning of the words of Dharma in all aspects, whereby he
pleases the buddhas with his body, speech, and mind.

5) to generate the divine eye
Having attained an approximation of the ten powers, the bodhisattva generates the divine eye
that knows the faculties of sentient beings as supreme or not supreme.

6) to completely purify the supported sentient beings of the buddha realm
The bodhisattva purifies the faults of those sentient beings supported on the pure realm of a
buddha.

7) to always abide in the illusion-like
The bodhisattva abides in the concentration that is like an illusion both when he rises and when
he engages.

8) having seen the benefit of all sentient beings, to fully uphold a predetermined rebirth
This bodhisattva takes rebirth out of compassion and prayer having seen the welfare of sentient
beings.

A bodhisattva on the eighth ground has gained an approximation of the ten powers of a buddha
and has attained the divine eye. The divine eye was explained before saying that it sees when
sentient beings will die and where they will be reborn. By means of this divine eye the
bodhisattva can benefit sentient beings.

There are two purifications included in the complete trainings of the eighth ground; the third
complete training which is to purify the supporting buddha realm and the sixth complete training
which is to purify the supported sentient beings. However, in short this means that such a
bodhisattva purifies his own mind by way of not grasping at phenomena as truly existent.

One of these eight trainings is to abide in the illusion-like concentration which means that
whether one arises from meditative equipoise or enters into meditative equipoise one sees all
phenomena as being like an illusion. Such a bodhisattva is said to abide in the illusion-like
concentration. While abiding in this concentration one acts for the benefit of sentient beings by not
seeing phenomena as truly existent.

The eighth of these complete trainings is to take rebirth in cyclic existent due to compassion and
prayers in order to benefit sentient beings. This bodhisattva sees how to benefit sentient beings by
eemanating as many rebirths are needed to fulfill their needs. While ordinary sentient beings take
rebirth due to karma and afflictions, a bodhisattva on the eighth ground is able to take rebirth
where and when he wishes.

Another particularity of a bodhisattva on the eighth ground is that such a bodhisattva has
completed the perfection of prayer whereby all kinds of prayers can be accomplished: the five, the
nine hundred thousand, and so forth.

2B2C-1A2C-4B3B-2B2A-9 The ninth ground: Good Intellect
A Root text
B Commentary
2B2C-1A2C-4B3B-2B2A-9ARoot text
Infinite prayers, knowledge of the speech of gods and so forth, confidence like a river, supreme entry into a womb, caste, clan, family, retinue, rebirths, renunciation, tree or enlightenment, and qualities are perfected collections.

Gyeltsab says that there are twelve complete trainings, such as infinite prayer, with which one purifies the ninth ground because they eliminate the faults of the ninth ground and complete its qualities. In sutra it says: “Great bodhisattva, by abiding on the ninth ground one should complete the twelve dharmas. What are the twelve? To thoroughly maintain infinite prayers, to thoroughly understand the speech of the gods, and so forth...”

1) infinite prayers
A bodhisattva on this level accomplishes infinite kinds of prayers because of having completed the six perfections.

2) knowledge of the speech of gods and so forth
The bodhisattva knows many types of languages, such as that of the gods, due to having the individual correct knowledges of words and meanings. This bodhisattva has the four individual correct knowledges of dharma, meanings, words, and courage; he is able to retain all this in his mind. Since the bodhisattva at this level is said to speak the language of gods he necessarily also knows the languages of the yakshas, the pishatsas, his birth place, Apabhramsha, Sanskrit, and the other human languages.

3) confidence like a river
The bodhisattva has courage in terms of teaching Dharma and does so fluidly, like a river. This is because such a bodhisattva has attained the individual correct knowledge of courage that has control over expressing the profound.

4) supreme entry into a womb
The bodhisattva is conceived in the womb of a mother who is admired by all beings and is free from all the defects of women. In tantra it mentions that a knowledge-woman is one who is free from five faults and has eight qualities. One fault is that of the womb; for example, the womb can be malformed in various ways such as being shaped like an ant which makes it difficult for a baby to be conceived. Other malformations are a womb that is shaped like a camel’s head and a womb that is shaped like a grain of barley. Due to these malformations a child can not grow in the womb. Another fault is when the ovum in the womb is too thin. In order to have a child the mother’s womb must be free from these faults.

A bodhisattva on this level takes rebirth in the womb of a mother who is free from these defects and admired by all sentient beings, just as Shakyamuni Buddha took rebirth in Maya’s womb.

5) perfect caste
The bodhisattva abides in a perfect caste, such as the caste of kings or brahmans. In the past in India the highest caste was that of the brahmans, while below that was the royal caste. Shakyamuni Buddha himself took rebirth in a royal caste; for this reason in the commentary it first lists the royal caste before the brahmin caste. However, it is predicted that Maitreya will be reborn in the brahmin caste in the future. It is said that he will have the color of copper while the Shakyamuni Buddha was the color of gold. Although in the present gold is of high value, in the future when Maitreya appears copper will be of higher value.

6) perfect clan
To be born in a perfect clan is to be born in ‘the clan of the kinsman of the sun’ or ‘the clan from a sugarcane field.’ These are the names of the clan in which Shakyamuni Buddha was born. This clan was called ‘the clan from a sugarcane field’ due to an event that took place in the past.
regarding a sage meditating in a forest. One day the queen of that area went for a walk in this particular forest with the five hundred members of her retinue. They saw the sage and developed faith in him. The queen later returned several times to make offerings to the sage. However, the king became worried about the reason that the queen was to be seen going to visit this sage and asked that the sage be brought to the palace. The king punished the sage for the visits of the queen by binding him to a thorny wood that had three peaks in a field of sugar cane. This punishment was so hard that the sage could have died. Other sages nearby saw this event through their clairvoyance and understood that if this sage were to die his clan would disappear. These sages repeated prayers, words of truth, to save him, whereby a cool wind arose and a rain fell, bringing about a sensation of pleasure in the body of the sage. Due to this some drops of his sperm dripped on the ground of the sugarcane field, whereby the heat of the sun slowly caused the two drops of sperm to mature into two children. For this reason this clan became known as the Kinsmen of the Sun or From a Sugarcane Field.

Tuesday morning class, June 16, 1998

7) perfect family
The bodhisattva takes rebirth in a perfect family. The difference between caste, clan, and family is that family is mainly in relation to the mother, or the maternal side of the family, while clan is mainly in relation to the father, or the paternal side of the family. A perfect family is when the mother has descended from seven pure generations.

8) perfect retinue
The bodhisattva has a perfect retinue.

9) perfect rebirths
When the bodhisattva is reborn he is immediately highly praised by the gods, Brahma, Indra, and so forth.

10) renunciation (definite emergence)
The bodhisattva renounces home life due to the buddhas and the sons of the gods of the pure lands exhorting him to do so.

11) tree of enlightenment
The bodhisattva takes a seat under a bodhi tree, such as the nagadruma (nagavriksha), ashvattha, and so forth, in order to attain enlightenment.

12) qualities
The bodhisattva completes all the excellent qualities, such as the ten powers, possessed by a buddha.

2B2C-1A2C-4B3B-2B2A-9B Commentary

1) Infinite prayers, 2) to know the speech of all sentient beings, gods and so forth, 3) inexhaustible confidence like a river, 4) to enter into a womb extolled by all beings, 5) to reside as a king and so forth, 6) birth from the sun and so forth, 7) properly related relatives, mother and so forth, 8) an independent retinue, 9) rebirth while openly praised by Indra and so forth, 10) requested by the buddhas and so forth, to renounce all, 11) a tree like a wish-granting jewel, Ashvattha and so forth, and 12) to bring to full completion all qualities which are the entity of buddha and buddha-dharma; by twelve types of complete trainings with characteristics of perfected collections like the
Gyeltsab says that the twelve complete trainings which perfectly characterize the ninth ground must be sustained, as said before, by great compassion and the wisdom realizing emptiness. In this way one will purify and actualize the ninth ground, Good Intellect.

Having demonstrated definitely from those, the complete trainings of the causal grounds; on the effect ground itself, not explaining those by means of summarizing all the grounds, the characteristics of the tenth ground.

Gyeltsab says that the complete trainings of the causal grounds are as explained above. Having shown them, here there is only an explanation of the definition/characteristics of the tenth ground, the resultant ground. In addition, the tenth ground is explained saying that it possesses all the qualities of abandonment and realizations of the lower grounds. There is a reason for not explaining the tenth ground in terms of complete trainings; it is because it is enough to explain the definition of the tenth ground, the resultant, in order to understand its nature. In other words, the tenth ground is not explained by means of complete trainings but only in terms of its characteristics because the complete trainings that were completed on the lower grounds are to be understood as having been completed on this ground.

Having passed nine grounds, exalted wisdom by which to abide on buddha grounds, by that, the bodhisattva ground, should be known as the tenth.

Gyeltsab says that this is to be known. How? There are eight lower grounds and nine causal bodhisattva grounds. The first eight lower grounds are [only] known and seen, while the latter [group], the nine causal grounds, abide and pass through. One should know, as is said in sutra, that one abiding on the buddha ground has passed through the nine causal bodhisattva grounds with his exalted wisdom. How should he be known? This bodhisattva is to be known as one on the tenth ground. In sutra it says that the buddha ground that is mentioned immediately after the nine causal grounds that are to be passed through (subject) is the tenth ground because it is a Mahayana ground and the bodhisattvas who abide on it are called the buddha-bodhisattvas of the tenth ground. It is from this point of view that it is known as the tenth ground. However, this bodhisattva is not a fully complete buddha. In sutra it says: “Subhuti, what is the tenth ground of a bodhisattva? In this way, a great bodhisattva practices the six perfections with skill in means and...” up to “when he practices up to the eighteen unshared qualities of a buddha, the level of the family...” up to “he perfectly passes through the bodhisattva grounds. Subhuti, in that way, having passed through the nine grounds, this great bodhisattva abides on the buddha ground. Subhuti, that is the tenth ground of a great bodhisattva.”
by intending to present the three systems condensed, 7) the three remaining enterers, and 8) solitary buddhas. Respectively, the grounds of 1) lineage, 2) the eighth, 3) seeing, 4) diminishment, 5) separation from attachment, 6) realizing completion, 7) hearers, and 8) solitary buddhas; and just one, the nine types of bodhisattva grounds which were explained.

As said previously there are grounds that are known and seen and grounds that are to be passed through. There are eight grounds that are known and seen, while there are nine that are passed through, these being the causal grounds, which here in the commentary are counted as one saying; “and just one.” Therefore there are the eight and the one (which is the nine that are passed by), while the tenth ground is the one that has passed beyond. The eight lower grounds are the grounds of 1) lineage, 2) the eighth, 3) seeing, 4) diminishment, 5) separation from attachment, 6) realizing completion, 7) hearers, and 8) solitary buddhas.

1) lineage
Gyeltshabs sets out a syllogism: the four paths of preparation which are supported on the lineage of reality of hearers, solitary realizers, and so forth (subject) are respectively the grounds of lineage because they are realizations of ordinary beings that are unmistaken in regard to the lineage that has been perfectly awakened by the Hinayana. A person who abides on the ground of lineage is not definite to not turn away from his respective enlightenment because there are, for example, hearers who abide on a hearer’s path of preparation who attain the Mahayana enlightenment. Someone on the hearer’s path of preparation but is destined to become the bodhisattvas lineage can be said to have a ground of lineage. The path of preparation in the continuum of this person is not suitable to not be posited as a ground of lineage because it would follow that one has not understood the general definition of a ground of lineage. This means that all hearer’s paths of accumulation and paths of preparation are to be posited as grounds of lineage. This is due to the definition of a ground of lineage: a clear realization of a hearer ordinary being. Therefore, one cannot say that one who is on the hearer’s path of preparation but will later change to the Mahayana does not have a ground of lineage.

2) the eighth
A clear realization in the continuum of an approacher into stream enterer is the second lower ground, called “the eighth.” This clear realization is called “the eighth” because when the sangha are counted starting with the abider in the result of foe destroyer and going down through the approacher into foe destroyer, abider in the result of non-returner, approacher into non-returner, abider in the result of once returner, approacher into once returner, abider in the result of stream winner, to the approacher into stream winner, this latter one is the eighth.

Tuesday afternoon class, June 16, 1998

The realization of an approacher into the first serial result, that of stream enterer, is the ground of the eighth because it is a realization that is the eighth, although it belongs to first [pair] of four pairs.

3) seeing
The realization of a serial stream enterer (subject) is the ground of seeing because it is a realization that is distinguished by having abandoned the three thorough entanglements

4) diminishment
The realization of a once returner (subject) is the ground of diminishment because it is the realization of an abider in a result that is distinguished by being free from most attachments. The word that has been translated here as “diminishment” is literally “thin” which means that most of
the attachments have been abandoned at this level while those that remain are said to be thin. This once returner has abandoned up to the sixth level of attachment of the desire realm.

5) separation from attachment
The realization of a non-returner is the ground of separation from attachment because it is the realization of an abider in a result that is distinguished by having abandoned the five lower similitudes.

6) realizing completion
The realization of a hearer foe destroyer is the ground of realizing completion because it is a realization of the Hinayana that is distinguished by having abandoned the five upper similitudes.

7) hearers
The realization of the three approachers into the remaining results of hearers is the ground of hearers because it is a realization of the remaining approachers into the results of hearers. The remaining approachers into the results of hearers are the approachers into the result of once returner, non-returner, and foe destroyer. These three remaining approachers are called hearers because there is no other name to give them. There is a reason for combining the three remaining approachers into one and calling them the ground of hearers; it is that there are three vehicles presented here: the vehicles that are seen and passed through (the hearer and solitary realizer vehicles) and the vehicle to abide on and pass through, while having passed beyond them is explained as the definition of the ten ground. Therefore, the above three approachers can only be a ground of hearers with respect to the three vehicles.

8) solitary buddhas
The clear realization of an arya solitary realizer is the ground of solitary buddhas/realizers because it is the realization of an arya of the middle vehicle.

The nine aspects of the bodhisattva grounds explained above are the nine bodhisattva grounds to be passed through which are counted as merely one because they are counted as the one that is to be passed through after having abided on it.

2B2C-1A2C-4B3B-2B2B-3B Explaining the tenth ground passed beyond those

Having passed the nine grounds like those, with regard to the tenth ground, because “one should express the bodhisattva as a mere buddha he is not a fully completed buddha” arises, abiding on the tenth ground of the bodhisattva. That buddha ground that is abided on by those knowing prayer is to be known as the tenth ground of a bodhisattva.

Gyeltsab says that likewise in sutra it says that just after passing through the ninth ground the bodhisattva abides on a buddha ground having gained control over the actions of clairvoyance and prayers; this is to be known as the tenth bodhisattva ground. In sutra it is said that the bodhisattvas abiding on this ground, the tenth, are called bodhisattva-buddhas although they are not yet perfectly complete buddhas.

In Uttaratantra it says: “In subsequent attainment this manner of bodhisattvas have realizations equal to those of the tathagatas in the sense of their perfectly liberating sentient beings because the bodhisattvas on the tenth ground no longer need gross effort to enact the welfare of others.” These bodhisattvas are equal to buddhas because of engaging in enlightened activities for all sentient beings without any need for gross effort. However, these bodhisattvas have not yet abandoned the level of the latency of ignorance, the uncontaminated karma that arises from the elaboration of the sign of true existence, a body that is the nature of the mind, and inconceivable transference (death). However, such a bodhisattva has overcome the death that is
caused by karma and afflictions. Since these bodhisattvas have not attained the pure and blissful truth body, a holy self, eternal/permanent perfection, they are not called “buddha.”

The word “prayer” is mentioned in the Commentary Clarifying the Meaning because this bodhisattva has attained the ten controls, which include prayer etc., and has therefore gained control over the means to actualize the truth body. The ten controls are: control over life, control over the mind, control over necessities, control over action, control over rebirth, control over belief/appreciation, control over prayer, control over miracles, control over exalted wisdom, and control over Dharma. These ten controls, or powers, are different from those set out in other contexts.

A bodhisattva on the tenth ground has not abandoned the uncontaminated karma that arises from the elaboration of the sign of true existence; this is the karma that causes a bodhisattva to take a body that is the nature of mind. This uncontaminated karma is karma that derives from subtle effort motivated by the obscuration to omniscience. The level of the latency of ignorance is similar to the affliction that causes one to create karma and take rebirth; however, a bodhisattva on the tenth ground only has the affliction that is the level of the latency of ignorance and only has uncontaminated karma. These are what cause him to take rebirth.

A bodhisattva on this ground does not experience gross death as do we, but experiences a death that is inconceivable.

2B2C-1A2C-4B3B-3A Explaining the collection of antidotes in particular
This concludes the explanation of the collection of grounds in particular. The next, the collection of antidotes, has three divisions:
A Making a connection
B Root text
C Commentary

With regard to the collection of antidotes, an interceding stanza.

2B2C-1A2C-4B3B-3B Root text

On the seeing and familiarization paths, in order to closely pacify conceptualizations of apprehenders and apprehendeds, so-called eight antidote types.

The Mahayana paths of seeing and meditation (subject) are said to consist of eight types of antidotes (predicate) because there are the eight that pacify the eight conceptions of apprehenders and apprehendeds, the objects to be abandoned (sign). In sutra it says: “Subhuti, nevertheless where do the vehicles come from?” “Proclaiming [the answer]: By means of non-observability they originate from the three realms and by means of non-duality one will abide in omniscience wherever it exists.”

When the above syllogism says that the Mahayana paths of seeing and meditation have eight types of antidotes this means that these paths are composed of eight antidotes that abandon eight objects of abandonment: the four objects of abandonment of the path of seeing and the four objects of abandonment of the path of meditation. The objects of abandonment of the path of seeing are:
- the conception of [true existence of] ever deluded phenomenon
- the conception of [true existence of] thoroughly purified phenomenon
- the conception of [true existence of] an apprehender of substantial existence
- the conception of [true existence of] an apprehender of imputed existence
The objects of abandonment of the path of meditation are also these four.

However, there are actually 108 objects of abandonment of the path of seeing: the above four objects of abandonment are each divided into nine for a total of 36 in relation to the desire realm, 36 in relation to these form realm, and 36 in relation to the formless realm. This total of 108
also applies to the path of meditation. These 108 are the ones which we went through when we were discussing the Mahayana path of preparation.

Wednesday morning class, June 17, 1998

2B2C-1A2C-4B3B-3C Commentary

Conceptualizations of apprehendeds (are) two: possessing the supports of 1) mere properties of the completely afflicted and 2) of antidotes. Conceptualizations of apprehenders (are) two: possessing the supports of 1) substantially existent persons and 2) of imputed beings. Since individually abandoned on the paths of seeing and meditation in order to pacify the eight conceptualizations of apprehendeds and apprehenders having relied on aspects of the two truths, that which is to be manifested, through classification of discordancies, distinguished in the context of only the two paths, (there are) eight antidotes.

Gyeltsab sets out a syllogism: the attribute of the occasion which has the ability to eliminate the objects of abandonment of only the Mahayana paths of seeing and meditation (subject) are the eight types of antidote because there are eight objects of abandonment which are the discordant class. The discordant class is divided into eight because there are the conceptions of apprehenders and apprehendeds included among the intellectually acquired and the innate which are to be pacified. The antidotes to the objects of abandonment of the path of seeing and the path of meditation are presented as those that are to be actualized and known in dependence upon the aspects of the two truths as taught in sutra. That to which one definitely emerges and that by which one emerges are asserted to be conventionalities. In dependence on these conventional truths, the antidotes to the conceptions of apprehenders and apprehendeds to be abandoned by the path of seeing are taught. Ultimately that to which one emerges and the means by which one emerges are negated. Through this ultimate truth, the antidotes to the conceptions of apprehenders and apprehendeds to be abandoned by the path of meditation are taught. Because there are divisions of the discordant class the antidote is also suitable to be divided into eight types. There are two conceptions of apprehenders and two conceptions of apprehendeds which are respectively the seed of the intellectually acquired conceptions and the seed of the innate conceptions that are abandoned on the path of seeing and the path of meditation.

In general, definite emergence is discussed in terms of emerging from cyclic existence, but here it is discussed in terms of that to which one emerges, which is nirvana, and the means by which to emerge, which is exalted wisdom. According to the Svatantrika-Madhyamikas both that to which one emerges and the means by which one emerges are conventional truths. Definite emergence is taught to be of six types in the commentary on Vinaya:
- the place from which one emerges
- by what one emerges
- that to which one emerges
- the purpose of emerging
(Geshe-la does not recall the other two.)

There are two types of objects of abandonment: objects of abandonment of the path of seeing and objects of abandonment of the path of meditation. The entity of an object of abandonment of the path of seeing is defined as: that which is observed to be intellectually acquired. The entity of an object of abandonment of the path of meditation is defined as: that which is observed to be innate.
With regard to the accumulation of collections like that, since definitely emerging, the fourth, achieving of definite emergence.

Gyeltsab say that by accumulating the two collections through vast thought and action, one will definitely emerge to omniscience.

Objects of intent, equality, welfare of sentient beings, effortless, definitely emerging to pass beyond extremes, definite emergence characteristic of attainment, exalted knower of all aspects itself, and definite emergence object possessor of the path: these essences of eight types should be known to be the achieving of definite emergence.

Gyeltsab says that the entity of the eight objects/places to which we definitely emerge is that which is to be practiced; this is to be known as the achieving of definite emergence. It is to be known by way of eight: [one] generality, the objects of intent (the place to which one emerges and so forth), and [seven] particularities. In sutra it says: “Bhagavan, that which is called the great vehicle, having outshone the world together with the gods, humans, and anti-gods, occurs.”

In brief, although in general there is one definite emergence when it is divided into its particularities it is of eight types.

1) The objects of intent which were explained, 2) the equality of all phenomena, 3) to act to perform the welfare of sentient beings, 4) through merely performing all without signs, spontaneous, 5) distinguished in the context of the entity which is separated from eternalism and nihilism, 6) to attain all aims of the three vehicles, 7) the exalted knower of all aspects itself, which was explained, and 8) the distinguished path of that the bases which will definitely emerge, because there are no other superior qualities distinguished from these example, through mere non-observance of anything, as the definitely emerged are of eight types, achieving of definite emergence is of eight types.

The object to which one definitely emerges is mainly the three objects of intent. These three objects of intent were already explained in the context of the sixth topic of omniscient mind. They are:
- great heroic mind
- great abandonment
- great realization

The objects of intent are the first type of achieving of definite emergence.

Gyeltsab says that the achieving of definite emergence is of eight types. All these objects to which one definitely emerges are to be realized as qualified by not being observed to exist ultimately. Conventionally these objects to which one is to definitely emerge are definitely of eight types because there are eight and there are no other phenomena that are superior to these bases to which one definitely emerges. What are the eight achieving of definite emergence? They are:

1) The objects of intent which were explained
The first achieving of definite emergence is the three objects of intent that were explained before; the Great Translator explains them as an attribute of achieving.

2) the equality of all phenomena
The second achieving of definite emergence is that, having seen all phenomena as equal in being empty of true existence, one’s great compassion, a great mind, knows that all sentient beings are equal in needing their suffering to be eliminated.

3) to act to perform the welfare of sentient beings
The third achieving of definite emergence is the enactment of the welfare of sentient beings by means of activities is performed infinitely. The differentiation of this definite emergence is taught in Uttaratantra saying: “Indra, drum, cloud, Brahma...”

4) through merely performing all without signs, spontaneous
The fourth achieving of definite emergence is that one spontaneously enacts others’ welfare without signs of conception and effort.

The last three (the second, third and fourth) achievings of definite emergence are included in the great heroic mind.

Wednesday afternoon class, June 17, 1998

5) distinguished in the context of the entity which is separated from eternalism and nihilism
The fifth achieving of definite emergence is that, having abandoned the extreme of cyclic existence and solitary peace, one attains the distinction of occasion that is the nature of separation from eternalism and nihilism, the extinction of the objects of abandonment [which in this case are] the grasping at the extremes of eternalism or nihilism.

6) to attain all aims of the three vehicles
The sixth achieving of definite emergence is the attainment of all the aims that are to be realized by the three vehicles through extinguishing all objects of abandonment.

These two achievings of definite emergence (the fifth and sixth) are the distinction of the second object of intent, great abandonment.

7) the exalted knower of all aspects itself, which was explained
The seventh achieving of definite emergence is omniscient mind itself which directly realizes the ten topics explained above, mind generation and so forth.

8) the distinguished path of that
The eighth achieving of definite emergence is the distinguished path to that omniscience which is included in the vajra-like concentration.

These latter two are to be known as a distinction of great realization. Since the distinguished path is posited as existing from the eighth ground onward, also the achievings of definite emergence exist from there onward.

**REVIEW OF CHAPTER ONE**

This concludes the ten topics related to omniscient mind, the first of the eight categories. We need to put these teachings into practice by, for example, generating the mind of enlightenment whenever possible. Then regarding precepts we should try to maintain them in our mind motivated by the mind of enlightenment. In regard to precepts we should know that all phenomena can be included in the two truths, the conventional and ultimate. The two truths should be understood well, meaning that all phenomena, ranging from form to omniscient mind, should be understood as having their respective definition/characteristic of their particular
function while being empty of true existence. The fact that phenomena have certain functions, some as agents, some as actions, and some as objects, all being [acceptably] right, is their conventional truth, while the fact that they are empty of true existence is their ultimate truth. We should do all our practices without passing beyond, or over, the two truths by avoiding falling into either the extreme of thinking that if something does not exist truly it does not exist at all (nihilism) and that if it exists it must exist truly (eternalism).

Also in the context of precepts Maitreya taught that, on the basis of remaining within the two truths, we should take the four noble truths—true sufferings, true origins, true cessations, and true paths—as our principal object of meditation. In relation to the four noble truths in *Uttaratantra* it says that one has to first recognize the sickness, then abandon the cause of that sickness, then seek well-being, a cessation of that sickness, and then take the medicine that cures that sickness. In the same way, one should meditate to recognize suffering, then abandon its causes, seek its cessation, and apply the antidotes to achieve its cessation. In brief, we have to recognize suffering or pain as something that is unpleasant. We should then seek to understand its causes and work to abandon them. Then we should apply the cure to this suffering and thereby achieve its cessation. To do this we need to understand the four noble truths; for example, we need to understand the various types of suffering. Having recognized our suffering and being afraid of it, we then need to look for a source of refuge. In short, that which we study and learn from texts should be put into practice.

There are ten divisions of precepts, which include the precept regarding going for refuge. There are precepts concerning effort, the path of seeing, the clairvoyances, and so forth which have already been discussed, but what is important is for us to make continuous effort.

The next topic, the third, is the similitude of definite discrimination, or the path of preparation. The principal characteristic of the Mahayana path of preparation is that it is superior to the Hinayana path of preparation in regard to five or six attributes: its observed object, aspect, cause, tutor, possession of the antidotes to the objects of abandonment, and its divisions. Here it is important to understand that the observed object of the path of preparation is the four noble truths. The four noble truths are the observed object of the path of preparation because they are the basis on which superimpositions regarding the Mahayana path of preparation are eliminated. It can be asked: if it is an exalted wisdom of meditative equipoise of a Mahayana path of preparation does it necessarily observe the four noble truths? Since it is difficult to say that it always observes the four noble truths, one would answer that it does not necessarily observe them. In other words, there is no pervasion that it observes all four noble truths although it does observe one of the four noble truths.

Here we need to understand the difference between the way in which the Mahayana and Hinayana paths of preparation observe the four noble truths. The difference is that the Mahayana path of preparation observes the four noble truths as qualified by non-true existence. In other words, while the Mahayana path of preparation observes the four noble truths as non-truly existent, the Hinayana path of preparation observes the mere four noble truths.

Another attribute of the Mahayana path of preparation is its aspect. The exalted wisdom of meditation equipoise of all four levels of the Mahayana path of preparation, the heat, peak, patience, and highest mundane dharma levels, have the aspect of the four noble truths as non-truly existent. The aspect is of two types: one from the side of the object and one from the side of the subject. The object aspect is the four noble truths which do not exist truly, while the subject aspect is the exalted wisdom of meditative equipoise which has a mode of apprehension that apprehends the four noble truths as non-truly existent.

In the *Commentary Clarifying the Meaning* it mentions how the twelve divisions of the path of preparation observe their respective observed objects: one by way of cause, one by way of result, and one by way of the entity, while the remaining nine divisions observe their observed objects by way of the aspect of reality (dharmata). This is just a brief overview of the teachings on this topic.
The Mahayana path of preparation is superior to the Hinayana in terms of its cause because the Mahayana path of preparation brings one closer to attaining the realizations of the three vehicles while the Hinayana path of preparation does not do so.

The Mahayana path of preparation is superior to the Hinayana path of preparation because one has a tutor who is a supreme emanation body while one on a Hinayana path of preparation does not have such a tutor (see page 14 outline 2B2C-1A2B-2B1C-2A):

The bodhisattvas’ “similitude of definite discrimination”, through the strength of skillful means, refers to properties of the four truths, in the proper way: 1) by means of cause regarding some, 2) by means of effect regarding some, 3) by means of mere entity regarding some, and 4) by means of the aspects of dharmata regarding some.

The four levels of the Mahayana path of preparation are also superior to the Hinayana in terms of their objects of abandonment. The heat level of Mahayana path of preparation suppresses the nine conceptions of true existence regarding ever deluded phenomena, which are obscurations to omniscience; the peak level suppresses the nine conceptions of true existence regarding thoroughly purified phenomena, which are obscurations to omniscience; the patience level suppresses the nine conceptions of apprehenders of substantial existence, which are obscurations to omniscience; and the highest mundane dharma level suppresses the nine conceptions of apprehenders of imputed existence which are obscurations to omniscience.

On the path of preparation these four groups of nine, which are 36 obscurations to omniscience mind, are suppressed but not abandoned. If they were abandoned at this time it would mean that a true cessation would be attained, but this is not possible. These 36 intellectually acquired conceptions which are obscurations to omniscience are abandoned by the path of seeing (when considered with respect to all three realms there are 108). The 36 innate conceptions which are obscurations to omniscience are abandoned by the path of meditation (when considered with respect to all three realms there are also 108).

The Mahayana path of preparation is also superior to the Hinayana in terms of its divisions because, although the heat, peak, and patience levels of the Hinayana path of preparation are divided into three, the small, middle, and great, the highest mundane dharma level is not so divided because it is said to be extremely brief in that it lasts the duration of a finger snap. However, the highest mundane dharma level of the Mahayana path of preparation is also divided into small, middle, and great.
One can then ask: does the Mahayana heat level of the path of preparation observe all four noble truths? It is difficult to say that it observes all four. The Mahayana heat level of the path of preparation observes any one of the sixteen attributes of the four noble truths; this is the way in which it can be said to observe the four noble truths. Just because it observes one of the attributes, it can be said to observe the four noble truths. Thus, the four noble truths are considered to be the observed object of the heat level of the Mahayana path of preparation. This is why it is said that if something is an observed object it is not necessarily observed. For example, we can consider true sufferings as a basis and establish the emptiness of true existence on it. When the emptiness of true existence is established on this basis, superimpositions regarding it are eliminated. In the text *Four Hundred Stanzas* it says that when superimpositions regarding a particular basis are eliminated then also the superimpositions regarding other phenomena are eliminated.

The observed objects of a Mahayana achieving are the fifth topic representing omniscient mind. The definition of this observed object is: a basis upon which superimposition is to be eliminated with regard to a Mahayana achieving. It has already been said that all phenomena are the observed object of a Mahayana achieving; for this reason ‘observed object of a Mahayana achieving’ and ‘object of knowledge’ are mutually inclusive. There are eleven divisions of observed objects of a Mahayana achieving, virtue, non-virtue, unpredicted/neutral, and so forth. The first three divisions of (1) virtue, (2) non-virtue, and (3) unpredicted/neutral are generalities, then there are eight divisions which are particularities. These eight can be grouped into four pairs:

- (4) the mundane and (5) the supermundane
- (6) the contaminated and (7) the uncontaminated
- (8) the compounded and (9) the uncompounded
- (10) common qualities and (11) uncommon qualities

When the subject of these eleven observed objects is debated one can discuss what is virtue and what is non-virtue. Virtue, according to Jetsun Chokyi Gyeltsen is ‘that which is predicted and abides in a class of white maturation’; while non-virtue is ‘that which is predicted and abides in a class of black maturation’. However, some scholars posit virtue as ‘that which is observed to be an object to be practiced by holy beings’; and posit non-virtue as ‘that which is observed to be an object to be discarded by holy beings.’ In regard to these definitions, one can debate who is and who is not a holy being. The answer is that a holy being is ‘one who engages in virtuous activities and does not engage in non-virtuous activities.’ This implies that a non-holy being is the opposite: one who engages in non-virtuous activities and does not engage in virtuous activities.

In regard to the topic of observed objects one should know that just as there are eleven observed objects, there are eleven bases upon which superimposition regarding Mahayana achieving is eliminated.

The fourth topic of omniscient mind is the buddha lineage that is the support of a Mahayana achieving. There are thirteen divisions of this buddha lineage; these are all emptinesses upon which one meditates. These emptinesses, which are the support of the Mahayana achieving, are the explicit presentation of the lineage. The thirteen divisions are as it says in Maitreya’s root text, *Ornament for Clear Realization*:

*Six dharmas of realization, antidotes and abandonments, completely reaching those, wisdom together with mercy, learners, the uncommon itself, the sequence of the welfare of others, and engaging in exalted wisdom without exertion: their supports should be known as lineage.*

The topic of lineage can also be understood by relying on other sources such as the *Ornament for Sutra* by Maitreya in which the Chittamatra view of lineage is presented in nine sections.
However, these nine can be condensed into a naturally abiding lineage and a developmental lineage. According to this presentation, the naturally abiding lineage is defined as a seed of uncontaminated mind; while the developmental lineage is defined as a seed of uncontaminated mind that has been developed by hearing and so forth.

In addition, there are the three lineages of the three vehicles. Jetsunba says that there are three different lineages because sentient beings have different predispositions and consequently different beliefs/appreciation and different ways of practicing. Because of these different predispositions, different beliefs, and different practices, there are also the three different results.

There are four reasons as to why the Mahayana lineage is superior to that of the Hinayana. In "Ornament for Sutra" it says that Mahayana virtue is superior to Hinayana virtue; the Mahayana lineage is able to act as a support for all excellent qualities while the Hinayana is not; the Mahayana lineage acts as a cause for culminating the two accumulations, which are of great purpose, while with the Hinayana does not; with the Mahayana lineage when the final respective nirvana is attained the roots of virtue become inexhaustible, while this is not the case regarding the Hinayana lineage when its respective nirvana is attained.

According to Uttaratantra the buddha nature exists in all sentient beings because:
1. the enlightened activity of the buddhas pervades all
2. the thusness of the minds of sentient beings and the thusness of the minds of buddhas are inseparable
3. all sentient beings have a lineage

Thinking about this we will come to realize that all sentient beings can become enlightened beings. With this understanding we will not become discouraged but will see that due to having the buddha lineage if we put effort into it we can become a buddha.

Why is the buddha nature not manifest in us now? It is because we have nine incidental stains which cover it and prevent it from being manifested. There are nine illustrations of that which obscures, nine illustrations of that which is obscured, nine meanings of that which obscures, and nine meanings of that which is obscured.

Thursday afternoon class, June 18, 1998

REVIEW OF CHAPTER ONE (continued)
The sixth topic is the objects of intent, the three greatesses that were discussed yesterday.

The seventh topic is that of the Mahayana achievings which are discussed in terms of their observed objects and the achievings themselves. In this context, the three exalted knowers are discussed here as generalities, while the four trainings are discussed as particulars. The subjects presented in the first three chapters are ‘the practice of the exalted knowers as an object’; this is said because there is no clear presentation of the six perfections in these chapters. In the following four chapters there are explanations of the four trainings which are called ‘the practice of the trainings as particulars’ which cut off doubts regarding the six perfections. The achievings are divided into four:
1. the achieving through armor
2. the achieving through engaging
3. the achieving through collections
4. the achieving through definite emergence

The achieving through armor is a practice that combines all six perfections in the practice of each perfection.

The achieving through engaging is the engagement in the concentrations and formless absorptions, the six perfections, the paths of seeing, meditation, no-more-learning, and the distinguished path, the four immeasurables, and so forth.
There are four concentrations each of which has a preparation and an actual concentration. A preparation is defined as: a virtuous cognizer that is a method for attaining its respective object to be attained and that belongs to the level of a preparation. For example, the first concentration is divided into preparation and the actual first concentration. The definition of a preparation of the first concentration is: a virtuous cognizer that is a method for attaining the first concentration and that belongs to the level of a preparation of the first concentration.

An actual concentration is defined as: a virtuous cognizer belonging to the level of a concentration that has gone beyond the lower level by means of its branches. If this definition is applied to the first actual concentration it becomes: a virtuous cognizer belonging to the level of the first concentration that has gone beyond the lower level, the desire realm, by way of its branches. The second actual concentration becomes defined as: a virtuous cognizer belonging to the level of the second concentration that has gone beyond the lower level, the first concentration, by way of its branches. This same formula can be applied to the remaining two concentrations.

Each time one transfers to a higher level of concentration one does so by way of its branches and not by way of its observed object, as in the case of transferring to a higher level of formless absorption.

The preparation of the first concentration is of three types:
- the mental attention of a mere beginner
- the preparation that eliminates afflictions
- the Not Unable preparation

The first of these can be called ‘a preparation included in calm abiding’; the second, ‘a preparation included in superior insight’ or ‘a preparation having the aspect of fine and coarse’; and the third, ‘a preparation having the aspect of the truths.’ However, from the second concentration up to the peak of existence there are only two types of preparations:
- the mental attention of a mere beginner
- the preparation that eliminates afflictions

The preparation that eliminates afflictions can be further divided into six:
1. the mental attention of individual knowledge of the character
2. the mental attention arisen from belief
3. the mental attention of thorough isolation
4. the mental attention of collecting joy
5. the mental attention of analysis
6. the mental attention of final training

The mental attention of a mere beginner is included in calm abiding; in other words, it is calm abiding.
1. On the basis of calm abiding, one generates the mental attention of individual knowledge of the character. This is defined as: a virtuous cognizer based upon calm abiding that analyzes its object (lower and higher levels) and lasts until the attainment of the bliss of physical and mental pliancy.
2. The mental attention arisen from belief is generated when one attains the bliss of physical and mental pliancy after long analysis of the gross and peaceful.
3. The mental attention of thorough isolation actually counteracts the three great levels of afflictions of the desire realm.
4. The mental attention of collecting joy then counteracts the three middle levels of afflictions of the desire realm. The meditator at this point has abandoned the six levels of afflictions of the desire realm and thinks that perhaps he has abandoned all the afflictions of the desire realm. However, upon checking with (5) the mental attention of analysis as to whether this is actually the case, he finds that he has not abandoned all the afflictions.
5. He then goes on to generate the mental attention of final training which counteracts the three small levels of afflictions of the desire realm. With this, he attains an actual concentration or formless absorption, the result of final training.
When eight preparations are enumerated, there are these six plus the mental contemplation of a mere beginner and the result of final training.

The concentrations have four concordances:
1. A concentration concordant with degeneration
2. A concentration concordant with abiding
3. A concentration concordant with enhancing
4. A concentration concordant with definite emergence

1. A concentration that is concordant with degeneration means, for example, that, having attained the first concentration which is pure, an affliction of its own level arises whereby the concentration itself is said to become afflicted. There are four types of afflictions by which a concentration can degenerate.
2. A concentration that is concordant with abiding is one that induces another pure concentration of its own level.
3. A concentration that is concordant with enhancing is that, having attained a pure actual concentration, one generates a pure concentration of a higher level.
4. A concentration that is concordant with definite emergence is that while abiding on a pure actual concentration one generates a supermundane path.

The first concentration has five branches; the second, four; the third, five; and the fourth, four; for a total of eighteen branches. If these are condensed, each concentration can be said to have three branches:
1. A branch of antidote
2. A branch of benefit
3. A branch of basis

In relation to the topic of the preparations, one should also understand the nine stages leading to the development of calm abiding, together with the five obstacles and eight antidotes.

Regarding the first object of the achieving of engaging, the formless absorptions, one should know that one transfers to a higher level by way of the observed object.

Friday morning class, June 19, 1998

REVIEW OF CHAPTER ONE (continued)

Yesterday we looked at the achieving of engaging in the concentrations and formless absorptions. There are also the achievings of engaging in the six perfections, the path, and so forth. These can all be condensed into the achieving of engaging in the path and the achieving of engaging in the result. The achieving of engaging in the path has three divisions:
1. The achieving of engaging in the concentrations and formless absorptions (or the achieving of engaging in the mundane path)
2. The achieving of engaging in the supermundane path which is further sub-divided into four:
   i. The achieving of engaging in the six perfections in order to attain one’s own final welfare, the realizations
   ii. The achieving of engaging in the path (the path of seeing and so forth) in order to attain one’s own final welfare, the abandonments
   iii. The achieving of engaging in the four immeasurables in order to enact others’ welfare
   iv. The achieving of engaging in the unobservable, the realization of all phenomena as empty of true existence, in order to perfect one’s activities for others’ welfare
3. The achieving of engaging in order to distinguish oneself from the Hinayana which can be further sub-divided into three:
(i) the achieving of engaging in the completely pure three spheres in order to distinguish oneself from the Hinayana (the three spheres, or factors, are the agent, the action, and the object)
(ii) the achieving of engaging in transforming one’s roots of virtue into the objects of intent: great heroic mind, great abandonment, and great realization.
(iii) the achieving of engaging in the six clairvoyances in order to quickly complete the two collections

Thus, the achieving of engaging in the path has eight sub-divisions (1+4+3).

The achieving of engaging in the result is the ninth achieving of engaging, that of engaging in the exalted knower of all aspects, omniscient mind.

The achieving of collections has seventeen divisions which can be elaborated on the basis of three divisions:
(1) the achieving of the collection of exalted wisdoms
(2) the achieving of the collection of grounds
(3) the achieving of the collection of antidotes

The seventeen divisions are:
(1) the achieving of the collection of great compassion
This is the basis for all the deeds of a bodhisattva, in that in order to practice the six perfections one needs to have great compassion.
Then there are the six perfections:
(2) the achieving of the collection of generosity
(3) the achieving of the collection of morality
(4) the achieving of the collection of patience
(5) the achieving of the collection of joyous effort
(6) the achieving of the collection of concentration
(7) the achieving of the collection of wisdom

Then there are the three:
(8) the achieving of the collection of calm abiding
(9) the achieving of the collection of superior insight
(10) the achieving of collection of union of calm abiding and superior insight

Through the practice of generosity, one achieves happiness in this life. Through the practice of morality, one achieves the happiness of future lives, in that it brings about higher rebirth as a human being or god. Through the practice of patience, effort, and concentration, one achieves the bliss of concentration. Through the practice of wisdom, one achieves ever-lasting happiness, nirvana. Through the practice of calm abiding, superior insight, and the union of calm abiding and superior insight, one achieves the means to give happiness to others.

(11) the achieving of the collection of skill in means, which achieves the happiness of others
(12) the achieving of the collection of exalted wisdom
(13) the achieving of the collection of merit

The achieving of the collection of exalted wisdom is done in meditative equipoise, while the achieving of the collection of merit is done in the period of subsequent attainment. Their result is to attain the two bodies of a buddha.

(14) the achieving of the collection of path
This refers to the path of seeing and so forth.
(15) the achieving of the collection of retention
This is the ability to retain words and their meanings without forgetting them. It arises naturally when one generates the path of seeing.

(16) the achieving of the collection of grounds
A ground is a support on which one extinguishes all faults and completes all excellent qualities.

(17) the achieving of the collection of antidotes
These antidotes are the means to abandon both the intellectually acquired and innate obscurations to knowledge.

Among the seventeen achievings of the collections, the achieving of the collection of exalted wisdom, the achieving of the collection of grounds, and the achieving of the collection of antidotes (the 12th, 16th, and 17th) are explained separately in detail. The achieving of the collection of exalted wisdom is explained separately because it is difficult to realize, but when realized it brings about many benefits. The achieving of the collection of exalted wisdom is difficult to realize because it is the exalted wisdom realizing emptiness which is difficult to obtain but once realized eradicates the root of cyclic existence forever. The achieving of the collection of grounds is explained separately because this is a very vast subject in that many words are needed to explain it and the meaning of these words is also very vast. For example, of ten grounds the first nine are causal while the tenth is resultant, and in each of the causal grounds there are its respective complete trainings which need to be explained. The achieving of the collection of antidotes is explained separately because it is difficult to understand in that the objects of abandonment are a vast subject and the antidotes that abandon them are also a vast subject.

The first nine causal grounds have their respective complete trainings, while the tenth, the resultant ground, does not have any. The first ground has ten complete trainings; the second, eight, the third, five; the fourth, ten; the fifth, ten; the sixth, twelve; the seventh, twenty; the eighth, eight; and the ninth, twelve. In this way their are a total of ninety-five complete trainings.

The tenth topic, that of the achieving of definite emergence, was discussed recently therefore we will not review it now. It has eight divisions.

(End of review)

2B2C-1A3 Summarizing the section

From the Ornament of Clear Realizations: a Treatise of Oral Instructions on the Perfection of Wisdom, the commentary of the first section.

Gyeltsab says that this is the explanation, the commentary of the first chapter of Essential Explanation, that comments on the Ornament for Clear Realization: A Treatise of Oral Instructions on the Perfection of Wisdom. In this context the Great Commentary says: “Due to establishing a relationship with the tathagatas, one has to do the following practice; the very knower of all aspects which is to be practiced is the nature of mind generation and so forth. Since this is the essence of cause and result it has been explained repeatedly. This is the subject of this text.” The mind generation and so forth clearly present omniscient mind in terms of an object representing an object possessor. The omniscient mind that is sought is experienced beginning from the first mind generation up to the twenty-second. Likewise, the four achievings are directly experienced gradually. In this way one actually engages in the actual essence of the ten topics. The omniscient mind is expressed repeatedly in terms of the ten topics which represent it.

Gyeltsab then says: Due to [this explanation of the first chapter] may the precious doctrine forever flourish and spread in all directions by all means.
QUESTIONS AND ANSWERS

Question: Please explain in more detail what is meant by dull and sharp faculty trainees.
Reply: A sharp faculty trainee is one who is able to realize the characteristics or reality of an object quickly, while a dull faculty trainee is one who is not able to do so. Or another way of interpreting this is that a dull faculty trainee is one who believes in the contents of a text just because it is written by a qualified person. On the other hand, a sharp faculty trainee is one who first checks the contents of a text to verify whether they are correct before believing in them regardless of the qualities of the author. In his Essential Explanation Gyeltsab explains that there are three levels of faculty by nature saying that a follower of the hearer vehicle is one of dull faculty, a follower of the solitary realizer vehicle is one of middling faculty, and a follower of the bodhisattva vehicle is one of sharp faculty. However, among the followers of these three vehicles there are beings of different levels of faculty.

Question: It is said that at the peak level of the Mahayana path of preparation one’s roots of virtue cannot be destroyed by wrong view but can they still be destroyed by anger?
Reply: On the path of accumulation one’s roots of virtue can be destroyed by anger but this is not clear regarding the path of preparation. However, there is a discussion regarding what would happen in the case that a bodhisattva who has received a prophesy becomes angry with a bodhisattva who has not received a prophesy, or that a bodhisattva who has not received a prophesy becomes angry with a bodhisattva who has received a prophesy. In conclusion, it would seem that the roots of virtue can be damaged by anger on the path of preparation. Therefore, we can affirm that while the roots of virtue on the path of preparation cannot be completely destroyed, they can be weakened or lessened.

Question: What is the pervasion with respect to the two, the Buddha Jewel and Sangha Jewel?
Reply: That which is a Buddha Jewel is not necessarily a Sangha Jewel. That which is an arya buddha is necessarily a Sangha Jewel. A Buddha Jewel is not necessarily a person, but a Sangha Jewel is necessarily a person. Therefore, that which is a Buddha Jewel is not necessarily a Sangha Jewel. If it is asked, “What is an example of something that is a Buddha Jewel but is not a Sangha Jewel?” the answer is a buddha’s wisdom truth body and nature truth body. That which is a Sangha Jewel is not necessarily a Buddha Jewel. For example, aryahearers, aryasolitaryrealizers, and arya bodhisattvas are a Sangha Jewel but not a Buddha Jewel.

Question: One of the ways in which the Mahayana path of preparation is superior to the Hinayana is with regards to the tutor. The external tutor in this case is a supreme emanation body. A supreme emanation body is a form body that enacts the twelve deeds. Who is the supreme emanation body that the bodhisattva receives teachings from?
Reply: Examples of buddhas who manifested a supreme emanation body and taught bodhisattvas are Shakyamuni Buddha, Buddha Amitabha, and all the other buddhas who became enlightened in the aspect of a supreme emanation body. Generally [a mere] external tutor can be of many types, such as those who give advice as to how to attain supreme qualities, those advising about secular activities, and so forth. A supreme emanation body performs the twelve deeds in our world, Jambudvipa, and in others. Some scholars assert that the first nine of these twelve deeds are the deeds of a bodhisattva while the last three are the deeds of a buddha. This is established saying that Prince Siddhartha, from the time of his living in the palace, through to becoming ordained, fasting and subduing the maras (the first nine deeds) was a bodhisattva, but then enacted the last three deeds, those of attaining enlightenment under a bodhi tree, turning the wheel of Dharma, and passing into parinirvana, as a buddha. This is one interpretation of the twelve deeds but actually all twelve deeds are those of a buddha because the supreme emanation body who came to this world had previously attained enlightenment, the four bodies, in Akanishta where he taught many bodhisattvas. Although Shakyamuni Buddha manifested attaining enlightenment under a bodhi tree, he was in fact already an enlightened being. This is
the [uncommon] assertion of the Mahayana schools. The interpretation of the first nine deeds as those of a bodhisattva and the last three as those of a buddha appears in the text *Abhidharmasamucchaya* and is therefore common to both the Hinayana and Mahayana.
Monday afternoon class, June 22, 1998

Commentary Clarifying the Meaning of the ‘Ornament for Clear Realization, A Treatise of Oral Instruction on the Perfection of Wisdom’

CHAPTER TWO
THE KNOWER OF PATHS

Gyeltsab says: Prostration to the venerable holy lamas. Having explained the very knower of all aspects, that which is to be obtained, the second [chapter].

2B2C-1B Explaining the knower of paths which progresses toward the exalted knower of all aspects
1 Making a connection by positing the commentary
2 Demonstrating the knower of paths is indicated by eleven features
3 Summarizing the section

2B2C-1B1 Making a connection by positing the commentary

Since realizing the exalted knower of all aspects itself does not exist without completely understanding the knower of paths itself, the knower of paths -

In order to attain omniscient mind, one first needs to actualize a knower of paths.

Gyeltsab says that in order to directly realize and attain the very knower of all aspects one has to meditate thoroughly on and completely know the knower of paths that leads to that, since without this there is no attainment of omniscience. Among the explanations given before in the first chapter, which were a mere cause for omniscience, the knower of paths, is to be specified here.

In the Great Commentary it says: “If it is like that, since the grounds, such as Extremely Joyous, were mentioned there, the paths of the bodhisattvas, such as the path of seeing and so forth, were [already] presented. So why are these [paths] presented here again? They are to be expressed here, because [in the first chapter] only the exalted knower of all aspects of the tathagatas was mentioned with regard to the realization of all causes and results without exception, while the paths of the children of the victors were not taught. To clear up that doubt, the very knower of paths possessing the bodhisattva’s paths, such as that of seeing, is excerpted as a mere cause [for omniscience] from that very [first chapter] and is posited apart.”

This means that in the previous explanation in the first chapter, although there could have been a presentation of the paths of seeing and meditation, which are included in the knower of paths, omniscience, the object of aspiration, which directly realizes all ten topics was presented there. Regarding that presentation someone has a doubt thinking that since omniscient mind directly realizes all phenomena it is enough to meditate on only a single meaning/reality in order to attain it, and therefore, there is no need to proceed to completely meditate on all three vehicles. In the first chapter, the ten grounds, the Extremely Joyous and so forth, were explained in the context of the paths of seeing and meditation which are included in the knower of paths. The doubt is that since the knower of paths has already been explained in the first chapter on omniscient mind there is not need to explain it again here. However, there is a need to explain the knower of paths again here because previously the path was only presented as an object of omniscient mind which realizes all ten topics, mind generation and so forth. However, here the knower of paths is to be explained as a cause leading to omniscience. In short, while the paths of seeing and meditation included in the knower of paths were explained previously as objects, here they will be explained as causes of omniscient mind. Gyeltsab says that this is the reason that the knower of path will now be explained apart.

In this regard, someone thinks that, since omniscient mind directly realizes all phenomena, in order to attain it it is only necessary to meditate on one reality as an object without meditating on the paths of all three vehicles. In other words, this person thinks that it is enough to meditate on one reality without meditating on the paths of all three vehicles. To negate this doubt it is
affirmed that it is necessary to meditate on all the paths of the three vehicles because without attaining a knower of paths knowing all three vehicles it is not possible to attain a knower of all aspects, omniscience.

Someone else thinks that by merely taking refuge in the Three Jewels one can attain omniscience, and also that while cultivating depression regarding cyclic existence is a correct practice for hearers and solitary realizers it is not correct as a practice of the bodhisattvas who enter cyclic existence for the welfare of others. To negate this wrong conception regarding the knower of paths it is explained apart from the ten topics which were explained before. Those who wish to attain omniscient mind must meditate on the three paths in order to be able to say that they have a knower of paths, as otherwise their knower of paths would only be a partial knower of paths and, therefore, they would have only a partial result. To clarify this the second chapter on the knower of paths is presented.

The first wrong conception that is to be eliminated here is the thought that one can attain omniscience merely by going for refuge. The second wrong conception is the thought that meditating on depression regarding cyclic existence is good for hearers and solitary realizers but not for bodhisattvas because they remain in cyclic existence in order to benefit others. These wrong conceptions can be eliminated through understanding that without generating depression regarding cyclic existence and the thought of definite emergence one cannot develop the mind of enlightenment.

Therefore, the section on the knower of paths that knows the paths of the three vehicles is explained apart as it leads to the knower of all aspects. The knower of paths is that which completely realizes the paths of the three vehicles. Because there are trainees of different levels, those following the hearer vehicle, those following the solitary realizer vehicle, and those following the bodhisattva vehicle, in order to guide them one must develop respectively a knower of paths that knows the paths of hearers, a knower of paths that knows the paths of solitary realizers, and a knower of paths that knows the paths of bodhisattvas. In short, a bodhisattva must gain the exalted wisdom realizing the selflessness of persons, the exalted wisdom realizing non-duality (the emptiness of apprehenders and apprehendeds being different substances), and the exalted wisdom realizing the emptiness of true existence of all phenomena.

Nowadays there are people who claim to be practitioners of the Mahayana path who do not even know the number of things to be practiced on the common path.

In short, the meaning of the above is that there is a reason for explaining the knower of paths after omniscience: it is to know that one must thoroughly meditate on the paths in order to attain omniscience.

Demonstrating that the knower of paths is indicated by eleven features
A The branches of the knower of paths
B The nature of the knower of paths

2B2C-1B2A The branches of the knower of paths
1 Root text
2 Commentary

In order to make the gods suitable, eclipsing (them) by light, definite object, pervasion, nature, and the action of that.

There are gods, such as Indra, Brahma, and so forth whose bodies radiate light whereby they generate pride in this fact. In order to make them suitable to generate a knower of paths this pride has to be eliminated. The tathagatas do this by radiating light that eclipses the light of these gods, whose pride then decreases. The first of the eleven topics representing the knower of paths is ‘the branches of the knower of paths,’ of which there are five:
(1) freedom from the obstacle of manifest pride
(2) the substantial cause - the activation of the Mahayana lineage
(3) the concordant condition - the generation of the mind of enlightenment
(4) the nature of the knower of paths (which is its definition)
(5) the function of the knower of paths

The line “In order to make the gods suitable, eclipsing (them) by light” presents the first of these five divisions. With regard to this, Gyeltsab says that in order to make the gods of the desire and form realms into suitable vessels for mind generation and so forth, the tathagatas with their natural light eclipse the light of these gods. There is a purpose to this: it is to make it known that first one has to destroy the pride that does not seek higher qualities, such as mind generation and the knower of paths.

Tuesday morning class, June 23, 1998

2B2C-1B2A-1 Root text (continued)

The five branches of a knower of paths can be further condensed into three:
(1) cause - which includes the first three branches
(2) entity - the fourth branch
(3) result - the fifth branch

The definition of the branches of a knower of paths is: the distinguished excellent qualities sustained by great compassion that are included in any of the three, cause, entity, or result, of a knower of paths.

1) “In order to make the gods suitable, eclipsing (them) by light”
In regard to the first of the five branches, that of eclipsing the gods by their light, in sutra it says: “In the presence of the natural light of the tathagatas the light of the gods that arises from the maturation of karma disappears. The light of the tathagatas alone is noted.” “Venerable Subhuti, how do the bodhisattva mahasattvas abide in the perfection of wisdom? What is the perfection of wisdom of the bodhisattva mahasattvas?”

2) “definite object”
Gyeltsab says that “definite object” is the support on which the knower of paths is generated. In order to be skilled in the path that thoroughly meditates on all three paths one must have preceded in the definite support that is the desire to attain buddhahood for the sake of the beings of the three lineages. In sutra it says: “Whenever someone generates the mind of unsurpassable enlightenment he becomes an object in whom to rejoice.”

3) “pervasion”
It is not right that those other than bodhisattvas cannot generate a knower of paths since all sentient beings are pervaded by the buddha lineage. In short, all sentient beings can generate a knower of paths because they all possess the buddha lineage. A sutra related to this passage says: “Even the sons of the gods who have not generated the mind of unsurpassable perfectly complete enlightenment will also generate the mind of unsurpassable perfectly complete enlightenment. Those who have entered that which is perfect and faultless (the Hinayana path) do not have the force to generate the mind of unsurpassable perfectly complete enlightenment. Why is that? Because they cut the continuity of cyclic existence.” Even the sons of the gods who have not yet generated the mind of enlightenment are an appropriate support for the generation of a knower of paths because they are an appropriate support for the generation of the mind of enlightenment. However, those who have entered the faultless path, the followers of the hearer vehicle, do not generate the mind of enlightenment on the same support of that life. Those on the perfectly faultless path include those who are definite to be hearers and those who are not definite to be hearers. According to the Madhyamikas those definite to be hearers who attain a hearer’s path of seeing definitely attain a hearers enlightenment without generating the mind of enlightenment in
the meantime. The sutra continues saying: “Why is that? Because they cut the continuity of cyclic existence.” In other words, those who have entered the faultless cut, or stop, the continuity of rebirth in cyclic existence for their own purpose and not for the attainment of buddhahood. Those who enter the faultless are those on the hearer’s path of seeing; they do not take rebirth in cyclic existence out of compassion and prayer but cease the continuity of rebirth in cyclic existence through specifically stopping the rebirth caused by karma and afflictions.

The purpose of mentioning this is to make those who have the indefinite lineage of hearers enter the Mahayana and to take care of those who have already entered the Mahayana. Those on the hearer’s path of seeing put a stop to both ways of taking rebirth in cyclic existence: (1) taking rebirth out of compassion and prayers and (2) taking rebirth out of karma and afflictions. In short, the purpose of mentioning the above is to guide those who have the indefinite lineage of hearers and to take care of those who have already entered the Mahayana.

In the Great Commentary it says: “The protector Nagarjuna and his followers who propound one final vehicle assert that this sutra possesses the intention, while the acharya Asanga and his followers who propound three final vehicles assert that this sutra is literally acceptable. This sets out the two traditions.” In other words, Nagarjuna and his followers say that the meaning of the sutra citation concerning those who enter the faultless path as not having the strength to generate the mind of enlightenment is a citation that has another intention, while Asanga and his followers say that this citation is to be accepted literally. Although Acharya Asanga himself did not accept that there are three final vehicles he asserted this to open the way for the tradition proclaimed by the Chittamatrins. To prove that Acharya Asanga was not a Chittamatin, Gyeltsab says that in his commentary on Uttaratantra Asanga established one final vehicle and also explained the view of emptiness differently from how it is explained in the Compendium of Mahayana (Mahayanasamgraha) and the Five Treatises on the Grounds, whereby he clearly commented on the Madhyamika tradition. In the Compendium of Mahayana and the Five Treatises on the Grounds, Asanga explained emptiness as being the emptiness of the apprehender and apprehended being different substances but in his commentary on Uttaratantra he explained emptiness as being the emptiness of true existence. Likewise, even Acharya [Haribhadra] is asserted to have the same view as Arya Asanga.

4) “nature”
The knower of paths is naturally superior to the paths of hearers because it has the nature of acting as the branches which accomplish others’ welfare without mainly abandoning afflictions. In sutra it says: “The knower of paths does not act as an interference to the class of roots of virtue of [and solitary realizers].” Here we should know that a bodhisattva who possesses a knower of paths does not avoid the afflictions forever, such as those for taking rebirth in cyclic existence, but purposely uses them to take rebirth for the welfare of sentient beings.

5) “action of that”
The actions of bodhisattvas are superior to those of hearers because they do not actualize the perfect end at an incorrect time and because they possess actions that act to ripen and liberate infinite sentient beings. In other words, a bodhisattva does not actualize the perfect end when he still has not completed the three conditions of ripening infinite sentient beings, purifying the buddha realm, and completing prayers. However, those on the hearer’s path do actualize the perfect end before these conditions are complete. Therefore, the actions of bodhisattvas are superior to those of hearers.

Tuesday afternoon class, June 23, 1998

2B2C-1B2A-2 Commentary
A The support who is separated from hindrances
B Simultaneously acting condition
C Demonstrating as pervaded by lineage
In order to achieve the mere suitability to generate the knower of paths itself, the natural lights of the Tathagata eclipsed the fully ripened light of the gods and so forth. That was done in order to make known “realizations generate only in continua which have conquered pride.” Therefore, the support is expressed implicitly.

That the natural light of the tathagatas eclipses the light of the gods and so forth, which is the maturation of contaminated karma, (subject) has a purpose because having destroyed their manifest pride it is for the sake of making them suitable to generate the mind [of enlightenment] and to generate the knower of paths. This is because it makes it known that the mind generation and the realizations of the knower of paths are only generated in the continua of those whose manifest pride has been destroyed. Thus, the words of the sutra indirectly express the support of mind generation and the generation of the knower of paths in that it says that only the continua of those whose pride has been destroyed are a support to generate them.

Here “the words of the sutra” refers to the quotation: “In the presence of the natural light of the tathagatas the light of the gods that arises from the maturation of karma disappears. The light of the tathagatas alone is noted.” In short, the knower of paths can be generated only in those whose manifest pride has been eliminated. For example, the tathagatas destroy the pride of the gods by outshining their light and thus make them suitable to generate a knower of paths. Thus in order for someone to become a suitable support for the generation of the knower of paths his pride must first be destroyed.

Furthermore, since it is only mind generation towards enlightenment, the individual objects (of support) are definite.

With regard to that knower of paths (subject) the object that supports its actual generation is individually definite because it is only a person who is not interrupted by other paths who has generated a mind of enlightenment. Furthermore, familiarizing oneself with directly knowing the paths of the three lineage holders is the aspiration to enact the welfare of the three lineage holders. None other than a complete buddha are able to fulfill this purpose. Having previously developed the aspiration to attain enlightenment, it is clear that one has to meditate on the three paths as a method [to achieve that]. Others appear not to be clear in the divisions of how to practice the path. Likewise, even beginners must know the three paths if they wish to quickly attain omniscience.

By this presentation, one should understand that it is necessary to generate the mind [of enlightenment] as a support of the knower of paths.

In short, one needs to generate the mind of enlightenment as a cause for and support of a knower of paths. This is a reminder of what was said before concerning Haribhadra’s commentary that a bodhisattva has to generate and thoroughly know all the paths.

The presentation of the three vehicles “has an ulterior intention (interpretive in meaning) since it is not fully qualified (definitive in meaning)” comes from a tradition. All beings will ultimately come to possess the highest perfect complete enlightenment. Because of that, those who are separated from attachment and other yogis as well, will
attain buddha(hood) itself, hence the knower of paths itself is pervaded by being an object to be cultivated.

The hearer and the solitary realizers are destroyers who are separated from attachment to the three realms and even the yogis who are not separated from attachment (subject) are pervaded by lineage because in order to attain buddhahood itself they must meditate on that very knower of paths. It is so because all sentient beings proceed to the final unsurpassable perfectly complete enlightenment. It is so because three final vehicles were presented with another intention and thus are not a definitive meaning which is literally acceptable, as is said in the systems of the great charioteers Nagarjuna and Asanga. In other words, there are various presentations regarding the acceptability of the statement regarding the existence of three final vehicles. For example, while the Chittamatris say that it is literally acceptable, the Madhyamikas do not accept it.

Wednesday morning class, June 24, 1998

Gyeltsab says that the naturally pure sphere of reality that is separated from the infinite elaborations of true existence exists in all sentient beings without any differentiation. Although there is not even the slightest difference in its entity, one holds wrong conceptions regarding it. This, the grasping at true existence that apprehends the aggregates and so forth as truly existing, is the root of all afflictions. However, this wrong conception, like the apprehension of a rope as a snake, is not stable but arises in the mental continuum incidentally and is suitable to be separated
from by its antidote. Therefore, all the stains of sentient beings can be removed because the obstructions to knowledge in the continua of hearer and solitary realizer foe destroyers who have just arisen from the sphere of peace can be abandoned and it is not possible that the buddhas, who teach the methods for abandoning them, give up this activity.

The sphere of reality which is naturally pure pervades all sentient beings without exception. This sphere of reality is not even slightly different in terms of its divisions; in other words, its nature cannot be divided. The mind apprehending true existence apprehends the sphere of reality wrongly. The conception apprehending the true existence of the sphere of reality and other phenomena is the root of cyclic existence. The conception apprehending the aggregates and so forth, including the sphere of reality, as truly existence is not stable. This conception is similar to the conception apprehending a striped rope to be a snake. This conception of true existence in the continua of sentient beings is incidental; therefore, it can be abandoned by applying its antidote. For this reason, the stains of sentient beings can be removed. Although the hearer and solitary realizer foe destroyers who arise from the sphere of peace do have obscurations to knowledge, these can be removed. The buddhas who teach the method for abandoning them do not give up this activity.

In addition, reasons will be explained below that negate other extremes.

Someone says: “That contradicts the teachings that there are three final vehicles.” There is no fault. For example, a captain who is skilled in means would emanate a city on an island in the ocean in order to allow his passengers, tired after a long voyage, to rest and only then, having rested, would he once again gradually proceed to the land of gems. In the same way, the buddhas teach the two nirvanas, which are likened to an emanated city, to those who are tired of the path of cyclic existence but do not initially wish to enter the Mahayana path. This is the skill in means of the tathagatas.

In short, Buddha taught three final vehicles and therefore presented both the nirvanas with and without remainder. These teachings were given in order to lead beings to the nirvanas of the Hinayana. When these beings have taken a rest from cyclic existence in the two nirvanas, the buddhas then guide them to the land of the Mahayana. The analogy given by Gyeltsab is that of a captain who is skilled in means who, in order to prevent his passengers from becoming tired, manifests an island where they can rest; this island represents the two nirvanas. Then, when his passengers have rested, the captain takes them to a land of gems; likewise, the buddhas guide the hearer and solitary realizer foe destroyers to buddhahood.

Gyeltsab then says that in the Sutra Unraveling the Thought and others it teaches that there are three final vehicles to some trainees who are Mahayana lineage holders. Although these trainees are Mahayana lineage holders they are not yet suitable to be taught the profound path. Therefore, Buddha taught these people three final vehicles. There is a basis of intention to this: temporally it is for the purpose of leading those who have different beliefs and different predispositions in the individual paths of the vehicles. In other words, the purpose of this presentation is to take care of lineage holders who are to be guided to the Mahayana path without negating that ‘the emptiness of apprehenders and apprehendeds being different substances’ is truly existent. However, there is harm to the words of these teachings. This harm comes from the reasonings that prove the emptiness of true existence of all phenomena harm the words that teach that the emptiness of apprehenders and apprehended being different substances is truly existent. There are also reasonings that negate other extremes.

To summarize, this means that Buddha had an intention in teaching three final vehicles. The temporal intention was to lead sentient beings with different beliefs and predispositions to whom it whom it would not have been suitable to present the profound path, emptiness, into the Mahayana path. Because sentient beings have different predispositions, different thoughts, and different beliefs, they need to be led into different vehicles. The purpose in Buddha teaching so was to lead those who assert the emptiness of apprehenders and apprehended being different substances as truly existent into the Mahayana.

Gyeltsab then says that the reasonings that prove the emptiness of true existence of all phenomena harm the words that teach that the emptiness of apprehenders and apprehended being different substances is truly existent. There are also reasonings that negate other extremes.
Gyeltsab says that the proponents of the Chittamatra school assert three final vehicles in dependence on the *Sutra Unraveling the Thought*, which they say is literally acceptable. There is a reason for this. They say that since other-powered phenomena and thoroughly established phenomena exist ultimately, the continua of sentient beings possess a definite lineage, the uncontaminated seed, which makes them suitable to be lead in the individual paths of the vehicles, and therefore they are ultimately definite to the individual lineages. Although due to temporal conditions their beliefs and thoughts can change slightly, ultimately by nature they are definite to the individual vehicles. Therefore, sentient beings are definite to three different individual final vehicles.

This means that the Chittamatrins assert that the statement in the *Sutra Unraveling the Thought* regarding the existence of three final vehicles is literally acceptable. In other words, they say that there are three final vehicles because other-powered phenomena and thoroughly established phenomena are truly existent, and therefore the continua of sentient beings, which possess the uncontaminated seed, are to be lead in the individual vehicles. Ultimately they are definite to an individual vehicle. In other words, while temporally their beliefs, thoughts, and predispositions can change slightly, ultimately their final vehicle is definite to be one of the three vehicles individually, and the vehicle to which they are definite cannot be changed. This means that since trainees are definite to one vehicle they proceed to the goal of their respective vehicle without changing. However, those who are not definite to one vehicle can change vehicles.

Wednesday afternoon class, June 24, 1998

This tradition, [the Chittamatra,] posits a subject who is explained to not pass beyond sorrow forever. They also say that the explanation of one final vehicle is not literally acceptable and posit it as interpretive. There are seven bases of intention [for teaching three final vehicles]:

1. there is no difference in the sphere of reality, which is like space, of the three vehicles,
2. all the persons of the three vehicles are similar in realizing selflessness,
3. they are similar in attaining a liberation that is the abandonment of sufferings and origins,
4. an indefinite hearer lineage holder enters the Mahayana and becomes a buddha, whereby two different lineages enter one path,
5. from the beginning the tathagatas practice the deeds of bodhisattvas, while some of those definite to the hearer lineage practice the deeds of bodhisattvas for some time but then later give them up and attain [a hearer’s] nirvana, whereby the tathagatas think, “In the past, by engaging in the deeds of a bodhisattva I attained buddhahood,” and then later by the power of a buddha they similarly think one time, “Because I engaged in the practices of a bodhisattva in the past I will attain buddhahood,
6. there are emanated hearers who show the aspect of attaining a nirvana of the hearer’s vehicle many times for the welfare of trainees,
7. there is not more than one final vehicle.

[The sutra that sets out three final vehicles] was taught with these seven bases of intention. In *Ornament for Sutra* (see *Ocean Playground* page 525) the seven bases of intention are mentioned saying: “The dharma, the person, due to the liberation being similar, due to the lineages being different, due to attaining two thoughts, due to emanation, and due to being the final, there is only one vehicle.” Here “the dharma” refers to the sphere of reality of the three vehicles which is like space. “The person” refers to the realizations attained by the three persons following the three vehicles which are similar. “Due to the liberation being similar” refers to the result that is attained by abandoning true sufferings and true origins. “Due to the lineages being different” refers to an indefinite hearer lineage holder who enters the Mahayana and becomes a buddha whereby two
different lineages enter one path. “Due to attaining two thoughts” indicates the fifth basis of intention. “Due to emanation” indicates the sixth basis of intention. “Due to being the final, there is only one vehicle” indicates the seventh basis of intention. In short, with these seven bases of intention Buddha taught three final vehicles for the Chittamatrins. Gyeltsab says that the intention of Buddha in teaching three final vehicles is to lead those who are indefinite hearer lineage holders to the Mahayana and to protect those who are indefinite Mahayana [lineage holders] from falling into other vehicles.

However, there is harm to these words [regarding the existence of one final vehicle] from scripture, the Sutra Unraveling the Thought, and from logic, the logic that proves that other-powered phenomena and thoroughly established phenomena are truly existent. In the Sutra Unraveling the Thought it says that there are three final vehicles, which is taken to be a definitive meaning; while in the presentation of the seven bases of intention there is said to be one final vehicle, which is taken to be an interpretive meaning. The reasoning that there are three final vehicles because other-powered phenomena and thoroughly established phenomena are truly existent harms the presentation of one final vehicle. In other words, the Chittamatrins prove that there are three final vehicles using the logic that other-powered phenomena and thoroughly established phenomena are truly existent. However, one of the seven bases of intention uses that same logic to show that there is one final vehicle.

2B2C-1B2A-2C2C Examining whether or not there exists an end to samsara

Someone says: If all sentient beings are able to attain buddhahood, the future buddhas will enact the welfare of only a few sentient beings, whereby others’ welfare will become very little and they will not complete the collection of merit.”

“When all sentient beings have become buddhas, they will not enact the welfare of even one sentient being, whereby others’ welfare will be interrupted and they will fall into the extreme of peace.”

“If all sentient beings are not able to attain buddhahood it would follow that: (1) perfectly complete buddhas who desire to lead all sentient beings to the state that they themselves have attained would lack the result of turning the wheel of Dharma by way of the twelve deeds until cyclic existence is empty; (2) they would merely seek the total pacification of the suffering of cyclic existence which lacks the fully qualified great compassion of the Mahayana; (3) if the bhagavans do not set all sentient beings in the state that they themselves have found it would follow that they have the five faults, such as that of being miserly in giving Dharma.” In other words the five faults mentioned previously contradict this passage. These five are: the Buddha had an impure mind, strong clinging, partial compassion, discriminates differently, and holds on to the teachings.

“If all sentient beings are able to attain total pacification of the sufferings of cyclic existence, one final vehicle would be well established whereby the attainment of buddhahood would be actualized without effort.”

“If there are sentient beings who are not able to attain liberation, it would follow that the sutra which has an intention is not literally acceptable which would contradict that established by scriptures and the reasonings taught by Acharya Haribhadra and Arya Vimuktisena, and therefore it would be necessary to explain how this is so.”

“If all sentient beings can attain enlightenment, the explanation that there is no end to cyclic existence would be incorrect.”

1 Refuting other traditions
2 Presenting our tradition

2B2C-1B2A-2C2C-1 Refuting other traditions

Someone says: “The fact that all sentient beings are definite to become buddhas should be set aside. It is not even possible to establish that they are merely suitable to attain buddhahood. In
order to prove that the result can be generated one has to posit the sign “the collection of causes is complete,” but if all sentient beings have completed the collection of causes for buddhahood it would follow that there are no sentient beings who have not entered the path to liberation.” According to this person it cannot be proven that all sentient beings can attain buddhahood. He argues that if it can be said that all sentient beings can attain buddhahood, it would mean that one could say that it is because they have completed the collection of causes. If this sign were established it would be difficult to posit someone who has completed the collection of causes but has not entered the path to liberation. There is a syllogism in the text Pramanavartika that says: in a field in the east where there is a grain of barley together with earth, manure, water, heat, and moisture its result can be generated because it is a grain of barley that is together with earth, manure, water, heat, and moisture.” However, while this syllogism proves that the grain of barley can bring a result, it does not prove that the sprout will definitely arise. This is because in the meantime the seed might be eaten by an animal or bird.

Thursday morning class, June 25, 1998

For that very reason that statement that says “Up to now there are sentient beings who circle in cyclic existence, but after that there will be none” means that there is an end to cyclic existence. The purpose for establishing one final vehicle is to prove that all sentient beings who have entered the path will attain buddhahood.

The thesis given is not evident as established by logic. The intention is to assert the definite reasoning of pervasion that if a collection of causes is complete a result can arise. It is not the intention [to assert that] there is the pervasion that if a result can arise the collection of causes are complete because this would contradict reasoning. The fact that a barley sprout can arise from a grain of barley does not prove that the collection of causes [for its arisal] is complete.

In addition, can aryahearers attain buddhahood or can they not? If it is the first (that they can attain buddhahood), it would follow that they have the complete collection of causes for buddhahood. If this is accepted, it would follow that they have entered the Mahayana path. Having accepted the sign and the pervasion of both the former and the latter consequence and having accepted the predicate of the latter consequence, all sentient beings who are not mere enterers into a path would degenerate.

If it is the second (that they cannot attain buddhahood), there would be a direct contradiction and it would contradict there being only one final vehicle. In addition, if all sentient beings will become buddhas then you necessarily accept that buddhahood is possible. This assertion is very clear.

Others say: The way in which there is no end to cyclic existence in the future is like this. Although all sentient beings will become buddhas, there is no time in which all sentient beings will have become buddhas. If you assert that the fact that all sentient beings will become buddhas is pervaded by there being a time in which all sentient beings will have become buddhas it would follow that there will be a time in which all functioning things will have perished because all functioning things perish. You are expressing a consequence that cannot be demonstrated by a valid cognizer and the predicate of the thesis. What is the fault in asserting that? If you assert that there is a time when all functioning things have perished it would follow that there would be a time in which all functioning things would no longer exist. If you say this it becomes an extremely great assertion.

This is followed by reasoning that negates the other extreme. This is that it would follow that while up to now there are functioning things, henceforth there will not be functioning things because there will be a time in which all functioning things would have disintegrated. This means that there is the consequence that henceforth functioning things will not exist. In this case it would follow that while one can establish that blue has existed up to now, henceforth blue will not exist because there will be a time in which blue has perished. If the reason is not established it would follow that there are permanent functioning things because having been generated from their
causes there would be not be a time in which they will have perished. There would be the [same] consequence to the assertion that there is no time in which all functional phenomena have perished. In short, this means that if there does not exist a time in which all functioning things will have perished it would follow that they are permanent.

Someone says: it would follow that there is a time in which all sentient beings will have become buddhas because they will become buddhas. However, it would follow that all sentient beings are pervaded by having already died because all sentient beings are pervaded by death. Our system says that this fault that you have expressed clearly shows that your intelligence is very gross. With regard to the previous consequence you are saying either that “It would follow that all sentient beings are pervaded by already having become buddhas” or that “There is a time in which all sentient beings will have become buddhas”; understand this well.

Is the perishing/disintegration of all functioning things possible? We need to consider whether disintegration means broken or non-existent. Or we can ask: will there be a time in which all functioning things no longer exist? If all sentient beings will become buddhas will there be a time in which they will all have become buddhas? Think about this. Is there a common locus between “all sentient beings will have become buddhas” and “the non-existence of sentient beings”? For example, when a donkey becomes a buddha, at that time there will no longer be a donkey. Is there a common locus between “the donkey having become a buddha” and “the non-existence of the donkey”? At that time there is no longer a donkey, only a buddha. There is no longer a donkey because the donkey has perished/disintegrated (or because there is the disintegration of the donkey). The Prasangikas posit disintegration to be a functioning thing, while the Svatrantrikas posit it to be a permanent phenomenon. The Prasangikas say that when an action is done there is no need to posit a basis on which to deposit this karma because karma itself is a functioning thing.

Thursday afternoon class, June 25, 1998

Someone says: “Although all sentient beings will become buddhas they are not definite to become buddhas.” Saying so manifests clearly that you do not know logic. Is the ascertaining consciousness that thinks, “All sentient beings will become buddhas,” present or not in your continuum by the power of a valid cognition? If it is the first (that the ascertaining consciousness arises by the power of valid cognition), it would follow that all sentient beings are definite to become buddhas because the fact that all sentient beings will become buddhas is ascertained by the power of a valid cognition. There is no pervasion because although it is ascertained by the power of a valid cognition in reality it is not definite. It would follow that your ascertaining consciousness that thinks “All sentient beings will become buddhas” would be a mistaken consciousness with respect to its determined object because while your mind ascertains “all sentient being will become buddhas” in reality there is not even the slightest certainty that they will become buddhas. When a valid cognition establishes that fire produces smoke, it is not definite that smoke is produced since it can be hindered by adverse conditions. In Pramanavartika it says: “The indefinite is such because it can be obstructed.” This means that although a valid cognizer ascertains that fire produces smoke it is not definite that smoke will be produced.

Someone says: “Likewise, if becoming a buddha is definite there could not be hindrances that are adverse conditions to becoming buddha.” This is not established by either example or meaning. With respect to example: if the production of smoke by fire is ascertained by the power of valid cognition it would contradict the fact that smoke is not definite to be produced. If the subject of the thesis is not ascertained by a valid cognition, the thesis would have no proof at all. That would show that the person who states the thesis is extremely foolish.

To clarify: the fact that fire produces smoke is ascertained by a valid cognizer. This valid cognizer contradicts the statement “smoke is not definite to be produced.” This is like someone saying “My mother gave birth to me but I am not sure that I was born from my mother.” If one does not ascertain with a valid cognition that smoke is produced by fire one cannot prove that fire
produces smoke. The thesis is that smoke is produced by fire. If the fact that smoke is produced by fire, the thesis, is not ascertained by a valid cognizer, it cannot be proven and therefore the person positing it would be very foolish. In other words, it is foolish to make such statements without having ascertained whether it is so by means of a valid cognizer. In the texts it says that those of sharp faculty do not maintain a thesis without first ascertaining it. For example, those of sharp faculty first check as to whether liberation can be attained and only when they have ascertained that it can in fact be attained do they promise to attain this state. Likewise, those of sharp faculty first check as to whether they can attain enlightenment by abandoning the two obscurations and self-cherishing through the application of the antidotes and only after ascertaining that this can be done do they enter the Mahayana path. Those of dull faculty do not do this preliminary type of examination.

In addition, it would follow that hearer and solitary realizer aryas are not definite to become buddhas because there can be hindrances that are adverse conditions to their becoming buddhas. This pervasion was asserted. If you accept this, it would contradict your own assertion that there is definitely one final vehicle. In other words, these two are contradictory: that hearer and solitary realizers aryas are not definite to become buddhas and that there is definitely one final vehicle.

The meaning of the Pramanavartika is not like that; this was already explained extensively in the commentary on that, Clarifying the Path to Liberation. If it were not like that but as you assert it would follow that the vase is not definite to exist because there could be obstacles that are adverse conditions to the existence of the vase. For example, if a vase is broken with a hammer this becomes an obstacle to the existence of the vase. Therefore, although there can be obstacles that are adverse conditions to production what counteracts the inability to act to not produce it? There can be obstacles to the production of smoke but this does not contradict the production of smoke. For example, Tashi can be sick but this does not contradict the fact that he is not sick. In other words, while Tashi can become sick there is no pervasion that he is sick.

If the production of a sprout can be obstructed is there a pervasion that the sprout is not produced? While it is possible that a sprout can be obstructed to be produced, it does not mean that the sprout will not be produced; this depends on whether or not there are actual obstacles to its production. Likewise, while all sentient beings can have obstacles to their becoming buddhas, they will become buddhas by eliminating these obstacles. Therefore, all sentient beings can become buddhas.

Then comes the thought that if all sentient beings become buddhas there will no longer be sentient beings to benefit. However, the word “all” (tam che) does not cover every sentient being as does “without exception” (ma lu pa). We can say that all the sentient beings of this continent can become buddhas which, however, leaves out all the sentient beings remaining in the other universes.

Friday morning class, June 26, 1998

QUESTIONS AND ANSWERS

Question: Does there exist an innate apprehension of an imputedly existent person?
Reply: If we talk about the conception of an apprehender of an imputedly existent person this can be innate. In addition, there can also be an innate apprehension of an imputedly existent person.
Question: Is it wisdom?
Reply: It may or may not be wisdom. It can also be mindfulness (memory) or the third of the fourth changeable mental factors, investigation.

The conception apprehending a truly existent person can be innate since it is an obscurcation to knowledge.
Are conceptions necessarily mental factors? No, because conceptions can be main minds; for example, a valid inferential cognizer can be either a mental factor or a main mind. Since a conception is not pervaded by being a mental factor it may or may not be wisdom.

Question: The Vaibhashikas posit a foe destroyer who degenerates. What are the causes?
Reply: In general there are three causes: (1) not having abandoned the afflictions, (2) vicinity to an object of afflictions, and (3) improper mental attention. The Vaibhashikas say that in order for degeneration to occur all three causes are not necessary, one alone is sufficient. For example, they say that although a foe destroyer has abandoned afflictions due to vicinity to an object attachment can arise. However, the Sautrantikas say that all three causes are necessary for a foe destroyer to degenerate.

For example, in regard to ourselves even if we find ourselves in a room near the room of an enemy anger begins to arise. We should apply its respective antidote.

Question: What is the mental basis for newly generating the Mahayana path of preparation?
Reply: Generally it is said that the mental basis for newly generating the Mahayana path of preparation is an actual absorption of any one of the four concentrations. However, there are different scriptural sources regarding this. Some say that those on the great level of the path of accumulation have necessarily attained the four concentrations and four formless absorptions. Therefore, the mental state that is the support of the Mahayana path of preparation is an actual concentration. A preparation is not a support of the Mahayana path of preparation because it is more difficult to use a preparation as the support of the path of preparation. For this reason, one uses an actual concentration to achieve the path of preparation.

Question: Are the middle two results of once returner and never returner attained in dependence upon both a mundane path and a supermundane path?
Reply: There is no pervasion. For example, abider in the result of once returner who has previously separated from attachment is attained in dependence upon both a mundane path and a supermundane path. This is also valid for an abider in the result of non-returner who has previously separated from attachment because when he attains the sixteenth moment of the path of seeing, a subsequent knowledge, he does so in dependence upon both a mundane path and a supermundane path.

Perhaps serial abiders in the results of once returner and non-returners, who first attain the result of stream enterer and so forth, are not necessarily attained in dependence upon both a mundane path and a supermundane path. Geshe-la does not remember exactly what it says in the texts regarding this but thinks it is like this.

Question: What is “mental attention to omniscience”?
Reply: This is a mind that observes omniscience. This mental attention accompanies the aspiration for enlightenment.

How many mental factors can be concomitant with the mind of enlightenment? The Svaatantrika-Madhyamikas say that there are at least ten. However, according to the Vaibhashikas there are many more. According to them because the mind of enlightenment is a main mind it is necessarily accompanied by ten mental factors. Because it is a virtuous mind it is accompanied by ten virtuous mental factors. In addition, it is accompanied by investigation and analysis, for a total of twenty-two mental factors. At times it can also be accompanied by regret; for example, when a bodhisattva commits a negative action and generates regret for it.

Question: How is the inner tutor developed?
Reply: The inner tutor is that which holds one from falling into the two extremes of cyclic existence and solitary peace: special method and special wisdom. The way to develop method is to familiarize oneself with love, compassion, and the mind of enlightenment; while the way to develop wisdom is to familiarize oneself with the realizations of emptiness and dependent
arising. Simply put, the development of an inner tutor can mean to prevent ourselves from engaging in non-virtue and to engage in virtue.

In addition we can talk about an inner companion and an outer companion. The inner companion is our own virtue.

Question: What are the boundaries of the inner tutor?
Reply: When the inner tutor refers to the inner tutor of the Mahayana path of preparation, the boundary is that it exists only on the Mahayana path of preparation. When this person progresses to the path of seeing, it becomes an inner tutor of the path of seeing.

Question: When are most of the four obstacles to the activation of lineage removed?
Reply: The four obstacles are that which prevents the activation of lineage; they are removed on the heat level of the Mahayana path of preparation. This is because when the boundary of the support of the Mahayana lineage that is explicitly presented here is posited it is said to exist from the heat level of the Mahayana path of preparation onward. The four obstacles are: (1) much familiarity with the afflictions, (2) being in contact with misleading friends, (3) lacking basic necessities, and (4) being under the control of others, such as a king.

Question: How does one become free from these four?
Reply: Due to one’s own inner development. For example, on the path of preparation the strength of the afflictions diminishes, whereby the familiarity with afflictions decreases; due to developing method and wisdom one becomes less able to be influenced by misleading friends; due to developing the food of concentration one becomes less dependent on external necessities; and naturally one becomes free from being under the control of others.

Although it can be said that those on this level are pervaded by being free from these four obstacles, they are not pervaded by being free from each and every one of these obstacles.

Question: What is the nature of the seeds deposited on the mind-basis-of-all?
Reply: These seeds are non-associated compositional factors.

Question: It seems that meaning generalities (ton ji) arise in dependence upon hearing and experience - a cause. How can they be permanent?
Reply: A meaning generality is permanent; it is that which appears to conception. Such a meaning generality is said to be permanent because it is a superimposition posited by conception. It is an appearance that occurs to conception that is not produced by causes and conditions. However, it does arise following upon hearing and experience. Likewise, true cessations arise through meditating on the path but are still said to be permanent. In the same way, although a meaning generality follows upon hearing and thinking it is still said to be permanent.

REVIEW
This week we began the second chapter which is on the subject of the knower of paths. The knower of paths consists of eleven topics of which we began to look at the first, the branches of the knower of paths, which is further divided into five:
(1) freedom from the obstacle of manifest pride
We need to understand what it means to be free from the obstacle of manifest pride. There is a difference between manifest pride and pride in general. Pride is not pervaded by being manifest pride. Manifest pride does not simply mean a pride that is manifest within us, there is more to it than this. For example, there is the pride that thinks, “I am,” which is a manifest pride and also precedes manifest pride. In Abhidharmakosha pride is divided into three, seven, and nine types of pride. Manifest pride is, for example, that of the gods who think, “I have clairvoyance,” and, “I have this natural light.”
Then we looked at the support of a knower of paths and the fact that the knower of paths can be generated. Can rebirths in the desire and form realm be the supports of a knower of paths? If something is a support for generating a knower of paths is it necessarily a rebirth/body of a happy migration? If someone says yes, one can ask: can a knower of paths not be generated on the support of a hungry ghost? If someone says no, one can ask: Then what does it mean in sutra when it says “Many hungry ghosts were placed in seeing the truths”? The path of seeing is defined as the clear realization of the truth, therefore it would seem that these hungry ghosts achieved the path of seeing. Based on this, it would seem that hungry ghosts can generate a knower of paths since they can generate the path of seeing. However, in general the support of the hungry ghosts is not said to be a support of a knower of paths although hungry ghosts may be suitable to generate a knower of paths. Some interpret that sutra saying that it means that the hungry ghosts are led in the causes for seeing the truths, not that they actually attain the path of seeing. If it is asked what are the causes to which they are led, it is answered that they are led to generate great compassion. For example, Avalokiteshvara is said to have caused the hungry ghosts to develop compassion.

All of us need to develop love and compassion which are the like the two sides of the hand.

END
Monday afternoon class, June 29, 1998

We were looking at the question as to whether or not the ascertaining consciousness in a continuum that thinks all sentient beings will become buddhas arises by the power of a valid cognition. According to the second possibility—the ascertaining consciousness that thinks all sentient beings will become buddhas does not arise by the power of a valid cognition—it would follow that one cannot set forth the thesis that ‘all sentient beings will become buddhas’ and it would follow that that ascertaining consciousness is not a subsequent cognizer that accords with its object because the fact that sentient beings will become buddhas is not established by a valid cognition. In other words, if the ascertaining consciousness thinking that ‘all sentient beings will become buddhas’ is not established by a valid cognition one cannot make the thesis that ‘all sentient beings will become buddhas.’ In addition, the ascertaining consciousness that thinks ‘all sentient beings will become buddhas’ would not be a subsequent cognizer because it would not be preceded by a valid cognizer ascertaining that ‘all sentient beings will become buddhas.’

If someone says “no pervasion” it would follow that he deprecates ‘the correct reasoning that is a non-observation of the imperceptible (the non-appearing).’ An example of ‘a correct reasoning that is a non-observation of the imperceptible’ is: on a basis before oneself (subject) a person for whom [the presence of] a pishatsa (flesh-eating spirit) is a hidden object does not have a concordant subsequent cognizer ascertaining a pishatsa (predicate) because the person for whom a pishatsa is a hidden object does not have a valid cognizer observing a pishatsa. We thus understand that a valid cognizer observing a pishatsa is the cause for a subsequent cognizer ascertaining the presence of a pishatsa. Since there is no such valid cognizer there is no subsequent cognizer.

In the case [of the deprecation that says there is no such sign as ‘a correct reasoning that is a non-observation of the imperceptible’] there would be no proof at all regarding any hidden object since this person’s logic would be similar.

Hidden phenomena are that do not appear to a direct cognizer. While manifest phenomena can be realized without depending on logic, hidden phenomena are realized in dependence on logic. Hidden phenomena can be further divided into slightly hidden and extremely hidden phenomena. A slightly hidden phenomenon is, for example, the quality of impermanence of a table since the table being impermanent is realized in dependence on the sign “because it is a product.” An extremely hidden phenomenon is, for example, that high status is the result of practicing morality; it is hidden because in order to realize this one has to rely on a scriptural authority that is pure with respect to three analyses. Another example is that generosity in this life brings wealth in a future life; this too is only realized on the basis of scriptural authority. Another example is that the practice of patience brings the result of beauty; this too is realizable only by way of relying on scriptural authority. These subjects are explained thoroughly in the texts Signs and Reasonings (tag rig).

Gyeltshab says that the difference between someone who is wise due to investigation and someone who is foolish is determined on the basis of whether or not a person knows how to correctly posit the meaning of a thesis based on valid cognition. The difference between the wise and the foolish can be found in the Sutra on the Wise and Foolish.

Having established that all sentient beings will become buddhas with a valid cognition, if it is not certain that they will become buddhas it would follow that ‘that which is observed by a valid cognition’ is no longer a measurement of existence. Having ascertained that all sentient beings will definitely become buddhas what could be more inadmissible (ignorant) than saying that all sentient beings are not definite to become buddhas?

From the side of sentient beings have they decided or have they not decided to become buddhas? If they have not so decided it would contradict the thesis that you asserted. If they have so decided it would contradict the assertion that sentient beings have not decided to become buddhas. If they have decided to become buddhas it would contradict that they are not definite to become buddhas. If sentient beings from their side have in fact not decided either to become or to
not become buddhas then there would be no relation [between what] you decide [for them and
their actual position of not having decided].

Not having the power to discriminate the path of logic that is without stain and not having
received oral instructions as teachings but saying “I am commenting on the Victor’s intention” [is
inadmissible and] it would be better to remain in equanimity regarding the Buddha’s doctrine. In
other words, if one is not able to discriminate the path of logic that is without stain and does not
receive teachings as advice yet still comments on the Buddha’s doctrine it would be better not to
do so.

To assert that all sentient beings will become buddhas but then to not assert that they will
definitely become buddhas is contradictory to logic as explained before. The statement that ‘all
sentient beings are not established to become buddhas’ does not bear logical analysis because if
the minds of all sentient beings are not pure in nature it would follow that true existence is an
object of knowledge and therefore a valid cognizer could not establish that all phenomena are
empty of true existence, whereby one could not posit ultimate truth. On the other hand, if the
mind is established by way of a valid cognition to be pure in nature, the stains of the conception
of true existence together with its imprints should be established through that very logic as
incidental and something that can be removed from the mind. Otherwise, one would have to
assert, as do those who behave like the Tirthikas, that stains are mixed with the nature of the
mind.

[First disputant]: “The previously [mentioned stains] are established by a valid cognition as
something that can be removed [from the mind], but the antidotes that counteract those stains are
not established as being able to be generated in [one’s continuum].”

[A second disputant negates what is said by the first disputant saying]:
1) Is that because there is no method for eradicating the stains in the continua of sentient beings?
2) Or is that because although there is a method there is no one who knows it?
3) Or is that because although there is someone who knows it there is no aspiration for that
method?
4) Or is that because although there is the aspiration there is no one who teaches that method with
the motivation of mercy-compassion?
5) Or is that because, although there is someone who teaches it, it is impossible for one to engage
in that method shown and to become familiar with it?

[The second disputant then answers the five hypothetical questions as follows]:
The first question is not right because by familiarizing oneself with the wisdom realizing
selflessness one can extinguish all stains.

The second question is not right because there is a teacher who has finished familiarizing
himself with the method, the wisdom realizing selflessness, for the welfare of sentient beings;
such a teacher is well established by logic.

The third question is not right because it is not possible that there are no sentient beings
who do not seek high status due to being exhorted by the buddhas and although temporally
[sentient beings] are not interested in definite goodness, all sentient beings [still] possess the two
types of buddha lineage. Due to the buddhas’ compassionate promise, which does not degenerate,
to lead all sentient beings to buddhahood, those sentient beings will generate depression
regarding cyclic existence and the aspiration for nirvana. This third answer is also established in
dependence upon the correct reasoning ‘scriptural authority that is pure with respect to three
analyses.’
The three analyses are:
1) analyzing whether there is any harm from a valid direct cognizer regarding [a scripture’s] presentation of visible, or manifest, phenomena,
2) analyzing whether there is any harm from an inferential valid cognizer by the power of the fact regarding [a scripture’s] presentation of slightly hidden phenomena,
3) analyzing whether there is any harm from a trustworthy quotation regarding [a scripture’s] presentation of extremely hidden phenomena; a trustworthy quotation or text must be one without any contradiction between earlier and later words [that present any subject matter whatsoever].

The fourth question is not right because when sentient beings from their side develop interest, the buddhas, who have a mercy that does not degenerate, like that of a mother for her only child, do not give up the activity of teaching Dharma.

The fifth question is not right because when on certain occasions one encounters the conditions to awaken the lineage it will be awakened; this is established in the root text Uttaratantra, its’ commentary, and so forth. Uttaratantra sets out examples and meanings to show how stains are not mixed with the mind and can be removed.

Therefore, having asserted that there is no person who cannot become buddha, one should not assert that all sentient beings will not become buddhas and that they are not definite to become buddhas.

[First disputant]: It would follow that all sentient beings can become buddhas because they will become buddhas.

[Second disputant]: I can only accept that since the consequence that all sentient beings have already become buddhas was already explained to be incorrect.

[First disputant]: Then, it would follow that there will be a time when there no longer exist any sentient beings because all sentient beings will have become buddhas.

[Second disputant]: There is no pervasion because when you will have become a buddha it would contradict your non-existence.

[First disputant]: It would follow that there will be a time in which there are no sentient beings.

[Second disputant]: That [statement] can only be accepted because functioning things are unstable.

[First disputant]: It would follow that there will be a time in which there are no sentient beings who are objects of welfare of the buddhas.

[Second disputant]: That [statement] is also to be accepted in the same way as the previous.

[First disputant]: It would follow that there will be a time in which the continuity of sentient beings who are objects of welfare of the buddhas cease because all sentient beings will have become buddhas.

Then, it would follow that there will be a time in which the continuity of a bodhisattva on the eighth ground (subject) will cease because he will have become a buddha.

Since this accords with the strength of the pervasion you assert all three:

1) When all sentient beings will have become buddhas there is the pervasion that there will be a time when there are no sentient beings.
2) When all sentient beings will have become buddhas there is the pervasion that there will the continuity of the sentient beings who are objects of welfare for the buddhas will cease.
3) When a bodhisattva on the eighth ground will have become a buddha there is the pervasion that there will be a time in which his continuity ceases.

[Second disputant]: With regard to your proof for the pervasions, the pervasion that if it is buddha it is not a sentient being needs to be thought about and well examined. If this is analyzed more closely, [the statements] ‘all sentient beings will have become buddhas’ and ‘all sentient beings will become buddhas’ are not different.

[First disputant]: If all sentient beings will have become buddhas where will they exist and at what time will they exist?

[Second disputant]: In that case, when you think “I will attain buddhahood for the welfare of sentient beings” in whose continuum does that which is to be attained, perfect complete buddhahood, exist and when does it exist?
[First disputant]: That buddhahood exists at the time one becomes a manifest complete buddha and it exists in the continuum of [that person]. That which is to obtained, buddhahood, does not exist in the continuum of a bodhisattva on the path of accumulation because cause and result do not exist at the same time.

[Second disputant]: Why is it not correct to respond in that way to the other [argument]? (page 241)

When we develop the mind of enlightenment and wish to attain enlightenment where is this buddha? Who possesses this buddha? And when does this buddha exist? Although buddha does exist in general can it be attained? When we say, “I will become a buddha,” who is this buddha and where is he? We can say he is in the pure land or we can say he is everywhere! There is no place in which there is no buddha, not even the smallest of places. If someone says that this is not the case because we cannot see a buddha we answer that there is no pervasion because the fact that we cannot see a louse on the back of our head does not mean that it does not exist there. If we say that something does not exist because we do not see it, we would have to say that we do not have a kidney because we do not see it. Although the kidney can be felt, it cannot be seen. Also to say that our stomach is free of sickness because we cannot see it does not mean that we are not sick.

Tuesday morning class, June 30, 1998

[First disputant]: If cyclic existence had a beginning it would be causeless. Therefore, while there is no limit to its beginning is there or is there not a limit to its end?”

[Second disputant]: While general cyclic existence has no future limit, a particular cyclic existence does have a future limit.

[First disputant]: Saying that would be contradictory because a vase that does not exist among functioning things would contradict its existence. Therefore, both general and a particular cyclic existence do have a future end because some scriptures say: “The teaching on the lack of evidence of a future end of cyclic existence was taught so that childish beings would not think regarding a definite time that some sentient beings attain liberation, not before and after, but at such a time.” Just as explained before, one should know that it is not possible to attain liberation.

Perhaps this last phrase in Gyeltsab’s text means that it is not possible for all sentient beings to attain liberation. Before it was said that both general cyclic existence and a particular cyclic existence do have a future end but this would contradict the statement that it is not possible to attain liberation. Saying that there is a future end means that sentient beings will attain buddhahood.

[Another disputant]: Saying that cyclic existence has no future end but all sentient beings will become buddhas is [as though one is] taking on only a load of contradiction. This could be elaborated upon but it will be left aside for the moment.

In one text it is said that cyclic existence has neither an end nor is it without an end. This means that while there is no limit to the beginning of cyclic existence, there is an limit to the end of cyclic existence. In other words, there is no beginning to cyclic existence but there is a future end to cyclic existence. There will be a future end because the realization of selflessness brings cyclic existence to an end. That is possible because one with the realization of selflessness abandons grasping at a self which is the root of cyclic existence. In this way the root of cyclic existence is cut and cyclic existence comes to an end.

Different scholars have different opinions; for example, some say there is no limit to the beginning and no limit to the end. However, Aryadeva says that while there is no limit to the beginning there is a limit to the end. We should keep this opinion in mind.
In *Fundamental Wisdom* it says: “Can the limit of the beginning be seen? When this was asked Buddha maintained silence.” This quotation comes originally from sutras. When Buddha was asked whether there was a limit to the beginning of cyclic existence he did not respond. Buddha was then asked whether there is a limit to the end of cyclic existence and once again he remained silent. This refers to the teaching on the lack of evidence of a future end of cyclic existence. This question was raised by a non-Buddhist in relation to the existence of the self as a basis of argument. In the sutra there are other questions about the existence of a self of persons such as “Is there a self of persons or not?” Because Buddha knew that if he responded yes this would reinforce the persons grasping at a self, and that even if he said no it was not the right moment to give this person teachings on emptiness, he remained silent. There are fourteen things that were unpredicted and, when elaborated, there are sixty-two unpredicted things concerning view that are explained in the fourth chapter of the *Ornament*.

The true aspectarian Chittamatrins, for example, assert three final vehicles and therefore that there are sentient beings who will never attain buddhahood. The reason they say that there are three final vehicles is because there are those who follow, for example, the hearer’s vehicle and thereby attain a hearer’s enlightenment. This is their final goal in that they do not proceed further to attain the great enlightenment. The reason that they say there are three final vehicles is because they assert other-powered and thoroughly established phenomena are truly existent. For this reason, ultimately sentient beings have definite lineages: there are three different truly existent kinds of predispositions, and therefore three truly existent beliefs, and therefore three truly existent paths, and therefore three truly existent results. This is why they say there are three final vehicles. When it is pointed out that this contradicts the fact that the Buddha taught one final vehicle they respond that that teaching is an interpretive meaning teaching in that: it has a basis of intention, there is a purpose to Buddha having taught this, and there is direct harm to this teaching from logic. Previously the seven bases of intention according to the Chittamatrins were mentioned to show why Buddha said that there is only one final vehicle. The purpose mentioned was to lead sentient beings who have an indefinite lineage to the Mahayana and to ensure that the bodhisattvas who have already generated enlightenment do not fall into the Hinayana. In short, the true aspectarian Chittamatrins say that due to these bases of intention and purpose Buddha taught one final vehicle.

According to those who accept one final vehicle the fact that Buddha taught three final vehicles is an interpretive meaning teaching; Buddha had a basis of intention and a purpose to teaching this. The purpose in teaching three final vehicles was to lead those sentient beings who are not ripe for the Mahayana into the Hinayana. In this way, those who are not yet ready for the Mahayana are given a rest before being led to the great city of enlightenment.

2B2C-1B2A-2C2D Examining where the hearers and solitary realizers enter in the Mahayana [after having been awakened]

[Question]: “When hearer and solitary realizer foe destroyers arise from the sphere of peace and enter the Mahayana path, do they enter from the Mahayana path of accumulation or from the path of seeing upward?”

[Based on this question there are two outlines]:

2B2C-1B2A-2C2D-1 Refuting other’s assertions
2B2C-1B2A-2C2D-2 Establishing our own tradition

When hearer and solitary realizer foe destroyers enter the Mahayana they enter the Mahayana path of accumulation because in order to enter the Mahayana they must first generate the mind of enlightenment, whereby they enter the path of accumulation. This is because the mind of enlightenment is the entranceway to the Mahayana. The mind of enlightenment on the small level of the path of accumulation, the ground-like mind generation, is the entranceway to the Mahayana. This is our own system which I set out here before going on to other systems in order to avoid confusion.

2B2C-1B2A-2C2D-1 Refuting other’s assertions
[First disputant]: According to those who assert that hearers have the realization of the selflessness of phenomenon [hearer foe destroyers] should not enter a Mahayana path lower than the path of seeing because if the purpose of generating a Mahayana path of seeing is [only] for a new direct realization of emptiness, which was not realized before, there would be no purpose here since they have already realized emptiness and familiarized with it.

Hearer foe destroyers when they enter the Mahayana path do so from the Mahayana path of accumulation. They do not enter it due to having the realization of the selflessness of phenomena but because they need to complete the accumulation of merit which is accumulated over three countless great eons. When hearers enter the Mahayana path of accumulation and the Mahayana path of preparation they accumulate merit for one countless great eon. Then on the first to seventh grounds they accumulate merit for a second countless great eon. Then on the last three pure grounds they accumulate merit for the a third countless great eon. For this reason, hearers enter the Mahayana on the path of accumulation.

[The disputant continues]: Accordingly, they should enter from the seventh ground upward.

Here someone says that the hearers should enter from the seventh ground and proceed upward.

According to those who assert that [hearer and solitary realizer foe destroyers] do not have the realization of the selflessness of phenomenon, they must generate the Mahayana path of seeing that directly realizes emptiness for the first time (newly). As a cause of that they must generate a Mahayana path of preparation through which they meditate on emptiness by means of a meaning generality with a wisdom that has arisen from meditation. For that purpose, they must [first] establish [the meaning of] emptiness by hearing and thinking; therefore, they have to enter a Mahayana path of accumulation.

In brief, there are those who say that hearers do have a realization of the selflessness of phenomena and others who say that they do not have a realization of the selflessness of phenomena. According to the first opinion hearers enter the Mahayana from the seventh ground upward, while according to the second opinion hearers enter the Mahayana path of accumulation upward.

[Second disputant]: That is completely incorrect because even according to those who assert that they do not have the realization of the selflessness of phenomena, hearer foe destroyers do not generate a Mahayana path of seeing in there continua. [Usually] one must generate a Mahayana path of seeing for the purpose of newly realizing a selflessness that has not been realized before, but a hearer foe destroyer has already directly realized selflessness and has familiarized with it. If I say this, what do you respond?”

[First disputant]: The Mahayana path of seeing is not only distinguished by a new direct realization of selflessness, it is also distinguished by the fact that it newly realizes subtle emptiness and, therefore, this it what is to be generated newly.

[Second disputant]: In that case, it would follow that even according to the previous assertion the Mahayana path of seeing must be generated in one’s continuum because that path of seeing is qualified by the two collections, the great collection of merit and the great collection of exalted wisdom. [For this reason], the path of seeing that is included in the collection of merit must be generated newly in one’s continuum and as its cause one must also generate the path of accumulation and the path of preparation.

[First disputant]: According to the first assertion the collection of merit included in the Mahayana path is already completed before the seventh ground therefore there is no fault.

[Second disputant]: It would follow that those who wish to attain highest enlightenment could definitely first enter the hearer’s vehicle and with blazing effort first attain [the state of] a hearer
foe destroyer in three lifetimes and then go to the seventh ground without the need to generate the sixth ground and below. [Otherwise,] they would have to accumulate merit for a period of one countless great eon on the Mahayana paths of accumulation and preparation.

In dependence on this understanding one should understand that it is incorrect that hearer foe destroyers do not need to enter the Mahayana paths of accumulation and preparation but can directly enter the eighth ground upward.

Therefore, although hearer and solitary realizer foe destroyers have directly realized the two subtle selflessness, when they enter the Mahayana they must do so from the Mahayana path of accumulation because there are infinite divisions of particularities that are included in the collection of merit. They have to establish those [divisions of particularities] well by way of hearing and thinking. After this, they need to develop a mundane wisdom arisen from meditation with which they have to familiarize with those [divisions of particularities] for countless eons. After that, they attain the first ground which has the twelve groups of qualities [of bodhisattvas] which are in sets of a hundred and so on.

Asserting that when such [hearer and solitary foe destroyers] abide on the Mahayana paths of accumulation and preparation they are ordinary beings would be a deprecation. In other words, if someone were to say that those two foe destroyers are ordinary beings while on these paths it would be deprecation because they are arya beings.

It should be understood that thinking that the objects of abandonment that are abandoned through the supermundane path can return and not having confidence in liberation is a serious wrong view. Furthermore, in terms of the mere direct realization of the sphere of reality there is no difference between hearer foe destroyers and those who were initially Mahayanists; however, there is a difference in their ability to abandon the discordant class and in their power. This difference should be understood as the difference between a mountain and a mustard seed. For that reason, whether hearers have the realization of selflessness or not it is to be understood that they enter the Mahayana from the Mahayana path of accumulation. In dependence upon entering the Mahayana path of accumulation they are definite to have the Mahayana lineage. Also those who occasionally had a hearer lineage enter the Mahayana path of accumulation. If these two, [one who previously had the realization of a hearer foe destroyer and then enters Mahayana path of accumulation and one who initially enters the Mahayana path of accumulation], enter the Mahayana path of accumulation simultaneously there is a great difference in their attainment of the peerless enlightenment. The one who initially holds the Mahayana lineage would be extremely fast while the other would be much slower. The reason for this involves infinite logic and there would be many words so it will not be mentioned here.

This means that the speed of progression of these two people would be different in that one who initially was a Mahayana lineage holder would be very quick while one who was initially a Hinayana lineage holder would be very slow; for example, like the relative speeds of a young man and an old man climbing a mountain. However, there is no doubt that the person who was initially a Hinayana lineage holder has actually entered the Mahayana.

Here the principal basis of argument is only those who proceed to peace, hearer foe destroyers and solitary realizer foe destroyers. There are those who only proceed to peace in that when they attain their nirvana they determine to remain in this state of peace. Therefore, they do not easily enter the Mahayana and when they do enter it they are slow in progressing. Establishing that there is one final vehicle is to be known as a proof related to the fact that all sentient beings will attain enlightenment as was established before.

In his Ocean Playground (page 530) Jetsun Chokyi GyeltSEN sets out an ancillary presentation of vehicle in four divisions:

1) definition
2) divisions
3) boundaries
4) reason for dividing the vehicles into three

1) definition
The definition of vehicle (yana) is: a clear realization of one who has entered the path who takes
upon himself the burden of any of the two welfares.

2) divisions
There are two vehicles: (1) the vehicle which is the great vehicle and (2) the vehicle which is the
lesser vehicle.

The great vehicle (Mahayana) is: a vehicle that is distinguished by possessing seven greatnesses.
In Ornament for Sutra it says: “Great observed object, likewise the two achievements, exalted
wisdom, exertion of effort, being skilled in means, great perfect accomplishment, great
enlightened activities of buddhas: due to possessing these seven greatness ‘the great vehicle’ is
definitely so called.”
Jetsun Chokyi Gyeltsen explains this saying: the vehicle which is a great vehicle (subject)
possesses seven greatness (predicate) because (1) it possesses a great observed object, the
extensive Dharma (subjects), the sutras and so on; (2) it achieves the two great achievements; (3) it
has the exalted wisdom that realizes the two selflessnesses; (4) it has the great effort needed to
accumulate merit over three great countless eons; (5) it has the great skill in means that is to hold
on to cyclic existence and to not take the afflictions as the principal object of abandonment; (6) it
has the great perfect accomplishment such as the strengths; and (7) it has great enlightened
activity, which is to become enlightened and then work for the welfare of infinite sentient beings.

The lesser vehicle (Hinayana) is defined as: a vehicle that is not distinguished by possessing the
seven greatnesses. The divisions are: (1) the vehicle of hearers and (2) the vehicle of solitary
realizers.

3) boundaries
The boundary of vehicle is from the path of accumulation up to the buddha ground.

Tuesday afternoon class, June 30, 1998
2B2C-1B2A-2D Nature of the knower of paths
1 Meaning of the words
2 Examining the limits

2B2C-1B2A-2D1 Meaning of the words

“Since mind generation towards enlightenment is the very engagement of benefiting
sentient beings for as long as cyclic existence (exists), delusions are not abandoned in
all ways” - is its nature.

“[Hearers and solitary realizers] exert effort in abandoning the afflictions included among the
contaminations of desire (the desire realm) and existence (the form and formless realms) as their
principal object of abandonment [whereas the bodhisattvas] do not abandon them in all aspects.”
This is the nature of the knower of paths whereby [the knower of paths] is superior to the paths of
hearers and solitary realizers because [the bodhisattvas’] generation of the mind of enlightenment
is the very entranceway into [fulfilling] the welfare of sentient beings until cyclic existence ends.
Therefore, the aryā bodhisattvas transform the contaminations of desire and existence into a
means to achieve others’ welfare. This is one reason that makes the knower of paths superior to
the hearer and solitary realizer paths. Bodhisattvas therefore remain in cyclic existence until it is emptied.

“Therefore, the arya bodhisattvas transform the contaminations of desire and existence into a means to achieve others’ welfare” means that bodhisattvas use some affections, such as attachment, as a means to benefit sentient beings. However, anger, as well as ignorance and wrong views, cannot be used to benefit others.

2B2C-1B2A-2D2 Examining the limits

[First disputant]: The affections explained here are actual affections. They are still the cause for arya bodhisattvas to take rebirth because in [Arya Vimuktsena’s] Commentary on the Twenty Thousand Stanza Perfection of Wisdom Sutra and in [Haribhadra’s] Great Commentary it says: “They abandon the dormant [afflictions] included in ignorance and wrong view but not the contaminations of the desire realm and form realm because [arya bodhisattvas, due to the contaminations], intentionally take rebirth in cyclic existence.” While bodhisattvas do abandon dormant affections, such as those included in ignorance and wrong views, they do not totally abandon all affections as they use them intentionally to be reborn in cyclic existence. Nevertheless, the fault of the affections is that they completely disturb the mental continuum. However, the bodhisattvas who are no longer under the control of the affections have destroyed the energy (seed) for taking rebirth and so on. Therefore, it is explained that these bodhisattvas do not generate the fault of affections at any level.

An affliction is a mental factor that functions to disturb the mind.

[A second disputant] belonging to our own system: That [they have destroyed the seed] is contradicted by much scriptural authority and logic. [When] arya bodhisattvas are not able to take rebirth as they wish out of compassion and their prayers do they need affections as an aid? Or even if they do not have affections, at the time of death they come to fear losing the self and crave contaminated aggregates; is this very craving what helps the bodhisattvas take their next rebirth?

The latter case, [the very craving for contaminated aggregates at the time of the death being an aid], contradicts the fact that bodhisattvas do not take rebirth under the control of the affections. The former case, [the need of help from the affections when they are not able to take rebirth as they wish out of compassion and their prayers], also contradicts [the fact that bodhisattvas do not take rebirth under the control of the affections].

Furthermore, if they need affections as a cause for taking rebirth [it would mean that] due to the affections they have not abandoned the sufferings of aging and so forth and therefore helping others would be out of the question as even one’s own welfare would not have been accomplished. In Uttaratantra it says: “Arya beings have totally abandoned the sufferings of sickness, aging, and death. A rebirth that is taken out of karma and affections does not exist for them.” Therefore there would be many contradictions.

Arya beings have abandoned the sufferings of aging, sickness, and death which are caused by karma and affections. The meaning of the above scripture is not to show that the affections are a cause for taking rebirth. One should know that [bodhisattvas], out of compassion and their prayers, take rebirth as universal monarchs and so forth and produce many sons in order to benefit others, for the purpose of which they need [the affections]. Also when they take rebirth in the form realm because they have extinguished the seed for taking rebirth caused by the karma of a concentration that is together with contaminations, they do not need [affections] as a cause for taking rebirth in the upper realm. Once born there they take the contaminations of the form realm as a branch for benefiting other. This is to be understood.

In general, bodhisattvas are said to need the help of affections to be reborn but perhaps in the case of rebirth in the form realm the main cause is prayer.

Afflicted ignorance, wrong views, and so forth can never be of the slightest use as a branch for benefiting others. Therefore, any affections that are included in the objects of abandonment of the path of seeing are to be extinguished completely.

452
[First disputant]: In the Teaching of Akshayamati Sutra (Akshayamatinirdeshasutra) it says that there are eight causes of rebirth. These eight causes are labeled as afflictions and function in a way similar to the way in which the afflictions in ordinary beings cause rebirth.

[A second disputant] belonging to our own system: That is not correct. Those eight causes have the method side complete and therefore the supposition as to whether or not the bodhisattvas abandon them specifically is not to be examined here. If the afflictions that are mentioned here are designated, then also the afflictions that are specifically abandoned by hearers would be designated because they do not specifically attend to the afflictions but only achieve a hearer’s enlightenment and by the way abandon the afflictions. Therefore, the knower of paths [in the continua of bodhisattvas] is shown to be distinguished as compared to the paths of hearers. Therefore, the afflictions [mentioned here] are real. Furthermore, they are the contaminations of the desire realm and existence (the upper realms). Although afflictions are not necessary for bodhisattvas as a cause to take rebirth, rather than avoiding the faults of the afflictions they transform them into the branches for accomplishing the welfare of others.

If they exert effort those on the seventh ground and below can take a mental natural body in dependence on uncontaminated karma and the level of the latencies of ignorance, [but] one should know that actualizing [such a mental natural body] spontaneously is possible only for hearer foe destroyers, solitary realizer foe destroyers, and bodhisattvas who have gained control. However, the attainment of a mental natural body (a body of the nature of the mind) is not common to all hearer and solitary realizer foe destroyers. The Prasangika Madhyamikas say that hearers and solitary realizers attain a nirvana without remainder and bodhisattvas who have gained control take a mental natural body in dependence on the level of the latencies of ignorance and uncontaminated karma. This seems to be the assertion of the Prasangikas who assert the extinction of the afflictions on the eighth ground while this is not asserted by the Svatantrikas. ‘A bodhisattva who has gained control’ according to Prasangikas is a bodhisattva who has abandoned all the afflictions while for Svatantrikas it is a bodhisattva who is free from the stains of the seven impure grounds.

[True aspectarian] Chittamatrins also assert that all afflictions have been abandoned on the eighth ground. Since at this point the afflictions have been eliminated there is no more mind-basis-of-all on the eighth ground. To posit a mind-basis-of-all there has to be afflictions and their consequential karmic formations. These are all stored on the support of the mind-basis-of-all. True aspectarian Chittamatrins who assert three final vehicles say that when someone attains the eighth ground the two additional consciousness cease because it is not possible to posit a mind-basis-of-all without afflictions and afflicted mentality also becomes non-existent as there is no more mind-basis-of-all which is its referent. The afflicted mentality observes that referent, the mind-basis-of-all, and has the aspect of grasping it as a self-supported substantially existent person. They posit a fruition consciousness (or maturation consciousness) in place of a mind-basis-of-all and [the afflicted mentality is transformed into the wisdom of sameness cognizing all phenomena as equally free from a difference in entity between subject and object (Meditation on Emptiness p.385)]. This fruition consciousness continues and when one becomes a buddha it becomes the mirror-like wisdom.

2B2C-1B2A-2E Function

After that, as the actions which possess a nature like that are to not manifest the limit of purity, and through wisdom and skillful means, to completely assemble sentient beings not (yet) assembled and so forth - (they) are deeds.

Having explained the nature [of a knower of the paths], the function of a knower of the paths, which has that type of nature, is different from the paths of hearers. Without completing [prayers], ripening [sentient beings], and purifying [his future buddha realm, a bodhisattva] does not actualize the perfect end. [Bodhisattvas], being skilled in means, such as the wisdom
observing emptiness and compassion, act to thoroughly assemble the sentient beings who have not been assembled thoroughly and so on.

‘Bodhisattvas being skilled in means’ refers to the fact that bodhisattvas have to learn, know, and generate the paths of hearers, solitary realizers, and bodhisattvas. On the basis of knowing them well, they then complete the three conditions, completion, ripening, and purifying the future buddha realm.

This concludes the five divisions of the first topic of the knower of paths.

2B2C-1B2B The nature of the knower of paths
1 Knowing the nature of the paths of hearers
2 Knowing the nature of the paths of the self-conquerors
3 Explanation of the nature of the knower of paths of the bodhisattvas

The second topic is the knower of paths knowing the paths of hearers, the third is the knower of paths knowing paths of solitary realizers, and the fourth is the knower of paths knowing the path of the great vehicle, or simply the Mahayana path of seeing.

2B2C-1B2B-1 Knowing the nature of the paths of hearers
A The entity of the knower of paths
B The cause of the knower of paths: the similitude of definite discrimination

2B2C-1B2B-1A The entity of the knower of paths
1 Making a connection
2 Root text
3 Commentary

2B2C-1B2B-1A1 Making a connection

Having expressed the support and so forth like that, as it is necessary to complete all paths on the occasion of the knower of paths - the path of hearers.

Thus, having expressed the support and so forth, in the context of the knower of paths it is appropriate to explain the way of knowing the paths of hearers because in order to attain omniscience one needs to meditate to complete all the paths of the three vehicles. Here, although Gyeltsab says that we have discussed the support actually we have just discussed the branches of a knower of paths, so what is the support? Support here refers to making the proud gods into a proper vessel for the knower of paths.

In this phrase that makes a connection it says that having gone through the five branches of a knower of paths, which are further condensed into three, cause, entity, and function, it is appropriate to explain the knower of paths knowing the paths of hearers.

2B2C-1B2B-1A2 Root text

Regarding the mode of the knower of paths itself, by means of not observing the aspects of the four truths of the aryas, one should know this path of hearers.

“Not observing” refers to the wisdom realizing the lack of true existence. In brief, with this wisdom as a companion one knows the paths of hearers.

The way to completely meditate on the knower of paths is to know how to meditate on the paths of hearers; this is to go through the four truths of the aryas which have sixteen attributes. These objects are to be meditated upon accompanied by mind generation, dedication, and the wisdom realizing that phenomena are not truly existent. The knower of paths knowing the paths of hearers is an exalted wisdom that directly realizes the sixteen attributes of the four noble truths, such as impermanence. These are to be meditated upon in order to guide hearer lineage holders.

[First disputant]: Is this not a knower of bases? How can it be called a knower of paths?
[Second disputant]: A knower of paths is posited from the point of view of being sustained by three attributes, not in terms of observing the hearer’s paths and meditating on emptiness.
In other words, taking the hearer’s path as an object and meditating on it is not the reason for calling it a knower of paths.

The exalted wisdom realizing impermanence and so forth in the continua of a bodhisattva on the path of seeing is a knower of paths knowing the paths of hearers and it can also be a knower of bases. However, here knower of paths is known from the point of view of being sustained by three attributes. In the third chapter [of the Ornament] those sixteen attributes, such as impermanence, are presented by way of their names as that which is to be known, seen, and passed by.

Although one realizes emptiness in meditative equipoise, in subsequent attainment one naturally also has the realization of the selflessness of persons.

This [subject of knower of] paths [knowing the paths of hearers] is meditated on during the occasion of the path of seeing. Effort to familiarize with it is not exerted on the path of meditation.

Here there is the path of seeing that acts to pass over and the path of seeing that has been passed through. These two paths of seeing are the direct realization of emptiness in meditative equipoise which is purposely engaged in. The realization of the selfless of persons that is gained naturally and the realization of the sixteen attributes is the path of seeing that has been passed through.

Question: With respect to the conception of true existence, please explain the process of fixing upon (mngon par shen pa), insisting (lhag par gnas pa), and holding as true (kun shes)?

Reply: This is presented in various ways. According to one presentation these three, strongly clinging (fixing upon), excessively abiding (insisting), and knowing all (holding as true) are divisions of the conception of true existence which correspond with the small, middling, and great levels. The first two, the small and middling, apprehend objects as truly existent without a reason, while the third relies on reason. Another presentation says that these three conceptions are respectively conceptions of true existence of the basis, path, and result. This second presentation comes in Essential Explanation (page 136) where it says: “These three are related respectively to the basis, path, and result; these are strongly clung to. This is to be ceased.”

There is also a third presentation related to three wrong conceptions: wrong discrimination (strongly clinging), wrong mind (excessively abiding), and wrong view (knowing all). They are related to the small, middling, and great conception of true existence and is found in the commentary Destroying Harm and the Pure Possessor of the Twenty-Thousand by Shantipa, one of the twelve commentaries that combine sutra and the Ornament.

Wednesday morning class, July 1, 1998

2B2C-1B2B-1A3 Commentary
A The path which is to be known
B The manner of knowing that

2B2C-1B2B-1A3A The path which is to be known

In sutra it says: “Regarding this, does a bodhisattva mahasattva reflect on the impermanence of form by generating a mind that possesses omniscience or by means of the unobservable?” This presents the entity of the sixteen aspects and the enumeration. The explanation by way of this commentary has three [divisions]:

1 Attributes of true sufferings and true origins
2 The attributes of true cessations
3 The attributes of true paths

2B2C-1B2B-1A3A-1 Attributes of true sufferings and true origins
A The individual attributes of sufferings and origins
B Common aspects
The individual attributes of sufferings and origins

1. The attributes of sufferings
2. The attributes of origins

The attributes of sufferings

Regarding that, in accordance with the order of the (four attributes of) true sufferings (in the sutra): 1) impermanence, 2) suffering, 3) empty, and 4) selfless - pacifying the characteristic natures of those - four attributes.

Regarding that, there are four attributes of true sufferings, these being:
1) impermanence, due to being produced by conditions
2) suffering, due to being under the control of karma and delusions
3) empty, due to being empty of a self that is another object (meaning an independent, permanent, partless self)
4) selfless, due to not being established as an entity of an independent self (meaning a self-supporting substantially existent self)

These characteristics are not established as existing as a self, therefore they are the four aspects of peace. Taking the [attributes] explicitly mentioned [in the sutra] as a thesis and explaining their meaning is the reasoning.

In other words, taking the aggregates as an example one can set out the following syllogisms:
- the aggregates are impermanent because they are produced by conditions
- the aggregates are suffering because they are under the control of karma and delusions
- the aggregates are empty because of lacking a self that is another object
- the aggregates are selfless because of lacking a self-supporting substantially existent self

Within the explicit sutra words the two latter aspects, [empty and selfless,] are presented by way of enumeration. According to that, the definition of being empty is selfless, and the definition of that is the aspect of peace.”

The attributes of origins

The very entities of 1) cause, 2) origin, 3) strong production, and 4) condition of true origins, and the aspects of 1) disease, 2) fester (boil), 3) irritant, and 4) slayer.

The attributes of true origins combined with the explanation by way of the enumeration in sutra are: craving (subject) has the attribute of 1) cause, which is identical with a sickness (predicate), because it is the cause of suffering (sign); it has the attribute of 2) origin, which is identical with a boil, because it produces suffering again and again; it has the attribute of 3) strong production, which is identical with pain, because it produces very intense suffering; and it has the attribute of 4) condition, which is identical with the [various] types of negativities, because it is a cooperative condition (simultaneously acting condition) for future rebirth.

On the basis of the sutra quotation syllogisms and reasons are set out. “Negativity” (sdig pa) can be understood to mean the ten non-virtuous actions or a scorpion, and in vinaya it is explained to be those vows of fully ordained monks which when broken can lead to expulsion or the lessening of rank. The punishment does not involve beating.

Common aspects

Since “because of aversion, the object to be separated from attachment, and cessation, there is engagement (in the path of preparation)” arises - the characteristics of aversion of the individual truths of suffering and origin themselves: the very entities of the aspects of 1) foreign enemy and 2) the subject of destruction, and the entities of the
There are seven aspects that are common to true sufferings and true origins.

Those very true sufferings and true origins (subject) are to be observed as being an entity of a type of harm that can be destroyed, like a foreign enemy, by an opponent with the characteristic of being individually depressed with respect to true sufferings and true origins (predicate), because one enters the path of preparation due to generating depression with respect to true sufferings and the true origins. So it is said.

[Those very true sufferings and true origins] (subject) are to be observed as moving/fluctuating because of not remaining in the second moment for those who are free from attachment and as an aspect of strong disintegration which does not rely on a future condition and cause (predicate) because one enters [the path of preparation] in order to become separated from attachment to true sufferings and true origins. So it is said. Here ‘So it is said’ means that these statements are taken from sutra.

[Those very true sufferings and true origins] (subject) are to be observed as a type of harm, fearful, an occasional infectious disease of the brain caused by cannibal spirits (srin po) etc., and a falling thunderbolt, since they are to be ceased and as having the entity of being harmful objects (predicate) because one enters [the path of preparation] in order to cease true sufferings and true origins. This is said in the Compendium of Enumeration.

Depression and so forth, these three, occur on the occasion of the path of seeing, at the end of the path of meditation, and at [the time of a nirvana] without the remainder of the aggregates. [The path in which one] enters for this purpose is the path of preparation. [Those three] are attained naturally on the occasion of [a nirvana] with remainder and on [other] occasions excluding the end of the path of meditation.

“Depression and so forth” refers to depression, freedom from attachment, and cessation. One enters the path of preparation in order to become depressed regarding cyclic existence, to gain freedom from attachment, and to attain cessation. “Depression” refers to the path of seeing, “freedom from attachment” to the end of the path of meditation, and “cessation” to a nirvana without remainder. The path which one enters to attain these is the path of preparation. One enters the path of preparation in order to attain the path of seeing (depression), the path of meditation (freedom from attachment), and a nirvana without remainder (cessation).
attributes of true cessations which are the four doors to liberation and are related to the fourth attribute, definite emergence: emptiness, signlessness, wishlessness, and effortlessness.

The second attribute, entity, and the others are presented by way of epithets.

The separations which are the characteristics of definite emergence (subject) have the aspects of emptiness, signlessness, wishlessness, and effortlessness because, respectively, the way in which one definitely emerges is through the abandonments that are separated from a truly existent entity, cause, and result; and that to which one emerges through effort is the abandonment that is separated from truly existent effort.

The subject here is true cessations; its attributes have the characteristic of being separations from their objects of abandonment. Cessation, [the first attribute], means an abandonment of, for example, true sufferings and true origins and the twelve links from ignorance to aging and death which belong to the class of ever-deluded phenomena. The suffering aggregates are also to be abandoned. We can see that our aggregates bring us many sufferings and problems.

The attributes of true paths

2B2C-1B2B-1A3A-3 The attributes of true paths

The attributes of true paths: 1) path, 2) suitability, 3) achievement, and 4) definite deliverance.

Regarding the attributes of true paths, the wisdom directly realizing selflessness, (subject) has the attributes of 1) path, 2) suitability, 3) achievement, and 4) deliverance because respectively it is the path by which one travels to nirvana; it is suitable because it can act as an actual antidote to the seed of the afflictions; it is achievement because it directly realizes the reality of mind; and it is definite deliverance because it is a path that acts to completely extinguish suffering.

In sutra it says: “By possessing a mental attention to omniscience by the means of the unobservable one meditates on the subjects beginning from the close placements of mindfulness up to the unshared qualities of a buddha. One practices the perfection of generosity, and when one practices the perfection of wisdom one connects oneself to the dharma of dharma. Koushika, any mind that has been totally dedicated is not a mind.”

“Koushika” is an epithet of Indra. A bodhisattva should know the paths of hearers while not observing the four noble truths to be truly existent. This means that the paths of hearers are to be known sustained by the wisdom that directly realizes emptiness.

Wednesday afternoon class, July 1, 1998

2B2C-1B2B-1A3B The manner of knowing that

By means of not observing entitiness, in the context of the knower of paths, the bodhisattvas should completely know the thirty-three paths of objects to be known as being the path of hearers.

The path which is to be known, which was explained above, is the path of hearers. Bodhisattvas should thoroughly know it as it is. How? [It is to be known] by way of being sustained by mind generation, dedication, and the wisdom not observing its very entity [as truly existent]. When is it to be known? On the occasion of the knower of paths that shows the collection of the causes for omniscience.

2B2C-1B2B-1B The cause of the knower of paths: the similitude of definite discrimination

1 Making a connection
2 Root text
3 Commentary
Since the complete understanding of the four truths possesses the preliminary - to realize the similitude of definite separation, having expressed the path, the similitude of definite discrimination.

The cause of knowing the four truths directly and newly is the similitude of definite discrimination, the path of preparation.

Regarding the path (causing) the arya hearers: because form and so forth (are) empty through inseparable emptinesses, heat; by not observing to those, transformed to the peak is correctly asserted; since inadmissible to abide in them through the mode of permanence and so forth, patience; having set out on the ten grounds, not abiding, as taught extensively is explained to become the supreme Dharma. If “Why” is asked, because the Buddha does not see all phenomena through exalted knowing.

Here there is a presentation of the observed objects and aspects of the heat, peak, patience, and supreme dharma levels of the path of preparation which is specific to this context of the second chapter of the Ornament.

The direct knowledge of the path of arya hearers is necessarily preceded by its cause, the similitude of definite discrimination. The very realization of the sixteen attributes, such as impermanence, by means of a meaning generality is initially sustained by the wisdom realizing emptiness by means of a meaning generality; this is heat. When that is increased, it is peak. When that is sustained by the attainment of a patience with which one negates the conception of true existence of permanence and impermanence, it is patience. When that apprehension is sustained by a wisdom that realizes that abiding on the ten grounds is not to be conceived of as truly existent, it is the supreme dharma.

In sutra with respect to the four levels of the path of preparation it says:
“Koushika, form is empty of form.”
“A bodhisattva should not abide on form in the manner of observing it [as truly existent].”
“In the manner of observing it, one should not abide saying that form is permanent.”
“Furthermore, a bodhisattva should not abide on the first ground in the manner of observing it [as truly existent].”

A disputant asks: Why does this abiding not exist truly?
A second disputant responds: Because the Buddha directly knows this. If phenomena were truly existing objects to abide on he would have seen it but he did not see it.

In this context in the Great Commentary it says: “Some hearers say that a supreme emanation body shows the manner of passing beyond sorrow as passing beyond sorrow by way of cutting the continuity of matter and consciousness. There is harm to this from scripture and logic. Whatever does not have incomplete causes to abide does not have the nature of abiding continuously; for example, fire, wood, and so forth which possess the potential cause of abiding of the smoke and so forth which exist completely. Also the buddha bhagavan is one who does not possess incomplete causes of abiding.

When the property of the subject is established with this reasoning, was the fact that the Bhagavan did not have complete causes to abide because:
1) he exhausted the power to enact the welfare of sentient beings?
2) he was without great compassion?
3) he had lost the power over the abiding of his compositional factor that is life?
4) he had exhausted the power of karma for his life force to abide?
5) there were no more sentient beings to be subdued?
Extensive logic shows that none [of the five questions] can be answered positively. There are many words that could be said but in the doubt that there would be too many they are not mentioned here.

Think over the answers to these questions. It is not right that buddha has exhausted the power to enact the welfare of sentient beings, is separated from mercy, has lost power over the compositional factor that is life, has exhausted the power of karma for his life force to abide, and that there were no more sentient beings to be subdued.

2B2C-1B2B-1B3 Commentary

1) Because the aggregates of form and so forth themselves are empty by way of their own entity, a mutual difference of emptinesses does not exist, 2) as before, not observing form and so forth, 3) “similarly, form and so forth are neither permanent or impermanent”, inadmissible to abide through the mode of observing (as ultimates), 4) because of what, “The Tathagata, having manifested complete buddhahood in enlightenment, does not see phenomena” - by the propriety of the reason of not being observed by a valid being, not abiding in the Extremely Joyous ground and so forth - by these quoted aspects, whatever was taught extensively, to the observed objects of the truths respectively the similitude of definite separation is said to grow.

The aggregates of form and so forth and their emptinesses are not ultimately mutually different because they are ultimately empty of their respective entitiness. Form and so forth do not exist ultimately because, as said before, if they existed truly they would be suitable to be observed but they are not observed. Likewise, by means of ultimately observing form and so forth they are negated as objects that abide. In terms of their existing ultimately they are neither permanent nor impermanent. The Extremely Joyous ground and so forth do not exist to abide on because if they did exist truly the tathagatas would have seen this but the tathagatas who have become complete buddhas do not see phenomena, such as the ten grounds, as existing ultimately.

This which is said is correct by the reasoning ‘it is not observed by a valid being,’ therefore the fact that they do not abide [ultimately] is presented elaborately in the sutras. Thus, [bodhisattvas] observe the above mentioned aspects of the observed object, the four truths, and meditate on them, whereby they generate the four similitudes of definite discrimination.

Here what is explicitly presented is the path of preparation that realizes emptiness. The cause of the knower of paths of hearers, definite discrimination, is the mundane wisdom arisen from meditation observing the sixteen attributes, which is mentioned implicitly in the text.

[A disputant says]: In this case there is repetition because here it actually presents the path of preparation which was [already] explicitly presented in the first chapter.

[Another disputant responds]: There is no fault because the purpose is different.

The path of preparation was explained in the first chapter only in the context of it being superior to a hearer’s path of preparation. Here it is explained in order to make it known that one has to meditate on the sixteen attributes of the four noble truths sustained by the wisdom realizing emptiness.

There are two types of path of seeing: ??a path of seeing that acts to pass over and a path of seeing that passes over which are respectively the wisdom realizing the sixteen attributes, impermanence and so forth, and the wisdom realizing emptiness. This makes it known that in the case of the Mahayana path of seeing one does meditate on the sixteen attributes of the four noble truths.

2B2C-1B2B-2 Knowing the nature of the path of the self-conqueror
A General meaning
B The meaning of the branches

2B2C-1B2B-2A General meaning
This section is not directly related to Haribhadra’s *Commentary Clarifying the Meaning*. It sets out the qualities of solitary realizers.

As a distinction of lineage, solitary realizers have less intense afflictions and therefore do not like hustle and bustle but prefer to be alone. Compared to the bodhisattvas, they have little compassion and therefore do not engage in the extensive welfare of others. Due to being of middling faculty they desire to attain enlightenment without competition.

Their mode of training on the path is that:

Some solitary realizers at the time when they are ordinary beings please the buddhas who arise and accumulate merit for a period of a hundred eons. In the future life in which they attain the path of seeing, they attain the result of foe destroyer.

Some accumulate the collections and so forth for an indefinite period of time.

Some in the presence of a master completely generate the similitude of definite separation and below, then in a future life generate the path of seeing, and then in the next life attain the result of foe destroyer.

Some solitary realizers accumulate merit for a hundred eons and others do so for three lifetimes and attain enlightenment. There are two types of solitary realizers: sociable solitary realizers and rhinoceros-like solitary realizers. These are solitary realizers who rely on a master to generate the aryā path and those who do not rely on a master in the life in which they attain foe destroyer, but are definite to attain enlightenment as otherwise they would be like hearers. A more detailed explanation should be learned from other texts.

Not relying on a master means that solitary realizers do not rely on a master in the same life in which they attain foe destroyer. Another particularity regarding solitary realizers is that they arise in periods when there are no buddhas and hearers and give teachings using gestures but without words.

After the path of hearers, it is indeed proper to express the path of the solitary buddhas; but if they are distinguished from the hearers, how - by what (reasons)? In order to meet the qualms which think their paths are other (than the hearers’), for a while, to establish merely the differences.

According to the scriptures immediately after explaining the path of hearers it would be right to explain the path of solitary realizers but at the moment that which will be explained is the difference between solitary realizers and hearers. If there was no difference of the path of solitary realizers compared to the path of hearers it would not be right to explain it as other. If there is a difference, then how is it superior to the paths of hearers? The qualm thinking by what reason are their paths different is welcome.

If there is a difference between the path of hearers and the path of solitary realizers how is it different? How is it superior? The doubt that the path of solitary realizers is different is well received even though it is hypothetical.
Thursday morning class, July 2, 1998

2B2C-1B2B-2B1A-2 Root text

Self arisen because of realizing (by) oneself - not necessarily taught by others nor (teaching by speech), exalted wisdom like a rhinoceros is clearly expressed as profundness.

A self arisen foe destroyer (subject) in his last existence does not need to be taught by others (predicate) because at that time he realizes enlightenment by himself without relying on a master. In sutra it says: “Also within the retinue, some sons of gods thought this, “Whatever is spoken in the language of the yakshas and so forth will be known, whatever perfection of wisdom taught by Arya Subhuti will not be known.” “Also” means that [solitary realizers] definitely do not teach Dharma by speech.

The exalted wisdom of the rhinoceros-like [solitary realizers] (subject) is clearly expressed to be a more profound realization than that of hearers (predicate) because it cannot be realized by the sign ‘the result of speech that teaches the Dharma’ as is that of the hearers, and because they possess a profound realization from the point of view of teaching Dharma with the body. In sutra it says: “The sons of gods thought this, “Oh! Sthavira Subhuti clarifies the perfection of wisdom. Because of being profound he exposes the extremely profound, because of being subtle he exposes the extremely subtle.” Although the paths that will be explained below are also meditated on by bodhisattvas, one should not think that it is contradictory in this context to present the result that exists in the continua of solitary realizers. In order to guide solitary realizer lineage holders the bodhisattvas practice the path that realizes that apprehendeds do not exist inherently. The way of traveling their path and the sequential way of actualizing their result are mentioned as a branch of realization.

Solitary realizers in previous lives while learners made prayers which are brought to completion in the life in which they attain [the state of] foe destroyer. They teach the Dharma with physical gestures but not through speech because this would disturb the mind from its state of concentration. They also prefer to live in isolated places. These characteristics are the result of prayers they made in the past.

2B2C-1B2B-2B1A-3 Commentary

A Difference of progressing on the path
B Difference of teaching the Dharma

2B2C-1B2B-2B1A-3A Difference of progressing on the path

From the scriptures comes “the hearers, having relied on (being) taught by others, will realize their own enlightenment - others also will be engaged in virtue having been taught the Dharma without expressions.” The solitary buddhas, having exerted previously in listening and so forth, not relying on being taught by others, will clearly realize their own enlightenment by themselves. “Because of that, it is not necessary for them to be taught by buddha and so forth” is one difference.

In their last life in cyclic existence solitary realizers do not need to be taught enlightenment by the Buddha and others. At that time, without relying on others’ teachings, they themselves manifestly realize enlightenment. This is because solitary realizers do so due to the cause of putting effort into the path, their previous hearing, prayers, and so forth. This is one difference from hearers, in that the scriptures say that in their last life in cyclic existence hearers attain their enlightenment by relying on teachings from others. They also make other trainees engage in virtue by giving Dharma teaching with words. It is in fact just as said.

Solitary realizers do not rely upon teachings by others in their last life in cyclic existence, however, this does not mean that they do not rely on teachings at all. They do receive teachings in
other lives as it says: “Having exerted themselves previously in listening and so forth.” Chandrakirti in his Madhyamikavatara says that the buddhas give birth to hearers, middle buddhas (solitary realizers), and bodhisattvas,” which means that due to the teachings given by buddhas on emptiness and dependent arising these children come forth. This means that solitary realizers also receive teachings from the buddhas.

### Difference of teaching the Dharma

By means of having taught the Dharma expressed in words, if listeners are made to realize the mental skill of the expositor - they (the solitary realizers), by the force of exalted wisdom and so forth, attained by themselves, cause others to engage in the ten virtues, having taught the Dharma without words. Because of that, their unrealized exalted wisdom itself is the second difference.

The exalted wisdom of the solitary realizers is not realized through the sign “result of speech”; that itself is the second difference from the hearers—the way of teaching Dharma. The solitary realizers by the power of the exalted wisdom they have attained, their prayers, and so forth teach Dharma without sound whereby others engage in the ten virtues and the realization of selflessness and so forth. There is a pervasion because due to the hearers teaching the Dharma through expressive sound, the listeners depend on realizing the qualities of knowledge and the mental aptitude of the expositor.

When Buddha taught the perfection of wisdom were there solitary realizers among his listeners? If the answer is yes then one can ask: Why then in the narration of the Heart Sutra which says “Thus, I have heard at one time. When the Bhagavan was dwelling together with a great sangha of monks and a great sangha of bodhisattvas...” are solitary realizers not mentioned? And why in Dignaga’s commentary Compendium of the Meaning of Eight Thousand Stanza Perfection of Wisdom when it says “Teaching from the point of view of the disciples” does it only mention hearers and bodhisattvas?

### Dispelling arguments

Again, to meet the qualms which wonder how to teach the Dharma without words.

This doubt comes in dependence on the statement that solitary realizers give teachings without sounds. Here someone wonders how this is possible.

Gyeltsab says: Also, other arguments have arisen from arguments.

### Root text

Concerning whoever and whatever meaning however - to such and such (disciples) desiring to hear this and that meaning - even without words, it appears like that.

[Although solitary realizers] do not teach with words they appear to all [types of] trainees as the meaning that is to be realized in accordance with the way in which they prefer to hear; in other words, to such-and-such [trainees], such-and-such meanings [appear]. Although solitary realizers teach without sounds there is no contradiction in their teaching Dharma because they are able to generate realizations [in the continua of] trainees accordingly without using words.

How do solitary realizers teach Dharma without sound? They teach Dharma through physical demonstrations which are of many types; for example, when there are no buddhas or hearers, solitary realizers appear for sentient beings and display physical demonstrations such as dividing their bodies into two parts and, for example, making the upper part of the body blaze
with fire, while water flows from the lower part. Through such physical demonstrations different people receive teachings in accordance with their needs. For example, those who are ripe to understand impermanence understand impermanence, those who are ripe to understand selflessness understand selflessness, and so forth. This ability comes about because when the solitary realizers were learners they made prayers which are then actualized in this way.

Not having investigated, not having analyzed, one does not speak words - hence expression is a distraction. Furthermore, since it disturbs the continuum, bodhisattvas made prayers, “May I teach the Dharma without expression, having become a buddha like that”. If so, because of similarity to buddhas, also in the context of solitary buddhas, by the force of prayers and so forth, even without words, in the consciousness of that certain (disciple) desiring to listen to some subject in whatever aspect, it will appear as only that subject and that aspect - it is called “teaching Dharma without words”. The meaning of the term “to teach the Dharma” is this: “to strongly generate and grow in the consciousness of the listener, the Dharma which is to be expressed like this.”

When a teaching is given through sound the purpose is for the disciple to understand the meaning. This is also the case with respect to solitary realizers because by way of their physical demonstrations trainees are caused to understand the meaning even without their expressing sounds.

There is no contradiction to teaching Dharma without sound because if the meaning of the sound of Dharma teaching is to produce and generate the realization of the Dharma that has been expressed in the consciousness of the listener, [the same is true] even in [the case of] the soundless Dharma teachings given by solitary realizers. This is so because solitary realizers, due to the power of previous prayers and so forth, and despite [giving] soundless Dharma teachings, appear in the very aspect of the meaning to the consciousness of trainees who, as they wish, listen to the meaning of [teachings on] high status and definite goodness.

The reason that solitary realizers possess this ability is because just as the bodhisattvas make prayers to be able to teach the Dharma without sound when they become a buddha, so too do the solitary realizers [make such prayers]. Due to having made these prayers they are similar to buddhas (in the sense that the prayer is actualized). Solitary realizers make these prayers because if they were to give teachings with speech it would disturb their concentration; for this reason they prefer to give teachings by way of physical demonstrations. The reason for this is that [in the case of physical demonstrations] there is no investigation of entity and no analysis of differentiation, and without investigation and analysis no words can be expressed and there are just physical demonstrations.

The meaning of [solitary realizers] being similar to buddhas is that just as the buddhas made prayers in the past when they were bodhisattvas on the learner path and then as buddhas no longer need to rely on prayers such as “May I be able to generate realizations in the continua of trainees when I will be a buddha,” likewise, the solitary realizers are similar [to buddhas] to the extent that these [particular] prayers are accomplished. [However, this passage] does not mean to say that buddhas [also] do not have words to teach the Dharma.

The fact that buddhas give teachings without previous prayers means that buddhas do not need to depend on investigation and analysis. In Madhyamakavatara it says “The holy body is actualized by ceasing the mind” which might appear to mean that the mind ceases when buddhahood is attained, but it means that the conceptual minds of investigation and analysis cease. It does not mean that buddhas do not have speech to give teachings; in fact this is the foremost deed of a buddha among his deeds of body, speech, and mind. It is through his verbal activities that a buddha mainly acts to guide sentient beings. Lama Tsongkhapa also said that among all the deeds of a buddha that of speech is supreme.
In addition, it is to be known that while most solitary realizers abide in the manner of giving teachings through physical demonstrations, it does not mean that there are no solitary realizers who give teachings with speech because it says in Vinaya that there are also solitary realizers who teach with speech. Also in the text *An Illuminating Lamp*, which is a commentary on the Guhysamaja texts quoted by Chandrakirti, it says: “They mainly teach Dharma with the body.”

The reason for most of them to abide in this way is that while buddhas are able to teach the Dharma with sound without depending on investigation and analysis, solitary realizers cannot do so because when they [teach Dharma with speech] their minds become disturbed. For this reason most of them do not teach Dharma with speech.

[First disputant]: Whether they teach Dharma with speech or teach with body in order to have realizations there is no difference.

[Second disputant]: Our system says that this is not right because by way of their miracles of body trainees are able to realize that they have this mere miraculous [power] but are not able to realize that they have a realization of selflessness. In other words, when someone shows miracles with the body it is easy to realize that that person can perform miracles but one does not necessarily realize that that person has a realization of selflessness.

“In dependence upon the sign “result of speech” one can realize that they have a realization of selflessness in their continuum.” By that sign, others can infer that someone has such a realization, but by physical demonstrations alone one cannot infer that that person has a realization of selflessness.

“Solitary realizers when they perform a physical demonstration do not need to motivate thinking “I am going to do this.” They perform such physical demonstrations naturally whereby sentient beings are able to generate a realization of the teachings on definite goodness, high status, and so forth. The fact that solitary realizers have this ability to generate realizations in the continua of trainees is due to their having made prayers when they were learners.

In our own system without understanding even slightly what is to be posited as the meaning of teaching Dharma and negating only that Dharma can be taught by means of the body is not right.

Solitary realizers teach the Dharma through physical demonstrations because:
- they made prayers in the past
- most of them prefer to teach through physical demonstrations
- when they do so they do not need to rely on a coarse motivation

The principal object of meditation of solitary realizers is the twelve links [of dependent origination] in the usual and reverse order. Solitary realizers go to cemeteries, pick up a bone, analyze where it comes from, and meditate on this. Looking at this bone they meditate on the twelve links that are related to cyclic existence and the twelve links that are related to nirvana. It is well known that solitary realizers mainly do this meditation.

2B2C-1B2B-2B2 The manner in which to know the path
A  Making a connection
B  Root text
C  Commentary

Having expressed the differences like that, since their path differs in being only superior - the path of the common solitary buddhas.
known. The path of solitary realizers is the exalted wisdom realizing the emptiness of apprehenders and apprehendeds being different substances.

Friday morning class, July 3, 1998

QUESTIONS AND ANSWERS

Question: By means of the attainment of a union of calm abiding and special insight observing emptiness the Mahayana path of preparation is attained. Can this calm abiding be the preparation to the first concentration, the mental contemplation of a mere beginner?

Reply: The calm abiding that is unified with special insight cannot be the mental contemplation of a mere beginner.

Question: How far along the path can a sharp bodhisattva progress on the basis of Not Unable?

Reply: According to the Mahayana a sharp bodhisattva can achieve the Mahayana path of accumulation on the basis of Not Unable. When he reaches the path of preparation he achieves all four levels of concentrations and formless absorptions and therefore no longer needs to rely on a preparation for the first concentration. However, according to the Hinayana one can even attain the result of foe destroyer on the basis of Not Unable. In a text, perhaps Praise to Alternation, it says: “Even without attaining an actual concentration a hearer can proceed without obstacles by way of Not Unable, even if demons with bulging eyes try to hinder him.” In brief, a hearer foe destroyer has not necessarily attained an actual concentration.

Question: In order to achieve the meditative stabilization of the stream of dharma on the path of accumulation most of the four obstacles must be removed. Are they not removed on the path of preparation when lineage is realized?

Reply: In order for someone on the path of accumulation to receive Dharma teachings from a supreme emanation body he must be free from gross obstacles. These obstacles are specific obstacles to activating the lineage which are removed on the path of preparation. However, most of them could be removed even on the path of accumulation. On the path of preparation bodhisattvas begin to have signs of irreversibility which arise due to being free from the four obstacles. Although on the path of accumulation they are free from most of these four obstacles, on the path of preparation they are definitely free from all four. When they attain the meditative stabilization of the stream of Dharma they are free from most of the four obstacles but are not completely free from all four. In reality it is hard to answer precisely without having achieved these stages personally!

Question: Why is it said that the developmental lineage transforms into a form body instead of a wisdom truth body?

Reply: The developmental lineage transforms into the compounded body of a buddha. The Svatantrikas define the developmental lineage as ‘that which will transform into the body of a buddha which is the entity of a compounded phenomenon.’ They assert that the naturally abiding lineage transforms into the nature truth body. In Ocean Playground it gives the definition of a naturally abiding lineage as ‘a reality of a mind that is together with stains that is the support of a self that transforms into a nature truth body.’ The definition of a developmental lineage is ‘a buddha lineage that transforms into the compounded body of a buddha.’ A developmental lineage is therefore that which transforms into either a form body or a wisdom truth body, but not into a nature truth body. However, the Chittamatrins make a different assertion.

Question: According to the sutra tradition what is the substantial cause of a buddha’s form body?

Reply: The substantial cause of a buddha’s form body is the collection of merit. This form body not only refers to a physical body but to the buddha as a person. The form body (rupakaya) is composed of the emanation body and enjoyment body. The word rupa means form, while kaya
means a collection of many parts. The main part of a text is also called ‘body’ because it is a collection of many parts. Which of the four bodies is the crown protuberance of a buddha? What is the treasure hair of a buddha? Are these buddha or not? The answer to these questions differs according to the different commentaries. For example, Jetsun Chokyi Gyeltsen says that the eye consciousness of a buddha is omniscient, while Panchen Sonam Drakpa says that the eye consciousness is not omniscient, only the mental consciousness is omniscient. In this context, there is a story about Jangkya Rolpe Dorje, the fifth reincarnation of Jetsun Chokyi Gyeltsen, who showed the aspect of becoming blind. It is said that one time some disciples asked this master for the oral transmission of a text and that by touching the text with his index finger he was able to read the text. When asked how he did this, he replied that he was able to read the text with his index finger because in a previous life he had composed a commentary on the Perfection of Wisdom sutras in which he asserted that all the consciousnesses of a buddha are pervaded by being omniscient. Due to this assertion he was now able to read the text with his body consciousness.

One can also ask is the buddha’s hand a buddha? Is the buddha’s leg a buddha? Some scholars say that whatever is conjoined with a buddha’s continuum is pervaded by being a buddha. However, we should keep in mind that a Buddha Jewel is not necessarily a person.

Usually a substantial cause is a cause which mainly generates its own substantial continuation. This does not necessarily mean that a substantial cause is that which mainly generates its own similar type. The substantial cause for a buddha’s form body is the collection of merit, while the substantial cause for a buddha’s truth body is the collection of wisdom. The substantial cause of a cup is the main material from which it is made, for example, clay, porcelain, or silver. In the case of a buddha’s form body there is no preceding form that is the substantial cause. In the case of our body aggregate, which is in the nature of suffering, we can say that the substantial cause is a virtuous action created in the past. On the other hand, we understand that the principal cause for this body is the ovule and the sperm of our parents. We should therefore think about which one of these is the most appropriate answer. Our body aggregate does not turn into a buddha’s form body. Therefore, our physical body is not a substantial cause that generates a future similar type that is the body of a buddha. This physical body will be abandoned in the future.

Question: What about that which generates a future similar class as a proof for past and future lives?
Reply: It is true that a similar cause is the main proof of past lives. In Pramanavartika it proves the existence of past lives by saying that the mind of new born baby must have been preceded by a similar type, a previous cognizer. Others say that a being who has a life force by which he inhales and exhales must also come from a similar type because this person is one with a life force which inhales and exhales. This shows that there must be a cause of similar class.

Question: Is there pervasion that there is a similar class?
Reply: There is pervasion. When talking about buddha’s mind or buddha as a person, they are pervaded by there being a previous similar class. Even the first moment of omniscience has a previous similar class which is mind. But in the case of a buddha’s form body it seems to be different because one can say that it is the collection of merit that is the substantial cause. A buddha’s form body should not be thought of a material as it is the person and so forth.

Question: What is the boundary of the naturally abiding lineage that is the fourth topic illustrating an exalted knower of aspects?
Reply: The naturally abiding lineage that is explicitly presented here exists from the heat level of the Mahayana path of preparation up to the final continuum of a sentient being. It is important to know that there is a difference between a Mahayana naturally abiding lineage and the Mahayana naturally abiding lineage that is explicitly presented as the fourth topic illustrating an exalted knower of aspects. This is because there is a Mahayana naturally abiding lineage that exists before
the path of preparation, such as the emptiness of the small, middle, and great levels of the path of accumulation, but they are not a Mahayana naturally abiding lineage that is explicitly presented as the fourth topic illustrating an exalted knower of aspects. The emptiness of the middle level of the path of accumulation is a Mahayana naturally abiding lineage because it is an emptiness that exists in the continuum of a bodhisattva and because it functions as an actual support of a Mahayana achieving.

Question: Which of the eight approachers and abiders rely upon a supermundane path of meditation to achieve their result?

Reply: Although this looks simple there are many things to consider. In Abhidharmakosha it says: “The four types of abiders in the result are posited by way of five reasons: being preceded by a prayer for the result, attaining others, binding the two exhaustions, attaining the eight knowledges, and attaining the realization of the sixteen attributes, such as impermanence.” This shows that some abiders in the result do not come from the supermundane path alone but also from the mundane path. However, this is in only according to the presentation of the Vaibhashika school; the Svatantrika presentation is different. Once returners and non-returners who have previously separated from attachment attain their result in dependence on the mundane path of meditation. Those who attain their result serially use both the supermundane and the mundane paths of meditation. However, this can differ, some may use only the supermundane path of meditation. For example, a serial stream enterer attains abider in the result of stream enter by the supermundane path of meditation and not by the mundane path. I think, but cannot remember precisely now, that some of those who proceed serially also depend on the mundane path, while some proceed only by the supermundane path.

Geshe-la: If something is one of the ten complete trainings of a bodhisattva on the first ground is it necessarily sustained by the practice of generosity? If you answer that there is pervasion, then it can be asked, “How can the ten complete trainings be conjoined with the three types of generosity: the generosity of giving material things, the generosity of Dharma, and the generosity of protection from fear? Think about this.

Geshe-la: What are the four ary lineage? They are: an ary who is satisfied with little food, an ary who is satisfied with mediocre Dharma robes, an ary who is satisfied with a mediocre dwelling, and an ary who enjoys abandoning negativities and enjoys meditating. It is good to remain in these four ary lineages, but what exactly does it mean? By abiding in these four lineages one abandons the two types of grasping: the grasping at I and the grasping at mine. By abiding in the first three ary lineages one diminishes the grasping at mine and by abiding in the fourth one diminishes the grasping at I. One should know these satisfactions which are the four ary lineages. Because we do not know satisfaction we always want better food, clothes, houses, etc. This leads to suffering which increases afflictions and dissatisfaction.

Geshe-la: According to the Chittamtrins how are the naturally abiding lineage and the developmental lineage defined?

Student: The difference lies in whether or not the uncontaminated seed has been nourished by listening to the Dharma.

Geshe-la: That is right. When the uncontaminated seed has not been nourished by listening to the Dharma it is the naturally abiding lineage, but when it has been nourished by listening to the Dharma it is the developmental lineage. In his Golden Rosary Lama Tsongkhapa says: “With respect to thinking of these two as substances, after entering the path they are both.” This means that if one considers the substantial continuation, both are nourished by the conditions of hearing and so forth. Before entering a path one has the naturally abiding lineage and the developmental lineage which are distinguished by whether or not they are nourished by hearing and so forth. However, after entering the path the lineage must necessarily be distinguished by hearing therefore what happens to the naturally abiding lineage at that time? It would appear that the
naturally abiding lineage is also nourished by hearing. The Chittamatrins (Ocean Playground page 342) assert that the lineage is (1) the continuum of a sentient being which continues from one life to another since beginningless time, (2) is acquired by reality, and (3) is a seed of the uncontaminated mind that exists in the inner entrance, the sixth entrance which is the mental entrance. The lineage that has these three factors is the naturally abiding lineage before it is nourished by hearing and so forth. When it becomes nourished it is asserted to be the developmental lineage. In the sutra on Abhidharma it says: “Regarding that, the lineage of the bodhisattva is the continuum that has come from beginningless time, it is attained by reality, and is a distinction of the sixth entrance.” In Bodhisattva Grounds it says: “What is the lineage? If condensed it is of two types: the naturally abiding lineage and perfect achievement. The naturally abiding lineage is a distinction of the sixth entrance of a bodhisattva. It is that which continues from one life to another since beginningless time. It is attained by reality.”
Monday afternoon class, July 6, 1998

1 Meaning of the words
2 Examining the limits

Because concerning objects apprehended is abandoned, and because apprehenders are not abandoned, by support, the rhinoceros-like path should be known as correctly summarized.

The path of the rhinoceros-like [solitary realizers] (subject) is to be known as a correct compendium because of possessing three attributes (predicate) because it is to be known as different [for the following reasons]: it abandons the conceptions of apprehendeds, such as forms, to be external objects and it does not abandon the conceptions apprehending consciousnesses, such as those which apprehend forms, to exist truly, and it is supported by the support-lineage. [The path of solitary realizers] is also to be known by bodhisattvas as being sustained by mind generation, dedication, and the wisdom realizing emptiness. The related sutras say: “Form is not profound; it is not subtle. Why is that? The nature of form is not profound and is not subtle,” and, “Then the sons of the gods thought, “Sthavira Subhuti, how should listening to the Dharma be considered?” and, “Then Subhuti said to those sons of the gods, “Sons of the gods, listening to the Dharma should be considered to be an illusion and a manifestation.”

Solitary realizers are of two types: rhinoceros-like and sociable solitary realizers. Rhinoceros-like solitary realizers prefer to live alone while sociable solitary realizers associate with other sangha and share a communal life. The rhinoceros-like solitary realizer have three qualities.

In this context, sutra says: “The three attributes presented [before] that are both to be generated in the continua of persons of the lesser vehicle and in the continua of bodhisattvas, are also to be known through this commentary.” That which is to be generated in the continua of those of the lesser vehicle, the solitary realizers, and in the continua of bodhisattvas is the wisdom realizing non-duality. If we distinguish the path of solitary realizers in general and the path of solitary realizers in this context we can ask: if something is a path of solitary realizers is it necessarily included in the continuum of a solitary realizer? Some [scholars] answer yes and some no.

Now the analysis:
[A first disputant] says: Solitary realizers and the theory of the Chittamatrins do not concord because while the former abandon the conception of apprehendeds but still conceive of apprehenders to exist truly, the latter realize [both] the apprehended and the apprehender to be non-truly existent.

[A second disputant]: Saying that [shows that] you did not investigate this in detail. What does it mean that a solitary realizer realizes apprehendeds as not true existent? It means that the bases, forms and so forth, are established as not truly existent by his valid cognition but that he does not realize that [consciousnesses], such as the sensory consciousnesses that apprehend [form and so forth], are not truly existent.

[Another disputant]: That is not right at all because, having realized one [specific] basis to not exist truly, when one engages in analysis as to whether or not other bases exist truly one definitely realizes them to not exist truly in dependence upon remembering the way in which the previous subject’s property was established by a valid cognition. Otherwise it would follow that it is impossible on the learning path to have a realization of all [bases] as not truly existent. Therefore, Acharya Aryadeva says, “Due to seeing the thusness of one phenomenon, one sees the thusness of all phenomena.” When one realizes that a particular object is not truly existent, one can realize that all phenomena do not exist truly without the need for further reasoning. This is because by
remembering how the property of one object was established by a valid cognition one also realizes the property of all other phenomena. This is because the real object to be negated is only one. No matter what subject is considered the object of negation is still true existence.

[First disputant]: “Although [solitary realizers] realize that form and so forth do not exist as external objects they do not realize that there are no apprehenders that are different substances from them.

[Second disputant]: It is not possible that those with dull faculty, having negated that form is a different substance from sensory consciousness, do not negate that sensory consciousness is a different substance from form.

[First disputant]: Although form is negated as being an external object there is no certainty that the apprehendeds included in the substance of consciousness are negated from being different objects because Pramanaavartika says: “The argument is similar with respect to them, thus other reasonings that negate that are presented.”

[Second disputant]: There is no fault because if the apprehendeds included in the substance of consciousness are negated from being different objects, it is impossible that the apprehenders are not negated from being different objects. It is not correct to differentiate higher tenets and lower tenets in terms of negating external objects and not negating the mere apprehendeds as being different objects.

Conceptions of apprehendeds can be abandoned because apprehendeds are external objects which do not exist and, therefore, a conception apprehending them can be abandoned. However, conceptions of apprehenders cannot be abandoned because apprehenders are other-powered phenomena which are necessarily truly existent. The Chittamatrins say that while solitary realizers can abandon conceptions of apprehendeds, they cannot abandon conceptions of apprehenders. The Svatantrikas-Madhyamikas say that solitary realizers cannot abandon the conceptions of apprehenders as truly existent because solitary realizers cannot abandon the obscurations to knowledge. However, some say that although they are not able to abandon the subtle grasping at a self of phenomena they are able to abandon the gross grasping at a self of phenomena. Therefore, it would not be correct to posit the view of the Chittamatrins and Svatantrikas as being the same.

Therefore, the meaning of abandoning the conception of apprehendeds is to realize that form and so forth do not exist as substances different from the sensory consciousnesses which apprehend them. [The meaning of] not abandoning the conception of apprehenders is not only that consciousnesses, such as sensory consciousnesses, do not exist as empty of true existence, but that one does not necessarily need the familiarity of that realization in order to attain the foe destroyer of the middle vehicle. In other words, it is possible to attain the enlightenment of the solitary realizer’s vehicle without abandoning the conception of truly existent apprehenders. Thus there are solitary realizer foe destroyers who have not realized the lack of true existence. In order to become a foe destroyer of the solitary realizer vehicle one does not need to be familiar with the realization of non-true existence.

Therefore, the view of solitary realizers presented here and the view of the Chittamatrins do not have even a slight difference of superiority and inferiority, therefore to say that the two have similar tenets is astonishing and clearly something to laugh at. This means that if someone were to say that the views of the Chittamatrins and solitary realizers are not different but the same this would be incorrect and laughable. Saying that the Chittamatrins and solitary realizers have the same view is amazing and laughable because they are not the same. Although the Chittamutrins and solitary realizers both assert that the subject and object are not different substances, if someone were to say that the Chittamatrins and solitary realizers have similar tenets it would be laughable. They do not have similar tenets because solitary realizers are not proponents of tenets.
The intention of the Great Commentary is also to be understood in the same way. Acharya Haribhadra makes an assertion that is common to the Chittamatrans in that he says that there are no external objects. Bodhisattvas meditate on non-duality, the emptiness of apprehenders and apprehendeds being different substances, on the first three paths (the paths of accumulation, preparation, and seeing) but on the path of seeing the realization of non-duality is known and seen and passed through. On the path of seeing this realization is meditated on without effort as the principal one, while non-duality is meditated on by the way. Such a realization of non-duality in the final continuas of a sentient being transforms into the momentary training of non-duality.

Solitary realizers can realize the subtle meaning of emptiness. A knower of bases that is included in this realization of non-duality is posited on the basis of solitary realizers but it can also be generated in the continuas of bodhisattvas. The path of solitary realizers is not to be known like looking at external form with one’s eyes. One has to know the solitary realizers path by actually generating it in oneself. Previously in terms of the knower of bases, knower of paths, and the knower of all aspects, two bases were mentioned: a basis upon which it is posited and a basis upon which it is generated. The exalted wisdom of non-duality also has a basis upon which it is posited and a basis upon which it is generated. A knower of bases belonging to the exalted wisdom realizing non-duality is posited on the bases of solitary realizers; the basis upon which it can be generated is bodhisattvas. What is the basis upon which it can be posited and the basis upon which it can be generated? A knower of bases is posited on the bases of hearers and solitary realizers, while the bases upon which it can be generated is all aryas. The exalted wisdom realizing the selflessness of persons is posited on the bases of aryas hearers; the bases upon which it is generated is the continua of all aryas. The exalted wisdom realizing non-duality is posited on the bases of arya solitary realizers; the bases upon which it can be generated is all aryas.

Although solitary realizers observe the Dharma collection of hearers, there is the distinction of their faculty which is that they realize the selflessness of phenomena.

"Concerning the path of the solitary buddhas: only to meditate on the truths which were explained, and having meditated according to the properties of dependent-origination, respectively 1) to abandon and 2) not abandon conceptualization of the objects of 1) apprehendeds and 2) apprehenders; and 3) by difference of basis of the supported dharma which is included in the solitary buddha’s vehicle, to realize the phenomena possessing distinction - should be known by the bodhisattvas: it is not to be known in all ways," is the path of the solitary buddhas.

Bodhisattvas should directly know the path of solitary realizers, the way to actualize it is not known in all aspects; this is to be understood. By what should the path of solitary realizers be known? It is to be known by the wisdom that realizes the sixteen attributes of the truths which were explained before. The definite explicit words here are called not inclusive (there are different types of terms, inclusive and exclusive)...

Tuesday morning class, July 7, 1998

[The solitary realizer’s path] is to be known as distinguished by what? The solitary realizer’s path that has being explained is only meditation on the sixteen attributes of the [four noble] truths; definite apprehendeds are not possessed in the exclusion.

By meditating on the usual, or evolutionary, mode and the reversal mode of phenomena, i.e., the usual and the reverse orders of the twelve links of dependent origination, according to how they are, one abandons the conception of apprehendeds as external objects. Because of apprehending
the consciousnesses to be a truly existent, these conceptions are not abandoned. Due to the reality (dharmata) of the supported phenomena that is included in the vehicle of solitary realizers, [the path of solitary realizers] is to be known as possessing a phenomenon that is distinguished as superior.

This means that solitary realizers abandon the conception of apprehendeds, or all phenomena, as being external objects. Yet they have not abandoned the conception of consciousnesses as being truly existing. Their realizations are distinguished in the sense of being supported on the dharmata of their own mind.

That very exalted wisdom which directly realizes apprehendeds as non-truly existent is called the path of solitary realizers. That which exists in the continuum of a solitary realizer is dependent upon the dharmata of the six entrances [of the continuum of the solitary realizer]. That which exists in the continuum of a bodhisattva is dependent upon the naturally abiding lineage. One should not think that that follows as being the bodhisattva lineage. (Here there is an extra phrase that is not clear in the older version of Gyeltsab’s text.)

Although hearers directly realize the evolutionary and reverse modes of cyclic existence and familiarize themselves with them, they do not abandon conceiving of phenomena as being external objects. They do not directly realize this wrong conception as being a mere wrong, or mistaken, appearance because their faculties are dull compared to those of [solitary realizers]. This means that the faculties of hearers are inferior to those of solitary realizers; in other words, solitary realizers are superior in terms of their faculties. Why are their faculties superior? Because solitary realizers are able to abandon the conception of apprehendeds, or phenomena in general, as being external objects while hearers are not able to abandon this conception. Solitary realizers have the characteristic of preferring to live in isolation and while doing so they meditate on the twelve links. They meditate on the twelve links in two sets: in the forward, or evolutionary, order and in the reverse order. Solitary realizers go through the twelve links thinking because there is ignorance there is the second link, karmic formation; because there is karmic formation there is the third link, consciousness; because there is consciousness there is the fourth link, name and form; because there is name and form there is the fifth link, the entrances; and so forth up to the twelfth link. Having finished this set, the solitary realizers meditate thinking, “From what does the twelfth link arise? It arises from the eleventh link, birth. From what does the eleventh link arise? It arises from the tenth link, existence/becoming. From what does the tenth link arise? It arises from the ninth link, grasping. From what does the ninth link arise? It arises from the eighth link, craving. From what does the eighth link arise? It arises from the seventh link, feeling. From what does the seventh link arise? It arises from the sixth link, contact. From what does the sixth link arise? It arises from the fifth link, entrances. From what does the fifth link arise? It arises from the fourth link, name and form. From what does the fourth link arise? It arises from the third link, consciousness. From what does the third link arise? It arises from the second link, karmic formations. From what does the second link arise? It arises from the first link, ignorance. These meditations are called meditation on the twelve links in different sets, there being meditation on the twelve links in one set and in different sets.

If we talk in terms of the rebirth of a particular individual the twelve links are completed in two lifetimes. In the first lifetime the six causal links are completed, and in another life the six resultant links are completed. The meditation on the twelve links in different sets is a meditation on how the twelve links are completed, in the sense of their being completed in two lifetimes. The meditation on one set and the meditation on different sets depends on how the cycle finishes. In terms of a single set one meditates on all twelve links from ignorance up to aging and death. In terms of different sets one meditates that while creating a set of twelve links one is experiencing the result of links created in another life.

The evolutionary modes and reverse modes of meditating on the twelve links can be done in terms of engaging in cyclic existence and in terms of becoming liberated from cyclic existence.
For example, in the evolutionary mode of engaging in cyclic existence one meditates thinking why is there the second link? Because there is the first link and so on. Then in terms of the reverse mode of engaging in cyclic existence one thinks why is there the twelfth link? Because there is the eleventh link. Then one asks why is there the eleventh and so on. This meditation also belongs to the side of cyclic existence.

With respect to the evolutionary modes and reverse modes on the side of liberation, or thoroughly purified phenomena, one meditates on then first link, then the second, and so on up to twelfth thinking. "By ceasing the first link, ignorance, the second link, karmic formation, ceases; by ceasing the second link, the third link, consciousness, ceases; by ceasing consciousness, the fourth link, name and form ceases; by ceasing name and form, the fifth link, entrances, ceases; by ceasing the entrances, the sixth link, contact, ceases; by ceasing contact, the seventh link, feeling, ceases; by ceasing feeling, the eighth link, craving, ceases; by ceasing craving, the ninth link, grasping, ceases; by ceasing grasping, the tenth link, becoming or existence, ceases; by ceasing becoming, the eleventh link, birth, ceases; by ceasing birth, the twelfth link, aging and death, ceases. This is meditation on the evolutionary mode of the twelve links on the liberated side.

The second meditation on the twelve links regarding phenomena of the thoroughly purified class, that of the reverse mode, is to ask due to the cessation of what is the twelfth link ceased? It ceases when the eleventh link is ceased. By the cessation of what can the eleventh link be ceased? If the tenth link is ceased, it will cease. In this way one goes back through the other links up to asking, “Due to the cessation of what can the second link, karmic formations, be ceased? They will cease if ignorance, the first link, ceases.”

The main point here is to know that solitary realizers have the characteristic of meditating on the twelve links.

2B2C-1B2B-2B3 Explaining the cause of that: the similitude of definite separation
A Making a connection
B Root text
C Commentary

If the similitude of definite separation is attained, since the path which was explained generates the similitude of definite separation.

After explaining the way of directly knowing the path of solitary realizers, the reason for explaining the similitude of definite separation is [to achieve] definite separation. In order to attain a knower of paths knowing the path of solitary realizers it must be preceded by its cause, the similitude of definite separation, the path of preparation.

2B2C-1B2B-2B3B Root text

The aspect which shows the dharmata of imputations as non-contradictory: transformed to heat, transformed to the peak: qualified by non-decrease and so forth of form and so on, through inner emptiness and so forth, because of not apprehending form and so forth: patience. Form and so forth, possessing the aspect of non-generation and so forth: supreme Dharma.

Although one realizes that there are no external objects, the aspect of the demonstration of form and so forth become the heat level without contradicting the dharmata of that which is designated by a label. Form and so forth which have become the peak level, which does not have decreasing and so forth, are distinguished. With the realization of the emptinesses, such as inner emptiness, one does not apprehend form and so forth to be external objects; therefore, this is patience level. The aspect-possessors of form and so forth, external objects without the generation of form and so forth, are the supreme dharma level. The related sutras say: “O Sthavira Subhuti, this does not contradict the designation also presenting the dharmata as that which possesses a profound
wisdom”; “Moreover, one should not train oneself in order to increase form”; “In addition to that, Subhuti said, “Venerable Shariputra, in this way there is no form to apprehend thoroughly”; and “Subhuti said, ‘Shariputra, in this way when a bodhisattva mahasattva practices the perfection of wisdom, he does not see the generation of form.”

The explicit presentation of the root [text, the Ornament,] explicitly presents the four levels of the path of preparation which realize the emptiness of apprehendeds and apprehenders being different substances, but it is explained thus because of appearing to be merely suitable to explain it so.

While the heat level of the path of preparation realizes that there are no external objects, this does not contradict the explanation that form and so forth exist as merely designated by label. In general, form and so forth do by nature increase and decrease but they are not external objects that increase and decrease. Since external objects do not exist there cannot be external objects that increase and decrease.

The Commentary [Clarifying the Meaning] explains the path of preparation in a way similar to the previous presentation. In other words, this commentary presents the subject just as it is presented in the first chapter of the Ornament.

2B2C-1B2B-2B3C Commentary

1) “To strongly demonstrate (realize) that form and so forth, imputations which arose from verbal conventions of phenomena, are not contradictory with dharmata, 2) to train for the purpose of (realizing) the non-existence ultimately of decrease and increase and so forth of form and so forth, 3) because of the emptiness by way of mere entity, not to apprehend (true existence) at all by (realizing) internal and external emptinesses with respect to form and so forth, and 4) (to realize) the non-existence of production and cessation with respect to form and so forth”. To the observed objects of the four truths respectively through these aspects, the similitude of definite separation grows.

This shows that the Commentary Clarifying the Meaning explains the path of preparation in a way similar to the presentation in the first chapter. For example, in the first chapter the path of preparation was said to have the four noble truths as its observed object.

Although form and so forth do not exist ultimately, they are not contradictory with the designated dharmata that has arisen from the label of phenomena that exists conventionally. Having explicitly presented the exalted wisdom of the heat level, just as form and so forth which were taught well, the heat level itself, which by means of a meaning generality realizes the emptiness of apprehended and apprehender being different substances, is presented implicitly. By presenting the peak leak which realizes form and so forth as not having ultimate decreasing and increasing and so forth, just as taught, the other peak level is taught implicitly. Here the word ‘implicitly’ refers to the words of the sutra which only teach inherent existence explicitly and do not explicitly mention the emptiness of non-duality.

Due to the emptiness of ultimate entitiness, the very realizations of inner emptiness, outer emptiness, and so forth are patient in not apprehending the object of apprehension, form and so forth, to exist truly; thereby the patience level [is taught implicitly]. In short, while the root text only presents the emptiness of non-duality it implies the four levels of the path of preparation, heat, peak, patience, and supreme dharma.

Form and so forth realized as not having ultimate generation and cessation implicitly presents the supreme dharma level.

“Just as these aspects were explained sequentially here, one has to meditate on the observed object, the four noble truths, to generate definite separation, the path of preparation. There is a purpose to explicitly presenting the four levels of the path of preparation as having the aspect of that which was taught; it is to make it known that the four implicit levels of the path of preparation are to be meditated upon on the basis of the wisdom realizing emptiness. In other
words, the presentation of the four levels of the path of preparation in connection with the wisdom of non-duality has a purpose; it is to make it known that one must generate the four levels of the path of preparation which are causes of the knower of path knowing the path of solitary realizers. These four levels of the path of preparation must be sustained by the wisdom realizing emptiness.

2B2C-1B2B-3A Making a general connection

After the path of the solitary buddhas, the path of the bodhisattvas.

After the explanation of the path of solitary realizers comes the explanation of the path of bodhisattvas. Gyeltsab says: “Of solitary realizers...”

2B2C-1B2B-3B Individual entities

1 The path of seeing
2 The path of meditation

2B2C-1B2B-3B1 The path of seeing
2B2C-1B2B-3B1A General meaning
2B2C-1B2B-3B1B Meaning of the branches

2B2C-1B2B-3B1A General meaning
2B2C-1B2B-3B1A-1 The support of the path of seeing
2B2C-1B2B-3B1A-2 The supported path of seeing

2B2C-1B2B-3B1A-1 The support of the path of seeing
A Physical support
B Mental support

2B2C-1B2B-3B1A-1A Physical support

Excluding those of the northern continent, Unpleasant Sound, and impotent men and women, it is generated on the supports of the humans and the gods of the desire realm. The [beings] of the two upper realms are not supports because they have little weariness of the three realms. Men and women of the three continents and the gods of the desire realm can generate the path of seeing. Beings of the upper realms are not supports of the path of seeing because they are not weary of cyclic existence.

2B2C-1B2B-3B1A-1B Mental support

The support [of the path of seeing], is an actual concentration. Gyeltsab says that although the Great Commentary explains that the path of meditation is supported on the mind of the desire realm and the mind of the Peak of Existence, he thinks that this cannot illustrate the path of seeing. However, some [scholars] think that because the path of meditation is supported on the mind of the desire realm and the mind of the Peak of Existence so too is the path of seeing. In the Sutra on the Ten Grounds it says: “On the third ground it is explained that the concentrations and clairvoyances are attained. This explanation is given in the sense of being attained by the force of an uncommon meditative equipoise. But the fourth actual concentration which has the aspect of gross and peace is definitely attained by a bodhisattva on the path of preparation. If that is attained there is no purpose in depending on a [more] difficult path in order to generate the supermundane path. Since a bodhisattva attains the fourth actual concentration on the path of preparation he does not need to depend on a preparation to attain the supermundane path because it is easier to generate the supermundane path in dependence on an actual concentration.
Tuesday afternoon class, July 7, 1998

QUESTIONS AND ANSWERS

Question: Is the Not Unable preparation attained by calm abiding or is it a union of calm abiding and special insight? Also is it the path of preparation?
Reply: The Not Unable is not the path of preparation. It is a preparation that is called an uncontaminated preparation because it has the aspect of the truths. It is other than the preparations that have the aspect of grossness and peacefulness. The Not Unable preparation can easily be generated in the aspect of the path. This preparation is calm abiding since without calm abiding there is no way to achieve this preparation. This preparation is also included in special insight.

Question: In the texts the “seventy topics” in Tibetan are sometimes called seventy don and sometimes seventy cho, what is the difference?
Reply: They are just two names for the same thing. In the case of the ten topics representing omniscient mind they are called ten cho (topics, dharma, phenomena) since they are holy Dharma. These ten dharmas, or ten topics, include all phenomena; therefore, they are called dharma in the sense that they hold their own entity. The specific reason for saying the ten dharmas, such as mind generation, is to emphasize the quality of the omniscient mind which is to know all phenomena, all dharmas.

Question: The four immeasurables can be related to in terms of meditation (equanimity, love, compassion, and joy) and in terms of practice (love, compassion, joy, and equanimity). Is not love, which wishes all sentient beings happiness, not developed after compassion?
Reply: Buddha presented them in this order. Generally equanimity comes at the end, only in the context of lam-rim and mind training (lojong) is it put at the beginning. When training in equanimity one comes to see friend, enemy, and stranger as equal. Then one develops the love that wishes these three types of beings to have happiness. Then one comes to wish all of them to be free from suffering; this is compassion. One wishes to make all sentient beings happy but in order to do so one must first eliminate their suffering. Therefore, first there is love which is the aim—to make sentient beings happy. But in order to do so one needs to remove their suffering. After wishing them to have happiness and be free from suffering, one wishes them to not be free from the happiness they have; this is immeasurable joy. In general, one first develops the mind wishing sentient beings to have happiness, then the mind wishing them to be free from suffering, then the mind wishing them to never be parted from happiness. Then on this basis one develops immeasurable equanimity which wishes all sentient beings to abide in equanimity free from attachment and aversion. This equanimity can be interpreted in tantra as freedom from the root and secondary afflictions. It can also mean freedom from the eight conceptions concerning apprehendeds and apprehenders.

Question: A buddha’s emanation body spontaneously and without thought helps sentient beings in whatever way is needed. What from the side of sentient beings determines a buddha’s ability to aid sentient beings?
Reply: A buddha’s great compassion determines his activities to help sentient beings. A buddha’s great compassion is non-conceptual, it is a direct perceiver. There is no need for a buddha to depend upon effort. There is not anything from the side of sentient beings that determines this ability but perhaps one can say that it is their suffering that causes a buddha to help them. A buddha is one who on the learner’s path as a bodhisattva made the determination to attain enlightenment and help sentient beings.

Question: What determines the amount of help that a buddha gives to sentient beings?
Reply: A buddha has the ability to help sentient beings of different levels but if the causes from the side of sentient beings themselves are not mature although the buddha has the ability to help them he is not able to do so. For example, although the rays of the sun are hot if one puts paper in the sun it will not catch fire without putting a magnifying glass on top of it. Likewise, the enlightened activities of a buddha can help us but if we do not have the means, the magnifying glass, we will not receive help. A buddha has the complete ability to help and to manifest emanations for all; he can manifest as food for those who desire food, drink for those who desire drink, clothes for those who desire clothes, a house for those who desire a house, a bridge for those who desire a bridge, and so forth. However, a buddha does not manifest everything we presently need because we lack total confidence in him. In addition, we have many negativities which prevent us from receiving this help.

Question: In one teaching it was said that Atisha was on the path of preparation. Does this mean that at one part of his life he was on the path of preparation and then later on progressed to a higher path? Or did he only attain the path of preparation in that life?
Reply: We cannot say now whether Atisha is a buddha or not. When he was living in Vikamalashila Atisha was said to be abiding on the path of preparation. However, later on we don’t know what level he reached.

Question: The definition of eye and clairvoyance in general seem to be the same. Can Geshe-la explain the difference?
Reply: Although the name is different the meaning is similar. For example, it may seem that the divine eye and the clairvoyance of the eye are similar, however, there must be some difference. Perhaps for a particular purpose they are given different names. According to the Svatantrika-Madhyamikas the divine eye is not an eye consciousness, but a mental consciousness. However, according to the Vaibhashikas the divine eye is an eye consciousness. The divine eye is an unpredicted phenomenon.

There are five eyes. In general, the eyes and the clairvoyances are similar. To attain a divine eye one must actualize a special eye faculty within the eye organ. To achieve the eye faculty one has to attain an actual concentration after which one has to train in visualizing a special faculty in the area of the pupil that is much stronger than the ordinary eye.

Question: Is the special faculty visible externally? Does it have color?
Reply: It does not have color. It is said to be lucid matter.

Question: That which is one with functioning thing is said to be a permanent phenomenon, but the only thing that is one with functioning thing is functioning thing which is an impermanent phenomenon. How can this be?
Reply: That which is one with functioning thing is permanent because it only an appearance to conception. However, when one posits that which is one with functioning thing it is only functioning thing.

Question: Naturally abiding lineage is said to be the emptiness of a sentient being’s mind which transforms into the nature truth body of a buddha. But how can emptiness transform into something?
Reply: Although something is permanent it can be said to change! The emptiness of the mind transforms into the nature truth body only because the mind itself transforms into the wisdom truth body. In other words, when the mind, the support, transforms into the wisdom truth body, simultaneously the nature of the mind transforms into the nature truth body. A permanent phenomena cannot change due to causes and conditions but it can change in other ways. The analogy is the emptiness of a vase; when the vase is broken the emptiness of the vase disappears. Although the emptiness is permanent it can cease. The space inside the vase is a permanent phenomena but it too ceases when the vase is broken.
Question: Does the conception of an apprehender perceive any object whatsoever or another consciousness?
Reply: An apprehender does not necessarily apprehend a consciousness; for example, it can be an apprehender apprehending Cristiana as a person. When this apprehender apprehends something that is an object of use of the person it is not apprehending a consciousness.

Question: How do the Hinayana and Mahayana schools consider the supermundane path of meditation?
Reply: The mundane path includes the path of accumulation and the path of preparation, the supermundane path includes the paths of seeing, meditation, and no-more-learning. This assertion is common to both vehicles. The mundane path of meditation is the preparations that have the aspect of grossness and peacefulness because they temporarily abandon the objects of abandonment of a mundane path of meditation. The real path of meditation is the supermundane path of meditation. A mundane path of meditation exists even in the continua of those who have not entered a path.

Question: The path of preparation was said to be attained when one attains a union of calm abiding and special insight observing emptiness on the mental support of a concentration. But a concentration observes the lower level as gross and the higher level as peace so how can it take emptiness as its object?
Reply: Generally speaking an actual concentration is not posited to be a path having the aspect of grossness and peacefulness. Only the preparations are said to have the aspect of grossness and peacefulness. The mental support of the path of preparation can be any of the four concentrations but if the person has attained all four the ideal mental support is the fourth concentration. This is because it is free from all the eight obstacles to concentration and therefore it is easier to develop a supermundane path on it. When a bodhisattva attains all four actual concentrations they naturally become a path of preparation observing emptiness. In other words, they become an agent to the realization of emptiness.

Question: What is the reason that the bodhisattva vows are set out in a particular order with “praising oneself” coming before killing father and mother?
Reply: They are set out in the order of habit because we tend to praise ourselves often and think “I” and “mine.” By praising oneself one aims to receive offerings and so forth and tends to belittle others. On the other hand, committing the five actions of immediate retribution, such as killing one’s father and mother, do not occur very often, while praising oneself and belittling others do happen continually. Perhaps for this reason the order is set out in this way. They are not set out in the order of their heaviness as giving up the mind of enlightenment is the heaviest but comes at the end. However, the order may just have been set out by the one who composed the text on the bodhisattva vows.
END
Thursday morning, July 16, 1998

In the *Great Commentary* it says: “It is also explained that the path of meditation is attained on a mind of the desire realm and a mind of the peak of existence.” This refers to a technique of alternating meditation that alternates between the absorption of cessation and the four concentrations and four formless absorptions. This is what it meant in terms of attaining the path of meditation on the peak of existence. In terms of attaining the path of meditation on a mind of the desire realm one meditates alternating the mind of the desire realm with each of the nine final absorptions. This will be explained in detail in the fifth chapter in the context of the absorption of leaping.

One may think that this is the same in the case of the path of seeing but it is not so. The mind of the desire realm and the mind of the peak of existence cannot be the mental supports of the path of seeing. This is because when the path of seeing is generated for the first time it is generated on the basis of an uncontaminated mind which cannot be the mind of the desire realm which is too gross and cannot be the mind of the peak of existence which is unclear. The mind of the peak of existence is said to be unclear because this mind, which is also called “without discrimination not without discrimination,” does not have gross discrimination and, although it does have subtle discrimination, it is unclear.

In the *Sutra on the Ten Grounds* it explains that the concentrations and clairvoyances are attained on the third ground but this explanation is only given in terms of the uncommon differentiation belonging to the exalted wisdom of meditative equipoise of the third ground and is not given in terms of the fourth actual concentration which has the aspect of grossness and peacefulness because this fourth actual concentration is attained by bodhisattvas on the path of preparation and therefore there is no purpose in them depending on a difficult path for generating a supermundane path. When this passage says that this explanation refers to ‘the uncommon differentiation belonging to the exalted wisdom of meditative equipoise of the third ground’ it means that on the third ground the bodhisattva attains a higher training of mind. Usually three higher trainings, those of morality, concentration, and wisdom are mentioned. However, when the third ground is explained the higher training in mind is mentioned rather than the higher training in concentration. On the second ground a bodhisattva attains the higher training in morality, while a bodhisattva on the third ground attains the higher training in concentration because such a bodhisattva emphasizes the practice of patience and the mind is no longer disturbed and becomes very calm. The higher training in wisdom is attained on the fourth, fifth, and sixth grounds. This is because on the fourth ground a bodhisattva has a wisdom that knows the gross and subtle aspects of the thirty-seven factors of enlightenment; on the fifth ground he has a wisdom that knows the gross and subtle aspects of the four noble truths in detail; and on the sixth ground he has a wisdom that knows the gross and subtle aspects of dependent relation, the twelve links, in their usual and reverse order. This is what is referred to in the above quotation.

Immediately after the supreme dharma level of the path of preparation, arises the wisdom which for the first time directly realizes emptiness free of elaboration by observing the sixteen attributes of the four noble truths. It is together with meditative stabilization and sustained by all types of practices, such as that of generosity.

The path of seeing follows the path of preparation. Does the path of seeing observe the sixteen attributes of the four noble truths? This is a subject of debate. Does the path of seeing observe impermanence? Does the path of seeing observe suffering? These questions are raised.
because when the path of seeing is newly attained its main object of meditation is emptiness but Gyeltsab says “observing the sixteen attributes of the four noble truths.” So then we ask whether these sixteen attributes actually appear to the exalted wisdom of meditative equipoise of the path of seeing. Here we need to think about what is said here: that the path of seeing directly realizes emptiness, that is together with meditation stabilization, and that is sustained by all types of conduct, which includes either the first five perfections or all six perfections. We need to understand the meaning of saying that the path of seeing is sustained by these six practices.

“That is from the point of view of the uncommon Mahayana path of seeing.” Gyeltsab says that the above definition is from the point of view of the uncommon Mahayana path of seeing, while “a mere path of seeing is defined as a Mahayana clear realization of the truth sustained by a Mahayana exalted wisdom realizing emptiness for the first time in the continuum of the one possessing it. On that occasion there is also a path of seeing that directly realizes the sixteen attributes, such as impermanence.” In this context we have to examine whether there is a path of seeing that directly realizes the sixteen attributes, such as impermanence. If we say there is, when does it arise? During the exalted wisdom of meditative equipoise of the path of seeing or at some other time? The answer to this according to Chokyi Gyeltsen is that such a path of seeing realizing the sixteen attributes exists both on the occasion of the exalted wisdom of meditative equipoise and during subsequent attainment; however, it is not necessarily manifest. Panchen Sonam Drakpa says that during meditative equipoise there is no path of meditation seeing the sixteen attributes because the bodhisattva only has emptiness as his object of meditation. Therefore, during meditative equipoise the path of seeing realizing the sixteen attributes exists in the mode of non-degeneration, yet the path of seeing realizing the sixteen attributes does not exist. Panchen Sonam Drakpa therefore says that it is not present during meditative equipoise, but if asked whether this means that it has degenerated he says that it has not degenerated. Panchen Sonam Drakpa says that for the path of seeing to be present during meditative equipoise it must be manifest, saying that it is there in the mode of non-degeneration means that it is there in a dormant manner.

Gyeltsab says that there are eight forbearances included in the uninterrupted path of seeing which observe the dharmata of the four noble truths and eight knowledges included in the liberated paths; thus, there are sixteen by way of name. In terms of a Mahayana person the eight forbearances arise simultaneously and the eight knowledges arise simultaneously. In the case of Hinayana follower the forbearances and knowledges are said to arise consecutively.

The eight forbearances are divided into two groups of four: four in relation to the four noble truths of the desire realm and four in relation to the four noble truths of the upper realms. The four forbearances of the desire realm are related to the four noble truths: the dharma forbearance of true sufferings, the dharma forbearance of true origins, the dharma forbearance of true cessations, and the dharma forbearance of true paths. There are also four forbearances in relation to the upper realms: the subsequent forbearance of true sufferings, the subsequent forbearance of true origins, the subsequent forbearance of true cessations, and the subsequent forbearance of true paths.

The eight knowledges are also divided into two groups of four: four in relation to the four noble truths of the desire realm and four in relation to the four noble truths of the upper realms. In relation to the desire realm there are: the dharma knowledge of true sufferings, the dharma knowledge of true origins, the dharma knowledge of true cessations, and the dharma knowledge of true paths. In relation to the upper realms there are: the subsequent knowledges of true sufferings, the subsequent knowledges of true origins, the subsequent knowledges of true cessations, and the subsequent knowledges of true paths.
Someone says: The dharmatas of the four noble truths are directly realized by a single mind in one instant. Therefore, at that time sufferings are known, origins are abandoned, cessations are attained, and paths are meditated upon. For that reason, the clear realization that acts with respect to the four noble truths, or the resultant clear realization, is one instant. Regarding the sequential abandonment of the wrong conceptions regarding each of the four noble truths, sixteen moments of clear realization are [posited because of] realizing them individually. Therefore, the presentations of approachers and abiders are correct.

Here we need to know what is to be negated. This person is saying that knowing true sufferings, abandoning true origins, attaining true cessations, and meditation on true paths are clearly realized in one instant. He says that the sixteen moments are only posited in relation to the abandonment of the wrong conceptions regarding the sixteen attributes, and that in terms of their clear realization this happens in one moment. Therefore, he says that the presentations of approachers and abiders are correct. Our system refutes this.

[Second disputant]: This is not the thesis of Acharya Haribhadra. It is not correct even according to logic because if cessations were attained at the time of newly realizing the dharmata of true sufferings then it would follow that true cessations do not need to be proceeded by true paths and that the uninterrupted paths and liberated paths of a specific basis would arise simultaneously.

The first disputant responds that true cessations are yet to be attained. The second disputant says that if you mean that [at the time of newly realizing the dharmata of sufferings] one attains cessations, there is no sense in dividing former moment and later moments into sixteen moments. The first disputant said that with respect to clear realization [the path of seeing] is only one instant but with respect to the abandonment of the sixteen wrong conceptions it has sixteen moments. The second disputant refutes this saying that it is not true because when the dharmata of true sufferings is realized for the first time true cessations have not been realized which means that there are former and later moments. They are not all realized in a single moment.

Another disputant says that the Pramanavartika says: “By meaning, one entity of its own is the essence which is an object of direct cognition. Any object to be investigated by a valid cognition, what part is not seen? In this way also a clear realization that individually realizes is said to be one instant.” This quotation means that if one takes an object such as a vase as an example, it has many attributes: the generation of vase, the vase that is a functioning thing, the vase that is a product, the impermanence of the vase, etc. When vase appears to the eye consciousness both the vase and these attributes appear to the eye consciousness but they do not appear separately. When vase appears to our eye consciousness, our eye consciousness realizes the vase but it does not realize the impermanence of the vase although the impermanence of the vase does appear to our eye consciousness. If we ask do we need another valid cognizer to realize the impermanence of the vase? The answer is yes, then we ask which one? We need a valid inferential cognizer because a valid direct cognizer does not perceive the impermanence of the vase. We need two understandings, that of eliminative engaging and that of collective engaging. Eliminative engaging refers to term and conception, while collective engaging refers to the eye consciousness. The eye consciousness is said be collective engaging because it engages an object without eliminating anything, whereas term and conception engage their object by eliminating something. The Pramanavartika says that term and conception are not collective engagers because if they were there would be no need for a separate valid cognizer as everything would be perceived by them. For example, when a term is expressed it only expresses its specific object and not anything else. In conclusion, this means that the path of seeing is not composed of sixteen moments but only of one moment.

Likewise, a clear realization that individually realizes is one instant.

[First disputant]: “It is asserted that an uninterrupted path and a liberated path do not arise sequentially one after the other, they are rather one instant because otherwise it would not be
right to induce the absurd consequence of the incorrectness of presenting approachers and abiders.”

[Second disputant]: Even that is not the thesis of Acharya Haribhadra because he asserts that the forbearances and knowledges arise sequentially one after the other.

This refutes the disputant who says that the path of seeing is only one moment by saying that this is not a thesis of Acharya Haribhadra because he asserts that the forbearances and knowledges arise one after the other. To prove that the forbearances and knowledges arise sequentially in Pramanavartika it says: “Due to seeing concordant attributes of the form, one may make a mistake with respect to the external color of a fish as being an aspect of silver. For this reason, other excellent qualities would not be conjoined. Therefore, there are many superimpositions which are wrong. Although the path of seeing is one instant by the force of logic, it is still explained to be sixteen moments by name. The forbearances and knowledges arise sequentially by which the presentations of approachers and abiders are correct.” This is what is asserted by Haribhadra. “The presentations of approachers and abiders are correct” cannot be applied to bodhisattvas but in terms of name they can be posited. In general, approachers and abiders are posited in relation to the Lesser Vehicle. This passage however is accepted by Haribhadra.

Someone says: “All the parts are apprehended yet with respect to the ability to dispel superimpositions the sixteen moments are posited as arising sequentially. Furthermore, the ability of the meditative equipoise of one session is attained sequentially.” “Ability” refers to the eight forbearances and eight knowledges which are attained sequentially. With respect to the ability to dispel superimpositions they arise sequentially and within one session the sixteen abilities arise sequentially.

A second disputant refutes this saying: That is not sustained by logic. This means that during subsequent attainment sixteen ascertaining consciousnesses are generated. It does not mean that there is a valid cognizer that induces the ascertaining consciousnesses which arise sequentially. In other words, this does not mean that there is the need to generate sixteen valid cognizers sequentially. During subsequent attainment there are sixteen ascertaining consciousnesses which are generated sequentially, but the sixteen valid cognizers which induce the ascertaining consciousnesses are not generated sequentially.

Gyeltsab says that even ordinary beings generate ascertainment sequentially thinking “I have seen that location” proceeded by a direct cognizer. For example, someone goes to a movie theater, watches the film, and leaves. This person has an ascertaining consciousness that remembers having seen that film in such and such a place. After leaving the movie theater he can recollect sequentially having seen this and that.

Gyeltsab says that although the path of seeing apprehends objects in all ways, a valid cognizer is explained to be an ability to dispel a specific obscuration. This explanation does not mean that there are sixteen valid cognizers arising sequentially in one session as otherwise there would be no meaning to differentiating the path of seeing as distinct from the valid cognizer of an ordinary being.

Thursday afternoon, July 16, 1998

The difference between aryas and ordinary beings is whether they are able to abandon the seeds or not. Ordinary beings have an inattentive cognizer that does not generate ascertainment although an object has been perceived. Those with great intelligence, the aryas, just by seeing are able to ascertain every aspect that has been seen; therefore, aryas do not have an inattentive cognizer.

Ordinary beings although they see objects with a direct perceiver can have an inattentive cognizer but whenever aryas see something with a direct perceiver it is ascertained. On the basis of our own experience we can verify that we do not ascertain everything we perceive. In the text on Mind and Awareness it says that when ordinary beings are extremely attracted to a beautiful form even if they hear sounds with their ear consciousness they do not ascertain them.
Just after having seen an object there are aspects that remain clear to the mind, therefore aryas are not only distinguished [from ordinary beings] by the fact they are free from having a mistaken consciousness. For this reason, the very uninterrupted path that is the dharma forbearance of true sufferings is generated in the entity of the eight forbearances which abandon the seeds to be abandoned by the path of seeing because it is valid in relation to the four noble truths.

Gyeltsab says that when someone realizes the emptiness of the four noble truths directly for the first time it is like water poured into water. At that time although the person could have been frightened by this profound dharma with which he has not previously familiarized himself in cyclic existence, he is unafraid. For this reason, it is called dharma forbearance. The dharma forbearance is posited as four by way of name because of realizing the dharmata of the four noble truths. Although a bodhisattva could have been frightened by his mind absorbing into emptiness like water poured into water he is not afraid and therefore his mind is called subsequent forbearance. The object-possessor that realizes the dharmata of the four noble truths, the subsequent forbearance, is also posited as four from the point of view of name. These eight forbearances exist as one entity but with different names. While a bodhisattva has these eight he has not yet attained the cessation that is free from the incidental stains.

With respect to the realization of the dharmata of the four noble truths, the path of seeing is posited as a realizer of the object-possessor of that.

A bodhisattva without arising from meditative equipoise attains a true cessation that is free from incidental stain and attains a liberated path. At this point because of realizing the dharmata of the four noble truths, the dharma knowledges are posited as four by name, and also four subsequent knowledges are posited as realizers of that very object-possessor, (the dharma-knowledge knowing the dharmata of the four noble truths). These eight knowledges exist in the continuum [of the bodhisattva] as one entity but with different names. Within a single session of meditative equipoise he has the clear realization of the truths which is just one instant but it is generated in the entity of sixteen instants. In this case, it is not acceptable that a subsequent forbearance arises after a dharma forbearance since for a bodhisattva all eight forbearances arise simultaneously and all eight knowledges arise simultaneously.

The meaning of saying “the path of seeing is one instant” refers to the fact that the path of seeing involves a single session of meditative equipoise, it does not refer to the shortest instant of time. In detail, an approacher is one who abides on the forbearances and an abider is one who abides on the knowledges. In this way the presentations of approachers and abiders are correct.

While a bodhisattva is in meditative equipoise he abides naturally with a powerful energy which enables him to practice the six perfections in each of them; if it were otherwise he would not be able to abandon the seeds of the obstructions to knowledge. When a bodhisattva abides on the subsequent knowledge of true origins he does not have a manifest meditation on the four immeasurables yet he previously meditated on them and has these excellent qualities in the manner of their not degenerating. In this way the bodhisattva does not fall into the cessation of the contaminated aggregates and then remain there for a long time without rising.

With respect to the way of positing the path as one instant or sixteen instants there is no difference between the presentation of Haribhadra and the presentation of Chandrakirti in his Sixty Reasons. However, with respect to the presentation of a self-cognizer there is a great difference. While the Svatantrika-Madhyamikas assert the existence of self cognizers, the Prasangika-Madhyamikas do not assert self cognizers. The Prasangikas say that if a consciousness cognizes itself it would follow that phenomena exist inherently. The Svatantrikas assert a self cognizer saying that otherwise it would not be possible to recollect past objects. The Svatantrikas say that for a remembering consciousness to recollect blue, a self cognizer must have apprehended the sensory consciousness apprehending the blue; only due to this can it be remembered.
When someone realizes the dharmata of true sufferings if he has not realized the dharmata of true origins it would follow that you who say this are a source of many faults such as the sign “that which is to be heard” proving that sound is impermanent.

While one is in meditative equipoise on emptiness one can have the Mahayana mind generation but there is no need for the mind generation thinking “I will attain enlightenment for the benefit of sentient beings” to be manifest. Likewise, one should understand all the other qualities.

According to the presentation here, the four dharma forbearances are the realization of the dharmatas of the four noble truths while the four subsequent forbearances are the realization of the dharmata of the four dharma forbearances. The eight knowledges are likewise posited: the four dharma knowledges are posited as the mind that observes the dharmatas of the four noble truths while the four subsequent knowledges are posited as observing the mind that observes the dharmatas of the four noble truths. This is a different presentation from that given in Abhidharmakosha.

The four dharma forbearances realize the dharmatas of four noble truths, while the four subsequent forbearances are posited as observing the dharmata of the four dharma forbearances.

Do the clear realizations of the sixteen attributes of impermanence and so forth, which is to be passed by, and the path of seeing having the aspect of dharmata, which passes through, arise sequentially or simultaneously? If they arise simultaneously, that is, if a single mind (the path of seeing) directly realizes both [the sixteen aspects and emptiness], it would follow that the exalted knowledge that knows the conventional truth and the exalted knowledge that knows the ultimate truth would be one entity. Saying that the conventional truth is realized implicitly and the ultimate truth is realized explicitly would also not be correct. In other words, if they arise simultaneously it would follow that the exalted knowledge knowing conventional truth and the exalted knowledge knowing ultimate truth would be one entity. In addition, saying that one is realized explicitly and one implicitly is not correct because it would be the same in the context of the path of preparation. It would follow that the two exalted knowledges are one entity, and then someone says that this would mean that these two are realized explicitly and implicitly. This is not correct because then it would be like this on the path of preparation because according to Chokyi Gyeltsen the two truths are realized simultaneously even on the path of preparation. This is because someone in the meditative equipoise of the path of preparation sees the dharmata by way of a meaning generality and thereby realizes conventional truth.

If someone says that the path of seeing that is to be passed arises first and the path of seeing that has passed through arises later, it would follow that a bodhisattva sequentially abandons the seeds of the two intellectually acquired obscurations, the afflictive obscurations and the obscurations to knowledge. If the path of seeing that is to be passed comes after the path of seeing that has passed through it would follow that after generating the path of seeing that passes through one would have to again generate the path of seeing that newly realizes the selflessness of persons; this would be endless. There is no fault because although the path of seeing that passes through directly realizes the sixteen attributes as free from elaboration it does not realize the sixteen attributes. The path of seeing that passes through extinguishes the seed of the two intellectually acquired obscurations and later on there arises a manifest path of seeing that has passed by. This means that during meditative equipoise one has a path of seeing that passes through which only observes emptiness, whereby the liberated path arises. In subsequent attainment there is a path of seeing that has passed by which directly realizes the sixteen attributes.

The instants of the path of seeing are posited only in terms of meditative equipoise. As long as a bodhisattva does not enter a meditative equipoise on emptiness in order to directly eradicate the seed of the innate obscurations to knowledge, his [realization] is to be known as included in the path of seeing. First the bodhisattva generates an uninterrupted path of seeing in
which there are eight forbearances, then he becomes free from the seeds of the intellectually acquired obscurations and attains the liberated paths that are the eight knowledges. When the session is concluded this bodhisattva arises and performs activities. He then returns to the meditative equipoise that is the path of seeing and generates an uninterrupted path which belongs to the path of meditation. This bodhisattva then begins to abandon the innate obscurations to knowledge.

2B2C-1B2B-3B1B Meaning of the branches
1 Showing the moments in brief
2 Extensive explanation of the manner of meditating on the aspects
3 Refuting the assertion that the aspects were not taught

2B2C-1B2B-3B1B-1A Root text

Four parts - the moments of forbearance and knowledge regarding truths and truths explain this path of seeing together with beneficial qualities in the knower of paths itself.

(Essential Explanation page 267)
Gyeltshab says that in the chapter on the very knower of paths the path of seeing and the benefits are explained. That which is together with benefit (the path of seeing) is explained to have four parts:
(1) the forbearances of true sufferings and true origins
(2) the forbearances of true cessations and true paths
(3) the knowledges of true sufferings and true origins
(4) the knowledges of true cessations and true paths
In other words, each of the four noble truths is explained to have four moments: dharma forbearance, subsequent forbearance, dharma knowledge, and subsequent knowledge.

In sutra it says: “Venerable Shariputra, where should the perfection of wisdom be sought? Koushika, the perfection of wisdom is to be sought in the chapter by Subhuti.” In the Twenty Thousand Stanza Perfection of Wisdom Sutra there are eight chapters on the eight categories. The question here may be posed by Indra, while Shariputra gives the answer. The meaning of this is by means of studying what [text] should one understand the perfection of wisdom, and the answer is the chapter by Subhuti. We will stop here on the point of saying “the perfection of wisdom is to be sought in the chapter by Subhuti.”

END OF SEMESTER!
Monday afternoon, September 14, 1998

CHAPTER TWO: THE KNOWER OF PATHS (continued)

In the context of the knower of paths itself, 1) “forbearance and 2) doctrinal knowledge of doctrinal knowledge and 3) forbearance and 4) subsequent knowledge of subsequent knowledge”, the objects of meditation of the bodhisattvas, possessing four moments of forbearance and knowledge individually connected with true sufferings and so forth, [and] possessing qualities of this and other [lives] - called “the path of seeing, the great beneficial quality”.

This paragraph from Haribhadra’s Commentary Clarifying the Meaning discusses the benefits of the path of seeing. The path of seeing has the quality of having the ability to bear the fear that arises in relation to the nature [of the four truths], including true sufferings. For example, true sufferings are empty of true existence; this nature is said to be supported, or borne, on the path of seeing. True origins, and likewise true cessations and true paths, are also empty of true existence, this too is supported by the path of seeing. Instead of being afraid of this nature the path of seeing can bear this nature/reality, therefore it is called forbearance. A dharma forbearance is the ability of the path of seeing to bear the nature of the four truths, while subsequent forbearance is the ability to bear the nature of the four forbearances. These four forbearances, the forbearance of true sufferings, the forbearance of true origins, the forbearance of true cessations, and the forbearance of true paths, are also empty; the path of seeing can bear this nature. The path of seeing takes true sufferings, true origins, true cessations, and true paths as empty and can bear this. The path of seeing also bears the emptiness of true existence of these four forbearances.

The Madhyamika Svatantrika school asserts that the dharma forbearances and subsequent forbearances are one entity but have different names. Likewise, the dharma knowledges and subsequent knowledges are one entity but have different names. This means that the eight forbearances are one entity and the eight knowledges are one entity, while having different names. This school asserts that the eight forbearances arise simultaneously and that the eight knowledges arise simultaneously in the context of a bodhisattva on the path of seeing. They assert this because bodhisattvas abandon the objects of abandonment simultaneously.

The lower schools assert that the dharma forbearances are related to the four noble truths of the desire realm, while the subsequent forbearances are related to the four noble truths of the upper realms. Thus, the Vaibhashikas assert that even for a bodhisattva the forbearances and knowledges arise sequentially.

The dharma knowledges are a path of seeing that realizes the nature of the four truths, true sufferings, true origins, true cessations, and true paths; the subsequent knowledges are a path of seeing that realizes the nature of the knower that realizes the nature of true sufferings and so forth. A dharma knowledge takes the emptiness of the four truths as its object, while a subsequent knowledge takes the nature, or emptiness, of the knower of the four truths as its object.

Gyeltsab says that in the context of a knower of paths, the path of seeing has a benefit related to this life, in that it ripens sentient beings, as well as a benefit related to future lives. The path of seeing is said to be great in that it realizes emptiness directly and meditates on this. A bodhisattva experiences the four moments of dharma forbearance, dharma knowledge, subsequent forbearance, and subsequent knowledge, each of which has the quality of being related to its object which is the nature of the four truths, true sufferings and so forth. This relation between the four moments and the emptiness of the four noble truths is the great benefit of the
path of seeing. In short, when someone realizes the four noble truths by way of the path of seeing there are great benefits in both this and future lives.

2B2C-1B2B-3B1B-2 Extensive explanation of the manner of meditating on the aspects
A Making a connection
B Root text
C Commentary

2B2C-1B2B-3B1B-2A Making a connection

If it is asked, "What are the aspects to be meditated on like?"

This question is raised because previously it was said that when the four noble truths are realized there are great benefits and therefore it is now asked what are the attributes of [the four noble truths] that are to be meditated on. The answer is given in the root text of the *Ornament* as follows.

2B2C-1B2B-3B1B-2B Root text

1) Thusness and buddha, they, because support and supported do not mutually exist, do not accept specifications and 2) the great, together with 3) non-valid and 4) immeasurable, and 5) without extremes and 6) abiding there, toward form and so forth, definite apprehension as the very buddha and 7) non-acceptance, non-rejection, etc. and 8) love and so forth, 9) emptiness, and 10) to attain buddha[hood] itself and 11) all the completely purified fully gathered and 12) to dispel all anxieties and sicknesses 13) to just pacify the apprehension of nirvana and 14) guarded and so forth by the buddhas 15) oneself, having abided in the [causal]-mode of the exalted-knower of all aspects, to not kill and so forth, to set sentient beings [in that] and 16) generosity and so forth dedicated to complete enlightenment - the moments of the knower of paths itself.

This is a list of the sixteen attributes of the four noble truths. The list of sixteen is as follows:

1) “Thusness” refers to the emptiness of true existence of true sufferings. “Buddha” refers to the exalted wisdom realizing the emptiness of true sufferings. “Because support and supported do not mutually exist” means that the thusness and the exalted wisdom are not ultimately realized to be support and supported. Although the thusness and exalted wisdom do exist conventionally as the support and supported, they do not exist ultimately as such. Thusness is the support and the exalted wisdom realizing the thusness is that which is supported. These two, the thusness and exalted wisdom, are similar to the case of the support of achieving, the naturally abiding lineage. The object here is thusness, by meditating on this one develops wisdom which gradually increases. Likewise the path of seeing, an exalted wisdom, mediates on the thusness of true sufferings whereby one’s wisdom increases.

When “thusness and buddha,” “the support and the supported,” are said to not exist ultimately, this refers to the first moment of the path of seeing, the dharma forbearance of true sufferings. “Do not accept specifications,” or “specifications are not accepted,” refers to the aspect of the dharma forbearance of true suffering, which is the dharma forbearance realizing that the support and supported do not exist ultimately. Knowing this aspect of the dharma forbearance of true sufferings, one should understand that this is the antidote to its respective object of abandoning of the path of seeing.

2) “The great” refers to the aspect of dharma knowledge of true sufferings. “Great” refers to the mind that realizes that the object, for example, form and so forth, are ultimately empty of true existence. The subject-mind, the perfection of wisdom realizing this emptiness, is known as great. This characteristic is the aspect of dharma knowledge of true sufferings.

3-4) “Together with non-valid and immeasurable” refers to the subsequent forbearance and subsequent knowledge of true sufferings. “Non-valid” means that ultimately there does not exist a valid cognizer realizing the reality (dharmata) of true sufferings. This is the aspect of the
subsequent forbearance of true sufferings. “Immeasurable” refers to the aspect of the fourth moment, the subsequent knowledge of true sufferings. Gyeltsab says that space is immeasurable and likewise the emptiness of true sufferings is ultimately immeasurable. A path of seeing realizing the emptiness of true sufferings is without measure, just as space is immeasurable. This is the aspect of the subsequent knowledge of true sufferings.

In this way four and a half lines of the root text in Tibetan cover the first four moments of the path of seeing.

5) “Without extreme” refers to the dharma forbearance of true origins. The aspect of the dharma forbearance of true origins is the exalted wisdom of the dharma forbearance of true origins realizing that form and so forth do not ultimately have the extremes of eternalism and nihilism.

6) “Abiding there, toward form and so forth, definite apprehension as the very buddha” refers to the dharma knowledge of true origins. Again the word buddha is used saying “toward form and so forth, definite apprehension as the very buddha.” “Abiding there” refers to the extremes of eternalism and nihilism between which lie form and so forth, while the exalted wisdom realizing that form and so forth do not exist ultimately is called “buddha.” Also “abiding there” can either refer to a yogi who realizes that form and so forth are empty of the two extremes or to a yogi abiding on the dharma knowledge of true origins. In brief, a yogi abiding on the dharma knowledge of true origins is able to apprehend the thusness, or emptiness, of form and so forth; that [definite] apprehension is the dharma knowledge.

7) “Non-acceptance, non-rejection, etc.” refers to the subsequent forbearance of true origins. What is the aspect of the subsequent forbearance of true origins? It is an exalted wisdom of the subsequent forbearance of true origins which realizes there are no objects to be ultimate practiced or ultimately rejected.

8) “Love and so forth” refers to the aspect of the subsequent knowledge of true origins which is to obtain the quality of having immeasurable love and so forth as a result of directly realizing emptiness and meditating on it. In other words, by realizing and meditating on the emptiness of true origins one attains the four immeasurables, immeasurable love and so forth. The four immeasurables are immeasurable love, immeasurable compassion, immeasurable joy, and immeasurable equanimity. These are the practices of a bodhisattva. We should try to emulate the bodhisattvas by generating the mind of enlightenment and the four immeasurables.

When the four immeasurables are practiced as it says in the lam-rim within each of them one generates another four immeasurables: immeasurable aspiration, immeasurable wish, immeasurable extraordinary thought, and immeasurable request. An immeasurable request means that during meditation one visualizes the merit field and asks the Buddha, Dharma, and Sangha to give one the blessings to be able to generate immeasurable love and so forth. The development of these four immeasurables within each of the immeasurables accords with the Preliminary Practices (jor-cho) in which it says:

“How wonderful it would be if all sentient beings had happiness and the causes of happiness” - the immeasurable aspiration.

“May they possess them.” - the immeasurable wish.

“I will make them possess them” - the immeasurable extraordinary thought.

“Please guru-deity bless me to be able to do this” - the immeasurable request.

When the root text here says “love and so forth” the words “and so forth” include immeasurable compassion, immeasurable joy, and immeasurable equanimity.

These last four (5, 6, 7, and 8) are the four moments related to the true origins: the dharma forbearance, the dharma knowledge, the subsequent forbearance, and the subsequent knowledge. When one meditates on the emptiness of true origins, the benefits are the four immeasurables.
This happens during the period of post-meditation and not during meditative equipoise because only emptiness appears to a bodhisattva during meditative equipoise.

9) “Emptiness”
This and the following three refer to the dharma forbearance and so forth related to true cessations. The term “emptiness” is used here because both cessation and emptiness are generally known to be states in which an object of negation is canceled or negated. In addition, etymologically emptiness is a nirvana. Therefore emptiness, cessation, and nirvana are related. When emptiness is said to be a nirvana it is considered to be a natural nirvana. According to the Madhyamika Prasangika school nirvana is an ultimate truth; they say that [natural] nirvana, the emptiness of true existence of the mind, is some thing that exists before the removal of the stains and remains after the removal of all the stains.

Tuesday morning, September 15, 1998

10) “To attain buddha[hood] itself” refers to the dharma knowledge of true cessations. This is because one attains buddhahood by meditating on the emptiness of true existence of all phenomena, ranging from form up to omniscient mind. The word “buddhahood” is used to refer to the dharma knowledge of true cessations in the sense that this is a knowledge that understands all phenomena and therefore it is therefore called “dharma knowledge” (knowledge of dharma, or knowledge of phenomena). This is one interpretation; however, by meditating on any of the 16 attributes of the four noble truths one will attain buddhahood. The meaning of “to attain buddha[hood] itself” is that by meditating on any of the sixteen attributes one will attain buddhahood.

11) “All the completely purified fully gathered” refers to the subsequent forbearance of true cessations. Subsequent forbearance means to possess the qualities that are a combination of all the antidotes that belong to the class of thoroughly purified phenomena.

12) “To dispel all anxieties and sicknesses” refers to the subsequent knowledge of true cessations. Subsequent knowledge of true cessations is referred to in this way because someone on this level is able to dispel all anxiety and adverse conditions. These conditions can be external or internal. In other words, a bodhisattva on this level is able to dispel all conditions that could shorten his life and all internal conditions, such as sickness.

Thus, these four (9, 10, 11, and 12) are the four moments related to true cessations.

13) “To just pacify the apprehension of nirvana” refers to the dharma forbearance of true paths. The aspect of the dharma forbearance of true paths is that it is a path that pacifies strong grasping to the true existence of nirvana and also to the true existence of form and so forth by meditating on their ultimate entitilessness.

14) “Guarded and so forth by the buddhas” refers to the dharma knowledge of true paths. Here dharma knowledge is referred to in this way because a bodhisattva is guarded and protected by the Buddha, Dharma, and Sangha Jewels. This is because such a bodhisattva engages in skill in means and is therefore protected from adverse conditions. One such adverse condition is the sons-of-the gods of the desire realm. Another such condition is external violence from hurricanes, forest fires, floods, and earthquakes. Bodhisattvas are also protected from sickness. Buddhas protect or give refuge to the bodhisattvas and put them in a safe place to hide them from danger.

15) “Oneself, having abided in the [causal] mode of the exalted knower of all aspects, to not kill and so forth, to set sentient beings [in that]” refers to the subsequent forbearance of true paths.
The aspect of the subsequent forbearance of true paths is that a bodhisattva, because of strongly desiring to attain buddhahood, abides on the right path, such as avoiding killing, and practices the perfections which are the causes for attaining enlightenment. This bodhisattva also places other sentient beings on the same path.

16) “Generosity and so forth dedicated to complete enlightenment” refers to the subsequent knowledge of true paths. The aspect of the subsequent knowledge of true paths is that such a bodhisattva dedicates all his virtue from the practice of generosity and so forth his complete enlightenment. This bodhisattva dedicates the virtue in this way in order to make it last forever. The dedication must be supported by mindfulness, introspection, and love. Love is kindness toward others. It is something that is easy to talk about, but difficult to practice.

In his text Essential Explanation Gyeltsab says that the Great Translator presents the sixteen moments in accordance with Acharya Vimuktisena in that he too says that the first four and a half lines of the root text in Tibetan present the first four moments, while “without extremes” presents the benefit of the first five moments; “abiding there” presents the benefit of the dharma knowledge of true origins; “non-acceptance” presents the benefit of the subsequent forbearance of true origins; and “love and so forth” presents the benefit of the subsequent knowledge of true origins. These are the first eight of the sixteen moments. The Great Translator says from “emptiness” up to “dispel all anxieties and sicknesses” presents the benefits of the four moments related to true cessations. The following lines from “to just pacify the apprehension of nirvana” up to “generosity and so forth dedicated to complete enlightenment” presents the four moments related to true paths.

The Great Translator says that the different aspects explained here are meditated on during the path of preparation. By meditating on them, one generates the path of seeing. During the post-meditation period one attains these benefits. In this way the sixteen moments are presented in terms of their benefits. Although these aspects are meditated on during the path of preparation they are only definitely possessed during the sixteen moments of the path of seeing. Just as there are sixteen moments of the path of seeing there are sixteen aspects. And just as there are sixteen aspects there are sixteen benefits. This is the meaning of this verse of the root text, the Ornament.

In Gyeltsab’s commentary it literally says “the first four moments present the entity of the sixteen moments” but what is meant here is not clear. This is probably a mistake in the text which should probably read “the lines [of the Ornament] that present the first four moments present the entity of the sixteen moments.”
and the “buddha,” the exalted wisdom realizing the thusness of true sufferings, do not ultimately exist mutually as support and supported, therefore they are not accepted to abide in mutual specifications. Ultimately no phenomena exist as support and supported. This means that the thusness of true sufferings and the exalted wisdom realizing that thusness are not accepted as an enumeration of truly existing support and supported because they do not ultimately exist as support and supported.

When a bodhisattva on the path of seeing on the level of the dharma forbearance of true sufferings meditates in this way, i.e., on the aspect of the thusness of true sufferings, he obtains the benefit of achieving the stable exalted wisdom of a buddha in the future.

1) In short, the exalted wisdom of the dharma forbearance of true sufferings that directly realizes the thusness of true sufferings and the exalted wisdom realizing it (subject) is the aspect of the dharma forbearance of true sufferings because it is an exalted wisdom of dharma forbearance that acts as a direct antidote against its own respective seed to be abandoned. This syllogism should be applied in the same way to the remaining aspects. In sutra with respect to this first aspect it says: “The thusness of form is also not observed to exist truly by the tathagatas, and the tathagatas are also not observed to be the thusness of form.” The last part of the sentence means that the tathagatas are also not observed to exist truly.

2) The emptiness of ultimate existence of form and so forth is the entity of the sphere of reality (dharmadhatu). The subject (mind) that realizes this dharmadhatu is “great.” This is the second aspect, [that of the dharma knowledge of true sufferings]; the formula of the previous syllogism should also be applied to it.

3) Likewise, the exalted wisdom of the subsequent forbearance of true sufferings that directly realizes that ultimately there is no valid cognizer realizing the thusness of true sufferings is the aspect of the subsequent forbearance of true sufferings. The previous syllogism should also be applied to this.

4) Space is without measure, likewise the thusness of true sufferings is immeasurable. The exalted wisdom that directly realizes the thusness of true sufferings as immeasurable is the fourth aspect.

These are the four moments of true sufferings. With respect to the latter three aspects it says in sutra:
“Due to form being great the perfection of wisdom of the great bodhisattvas is also great.”
“Koushika, due to there not being a valid cognizer with respect to form, the perfection of wisdom of the great bodhisattvas is also without a valid cognizer.”
“Koushika, due to form being without measurement, the perfection of the wisdom of the great bodhisattvas is also without measurement.”

Just as form is great the perfection of wisdom is also great. “There not being a valid cognizer with respect to form” means that there is no valid cognizer realizing form as existing ultimately. For that reason the perfection of wisdom of a bodhisattva is also without a valid cognizer. Just as form is ultimately without measurement, likewise the perfection of wisdom cannot be measured.

2B2C-1B2B-3B1B-2C1B The aspects of [true] origins

1) Through the mere non-existence of entitiness in form and so forth, the non-existence of the very extremes of eternalism and nihilism, 2) abiding in the perfection of wisdom, through the very entity of the sphere of reality, definitely apprehending form and so forth as the Tathagata himself, 3) similarly, abiding in that, to meditate on all phenomena as not to be accepted or rejected and 4) without entitiness, to meditate on the four immeasurables of the preliminary visualization. Thus, the aforesaid are the aspects of true origins.
1) Gyeltsab says that regarding the aspect of true origins, the aspect of the dharma forbearance of true origins is the direct realization of the form and so forth, which are ultimately entitleless and included in contaminated causes, as not possessing the extremes of eternalism and nihilism.

2) The aspect of the dharma knowledge of true origins is the definite apprehension of a yogi abiding in the perfection of wisdom of the dharma knowledge of true origins that realizes form and so forth are empty of the true existence of the tathagata. This realization is attained by meditating on the entitlelessness of the dharmadhatu.

3) Likewise, a bodhisattva or yogi abiding in the continuum of the perfection of wisdom meditates on the fact that there are no objects to be ultimately practiced or ultimately rejected. This meditation is the aspect of the subsequent forbearance of true origins.

4) Preceded by the belief that there is no ultimate entity, one meditates on the four immeasurables by which one comes to possess the qualities of the subsequent knowledge of true origins.

These are the four moments related to true origins. Due to possessing the four immeasurables during post-meditation the fault of falling into cessation is blocked. While meditating on emptiness, the meditations on the four immeasurables are not manifest. These meditations are done during the interruption of meditative equipoise. In other words, the four immeasurables are not meditated on while one is on the sixteen moments [of the path of seeing] related to the four noble truths.

With respect to the four aspects related to true origins it says in sutra:
"Koushika, for the reason of form being infinite the perfection of wisdom of the great bodhisattvas is also infinite."
"Bhagavan, I will hold the bodhisattva’s perfection of wisdom which is not separate from ourselves as the tathagata itself."
"Bhagavan, great bodhisattvas do not accept and do not reject the perfection of wisdom until the attainment of omniscience."
"Through the mode of not observing other sentient beings, one meditates on love, compassion, joy, and equanimity, whereby one will not be harmed by human and non-human beings on any occasion." This means the if someone meditates on love, compassion, joy, and equanimity supported on the understanding of the emptiness of true origins he will not receive harm from others, human beings and non-human spirits. We too should try to meditate that all phenomena ranging from form up to omniscience are one taste in that they are empty of true existence. If one meditates on love and so forth on this basis one will not be harmed by others.

2B2C-1B2B-3B1B-2C1CThe aspects of true cessations

1) Emptiness of just an essential innate entity of form and so forth and 2) to attain tathagata[hood] itself, the fruit of the roots of virtue which equal the sphere of reality and 3) in the perfection of wisdom, the antidotes are gathered in all ways and 4) by that itself, to strongly purify outer and inner harms. Like the aforesaid are the aspects of true cessations.

1) Regarding the four aspects of true cessations Gyeltsab says that the aspect of the dharma forbearance of true cessations is the direct realization of the emptiness of true existence of form and so forth right from the beginning. This primordial nature of form and so forth means that
right from the first moment of their existence form and so forth have the innate characteristic of being empty of true existence. This is what is realized.

2) The aspect of the dharma knowledge of true cessations is a path of seeing having the benefit of attaining tathagatahood from virtue equal to the sphere of reality (dharmadhatu). The aspect of subsequent forbearance of true cessations is the possession of qualities that include all the types of antidotes that belong to the class of thoroughly purified phenomena which are on the way to the perfection of wisdom.

4) The aspect of the subsequent knowledge of true cessations is the exalted wisdom of subsequent knowledge that possess the qualities of purifying outer and inner harms.

These are the four aspects related to true cessations.

Gyeltsab literally says that the aspect of the dharma forbearance of true cessations is that of “abiding upright” but what this means is that form and so forth are empty of true existence right from the beginning. Maitreya uses the word “emptiness” in the root text rather than “abiding upright” but the meaning is the same. There are sixteen or twenty types of emptiness, a direct realization of any of them is the aspect of the first moment related to true cessations.

True cessations are explained in the fourth chapter of the Ornament in relation to the aspects of the knower of paths in which it says: “Regarding cause, path, suffering, cessation respectively those eight, seven, five, and sixteen are proclaimed.” The number sixteen refers to the sixteen types of emptiness explained in relation to a knower of paths.

With respect to the aspect of the dharma knowledge of true cessations a bodhisattva at this level creates a great quantity of virtue which is said to equal the sphere of reality. Wherever there are objects of knowledge it is pervaded by the dharmadhatu. A bodhisattva on this level creates a quantity of virtue equal to this from which he reaps the benefit of attaining tathagatahood. Tathagata literally means “one gone thus.”

The aspect of the subsequent forbearance of true cessations is that any kind of antidote belonging to the class of thoroughly purified phenomena is included within the perfection of wisdom. In other words, a perfection of wisdom that includes all antidotes is the subsequent forbearance of true cessations. The benefit of the subsequent forbearance of true cessations is that one practices all the antidotes of the thoroughly purified class. The meaning of “gathering” is that by practicing one, all are included. This word gathering, or inclusion, or collecting, can mean different things in different contexts; for example, in the first chapter we talked of how different practices are included in the three knowers. Inclusion can mean many things included in one, including many things because of belonging to a particular class, including many other branches by practicing one, or including in terms of the principal and the retinue, in that if the principal is present so too are the retinue. Here inclusion is that of practicing one aspect whereby all others are included.

The aspect of the subsequent knowledge of true cessations is that one possesses the qualities of thoroughly pacifying inner and outer harms. This differs from the sutra quotation regarding anxieties. Here it simply says that outer and inner harms are purified. Outer harm can come from the four elements, earth, fire, water, and wind, and from being chased by ferocious animals, human beings, non-human beings. Inner harm is harm from sickness which separates our body and mind and shortens our life. At a deeper level sickness refers to the uncontrolled mind filled with mental afflictions. The main sickness that needs to be cured is therefore the mental sickness of attachment, hatred, and ignorance. Upon attaining the subsequent knowledge of true cessations one attains the benefit of dispelling all kinds of sickness. The best way to cure our mental sickness is to do both focusing and analytical meditations on emptiness and the four noble truths.

With respect to the aspects of true cessation it says in sutra:
“Regarding that, thus a son or daughter of good lineage thoroughly meditates on inner emptiness in the mode of non-observability.”

“Bhagavan, to what extent does a great bodhisattva hold...” up to “...in the three vehicles the vinaya is the most amazing.”

“Bhagavan, to what extent of thoroughly holding the profound perfection of wisdom can one say that the perfection is thoroughly held?”

“Koushika, likewise a son or daughter of good lineage who holds the perfection of wisdom, takes care of it, and so forth will not have any problems even if the adverse conditions of disputes and arguments arise as they will be pacified by the power of the perfection of wisdom.” The word “dispute” refers to a philosophical debate while an “argument” is over women, possessions, such as household articles or fields, and so forth.

2B2C-1B2B-3B1B-2C1D The aspects of true paths

1) By only meditating on non-entitiness, to purify strong grasping to form and so forth and to nirvana and 2) upon engaging in wisdom and skillful means, the buddhas will guard, protect and hide and 3) by strongly desiring buddha[hood] itself, [oneself] having abided in the [causes of] the exalted knower of all aspects, [such as] to abandon killing and so forth, to set others in that itself, and 4) by the desire to make charity and so forth inexhaustible, one should dedicate to perfect enlightenment.

Like the aforesaid are the aspects of true paths.

1) Gyeltsab says that regarding the aspects of true paths, the aspect of the dharma forbearance of true paths is a path that pacifies strong grasping to the true existence of form and so forth and nirvana only through meditation on their ultimate entitilessness.

2) The aspect of the dharma knowledge of true paths is the exalted wisdom of the dharma knowledge of true paths that has the benefit of being guarded, protected, and hidden by the buddhas from the harm of the sons-of-gods, outer elements, and sickness, while engaging in wisdom and skill in means.

3) The aspect of the subsequent forbearance of true paths is the exalted wisdom of a subsequent forbearance that possesses the qualities of intensely wishing to attain buddhahood and abandoning killing and so forth as a cause for attaining the omniscient state. While abiding in these causes, the perfections, the bodhisattva also places other beings in them.

4) [The aspect of the subsequent knowledge of true paths is to possess the quality of dedicating all the roots of virtue of generosity and so forth to fully accomplished buddhahood with the wish to make them inexhaustible]. The exalted wisdom of the subsequent knowledge of true paths which possesses the quality of being inexhaustible (subject) is the aspect of the subsequent knowledge of true paths because it is an exalted wisdom of a subsequent knowledge of the path which has the entity of being a liberated path actually free from the seeds to be abandoned by the path of seeing. Or one can apply the same formula as before [which is “because one attains inexhaustible roots of virtue by dedicating thus”].

In brief, the aspect of the dharma forbearance of true paths is the pacification of strong grasping at true existence. The aspect of the dharma knowledge of true paths is to be guarded, protected, and hidden by the buddhas while engaging in wisdom and skill in means. On this level one is safe from the three kinds of harms: from the sons-of-gods, the outer elements, and the inner harm of sickness. The bodhisattva is protected by the Buddha Jewel. The aspect of the subsequent forbearance of true paths is to abide within the conduct, the perfections, which means to abandon killing and so forth and to cause others to do likewise. In other words, one abides in the six perfections of generosity and so forth and inspires others to do the same. The aspect of the
subsequent knowledge of true paths is to dedicate so as to make one’s roots of virtue become inexhaustible.

This concludes the discussion of the four noble truths. One should keep in mind that the knowledges in the context of dharma knowledge and subsequent knowledge are liberated paths, or paths of release, while the forbearances, dharma forbearance and subsequent forbearance, are uninterrupted paths which are antidotes.

Perhaps here we should consider the difference between “seed” and “latency” in the context of a seed to be abandoned by the path of seeing and a latency to be abandoned by the path of seeing. Think about this.

Regarding the aspects of true paths in sutra it says:
“Koushika, it is so. All phenomena are totally pacified by the perfection of wisdom and they are not strongly increased.”
“The sons-of-the-gods of one billion world systems who hold and take care of the perfection of wisdom of the great bodhisattvas will be eternally guarded, protected, and hidden.”
“I will abandon killing. I will also make others abandon the action of killing.”
“Koushika, in addition when the great bodhisattvas practice the six perfections any generosity they do will always be considered to be property common to all sentient beings and dedicated unobservably to peerless enlightenment.”

The second quotation says that the great bodhisattvas who hold and take care of the perfection of wisdom will be guarded, protected, and hidden by the sons-of-the-gods of a billion world systems. These gods include the kings of the four directions, Dhritarashtra, Virudhaka, Virupaksha, and Vaishravana. In the past these four directional kings promised Shakyamuni Buddha that they would protect his doctrine, his followers, the sixteen foe destroyers, and so forth, and remain with them like a shadow follows the body.

To conclude the subject of the four noble truths it can be said that meditation on emptiness purifies both karma that will ripen in this life (literally in seen, or visible, phenomena) and that which will ripen in a future life. There are three types of karma: karma that ripens in this life, karma that ripens in the next immediate life, and karma that ripens in a future life. When it is said that one is guarded, protected, and hidden it means that the buddhas enable us to respectively purify karma that will ripen in this life, karma that will ripen in the next immediate life, and karma that will ripen in a later future life.

The third sutra quotation regarding the abandonment of killing refers also to the remaining nine non-virtuous actions. One will likewise urge others to abandon all these actions.

The fourth quotation means that all one’s virtuous practices such as generosity should be considered as common property belonging to all sentient beings. Just as Buddha says in the sutra we should practice thinking to do all our virtuous actions for all sentient beings and to share the virtue created with them. Then we should dedicate this virtue for peerless enlightenment in order to safeguard it. In a teaching it is said that just as a drop of water that falls into an ocean continues to exist until the ocean dries up, so too our merit, which is single and limited, [becomes inexhaustible] when combined with the extensive virtue of bodhisattvas and other beings by dedicating it to enlightenment. In this way our virtue will last as long as all this virtue is not exhausted. We need to be mindful to dedicate whatever virtue we create as soon as any action, such as hearing teachings, and thinking and meditating on them, is completed.

Like that are the moments of the knower of paths.
Gyeltsab says those are the aspects. These aspects are to be meditated upon in a similar way during the path of preparation and also in post-meditation, as well as during peak training. Peak training will be explained in the fifth chapter when it says: “Generosity and so forth are to be included in each.” This means that when one practices generosity one should simultaneously include the practice of the remaining five perfections. The same is true of the practice of morality and so forth.

2B2C-1B2B-3B1B-3 Refuting the assertion that the aspects were not taught
A Expressing the assertion
B Refuting that

2B2C-1B2B-3B1B-3A Expressing the assertion

Someone says, “The section which purported to explain the meaning of the group of verses, as it did not explain the meaning of the aspects, it made a superficial indication of the sixteen moments of the path of seeing. Regarding the similitude of definite separation and so forth, which was explained and not explained, one should view that group of verses similarly.”

Here someone says that the verses of the root text beginning “1) Thusness and buddha...” up to “the moments of the knower of paths itself” presents the sixteen moments of the path of seeing but not their aspects.

Gyeltsab says that here someone argues that the words of the extensive explanation of the [root] text (“thusness and buddha...”), which voluntarily set out the subject-meaning of the versified words of the brief presentation of moments (“four parts - the moments of forbearance and knowledge... beneficial qualities in the knower of paths itself”), as well as the sutra words (the source or reference), do not explicitly explain the meaning of the aspects of the forbearances and knowledges. Only the sixteen moments of the path of seeing are explained explicitly in terms of the benefits that arise in post-meditation. [Therefore], the presentation [here] is only partial or superficial. In addition, even the previous explanation did not explain the aspects upon which one is to meditate but only presented the conduct during post meditation. The aspects are explained in the context of the 173 aspects later on.

The person making this argument is an Indian scholar who says that the root text that presents the path of seeing, as well as a previous section of the root text “By observed object, aspect, cause...” (first chapter) that presented the observed objects and aspects of the path of preparation, do not actually present the aspects. The only difference between Gyeltsab’s commentary and Haribhadra’s is that Gyeltsab also says that this person asserts that the meaning of the words of the sutra is that they explain the benefits of the sixteen moments of the path of seeing.

In the case of the cause of the path of seeing, the path of preparation, also called the similitude of definite separation, there was no mention of aspects (first chapter). This person argues that also here in the case of the path of seeing only the mode of observing is explained, not all the aspects of the sixteen moments.

The words “previous explanation” refers to the previous verse in the root text: “By observed object, aspect, cause...” (first chapter). The disputant here says that this explains the mode in which the four noble truths are observed by a bodhisattva on the path of preparation but it does not present the aspects of the path of preparation.

2B2C-1B2B-3B1B-3B Refuting that
Others say, “Because those did not show the stages of meditation, they did not show even a little, the stages of clear realization. Furthermore, what meaning do you interpret of the verses ‘observed object and aspect and’, and so forth?”

“Others” are those who have assertions similar to Haribhadra. These people, who are in agreement with Haribhadra, say that it would follow that [the verses] “Thusness and buddha...” (subject) do not explicitly present even a little about the stages of clear realization because they do not explicitly present the way in which to meditate on the stages of the mode of apprehension of the clear realizations. In addition, they say there is the fault that at this disputant has not understood the meaning of the words of “by observed object and aspects” why has he quoted it? Quoting that is not right because the root text of the first chapter that goes through the similitude of definite separation does not present the aspects. The previous reason implies the consequence that the title of the text and the meaning do not concord.

Refuting this section means refuting the assertion of the disputant that the section “Thusness and buddha...” does not even slightly present the stages of clear realization because it does not present the way in which to meditate on the aspects of the mode of apprehension of the clear realizations. The second fault mentioned here is a response to the disputant who quotes “by observed object and aspect” asking him why does he quote this line since it clearly says “aspect.”

In brief, the Indian scholars who agree with Haribhadra do accept that “Thusness and buddha...” presents the aspects of the path of seeing.

After the path of seeing, the path of meditation through being an object of expression.

This means that after the path of seeing the subject to be explained (object of expression) is the path of meditation. The connection is made in this way because the path of seeing slowly turns into the path of meditation. The path of seeing is so-called because here one sees the meaning of the truth for the first time, while the path of meditation is so-called because one meditates on, or familiarizes oneself with, the meaning of the truth that has already been realized. The path of seeing is followed by the path of meditation but for reasons of presentation the text goes on to the fifth topic of the second chapter, the knower of paths, which is the function, or activity, of the path of meditation.

Gyeltshab says that it is correct to explain the path of meditation after the path of seeing.

Because just a few objects are to be expressed, and for the entry of those to be subdued into merely undertaking the fruit - briefly, the action of that.

Here the text explains why the function/action/activity of the path of meditation is explained immediately after the path of seeing. It is because the subject of the path of meditation is quite short and also because when one hears the function of the path of meditation it will inspire one to undertake it.
Gyeltsab says the function of the path of meditation is explained immediately after the path of seeing because the subject is short, and also in order to inspire trainees to enter the cause that will allow them to enjoy the result of the path of meditation.

\[ \text{Root text} \]

To thoroughly pacify, toward everyone to bow, victory over the delusions, merely not affected by harms, enlightenment and just to worship the support.

This lists the six functions of the path of meditation. These six functions are explained by Gyeltsab in three categories: the first four of the six are results created by beings; the fifth is a result similar to the cause; and the sixth is an environmental result. In the case of the first four, which are results created by beings, does it mean that beings create a cause which brings a result? The four functions which are results created by beings are:

1) thorough pacification
2) bowing to all virtuous spiritual friends
3) victory over the afflictions
4) not being affected or oppressed by harms

5) The fifth function is enlightenment which is a result that is obtained by meditating on the path (this a result similar to the cause).

6) The sixth function is that wherever there is someone on the path of meditation that place itself becomes an object of worship, like a stupa. This is called an environmental result because the actual place where a bodhisattva on the path of meditation is found becomes an object of worship.

In regard to these six functions in sutra it says:

"With this perfection of wisdom the great bodhisattvas are likewise thoroughly pacified. It is a great amazement to abide closely in order to not have pride"

"Bhagavan, therefore with this perfection of wisdom great bodhisattvas will thoroughly bow and abide closely in order to not have pride."

"Thus, for those daughters of good lineage who for a long time practice the perfection of wisdom, the weapons of attachment and the arrows of attachment will be destroyed."

"Regarding that, [those who practice the perfection of wisdom] will not be harmed by any of the following adverse conditions: being scattered [with poison], given poison, thrown into a fire pit, stabbed by weapons, given food or drink mixed with poison, and being thrown into a river."

"All phenomena are not observed by bodhisattvas and they attain the highest enlightenment and will take care of all sentient beings."

"With the practice of the perfection of wisdom the place where one lives becomes an object of worship of sentient beings."

In short, someone on the path of meditation has thoroughly pacified his own mind, bows down to all virtuous spiritual friends as he is free of pride, gains victory in the battle with the afflictions, will not be harmed by suffering, and so forth. He will not be harmed by the weapons of attachment because he has gained victory in the battle with the afflictions. The benefit of not being oppressed by suffering is that even when someone throws poison at a bodhisattva on the path of meditation he will not be harmed, nor is he harmed when dragged along the ground and thrown into a pit of fire, is thrown into a river, or given a poisoned drink.
5) to accomplish perfect complete enlightenment and 6) to take the place of support as the very thing to be worshipped: are the six types of actions.

Gyeltsab says that the first function/action is that a bodhisattva on the path of meditation has controlled himself in all aspects in the sense of having generated a higher path. The second is that by destroying pride and haughtiness the bodhisattvas bow to their virtuous spiritual friends. The third is that without being under the control of afflictions the bodhisattvas overcome attachment and so forth. The fourth is that the bodhisattva no longer receives harm, such as poison, weapons, and casting of spells, from antagonists. The fifth is that a bodhisattva achieves perfectly [complete enlightenment] by his own power. The sixth is that the place where a bodhisattva on the path of meditation abides becomes an object of worship.

One time when the monks where doing the debate exams at the Norbulingka (the summer residence of the Dalai Lamas) in Tibet, there was a geshe, Geshe Ngawang Gendun, who is now known as Yangtse Rinpoche, who was debating. Another geshe from Drepung Loseling called Asum, who was quite funny, asked him the six functions of the path of meditation. Geshe Ngawang Gendun mentioned self-control of the mind and so forth. Asum then asked him whether it was certain that both the bodhisattva and the place in which he lived became a place of worship. The other agreed. Asum then said if that he was sure about that does it mean that even the excrement in that place where such a bodhisattva lives becomes a stupa (literally a support of worship)!. The point here is that Geshe Ngawang Gendun could not easily say either yes or no so all the geshes grading the examination began to laugh.
Because of that, [regarding] the path of meditation with contamination, from among the so-called ‘attention to appreciation, dedication and rejoicing’...

Gyeltsab simply quotes Haribhadra saying “because of that” and then goes on to the next outline. It was said that there are two types of path of meditation, the contaminated and uncontaminated. The contaminated path of meditation has three divisions: appreciation, dedication, and rejoicing/admiration.

...the first path of meditation, ‘attention to appreciation.’

Gyeltsab says “the first path of meditation.” [The Mahayana path of meditation of appreciation] is the sixth topic of the second chapter [on the knower of paths].

The path of meditation of appreciation which is posited as contaminated is known to be a conception which apprehends a sound generality and a meaning generality as suitable to be mixed. Although the path of meditation of appreciation is posited as contaminated, it not a contamination in the context of objects to be abandoned because it is that which a bodhisattva has to repeatedly generate with much effort during the post-meditation of the path of meditation as a means, or a branch, to complete the collection of merit. If the path of meditation of appreciation were contaminated in the sense of being an object to be abandoned no arya being would put effort into generating a path of meditation of appreciation. If it were an object to be abandoned it would be an object of abandonment of the path of meditation; therefore, the path of meditation of appreciation is not an object to be abandoned. No one asserts a common locus between an object to be abandoned by a Mahayana path of meditation and a Mahayana path of meditation. In the Compendium of Knowledge (Abhidharmasamucchaya) contamination is explained to be pervaded by being a contaminated object of abandonment. However, taking this text as proof of this does not have any relation to this subject here because the contamination explained in the Compendium of Knowledge is contamination in the context of affliction. If there was no conception which apprehends a sound generality and meaning generality as suitable to be mixed on the eighth ground and above it would follow that there would no longer be the apprehension of hidden phenomena. This would follow because an inferential cognizer is necessary to apprehend a hidden phenomena. In general, for ordinary beings a hidden phenomena is realized by...
conception, not by direct perception. Even the word “hidden” shows that it is something that cannot be perceived by a sense direct perceiver. If there were no conception which apprehends a sound generality and a meaning generality as suitable to be mixed there would not be an inferential cognizer (which is necessarily conceptual) and it would follow that there would be no way to realize a hidden phenomena in dependence on logic.

To appreciate one’s own aims and the aims of oneself and others and others’ aims and those to be known as three types, also are asserted as three individual types, weak, middling and great - by dividing into the weak of the weak and so forth there are three types further - thus twenty-seven types are asserted.

The path of meditation of appreciation is divided into three:
- a path of meditation of appreciation for one’s own welfare
- a path of meditation of appreciation for both welfares, one’s own and others’
- a path of meditation of appreciation for others’ welfare

“Known as three types” shows that each of these three divisions is also divided into three, small/weak, middling, and great, which are then further divided into another three, small/weak, middling, and great, for a total of twenty-seven types.

Chokyi Gyeltsen defines the path of meditation of appreciation as: a Mahayana subsequent clear realization which appreciates the mother, the perfection of wisdom, as being a source of the three welfares.

Gyeltsab presents the root text with a syllogism: the Mahayana path of meditation of appreciation (subject) is to be known as being of three types because there is (1) a path of meditation of appreciation for one’s own welfare, (2) a path of meditation of appreciation for one’s own and others’ welfare, and (3) a path of meditation of appreciation for others’ welfare. These three divisions (subject) are asserted to be of three types because each of them [is divided into] small, middle, and great. Each of the small, middle, and great divisions (subject) are also asserted to be of three types because there is a small small and so forth. In this way, there are twenty-seven types of path of meditation of appreciation.

The very reference [to the mothers] with regard to one’s own, both, and others’ aims, although being the support of the virtuous dharmas which were seen according to how appreciated, from the point of view of the path of meditation, the entity which is not actualized in the beginning is also of three types.

Also they are each of three types through the instances of weak and so forth individually. Thus by three sets of nine, twenty-seven types of appreciation.

Gyeltsab sets out a syllogism: the entity of the Mahayana path of meditation of appreciation (subject) is also of three types because there are three by way of observing one’s own welfare, both welfares, and others’ welfare. This is a reason why the Mahayana path of meditation of appreciation (subject) is not actualized at the beginning of the aryapath; it is because although this virtuous quality, which sees the mother accordingly as a source of the three welfares, is a support of the perfection of wisdom it is only attained after gaining control over the pure post-meditation called the mundane path of meditation.

These three divisions, one’s own welfare, both welfares, and others’ welfare, are also divided into three types because there are the particularities of small and so forth. Also the small and so forth are further divided into three types because there is the small small and so forth.
“Pure post-meditation” is so-called because during post-meditation the bodhisattva perfects his meditation on the mundane path of meditation such as the pure preparation for the concentrations. On this basis he achieves the path of meditation of appreciation. Or it can be said that the path of meditation of appreciation is attained by the force of meditating on the mundane path of meditation which is pure.

In brief, there are twenty-seven divisions of the path of meditation of appreciation.

Usually the object of appreciation is something established by scripture and logic. However, in the context of the path of meditation of appreciation the object of appreciation refers to the three types of perfection of wisdom: the scriptural, path, and resultant perfection of wisdoms.

The entity of the path of meditation of appreciation is the believing faith and clear faith which believe that the three perfections of wisdom are a source of the three welfares. These two faiths are attained during post-meditation by the power of meditating on the path perfection of wisdom during meditative equipoise.

The divisions of the path of meditation of appreciation are:
- the occasion of not having abandoned pride in I
- the occasion of having realized that oneself and others are equal
- the occasion of engaging in others purpose all the time

The path of meditation of appreciation for one’s own welfare is posited as the first occasion. The path of meditation of appreciation for both one’s own and others’ welfare is posited as the second occasion. The path of meditation of appreciation for others’ welfare is posited as the third occasion.

The path of meditation of appreciation for one’s own welfare exists on the seven impure grounds. The path of meditation of appreciation for both one’s own and others’ welfare exists on the eighth and ninth grounds. The path of meditation of appreciation for others’ welfare exists on the tenth ground. However, although this is posited, the three divisions of the path of meditation of appreciation exist during the post-meditation period of the nine grounds of the path of meditation. There is no contradiction.

To conclude this sixth topic, the path of meditation of appreciation, it can be said that one engages in practice with the belief that the mother, the perfection of wisdom, is the source of the three welfares. The result is to attain the two bodies, the truth body for one’s own welfare and the form body for others’ welfare. Generally it is said that the truth body fulfills one’s own welfare, while the form body fulfills others’ welfare. The reason for saying that the truth body fulfills one’s own welfare is because it is realized for oneself in that it is not seen by other sentient beings. The form body on the other hand appears to the sense consciousness of other sentient beings who can perceive its form and so forth and thereby receive help from it; for this reason it is said to fulfill the welfare of others.
veneration to a bodhisattva on the path of meditation of appreciation for both welfares, and
laudation to a bodhisattva on the path of meditation of appreciation for others’ welfare.

Gyeltsab says that the connection here is that there is a purpose to the buddhas and so
forth praising those who meditate on the path of meditation of appreciation; it is in order that the
bodhisattvas who meditate on the path of meditation of appreciation generate joy. Having
practiced the path of meditation of appreciation for one’s own welfare one is praised by the
buddhas.

In the contexts of appreciating the perfection of wisdom by three sets of nine, to praise,
venerate and laud are asserted.

Gyeltsab sets out a syllogism: the occasion during which a bodhisattva believes that the three
perfection of wisdoms, the scriptural, path, and resultant, are a source of the three welfares
(subject) is praised, venerated, and lauded because there are three sets of nine, praise, veneration,
and laudation.

What does it mean to say that a bodhisattva is praised, venerated, and lauded because
there are three sets of nine, praise, veneration, and laudation? What is the difference between
praise, veneration, and laudation? Think about it!

Thursday morning, September 17, 1998

We are considering the beneficial qualities, or benefits, of the path of meditation of appreciation.

There are nine divisions of praise, veneration, and laudation. This is because there are
three divisions of the path of meditation of appreciation: the path of meditation of appreciation
for one’s own welfare, the path of meditation of appreciation for one’s own and others welfare,
and the path of meditation of appreciation for others’ welfare. Because there are these three
divisions there are the three: praise, veneration, and laudation. Each division of the path of
meditation of appreciation is further divided into three, the small, middle, and great, which are
each further divided into three; therefore, there are also nine divisions each of praise, veneration,
and laudation.

In accordance with how [they] appreciate, the first, second and third attentions to
appreciation which engaged the perfection of wisdom - the characteristic of the
dharmas to be seen - on nine occasions, respectively higher and higher by nine
individual types, produce manifest joy and are asserted to praise, to venerate and to
laud.

Thus these praises and so forth are possessing the characteristic of realizing correct
facts just as they are - they are not the entity of insincere flattery.

The nine praises, venerations, and laudations are made in accordance with the actual qualities of
the path of meditation and are not mere flattery or insincere praise.

Gyeltsab says that there is praise, veneration, and laudation. In what context? These three
are present in the context of the three divisions of the path of meditation of appreciation which
believe that the mother is the source of the three welfares. The path of meditation of appreciation
has the aspect of believing in the perfection of wisdom as being the source of the three welfares. It
has the characteristic of seeing the qualities of the perfection of wisdom. Each of the three
divisions is further divided into nine. Each of the nine divisions is superior to the one below. At
each level when praise is made the bodhisattva at this level becomes very happy; this is the reason
praise is made.
Praise is not made to bodhisattvas who do not possess such qualities because just as the bodhisattvas possess these excellent qualities so too the mind that praises them realizes the value of the path of meditation accordingly and with this mind is motivated to praise them and so forth. In short, when these praises, venerations, and laudations are made it is in accordance with the actual qualities that bodhisattvas on the path of meditation of appreciation possess and it is not done to flatter them. In worldly life praise, veneration, and laudation are similar. Praise can mean mere words without showing respect with the body. Veneration includes standing up, bowing down, and other signs that indicate someone is superior to oneself. Laudation is a praise made in an extraordinary way compared to praise and veneration. In other words, praise, veneration, and laudation each superior to the previous; laudation being the best. There is this difference between the three words in Sanskrit.

The path of meditation of dedication is the eighth topic of this chapter on the knower of paths. A Making a connection B Root text C Commentary

In regard to appreciating like that, since dedication arises; second: ‘attention to dedication’.

The path of meditation of appreciation is followed by the path of meditation of dedication. Gyeltsab merely quotes Haribhadra’s commentary saying “[In regard to appreciating] like that.”

Possessing special complete dedication is it’s supreme activity. It has the aspect of non-observance, a non-perverse characteristic, isolation, and has a sphere of activity which recalls the nature of Buddha’s collection of merit. Together with method, signless, approved by the Buddha, is not included in the three realms and weak, middling and great’s dedication, another three types [whose] very essences bring forth great merit.

Here Maitreya lists the twelve divisions of the path of meditation of dedication. The path of meditation of dedication is a contaminated path of meditation that is a conception which apprehends a sound generality and meaning generality as suitable to be mixed and dedicates one’s own and others’ roots of virtue to unsurpassable enlightenment. In this context, one needs to know what to dedicate, to what to dedicate, and who dedicates.

1) In the Ornament is says “special complete dedication” and “supreme activity” because a bodhisattva on this level makes a dedication which is superior to those of hearers and solitary realizers and, since his dedication is supreme, so too are his activities.
2) “It has the aspect of non-observance,” 3) “a non-perverse characteristic” and 4) “isolation” refer respectively to the path of meditation of dedication having the aspect of not [ultimately] observing that which is to be dedicated, the mind that dedicates, and the person who dedicates. This stops the grasping at them as truly existent.
3) “Has a sphere of activity which recalls the nature of Buddha’s collection of merit”
4) “Together with method”
5) “Signless”
6) “Approved by the Buddha”
7) “Not included in the three realms”
8) “Weak, 11) middling and 12) great’s dedication, another three types [whose] very essences bring forth great merit.”
1) Gyeltsab sets out a syllogism: Regarding “Possessing complete special dedication” the activity of dedication of an aryasing on the path of meditation (subject) is superior to that of others because it is a peerless dedication which transforms all the roots of virtue into aids to, or branches of, enlightenment. In sutra it says: “A bodhisattva abides closely in order to subdue sentient beings and has the material, merit, in which to rejoice. This merit is used as common property and dedicated to highest enlightenment in an unobservable way.” In other words, whatever merit this bodhisattva possesses he dedicates it as property common to all sentient beings. “Transforms all his roots of virtue into aids to enlightenment” means that he transforms them into the cause of enlightenment.

2-3-4) The second, third, and fourth dedications, called non-observance, non-perverse characteristic, and isolation, stop the grasping at that which is to be dedicated, the mind that dedicates, and the person who dedicates as truly existent.

5) The fifth dedication is called “that which recalls the nature of Buddha’s collection of merit.” On this level a bodhisattva eliminates the grasping at his own virtue and the buddhas’ virtue as good or bad.

6) “Together with method” - on this level a bodhisattva eliminates the grasping at the virtue of the six perfections as being good or bad.

7) “Signless” - on this level a bodhisattva eliminates the conception of the three spheres of the dedication as being truly existent.

8) “Approved by the Buddha” (or rejoiced at by Buddha) and 9) “Not included in the three realms,” are that knowing that all phenomena at a conventional level are like illusions, a bodhisattva respectively dedicates his roots of virtue for the buddha ground and does not dedicate them as a cause of returning to cyclic existence.

10) “Weak, 11) middling and 12) great’s dedication, another three types [whose] very essences bring forth great merit” are [dedications that are] posited in terms of their aspects.

The attentions imputed with names like the aforesaid, respectively 1) highest enlightenment and 2) the aggregates of ethics and so forth and 3) the mind which dedicates and 4) the properties which have a self (the dedicator) and so forth and 5) the virtues of the buddhas of the three times and 6) generosity and 7) signs and 8) all paths and 9) the realms of desire and so forth and 10) the paths of action of the ten virtues and 11) stream enterers and so forth and 12) to abide in the highest enlightenment.

Referring [conventionally] to these [as ultimately] non-referential, by those possessing the entity of the cause and the activities which demonstrate the path to sentient beings who are to be subdued by the three vehicles, in order to make inexhaustible for the benefit of all sentient beings, they make twelve types of dedication to the highest perfect complete enlightenment.
Gyeltsab says that dedication to complete enlightenment is of twelve types. In order to make their virtue inexhaustible for the sake of sentient beings bodhisattvas dedicate their virtue in a way that is supported by special method and wisdom. This is because with the support of the wisdom realizing the lack of true existence, conventionally this bodhisattva shows the paths very closely to the sentient beings who are to be subdued by the three vehicles, the observed object, in accordance with their fortune or merit. In this way, the dedication is made in such a way that the method possesses the entity of becoming a cause to attain enlightenment. The bodhisattva dedicates all his roots of virtue for the different levels of sentient beings in the three vehicles to attain their own respective goals.

What are the twelve?

1) The first is a special dedication made for a special purpose. This dedication is superior to those of the hearers and solitary realizers. This special dedication is a name given here. Similarly all the dedications are given the name “a dedication that does not observe the ultimate but does observe conventionalities.” This means that when one dedicates, one observes that which is to be dedicated, the person who dedicates, and so forth as non-truly existent.

2) “Non-observance” is to dedicate while not observing the aggregates of morality and so forth, the objects of dedication, as ultimate. The objects to be dedicated to enlightenment are the aggregate of morality, the aggregate of meditative stabilization, the aggregate of wisdom, the aggregate of liberation, and the aggregate of that seen by the exalted wisdom of a liberated being. Here in Gyeltsab’s text “and so forth” refers to these other four aggregates.

3) “Non-perverse” is a mind that dedicates while observing that which is observed as not existing ultimately. This formula is to be applied to the remaining dedications. “Observing that which is observed as not existing ultimately” means to observe emptiness. In each dedication that which is to be dedicated is observed at a conventional level but is not observed ultimately.

4) “Isolation” means that the attention to the highest path of meditation of dedication (subject) is called an ultimately isolated dedication because it is a dedication that observes the self and material things as not exiting ultimately. In other words, it is a dedication which observes the self and material things as conventionalities. The dedication here does not observe the person, the dedicator, the I, and material things as existing ultimately, but as existing conventionally. This formula is also to be applied to the previous and later dedications.

There must be something to dedicate when dedicating. Consider the difference between prayer and dedication. In the Guru Yoga of Lama Tsongkhapa there is a verse in which one dedicates one’s virtues for the doctrine and sentient beings. This is both a dedication and a prayer. However, if one thinks “May all sentient beings be born in a pure land” this is a mere prayer and not a dedication. A dedication is necessarily a prayer [but a prayer is not necessarily a dedication]. People often say that they have dedicated their life to a particular purpose, is this a prayer? Think about it.

Thursday afternoon, September 17, 1998

5) “That which recalls the nature of Buddha’s collection of merit” means that all the virtues of the tathagatas of the three times are not observed ultimately. The wisdom realizing this supports the dedication. On this support the virtue is dedicated to enlightenment. Here what is recalled is the collection of virtue which is the collection of merit and the collection of wisdom. These are what are dedicated. These collections of virtue are recalled because a bodhisattva on the path remembers all the different collections of virtue a bodhisattva needs in order to become a buddha. A bodhisattva collects merit for three countless great eons. For the first great eon the bodhisattva collects merit on the path of accumulation, for the next great countless eon on the seven impure
grounds, and for the last great countless eon on the three pure grounds. A bodhisattva considers what other bodhisattvas have done in order to become buddhas and emulates them. We too should remember the deeds of the buddhas and also create as much merit as we can in order to become like them.

6) “Skilled in means” signifies that one [engages in] the perfection of generosity and so forth. This dedication is called skilled in means because when one engages in the practice of the first five perfections, from generosity to concentration, this is the practice of method, while the last perfection is that of wisdom. Gyeltsab says “generosity and so forth” which can also be interpreted to include the four means of gathering disciples as this too involves skill in means. The four are generosity, speaking pleasantly, giving Dharma teachings according to others’ needs, and practicing what one teaches.

7) “Signless” is a dedication which has stopped the sign of true existence upon all phenomena. Signless can be understood as in the fourth chapter of the Ornament where it is explained in terms of the three doors of liberation: emptiness, signlessness, and wishlessness. In this context the four attributes of true paths and the four attributes of true cessations are explained in terms of signlessness; the last two attributes of true suffering are explained in terms of emptiness; and the first two attributes of true sufferings and the four attributes of true origins are explained in terms of wishlessness. In Abhidharmakosha there is an explanation concerning ten signs: the four characteristics of phenomena, generation and so forth, the four colors, blue, yellow, red, and white, and the gender signs of male and female. In this context one can ask what about the beings in the form realm who do not have gender signs? The answer is that they can be distinguished by the sound of their voices and by touching their bodies.

8) “Approved by the Buddha” (or authorized by the Buddha) is related to all the paths. What is permission granted for? Buddha granted permission to practice all five paths, or the fifteen paths: the five paths of hearers, the five of solitary realizers, and the five of bodhisattvas. All these paths are not observed as existing ultimately yet do exist conventionally. Therefore, whatever practice one does on these paths is dedicated so as to transform it into a cause for enlightenment.

9) “Not included in the three realms” is that the desire realm and so forth are not observed to exist ultimately but do exist conventionally. All one’s roots of virtues are dedicated to enlightenment. This dedication is a subject of debate because one can ask, for example, what is included in the form realm? In Abhidharmakosha the constituents (kani) are discussed saying that all phenomena are included in the eighteen constituents. In Seventy Topics it says “not included in the three realms” in other texts it says “not included in the third realm.” However, the main point here is that whatever virtue or merit is created it should be dedicated to enlightenment and not be dedicated as a cause to be reborn in the three realms. In the case of bodhisattvas however they do make prayers to be reborn and remain in cyclic existence until all sentient beings, who are equal to space, are enlightened.

10) “Weak (or small) dedication from which comes great merit” is so-called because while a bodhisattva does not ultimately observe the virtues that are created by placing all the sentient beings of a billion world systems on the positive path, such as the ten virtues, they are observed conventionally. These virtues are transformed into a branch of enlightenment. In brief, a bodhisattva places all the sentient beings of a billion world systems on the positive path of the ten virtues and then dedicates his virtue to enlightenment in an unobservable way.
11) “Middling dedication from which comes great merit” is so-called because it is a dedication which transforms all the roots of virtue created by placing all the sentient beings of a billion world systems on the eight levels of stream enters, once returners, non-returners, and foe destroyers.

12) “Great dedication from which comes great merit” is so-called because it is a dedication which transforms all the roots of virtue from placing all the sentient beings of a billion world systems in highest enlightenment. This can mean that these roots of virtue come from placing all sentient beings on the path to highest enlightenment.

To conclude this session one should understand that there are twelve divisions of the path of meditation of dedication. These can be found in Seventy Topics.

The path of meditation of rejoicing/admiration is a contaminated path of meditation. It is the ninth topic of this chapter on the knower of paths.
A Making a connection
B Root text
C Commentary

Thus, the properties which were well dedicated, by being objects to be increased, third: the so-called ‘attention to rejoicing’.

While one is on the path of meditation of appreciation a bodhisattva creates much merit. Then on the path of meditation of dedication a bodhisattva dedicates this merit. Then on the path of meditation of rejoicing this bodhisattva rejoices in his merit and in the dedication in order to increase his merit even more. Gyeltsab says likewise one’s own and others’ virtues are well dedicated to unsurpassable enlightenment. In order to increase them even more there is the third, the path of meditation of rejoicing.

*To delight in the roots of virtue by method and non-observance, expressed here as being the meditation of attention to rejoicing*

With “method and non-observance” one rejoices in all the roots of virtue. This means that while a bodhisattva observes the roots of virtue as not existing ultimately, he observes them to exist conventionally and rejoices in them. Gyeltsab says that in this context the path of meditation of rejoicing that is contaminated is expressed. Conventionally all the roots of virtue are realized as illusions. The bodhisattva has the method that realizes them to be illusory and the wisdom that observes the roots of virtue as not ultimately existing. Supported on this he rejoices in his own and others’ roots of virtue. The path of meditation of rejoicing is an clear/lucid faith that takes pleasure in the roots of virtue of oneself and others. Here is seems that the path of meditation of appreciation and the path of meditation of rejoicing have the same aspect of clear faith. However, while the path of meditation of appreciation has the aspects of both believing faith and clear faith, the path of meditation of rejoicing is said to have just the aspect of clear faith.

2B2C-1B2B-3B2B-2B1B-3C Commentary

Through observing the roots of virtue with an extremely joyful mind, by conventional methods [and] by mere non-observance ultimately, they are the objects to be rejoiced in.
Gyeltsab says that with a mind delighting in the roots of virtue of oneself and others, the method of increasing the roots of virtue conventionally, one observes them sustained by the wisdom realizing that ultimately they are unobservable. This is the path of meditation of rejoicing.

Regarded, the summarized meaning is this: attention to appreciation strongly brings about merit like nuggets of gold from a mine; attention to dedication produces the limbs of perfect complete enlightenment like ornaments [made] by a goldsmith; attention to rejoicing will attain equality - the produced merit of others and one’s own.

Gyeltsab says that the functions of the three paths of meditation are different. The summarized meaning is that with the path of meditation of appreciation one accumulates a vast amount of merit, just like someone who reaps the benefit of finding nuggets of gold. The path of meditation of dedication (subject) has a special function because with this one transforms all one’s virtue into a branch/limb of complete buddhahood, just like a goldsmith transforms a piece of gold into an ornament. The path of meditation of rejoicing (subject) has a special function because with this a bodhisattva attains equal merit by rejoicing in the virtues created by oneself and others. This is the distinction of their functions.

In terms of rejoicing, if someone else creates virtue and one rejoices in it one creates the same amount of merit as if one would had done the positive action oneself. Likewise, if one rejoices in the negativities of others one also creates the same amount of negativity. For example, if the president of a country gives an order to bomb a city and one rejoices in this, one creates great negative karma. In Abhidharmakosha it says that if someone rejoices in the actions of soldiers in a war one creates negative karma. Lama Tsongkhapa in his text The Condensed Stages of the Path says: “Through the small effort of rejoicing one creates great waves of merit, therefore put effort into it.” We should do as Lama Tsongkhapa advises. When Shakyamuni Buddha was alive there was a king who made many offerings to Buddha and his retinue in order to receive teachings. However, at the end of the teachings during the dedication of merit Buddha dedicated in the name of a poor man in the audience. The king was offended that his own name had not been mentioned as he had sponsored the teachings. But Shakyamuni Buddha explained to the king that he had made such offerings in order to acquire fame and due to this inappropriate motivation he had not accumulated much merit. On the other hand, the poor man had continually rejoiced in the offerings of the king and had thereby created extensive merit. The Buddha mentioned the name of the poor man because among all the listeners he had created the most merit. This shows that even in our daily life when we create virtue we should dedicate it and we should also rejoice in our own and others’ virtues created by studying, meditating, and so forth. In this way one will create merit.

In short, with the path of meditation of appreciation one creates much merit, with the dedication level one dedicates this merit, and with the rejoicing level one rejoices in and thereby increases this merit. These three are compared to the example of finding gold nuggets, transforming them into an ornament, and then delighting in it. The path of meditation of appreciation is likened to finding gold but merely holding it in one’s hand without making use of it. The path of meditation of dedication is likened to proceeding to melt the gold and transforming it into an ornament which can be worn. The path of meditation of rejoicing is likened to delighting in the ornament that has been made.

REVIEW
There are eleven topics included in the second chapter on the knower of paths.

I) BRANCHES OF A KNOWER OF PATHS
The first of the eleven topics is the branches/limbs of a knower of paths. This is divided into five which can be condensed into three divisions. When divided into three they are cause, entity/nature, and activity. What are the causes of generating a knower of paths? One of the causes is to be free from manifest pride which impedes the development of a knower of paths. Being free from pride is necessary because pride impedes the attainment of new knowledge. Pride is likened to a high mountain on whose higher elevations no vegetation grows even in the spring, while at lower elevations vegetation does grow.

Also included in the division of cause of a knower of path is the awakening of the Mahayana lineage which refers to the cultivation of great compassion. This is the substantial cause for the generation of a knower of paths. Whenever we practice meditation, etc. we should do so free from pride and based on the development of compassion. On the basis of compassion one generates the mind of enlightenment. The best would be to have the actual mind generation but if this is not possible one should at least generate an artificial mind of enlightenment. To generate the mind of enlightenment it is necessary to avoid harming others and to help them as much as possible. If we cannot help, we should at least avoid harming them. This is a cause for the generation of a knower of paths.

The entity/nature of a knower of paths is that it is a clear realization of an arya supported on method and wisdom. Method includes the mind of enlightenment and the practice of the six perfections; wisdom is the wisdom realizing the emptiness of true existence.

The fifth branch is the activity of a knower of paths. This gives the final result, which is the omniscient state. This is its function, or activity. Another way of interpreting this activity is that it fulfills the aims of the three followers, the followers of the hearer’s vehicle, the solitary realizer’s vehicle, and the bodhisattva’s vehicle. In other words, it fulfills the aims of the lineage holders of the three vehicles. With the help of a knower of paths one takes care of all three types of three lineage holders and leads them finally to their respective enlightenments. In fact this is what we learnt in the context of the offering of worship in which it says that a knower of paths fulfills the aims of the world. Here “the world” refers to the three lineage holders: hearers, solitary realizers and bodhisattvas.

To generate a knower of paths, we need to depend on a certain support, or basis. The support can be a physical support or a mental support. The support that is a physical body includes the bodies of human beings, male and female, of three continents and the bodies of the six types of gods of the desire realm. That includes us as well because we are men and women of one of the three continents. Therefore, we have the possibility of generating a knower of paths because we have this physical support.

The mental support is said to be an actual concentration of the form realm. This is necessary for the generation of a knower of paths. The actual absorption of a concentration is something we can gain relatively easily. First we need to develop calm abiding followed by special insight, and then unify these two. On this basis we can attain the actual absorption of a concentration.

This is a rough overview of the five branches of a knower of paths.

II) A KNOWER OF PATHS KNOWING HEARER’S PATHS
When a knower of paths is explained in detail there are divisions into a knower of paths knowing the hearer’s paths, a knower of paths knowing the solitary realizer’s paths, and a knower of paths knowing the bodhisattva’s paths. These are different types of knowers of paths. A knower of paths knowing the hearer’s paths is the second topic here, a knower of paths knowing the solitary realizer’s paths is the third topic, and a knower of paths knowing the bodhisattva’s paths, or simply the Mahayana path of seeing, is the fourth topic. These are the actual explanations on a knower of paths.

What is meant here by a knower of paths knowing the hearer’s paths is that a bodhisattva following the bodhisattva’s vehicle needs to meditate on the selflessness of persons in order to guide the lineage holders of the hearer’s vehicle. This is because a hearer’s principal object of meditation is the selflessness of persons. This is what they wish to realize. There is reason for
hearer learners to meditate on the selflessness of persons; it is because they wish to abandon the
obstructions to liberation. To do this they have to eliminate the grasping at a self of persons. For
this reason they meditate on the selflessness of persons.

In our case we need to meditate on the selflessness of persons because we have many
afflictive obscurations. These include attachment, hatred and so forth which are rooted in the
grasping at a self of persons. Meditation on the selflessness of persons will help us to reduce these
the afflictions.

The text we are studying is based on the tenets of the Madhyamika Svatantrika school.
According to this school the selflessness of persons is the person’s emptiness of self-supported
substantial existence. In other words, the Madhyamika Svatantrikas say that the person is not self-
supported and not substantially existent. By meditating on this emptiness we can help overcome
our many afflictions.

The lineage holders of the hearer’s vehicle have particular predispositions and attitudes
towards the realization of the selflessness of persons. Before explaining to them how to meditate
on the selflessness of persons, a bodhisattva on the bodhisattva’s vehicle needs to know what to
teach them. Therefore, a bodhisattva must meditate on the selflessness of persons in order to take
care of and guide the lineage holders of the hearer’s vehicle. It would be quite absurd for someone
to teach someone something that he does not know himself! There is an analogy regarding this. In
Tibetan monasteries the monks play a long horn which is very small at one end and larger at the
other. When someone blows on this horn a lot of sound is produced which is heard by other
people, but there is nothing for oneself.

III) A KNOWER OF PATHS KNOWING SOLITARY REALIZER’S PATHS
A knower of paths knowing solitary realizer’s paths is explained in order to make the
bodhisattvas know that they need to realize an exalted wisdom realizing the non-duality that is
the emptiness of the apprehender and the apprehended being different substances. This is the
principal object of meditation solitary realizers. Here too in order for the bodhisattvas to teach this
subject to them they have to first gain its realization.

When bodhisattvas meditate on the selflessness of persons and non-duality they do so
supported on the mind generation, dedication, and the wisdom realizing emptiness.

IV) MAHAYANA PATH OF SEEING
The fourth topic is a knower of paths knowing the bodhisattva’s path, the Mahayana path of
seeing. A bodhisattva also needs to know this. Maitreya’s text, the *Ornament*, says:

> Four parts - the moments of the forbearance and knowledge regarding truths and truths
> explain this path of seeing together with beneficial qualities in the knower of paths itself.

When Maitreya says “truths and truths,” the first “truths” refers to the true sufferings and true
origins, while the second “truths” refers to true cessations and true paths.

Each of the four truths have a dharma forbearance, dharma knowledge, subsequent
forbearance, and subsequent knowledge. Therefore there are eight forbearances and eight
knowledges, making a total of sixteen moments.

“Dharma forbearances” are so-called because they are paths of seeing that are able to bear
the emptiness of the four noble truths. “Dharma knowledges” are so-called because they are
liberated paths which come as a result of abandoning the respective objects to be abandoned by
the dharma forbearances. These four liberated paths are induce after realizing the nature of the
four noble truths. Subsequent forbearances bear the emptiness of the dharma knowledges
related to the four noble truths. These induce the subsequent knowledges, which are liberated
paths, due to abandoning the respective objects to be abandoned by the subsequent forbearances.
Thus, there are a total of sixteen moments of the path of seeing. Said simply, there are four
moments in relation to each of the four truths: true sufferings, true origins, true cessations, and
true paths.
When the path of seeing is explained in detail regarding its aspects the root text says:

1) Thusness and buddha, they, because supported and supported do not mutually exist, do not accept specifications and 2) the great, together with 3) non-valid and 4) immeasurable, and 5) without extreme and 6) abiding there, toward form and so forth, definite apprehension as the very buddha and 7) non-acceptance, non-rejection, etc. and 8) love and so forth, 9) emptiness, and 10) to attain buddha(hood) itself and 11) all the completely purified fully gathered and 12) To dispel all anxieties and sicknesses 13) to just pacify the apprehension of nirvana and 14) guarded and so forth by the buddhas 15) oneself, having abided in the (causal)-mode of the exalted-knower of all aspects, to not kill and so forth, to set sentient beings (in that) and 16) generosity and so forth dedicated to complete enlightenment - the moments of the knower of paths itself.

This simply means that thusness, the emptiness of the four noble truths, and the exalted wisdom realizing this emptiness are not ultimately support and supported. "Do not accept specifications" or "Specifications are not accepted" means that ultimately specifying or enumerating a support and supported is not acceptable. In other words, since there is no ultimate existence, there is no enumeration or list that specifies this ultimately a support and this is ultimately a supported phenomena. This means that there are no specified support and supported. This concludes the fourth topic, the Mahayana path of seeing.

V) FUNCTION OF THE MAHAYANA PATH OF MEDITATION
Then comes the fifth topic, the function, or activity, of the Mahayana path of meditation. There are six divisions of the function of a Mahayana path of meditation: thorough pacification of one’s own mind, self control, and so forth.

Then comes a discussion of the path of meditation which has the actions. This is divided into a contaminated and an uncontaminated path of meditation. The contaminated path of meditation is further divided into a path of meditation of appreciation, a path of meditation of dedication, and a path of meditation of rejoicing which are respectively the sixth, eighth, and ninth topics related to a knower of paths.

VI) MAHAYANA PATH OF MEDITATION OF APPRECIATION
A Mahayana path of meditation of appreciation is a Mahayana subsequent clear realization that is a conception which apprehends a sound generality and a meaning generality as suitable to be mixed and believes that the mother is a source of the three welfares. The Mahayana path of meditation of appreciation is divided into one’s own welfare, both welfares, and others’ welfare each of which are further divided into nine for a total of twenty-seven divisions.

A path of meditation of appreciation is both a believing faith and a clear/admiring faith which admire the perfection of wisdom. When one meditates on the path of meditation of appreciation there are certain benefits.

VII) BENEFICIAL QUALITIES OF A MAHAYANA PATH OF MEDITATION
The benefits, or beneficial qualities, of the path of meditation of appreciation is the seventh topic. This is divided into praise, veneration, and laudation which are each also further divided into nine for a total of twenty-seven divisions.

VIII) PATH OF MEDITATION OF DEDICATION
Then comes the path of meditation of dedication. One dedicates one’s roots of virtue to complete enlightenment. This is divided into twelve. Of these the tenth, eleventh, and twelfth, respectively small dedication, middle dedication, and great dedication, are dedications that respectively conventionally transform (1) the roots of virtue of placing all the sentient beings of a billion world
IX) PATH OF MEDITATION OF REJOICING
The ninth topic is the path of meditation of rejoicing. Here one increases one’s virtue by rejoicing in one’s own and others’ virtue that has already been created. In Lama Tsongkhapa’s Condensed Stages of the Path it says: “By the small bit of effort in rejoicing one creates great waves of merit.”

QUESTIONS AND ANSWERS
Question: The main observed object of a bodhisattva is emptiness. What is the main support of that emptiness? Is it the emptiness of the mind which is the naturally abiding lineage or the emptiness of the person?
Reply: According to the Madhayamika Svatantrika school the main observed object of a bodhisattva is the selflessness of phenomena. The support of this emptiness is not discussed in the texts, therefore one could take any base ranging from form up to omniscient mind. In terms of whether the mind is the main support of the meditation on emptiness, it could be if the bodhisattva takes this as his object. Emptiness is of many types, outer emptiness, inner emptiness, emptiness of both the inner and outer, emptiness that cannot be discarded, and so forth. When meditating on inner emptiness the base of this emptiness is the mind. It is, of course, good to take the mind as the observed object and then meditate on its emptiness. When practicing mahamudra the mind is the main object of meditation. There are two types of mahamudra, one according to sutra and one according to tantra. According to sutra, mahamudra is the emptiness of true existence of the mind. It is, of course, good to take the mind as the observed object and then meditate on its emptiness. When practicing mahamudra the mind is the main object of meditation. There are two types of mahamudra, one according to sutra and one according to tantra. According to sutra, mahamudra is the emptiness of true existence of the mind. One can attain calm abiding by focusing on the mind and then analyzing its nature.

Question: At one point the text says that the Mahayana lineage can be activated before entering the path, then later on it says that on the path of preparation most of the obstacles to awakening the lineage have been removed. It would seem that the lineage is awakened and then the obstacles are removed?
Reply: That is true. When it is said that the Mahayana lineage can be activated before entering the path it means that when someone generates great compassion the lineage is awakened. Before entering the path there are four obstacles to the awakening of the Mahayana lineage. When someone attains a Mahayana path of preparation he becomes free from most of these obstacles because at this point he attains the wisdom arisen from meditation observing the naturally abiding lineage of the mind for the first time. From that point onward, one has the power to gradually suppress the afflictions because strong familiarity with the afflictions begins to weaken beginning with the attainment of the path of preparation. Also at this time one is also no longer accompanied by misleading friends. In addition, this bodhisattva no longer lacks the necessities for Dharma practice because he has gained meditative stabilization and can survive on the subtle food of concentration. Also he is no longer under the power of others because he does not depend on others for food, etc.

To activate the Mahayana lineage there is no need to have realized emptiness. In other words, a bodhisattva has not necessarily realized emptiness; for example, Atisha’s two masters Dharmarakshita and Serlingpa (Suvarnadvipa). Dharmarakshita was a Vaibhashika holder of tenets and on the path of accumulation, while Serlingpa was a Chittamatra upholder of tenets; neither of them has realized the selflessness of phenomena yet they were bodhisattvas. To be bodhisattvas they had necessarily generated the mind of enlightenment and prior to this great compassion. Bodhisattvas are of dull and sharp faculties. In Ornament for the Middle Way Shantarakshita defines those of dull faculties as bodhisattvas who first generate the mind of
enlightenment and then realize emptiness, and defines those of sharp faculties as bodhisattvas who first realize emptiness and then generate the mind of enlightenment. Shantarakshita says this because those of sharp faculties do not make promises before understanding that their aim can be achieved. A sharp facultied person first examines whether the conception of true existence can in fact be eliminated. He realizes that this can be achieved through realizing the emptiness of true existence, which is what stops cyclic existence. Having realized emptiness he knows that buddhahood is possible and then generates the mind of enlightenment. Dull facultied bodhisattvas on the other hand promise to achieve enlightenment without actually knowing that it is possible to achieve it.

Activating the lineage before entering the path means before entering the path of accumulation. One who enters the Mahayana path of accumulation can either have already realized emptiness or not. The Mahayana lineage is activated because without activating it one cannot enter the bodhisattva’s path.

Question: Are the seeds of afflictions the substantial cause of afflictions?
Reply: No.

Question: Can we say the imprints/latencies are a psychic aura or energy?
Reply: In debate it is generally concluded that while the seeds of afflictions are pervaded by being imprints, imprints are not pervaded by being seeds. The seeds of afflictions are an imprint of a previous affliction which gives rise to an affliction. The seeds are a potency of a former affliction which gives rise to a later affliction. Seeds are a non-associated compositional factor; imprints are an energy or potency that are also a non-associated compositional factor. The question arises what is an example of something that is an imprint but is not a seed? The answer is that a foe destroyer who has abandoned afflictions has the imprints of the afflictions but does not have the seeds of the afflictions. While these imprints cannot produce afflictions in the future, they can produce unusual behavior of body and speech like swinging from trees like monkeys or engaging in idle talk such as sudden swearing. In some texts, such as Chandrakirti’s Supplement to the Middle Way, imprints, seeds, and sediment/remainder are said to be synonyms. However, there are differences among the schools. The Madhyamika Prasangikas say that the conception of true existence is an afflictive obscuration, while the Madhyamika Svatantrikas say that it is an obscuration to knowledge. The Prasangikas say that even the seeds of the conception of true existence are afflictive obscurations and not obscurations to knowledge. But in the case of the imprints of foe destroyers there is more to say. The Prasangikas say that the subtle imprints of the conception of true existence are obscurations to knowledge, otherwise there is no illustration of obscurations to knowledge. The Prasangikas do not assert an obscuration to knowledge that is a consciousness. This means they only posit dualistic appearance as the obscuration to knowledge.

Question: Do the 7th, 8th, and 9th achievings belong just to the path of seeing or to all ten grounds?
Reply: The 7th and 8th achievings belong to the path of seeing but I am not sure about the 9th, the achieving of reaching thoroughly to the end. I will answer that another time. The achieving of antidote and the achieving of abandonment are the uninterrupted paths and liberated paths included in the path of seeing.

Question: Why are they not present on the other grounds?
Reply: This may depend on the assertions of different scholars. I will check the texts.

Question: In relation to the question concerning naturally abiding lineage can it be said that it is activated before entering the path and that on the path of preparation it is realized?
Reply: In general it can be said that on the path of preparation one attains a wisdom arisen from meditating on the naturally abiding lineage and at this point one can say that it is realized. However, the meaning of activating and the meaning of realizing the naturally abiding lineage on the path of preparation are different. Hearer and solitary realizer foe destroyers do realize the Mahayana lineage. One can say that while these two foe destroyers, who have realized emptiness,
have realized that the mind of a bodhisattva is empty of true existence they have not activated the Mahayana lineage. Or one can debate saying that one can have an inferential cognizer realizing the Mahayana lineage without it being activated.

Question: When a dull facultied bodhisattva who has activated the lineage before entering the path achieves the path of preparation is he reactivating the same lineage or a different lineage?

Reply: It is not said that the same lineage is activated once again but it can be said that a special Mahayana lineage is activated. In the fourth chapter the signs of irreversibility are presented. These include the sign of activating the Mahayana lineage related to body and speech. For example, at one time a geshe, Geshe Gendun, who died in Germany, was debating in Tibet for the geshe exam. He asked his debate partner whether when someone has tears in his eyes and the hairs of his body stand on end is this necessarily an irreversible sign of possessing the mind of enlightenment? The other answered yes. Then the geshe asked what about when the hair stands on end due to the cold? At this time does one have compassion? Also when one is beaten and tears come to the eyes does that mean one has compassion? Tears in the eyes [and the hairs of the body standing on end] are said to be signs of having generated the mind of enlightenment.

END
Tuesday afternoon, September 22, 1998

After the contaminated, the path of meditation without contamination. It is of two types.

What is meant by a contaminated and an uncontaminated path of meditation? A contaminated path of meditation is a conceptual path of meditation which apprehends a sound generality and a meaning generality as suitable to be mixed. An uncontaminated path of meditation is a non-conceptual path of meditation which does not apprehend a sound generality and a meaning generality as suitable to be mixed.

The contaminated path of meditation is explained before the uncontaminated path of meditation because the contaminated path of meditation is considered to be inferior to the uncontaminated path of meditation. For this reason it is explained first.

Gyeltsab says that after the contaminated path of meditation comes the uncontaminated path of meditation. This uncontaminated path of meditation which comes after the contaminated path (subject) is of two types because there is a path of meditation of achieving and a completely pure path of meditation. The path of meditation of achieving is so-called because it is the means to achieve ever higher realizations. The completely pure path of meditation is so-called because it purifies stains.

1 Path of meditation of achieving
2 Completely pure path of meditation

A Making a connection
B Root text
C Commentary

Because of that, first the path of meditation with the characteristic of strongly achieving.

Gyeltsab says “because the uncontaminated path of meditation is of two [types].”

The very entity and supremacy of that, to not bring anything about, all phenomena as non-observed is to bestow, [and] the great aim itself.

Gyeltsab says that the path of meditation of achieving has five divisions because there is:
(1) a path of meditation of achieving that is qualified by entity
(2) a path of meditation of achieving that is qualified by result
(3) a path of meditation of achieving qualified by its function
(4) a path of meditation of achieving qualified by temporary qualities
(5) a path of meditation of achieving qualified by final qualities

These are listed in the root text saying: (1) “the very entity,” (2) “supremacy of that,” (3) “to not bring anything about,” (4) “all phenomena as non-observed is to bestow,” and (5) “the great aim itself.”

1) To see form and so forth non-erroneously is the very entity. 2) [That] others will not attain buddha[hood] itself is the supremacy. 3) Application to realize the differences of all phenomena are without birth is to not bring anything about. 4) To generate the paths which possess the very entity and so forth like that in the continua of yogis, merely not observing phenomena is to bestow. 5) Because of producing the great aim, buddha[hood] itself, the great aim itself.

(1) Gyeltsab says that the exalted wisdom of meditative equipoise of the second ground is the very entity of the path of meditation of achieving because it is a subsequent clear realization that correctly sees the mode of abiding of form and so forth. As it says in sutra: “The perfection of wisdom is extremely pure, therefore it eliminates.”

(2) The exalted wisdom of meditative equipoise of the second ground is a very supreme method because, while buddhahood is not attained by others, generosity and so forth, which are not sustained by exalted wisdom, it can be attained when sustained by the supreme method.

(3) The exalted wisdom of meditative equipoise of the second ground has a function because, while it does not consider all as truly existent, it connects one to the realization that the differentiations (particularities) of all phenomena are without truly existent generation. In sutra it says: “Furthermore, all phenomena from form to omniscience are not to be strongly achieved, therefore the perfection of wisdom is to be strongly achieved.”

(4) The path of meditation of achieving (subject) possesses a special temporary result because it bestows a special temporary result on the continuum of a yogi. The path of meditation of achieving bestows a special temporary result on the continuum of a yogi because it acts to generate the qualities of the path, which has the distinctions of entitiness, result, and activity, by way of being sustained by the wisdom realizing all phenomena to be unobservable.

(5) The path of meditation of achieving (subject) acts to bring about the great aim, the final result, because it makes a yogi realize buddhahood, which is the great aim. In sutra it says: “By what list is the perfection of wisdom great? The form of the perfection of wisdom is not great and is not small.” The perfection of wisdom can be interpreted according to its four divisions: the natural wisdom perfection, scriptural perfection of wisdom, path perfection of wisdom, and the resultant perfection of wisdom. The resultant perfection of wisdom is the great aim, buddhahood.

The path of meditation of achieving is the tenth topic of the second chapter. The path of meditation of achieving and the completely pure path of meditation are mutually inclusive. They are distinguished in terms of their function/activity.

The completely pure path of meditation is a case of giving the name of the result to the cause. Non-abiding nirvana is the result, it is complete purity. The path of meditation that purifies, the cause, is given the name completely pure. Complete purity is of four types: the complete purity of hearers, the complete purity of solitary realizers, the complete purity of bodhisattva, and the complete purity of buddhas. The most important of these is the non-abiding nirvana of a buddha.
Making a connection

After that, by means of dispelling the doubt wondering what are the causes of the generation and the non-generation of this completely pure path of meditation, to be attained by upholding some and forsaking some - second, the characteristics of the infinitely pure.

Gyeltsab says that the second, that which follows the path of meditation of achieving, the path of meditation that is characterized by complete purity, is now explained. This includes a discussion of conducive conditions which are to be sustained and adverse conditions which are to be forsaken. For the practice of the completely pure path of meditation one has to leave aside adverse conditions and establish conducive conditions.

Root text

Devotion to Buddha and generosity and so forth and what skill in means there is are the causes of appreciation towards this. The causes of being bereft of Dharma are the blessing [oppressed by the darkness] of mara, no appreciation for the profound Dharma, to be strongly fixed upon the aggregates, and being taken hold of by an evil companion.

The conducive conditions for the completely pure path of meditation are:
1) devotion to the buddha - the external condition
2) generosity and so forth - the internal condition
3) skill in means - a union of calm abiding and special insight

Gyeltsab says that three conditions are the causes for appreciating the completely pure path of meditation: the external condition, devotion to a buddha; the internal conditions, practicing generosity and so forth; and any condition that is right for skill in means, the union of calm abiding and special insight. In sutra it says:
“Great bodhisattva, from making offerings to the countless buddhas of the world systems of the ten directions there will come rays of light. There will be the generation of...”
“When one generates the mind of enlightenment for the first time one practices the perfection of generosity.” Here “the mind of enlightenment for the first time” refers to the ultimate mind of enlightenment which is divided into ten in accordance with the ten grounds.
“Any great bodhisattva beginning from the first time of generating the mind of enlightenment exerts effort in the profound mother in an unobservable way.”

There are four causes of being bereft of the Dharma:
1) being suppressed by the troops of the maras
2) lacking belief in the Dharma
3) strongly grasping at the aggregates and so forth as truly existent
4) being taken hold of by evil companions

This show that we have to give up misleading friends who would separate us from the Dharma; we need appreciation or belief for the meaning of emptiness; and we need to see that the aggregates and so forth do not exist truly. In this context, the troops of maras refers principally to the mara of the afflictions. Due to seeking an observed object of the afflictions we lose energy for study and become lazy. What little energy we have for study becomes oppressed by the afflictions. We need to give up these adverse conditions.

Wednesday morning, September 23, 1998
1) To please the buddhas and 2) to complete the perfections of generosity and so forth
and 3) skill in calm abiding - are the causes of generation.
1) Harmed by maras and 2) no appreciation toward the profound Dharma and 3) to
grasp at things and 4) to accompany non-virtuous companions - are the causes of non-
generation.

This is a list of the three conditions conducive to the development of the completely pure path of
mediation, and a list of the four obstacles to the generation of the completely pure path of
mediation.

1) “To please the buddhas” means to show respect to the buddha such as standing up and bowing
down in their presence, offering service, and so forth. However, the main way to please the
buddhas is to practice what they teach.
2) “To complete the perfections of generosity and so forth”
To generate the completely pure path of meditation there is the internal cause, the practice of the
six perfections. With regard to completing the practice of the perfections one can understand this
in terms of either the six perfections, or the ten perfections that are respectively related to each of
the ten grounds. However, the best is in the context of the ten grounds as they concord with the
ten perfections.
3) “Skill in calm abiding” refers specifically to the calm abiding that observes emptiness as this is
the cause of the path of meditation.

Haribhadra first explains the causes of generating the path of meditation and then the obstacles to
generating it.

1) “Harmed by maras” means that due to the harmful energy of the maras one has difficulty
mediating and practicing. This harm by maras does not mean that ugly beings with bulging eyes
actually beat one with a big stick! There are four types of maras: (1) the mara of the aggregates, (2)
the mara of the Lord of Death, (3) the mara of the afflictions, and (4) the mara of the sons-of-the-
gods (devaputra) who is one particular god called Garab Wangchuk. The aggregates are called a
mara because the mere possession of them produces suffering which harms us. While the
aggregate of form is the actual mara of the aggregates, all five aggregates can be considered the
mara of the aggregates. Like the actual maras cause suffering or harm to us, so too do our
aggregates cause us suffering and are therefore said to harm us. The Lord of Death is called a
mara because the separation of our body and mind causes us suffering. The Lord of Death refers
to this separation of body and mind. The afflictions are called a mara because they cause us
suffering of body and mind. Suffering in our body can be the result of mental unhappiness which
causes an imbalance in the four elements of our bodies and thus results in illness, etc. The son-of-
the-gods refers specifically to Garab Wangchuk who is also known by the name “the one who
possess five arrows” and is called “the one without a body” in some Hindu scriptures. One of the
arrows of the son-of-the-gods is said to make people intoxicated, one makes people faint, one
makes people confused, one paralyzes people, and one makes people proud. When one is struck
by the arrow that confuses one wakes up in the morning already dull and heavy; when struck by
the arrow that paralyzes one becomes rigid; when struck by the arrow that makes one faint one
faints; when struck by the arrow that makes one proud one becomes proud. This is a mara
because when we are proud we are obstructed to gain knowledge and this harms us. These
arrows can also be called the arrow of attachment, the arrow of hatred, the arrow of ignorance, the
arrow of jealousy, and the arrow of pride. These correspond with the previous five that were
mentioned.
2) “No appreciation toward the profound Dharma” obstructs the generation of the path of meditation.

3) “To grasp at things” means to apprehend all phenomena from form up to omniscient mind as truly existence, which impedes the generation of the path of meditation.

4) “To accompany non-virtuous companions” means to have misleading friends, which blocks progress on the path.

Gyeltsab gives a brief explanation of the three causes of generating the path of meditation and the four obstacles to its generation. The conducive conditions that are causes for the generation of the path of meditation of achieving are (1) to please the buddhas in order to complete all the buddhas’ qualities, (2) to complete the perfections such as generosity, and (3) to become skilled in calm abiding, which is the attainment of a special meditative stabilization. There are four causes for the non-generation of the path of meditation. Due to not having collected virtue in the past one will experience the four causes that prevent the generation of the path of meditation, harm from maras and so forth. On the other hand, when one has a great support of merit from previous lives one will find oneself in fortunate situations in which one is not harmed by maras and so forth.

Previously the three causes that are conducive to the generation of the completely path of meditation and the four obstacles to its generation were explained. Now the completely pure path of meditation is discussed in general.

Gyeltsab merely quotes [the root text] saying “like that.”

Gyeltsab says that when the result (a liberated path) is free from the stain of its respective object to be abandoned by the mode of training in virtue, its objects, form and so forth, are also free from those very stains. This is because the two (the subject and object) that are isolated from a single object to be purified are not different in terms of having different self characteristics and they cannot be cut, or are not divisible, in terms of being different types. Therefore, these two are said to be one type of purity. In sutra it says: “Subhuti, any complete purity of form is complete purity, a result.” When an uninterrupted path eliminates its respective object of abandonment a stain is removed and a complete purity is attained. At that time the objects of this liberated path, form and so forth, also become free from stain because before there was a stain that was in the process of being eliminated by an uninterrupted path while now this stain has been eliminated.

The “two” are the subject, the liberated path, and form, the object of the liberated path. These two are not different in terms of having different entities of self characteristics. These two are also not of different types. That these two are not divisible due to being different types means that there is no valid cognizer realizing the purity of the subject, the liberated path, and the object, form, as being divisible. This explanation is a literal explanation of Maitreya’s actual root text. This will be elaborated on in the coming section of Haribhadra’s and Gyeltsab’s commentaries.
The sutra quotation mentioned in Gyeltsab’s text is not complete as it actually continues on to mention much more than just form. This quotation is found in the Twenty Thousand Stanza Perfection of Wisdom Sutra and is elaborated on in the Hundred Thousand Stanza Perfection of Wisdom Sutra where an entire list is given.

Gyeltsab says that the result, [the liberated path], and form and so forth, which are free from being a single object to be purified, are said to be one type because the complete purity that is isolated from a single object to be abandoned is not different with respect to its self characteristics and general characteristics. This is because the result, [the liberated path], and form and so forth have a complete purity which is not different in terms of entity and are also not divisible by a valid cognizer into different types. This is so because the result, the liberated path, and its object, form and so forth which are completely pure, are pure because of being isolated from a single object of abandonment. What is the single object of abandonment? It is the strong grasping at a self of persons of form and so forth. This stain is removed at the time of the liberated path. Because the liberated path is free from this stain, it is pure. In sutra it says: “Any result, purity, is the complete purity of form and so forth because the aryas of three vehicles who have attained the liberated path, the result of training in virtue, and its object, form and so forth, are separated from their respective discordant class. Therefore, these two, [the liberated path and its object], are purified of stain.” This does not mean that when a yogi has exhausted all the stains that also all the objects become free from stains. If it were like that it would follow that when one being becomes a buddha all other beings would no longer have to make an effort to become a buddha. Then what is does it mean? It means that when someone becomes free from a stain [that is an object to be abandoned in his continuum], the objects of [the liberated path, form and so forth, also become free from the object to be abandoned that was in his continuum. Therefore, when a yogi observes form and so forth there is an appearance that is different from before because for someone who has realized dependent arisings as being empty of true existence dependent arisings appear as an illusion.

This means that when someone on a liberated path of the path of seeing becomes free from a particular object of abandonment, one stain has been removed. This is a purity. This exhaustion of an object of abandonment by an uninterrupted path results in a purity. At the same time the object of the liberated path is also said to be free from stain.

Is a person sitting in front of someone on a liberated path of the path of seeing also free from stain? If asked, in general is this person free from stain, the answer is no. Therefore, Gyeltsab specifies that it is not the case that the objects themselves actually become free from stain. What is pure here is the object seen by a yogi because an interrupted path in his continuum has eliminated the object of abandonment and therefore his liberated path is free from stain and said to be pure. In this sense objects are free from stain, or it can be said that objects are not polluted by stain.

Here in this passage “Free from stain” refers to freedom from incidental stain. However, it can also refer to being free from natural stain. Natural purity is the emptiness of true existence of any object. The natural purity of our mind and the mind of a buddha are the same in that neither of these minds exist truly. The definition of the nature truth body is a final sphere of the two purities. Just as there are incidental stains and natural stains so too are there two types of purities and two types of nature truth bodies. One is an incidental complete purity and one is a natural
complete purity. The afflicting obscurations and the obscurations to knowledge are incidental stains, their removal is incidental purity. The lack of true existence is natural purity.

What is purity? What is to be purified? What purifies? These will be discussed next. In the sutras there are detailed quotations that, for example, say: “Whatever is the complete purity of the result [is also that of] form and so forth,” and “There is no duality. They cannot be taken as dualistic. They are not different. They are not divisible.”

The completely pure path of meditation purifies the obscurations to knowledge. This is in the context of a bodhisattva on the Mahayana path whose principal emphasis is to remove the obscurations to knowledge. That which purifies them is the completely pure path of meditation. We practitioners need to try to abandon the four obstacles to generating the completely pure path of meditation and develop the three conditions conducive to generating it. To establish these conducive conditions, since there are no buddhas nearby, we should serve and please our virtuous spiritual friends mainly by practicing what they teach. The second conducive condition is to practice the perfections, we can practice these in a way similar to that of the bodhisattvas even though it is not an actual perfection of generosity and so forth. In addition, we need to become skilled in calm abiding. Even if we cannot achieve calm abiding we can try to attain an approximate one that enables us to focus our mind on an object. We can try to develop the nine stages that lead up to calm abiding.

Wednesday afternoon, September 22, 1998

There are different ways of listing the five arrows that were mentioned this morning: an arrow that makes one proud, an arrow that makes one confused, an arrow that makes one very confused, an arrow that makes one faint, and an arrow that makes one mindless. These are called “arrows of flowers.” Another list is: an arrow that makes one confused, an arrow that makes one faint, an arrow that makes one crazy, an arrow that kills, and an arrow that makes one forgetful. Another list is: an arrow that makes one intoxicated, an arrow that makes one shake, an arrow that makes one proud, an arrow that makes one confused, and an arrow that makes one die. These different ways of listing them come from different texts.

This refers to the effect of the completely pure path of meditation.

2 Root text
3 Commentary

Having expressed complete purity in general, particularly -

Gyeltsab merely says “complete purity.” The connection is made in such a way that it shows that previously the complete pure path of meditation was explained in general in relation to the fact that a liberated path is free from the stains that have been abandoned, and likewise its object is free of stains. Now the completely pure path of meditation of hearers, solitary realizers, and bodhisattvas will be explained.

Because of damaging [or: forsaking] delusions, the known, and the three paths: learners, rhinoceroses and the children of the victors’ purity - buddha, all ways, infinite.

“Because of damaging delusions” presents the fact that someone on the path of a learner hearer eliminates the objects of abandonment and then, when all of them have been eliminated, attains a hearer’s nirvana, which is the complete purity of hearers. In short, the complete purity of the hearer’s vehicle is a hearer’s nirvana.
Solitary realizers also abandon the afflictive obscurations but in addition they abandon the conception of duality which apprehends form and so forth to be external objects. In this way, they attain the complete purity of a rhinoceros-like solitary realizer.

Bodhisattvas also have their respective purity which are in relation to the various grounds and depend on what objects of abandonment have been abandoned.

“Buddha, all ways, infinite” refers to the buddhas who are infinitely completely pure in all ways. The first moment of omniscient mind is the complete purity of a buddha. At this point one is completely pure in that all stains have been removed. When one become a buddha one has exhausted all objects of abandonment, doubt, etc.

Gyeltsab says that hearers, solitary realizers, and bodhisattvas on the path of meditation have a complete purity through having purified some level of stains. This is because hearer and solitary realizer foe destroyers have respectively removed the afflictive obscurations and the conception apprehending form and so forth as external objects, while the latter, the bodhisattvas, have removed the seeds of the obscurations of the three paths, whereby the seeds degenerate. Such purities are called the purity of the hearers, purity of the rhinoceros-like, and purity of the victors’ children. The purity of a complete buddha is called extremely completely pure in all ways because it is a final purity. In sutra it says respectively:

“By the fact of attachment, hatred, and ignorance being completely pure and form and so forth being completely pure, they are not dualistic and cannot be taken as dualistic.” “Attachment, hatred, and ignorance being completely pure” refers to the complete purity of a hearer.

“Form and so forth being completely pure, they are not dualistic and cannot be taken as dualistic” refers to the complete purity of a solitary realizer.

“By purifying ignorance karmic formations are purified.” This refers to the complete purity of a bodhisattva.

“By completely purifying the perfection of generosity one completely purifies the perfection of morality.” This refers to the complete purity of a buddha.

The followers of the hearer vehicle work mainly to eliminate the afflictive obscurations which Buddha emphasizes here saying “attachment, hatred, and ignorance.” Saying “form and so forth being completely pure, they are not dualistic and cannot be taken as dualistic” Buddha explicitly shows the objects of abandonment of a solitary realizer.

Gyeltsab says that the abandonments of hearers and solitary realizers are the purities of hearers and solitary realizers because these abandonments are a separation that is a freedom from the afflictions, attachment and so forth. That abandonment is also a freedom from the afflictive obscurations and one part of the obscurations to knowledge, the conception that apprehends form and so forth to be external objects.

An abandonment in the continuum of an arya bodhisattva is a complete purity of a bodhisattva because it is a separation in the continuum of such a bodhisattva which is a freedom from any of the three obscurations of the paths of the three vehicles: the afflictive obscurations,
the gross obscurations to knowledge (the conception apprehending form and so forth to be external objects), and the subtle obscurations to knowledge (the conception of true existence).

The natural complete purity that arises from the sphere of reality, which is completely pure because of being free from incidental stain, (subject) is asserted to be the purity of the highest buddha because it is a separation that is the abandonment of the afflictive obscurations and the obscurations to knowledge together with their latencies in all ways.

1 Difference of being or not being extremely completely pure
2 Proving the infinitely complete purity of buddha

2B2C-1B2B-3B2B-2B2B-2D1 Difference of being or not being extremely completely pure
The complete purity of hearers, solitary realizers, and bodhisattvas are not extremely completely pure.

A Question
B Reply

In addition to mentioning complete purity on the occasion of the knower of paths itself, the complete purity of the buddhas and hearers and so forth respectively. If asked, what is the explanation of the infinite and the others like?

Gyeltsab say that with regard to the very knower of paths, on the occasion of discussing the complete purity of a bodhisattva’s path of meditation is it not wrong to talk about the complete purity of others? Here the path of meditation of achieving and the completely pure path of meditation of a bodhisattva are explained, so a question is posed as to why the complete purity of other paths is being discussed.

1 Root text
2 Commentary

On the nine levels, the great of the great and so forth stains’ antidotes - the small of the small and so forth paths - are pure.

Here the result, complete purity, is divided. The divisions of a bodhisattva’s path of meditation are established as a cause that purifies. For this reason, there is no mistake in talking about other complete purities. How is this established? The complete purity of a buddha is extremely, or infinitely, completely pure, whereas the complete purity of hearers and the complete purity of solitary realizers are not extremely completely pure. From the point of view of the path as a cause the bodhisattva’s path of meditation is an antidote that destroys the great great conceptions of apprehender and apprehended which exist within the three realms and nine grounds that are to be abandoned by the path of meditation. Therefore, the bodhisattva’s path [of meditation] is a path that completely purifies both obscurations. The hearer and solitary realizer’s path of meditation is not able to exhaust all the stains.

Gyeltsab quotes the Great Commentary which says: “The nine grounds here are the nine levels in the context of the three realms and nine levels. According to our own tradition the nine levels are considered to be a mental support. When it is explained that the mental support is of nine levels it refers to the six meditative stabilizations and the first three of the four formless absorptions. When the nine levels are said to include the desire realm it is because the path perfection of wisdom is presented as not abiding ultimately within the three realms. This is others’ tradition. The reason for not explaining the mind of the desire realm and the mind of the Peak of Existence as a mental support is because this is explained from the point of view of taking care of some disciples, for example hearers, who are not skilled in meditation.” A bodhisattva on
the path of meditation does take the mind of the desire realm and the mind of the Peak of Existence as a mental support of the path, but hearers do not take these minds as a mental support of the path. The hearers do not do so because the desire realm mind is too gross, while the mind of the peak of existence is too subtle, to act as the mental support of an uncontaminated path.

According to the literal meaning of the Great Commentary it is clear that the nine levels are a basis to be abandoned. Although the nine levels are said to be a basis to be abandoned this refers to the objects of abandonment of the path of meditation which are divided into nine: the objects of abandonment of the desire realm, the objects of abandonment of the four concentrations of the form realm, and the objects of abandonment of the four formless absorptions of the formless realm (Infinite Space, Infinite Consciousness, Nothingness, and Peak of Existence). When in the root text says “on the nine levels” it refers to these nine. When the root text says “the small of the small and so forth, paths, are pure” it refers to the fact that the path of meditation is divided into small, middle, and great which are each further divided into three, the last being the great great. When the root text says “the great of the great and so forth” Maitreya shows that first the great great objects of abandonment are abandoned followed by the middle great and so forth. However, the path that abandons them is the small small followed by the middle small and so forth.

The nine levels of the desire, form, and formless realms are all to be abandoned.

Gyeltsab says the complete purity of a buddha is extremely [completely pure] while the complete purity of hearers and the complete purity of solitary realizers are not extremely [completely pure]. There are discordant classes that exist on the levels of the desire realm, the four concentrations, and the four formless absorptions. These are the great great objects of abandonment of the path of meditation. As an antidote to them there is the small small Mahayana path of meditation which is of nine types. These are the antidotes that purify all types of obscurations. On the contrary, the path of meditation of hearers and the path of meditation of solitary realizers are only causes for a partial purity of certain objects of abandonment.

We can talk about nine levels in the sense of objects of abandonment or we can talk of them in the sense of antidotes. If we do talk about them in the sense of antidotes, the path, it is said that in dependence on the nine uncontaminated levels one removes the various levels of obscurations. When the nine uncontaminated levels are counted they are the six levels of concentration and the three formless absorptions. The six levels of concentration are:

(1) the preparation Not Unable of the first concentration,
(2) the mere actual first concentration,
(3) the special first actual concentration,
(4) the second actual concentration,
(5) the third actual concentration, and
(6) the fourth actual concentration.
If asked, “What is the ‘extremely’ like?”

Gyeltsab says in what way is the complete purity of a complete buddha extremely [completely pure]?

By the rejection of the objection to that, the path, by the mere equality of comprehenders and objects to be comprehended, is asserted as the very antidote of the three realms.

Gyeltsab presents someone’s argument saying: according to your tradition impure other-powered phenomena are truly existent because the objects to be abandoned which are to be harmed are established to have nine divisions. Perfect other-powered phenomena also would follow as existing truly because the antidotes, the harmers, which fight them are established to have nine divisions. Our own tradition says that this is an argument that apprehends the two truths as contradictory. It is an argument about the order of generation of the antidotes and the order of cessation of the objects to be abandoned; thus, it is an argument that depends on the conventional. This argument originates from a previous verse of the root text that says “buddha, all ways, infinite.”

The answer is set out in the form of a syllogism: the exalted wisdom of the meditative equipoise of a bodhisattva on the path of meditation is asserted to be an antidote that purifies all the obscurations of the three realms without exception because it is established to be an antidote to the objects to be abandoned through having rejected the argument concerning the order of the generation of the antidotes and the order of the cessation of the objects to be abandoned. The exalted wisdom of the meditative equipoise of a bodhisattva on the path of meditation is established to be an antidote because by directly realizing that the consciousness, which is a comprehender, and the objects of comprehension do not exist ultimately it directly destroys the objects to be abandoned.

The objection which states: “The antidotes to those are the great of the great and so forth - as the discordant class [at the end] is the small of the small, it is proper” - by means of [its] rejection through the example of a washer person’s effort for a long time to clean a subtle stain adhering to a cloth, that which was shown [about] the path of meditation [as the cause] of the extremely (completely) pure, because of that equality there is through the mere non-observance to consciousness and the objects to be known possessing the aspects of the three realms - is the mere entity of the antidotes of all obscurations; the complete purity of the buddha is presented as extremely.

Our own tradition says that the objects of abandonment are abandoned beginning from the great down to the small, whereas the path begins with the small and goes up to the great. Gyeltsab says that someone argues that the order of generation of the path and the order of cessation of the objects of abandonment are not right as explained here because in order to reject a strong enemy one needs a strong opponent; likewise, in order to eliminate the great great objects of abandonment of the path of meditation one needs to generate a great great path of meditation. It is so because when an enemy is very weak there is no need for a powerful opponent; likewise to reject the small small discordant class it is enough to generate the small small path of meditation. Thus it would mean that if the small small objects of abandonment of the path of meditation cease at the end it would mean that a small small path of meditation is generated at the end.

While in the text it says great great and small small etc. these refer to strong objects of abandonment and subtle objects of abandonment and a strong path and a weak path. When a stain on one’s clothes is gross it is easily washed out, while a more subtle stain is more difficult to
wash out. The disputant who argues against this could also have argued that the antidote could be generated from the great up to the small and the discordant class ceased from the great down to the small.

Our own tradition says that this argument depends on a convention. Just as is said in the commentary by Arya Vimuktisena if the objects of abandonment and the antidotes do not exist ultimately then arguing that their order is not correct as it is an argument about the contradiction of the two truths. The complete purity of a complete buddha is well established to be extremely completely pure. In brief, the argument is that if the objects of abandonment and the antidotes do not exist ultimately, they do not exist.

The answer is that the extremely complete purity of the Mahayana path of meditation presented before is the entity of an antidote against all obscurations. Although the objects to be abandoned and the antidote do not exist ultimately the order of the objects to be abandoned and the antidotes is still correct. The path of meditation that has been explained above does not ultimately observe the consciousness having the aspect of the third realm and the objects of knowledge; by this very fact they are directly realized as equal in terms of being empty of true existence, through which the objects of abandonment are destroyed. This is an answer to the argument that is related to the subject of the ultimate truth. In sutra it says: “Bhagavan, complete purity is not generated in the desire realm, form realm, and formless realm.” “Bhagavan, complete purity is without seeking.” The Tibetan word for seeking or wanting (’tshal) is the same as that used in prostration (phyag ’tshal) which in that context means to seek the qualities of the one to whom one is prostrating.

Our own tradition says that there is no mistake in the order of the objects to be abandoned and in the order of the generation of the path because this is established by the example of a person who washes clothes who when eliminating a gross stain does not need lasting effort, but who when eliminating a subtle stain does need much effort. In this way the argument is completely stopped.

Lama Tsongkhapa in his text *Golden Rosary* says that ‘seeking’ refers to consciousness and ‘matter’ refers to objects of knowledge. Here in sutra it just says ‘seeking.’

To conclude: the complete purity of a buddha is extremely completely pure because it is free from both obscurations together with their latencies. Or it is because the complete purity of a buddha is realized at the end of the activity of the path of meditation which abandons the nine levels of the objects of abandonment from the great great to the small small.

There are two divisions of the path of meditation, the path of meditation of achieving and the completely pure the path of meditation, each of which has its particular function. The completely pure path of meditation leaves a latency for the final abandonment, while the path of meditation of achieving leaves the latency for the final realization. The final result of the path of meditation of achieving is a final realization. The final result of the completely pure path of meditation is a complete abandonment. In order to attain buddhahood one needs the two collections of merit and wisdom. With the two collections one attains the two bodies of a buddha, the form body and the wisdom truth body. The form body is achieved through the collection of merit, while the wisdom truth body is achieved through the collection of wisdom. These are accumulated by a bodhisattva on the path of meditation because the three contaminated paths of meditation, those of appreciation, dedicating, and rejoicing, bring about the collection of merit, while the path of meditation of achieving and the completely pure path of meditation complete the collection of wisdom that results in a buddha’s wisdom truth body.

According to Chokyi Gyeltsen’s commentary complete purity refers to true cessation. A true cessation existing in the continuum of a hearer foe destroyer is a complete purity of a hearer because it is a hearer’s separation which is an abandonment of the affective obscurations. A true cessation existing in the continuum of a solitary realizer is a complete purity of a solitary realizer because it is a solitary realizer’s separation which is an abandonment of the conception apprehending forms and so forth to be external objects. A true cessation existing in the continuum of a bodhisattva on the path of meditation is a complete purity of a bodhisattva because it is a
bodhisattva’s separation which is an abandonment of the objects of abandonment of the paths of the three vehicles. A true cessation existing in the continuum of an arya buddha is extremely completely pure because it is a separation which is a total abandonment of the two obscurations together with their latencies.

Chokyi Gyeltsen defines a complete purity as an analytical cessation which has abandoned the obscurations to be abandoned by the uninterrupted path which is the means for attaining it. When divided there are four:
(1) the complete purity of hearers,
(2) the complete purity of solitary realizers,
(3) the complete purity of bodhisattvas, and
(4) the extremely complete purity.

The definition of a complete purity of a hearer is: a hearer’s separation which has abandoned its respective objects of abandonment by an uninterrupted path which is the means for attaining it. The complete purity of a hearer and the true cessation of a hearer are mutually inclusive.

The definition of a complete purity of a solitary realizer is: a solitary realizer’s separation which has abandoned its respective object of abandonment by an uninterrupted path which is the means for attaining it. The complete purity of a solitary realizer and the true cessation of a solitary realizer are mutually inclusive.

The definition of a complete purity of a bodhisattva is: a bodhisattva’s separation which has abandoned its respective object of abandonment by an uninterrupted path which is the means for attaining it. The complete purity of a bodhisattva and the true cessation of a bodhisattva are mutually inclusive.

Extremely complete purity is: a separation in which the two obscurations have been abandoned without exception. Extremely complete purity and the true cessation of a buddha are mutually inclusive.

These complete purities exist from a hearer’s path of seeing up to the buddha ground.

In short, a complete purity is a true cessation and a true cessation is a separation from a particular level of obscuration.

How many obscurations are there to be abandoned by the path of meditation? There are afflictive obscurations and obscurations to knowledge. The afflictive obscurations to be abandoned by the path of meditation are of many types. The Svetantrika Madhyamikas assert that one who is an initially determined bodhisattva abandons the afflictive obscurations and the obscurations to knowledge simultaneously and then simultaneously becomes both a foe destroyer and a tathagata. This foe destroyer is a Mahayana foe destroyer.

There are sixteen afflictive obscurations to be abandoned by the path of meditation. These are the six afflictions related to the desire realm, attachment, hatred, ignorance, pride, the view of the transitory collection, and extreme view, and five each related to the form and formless realms, attachment, ignorance, pride, the view of the transitory collection, and extreme view. Each of these sixteen are divided into three, great, middle, and small, which are further divided into three, great, middle, and small. In this way there are the great great, middle great, small great and so forth for a total of 144 afflictive obscurations.

According to the Svetantrika Madhyamikas the obscuration to knowledge that is abandoned by the path of meditation is the conception of true existence. The path of meditation is divided into small small, middle small, and so forth up to the great great, for a total of nine divisions of which the last is divided into gross and subtle for a total of ten conceptions of true existence which are the ten objects of abandonment to be abandoned by the ten levels of the path of meditation.
We need to develop our understanding of emptiness which shakes our conception of true existence. Due to this all the afflictions based on it are shaken and weakened. What is this conception of true existence like? When attachment is defined it is said to be a striving for a contaminated object after superimposing qualities on it with improper mental attention. In short, attachment is a mental factor that apprehends a contaminated object as attractive. There are various types of attachment: the attachment of the desire realm which is attached to the five objects of the senses, the attachment to the transitory which is the attachment that causes us to fear losing things when we are dying, and the attachment to existence which is the attachment of the form and formless realms.

Hatred is a mental factor that apprehends a contaminated object as repulsive through improper mental attention. Attachment and hatred are the two main sources of our suffering and problems. We need to recognize them in order to apply their antidotes.

Thursday afternoon, September 24, 1998

Pride is a mental factor that makes one puffed up. In Abhidharmakosha pride is divided into three groups, one group of three, one of seven, and one of nine. Pride acts to obstruct the development of qualities. This is because when one is proud one does not ask questions to others as one is afraid to lose face. Thus, we should avoid feeling important and thinking we are the best and instead try to learn from others, even children and others who are younger than ourselves. Sakya Pandita said that one should gain knowledge even from the mouth of a child and that even if one is to die tomorrow one should still learn today. This means that we should continuously develop our qualities. To gain more knowledge and keep it is like being a bank into which one puts money in order to keep it secure. It is also said in one of the life stories of Buddha that to hear a teaching is the best lamp illuminating the darkness and to gain knowledge is something that cannot be stolen by a thief. Therefore, we need to continuously put effort into learning. Sakya Pandita said that although we may not become a sage in this life we can continue learning in our future lives. If one wants to learn, one needs to respect others in order to gain from their knowledge.

Ignorance is a mental factor that engages its object with unknowing. Ignorance is of many different types but it mainly refers to ignorance with respect to the law of action and result (cause and effect) and ignorance with respect to the reality of phenomena. The reality of phenomena refers to the selflessness of persons and the selflessness of phenomena; we are ignorant of these. From the point of view of the Svaatantrika Madhyamikas ignorance of the selflessness of persons means to conceive of a person as being self-supporting substantially existent, while ignorance of the selflessness of phenomena is to conceive of phenomena as truly existent. These selflessnesses are posited from the point of view of the object of negation. Ignorance with respect to the law of action and result means to not know that negative actions bring a suffering result while positive actions bring a pleasant result. Tibetan tribes used to say “In the past, the karmic result did not ripen quickly; nowadays the wheel of action and result rotates quickly around the finger.” (What is karma? Is the action of drinking tea karma? Think about it.)

Ignorance is a lack of knowledge, an unknowing; therefore, we have many types of ignorance. According to the Svaatantrika Madhyamikas the selflessness of persons is not an ultimate truth but a conventional truth. Only the selflessness of phenomena is an ultimate truth; it is a mere non-affirming negative that is the negation of the object of negation, true existence.

The view of the transitory collection according to the Svaatantrika Madhyamikas is an afflicted wisdom that observes the I or mine and conceives it to be self-supporting substantially existent. Therefore, it is the grasping at a self of persons. What is the measurement of conceiving the person to be self-supporting substantially existent? Think about it.

The person is not self-supporting substantially existent because in order for it to be known one has to depend on the aggregates. To make this point clearer we can take the example of Lorenzo. In order for Lorenzo to appear to our mind his aggregates must appear. In other words, Lorenzo cannot appear to the mind without his aggregates appearing to the mind. The Svaatantrika
Madhyamikas assert that the person is not self-supporting substantially existent. However, they assert that an illustration of the person is the mental consciousness which is self-supporting substantially existent. In the text *Blaze of Reasoning* by Acharya Bhavaviveka it says that although the person in general is not self-supporting substantially existent it is not contradictory to say that the illustration of it, the mental consciousness, is self-supporting substantially existent. There is no contradiction because the appearance of the mental consciousness, the illustration, does not depend upon other aggregates.

When the view of the transitory collection is divided there are two: an afflicted wisdom that observes ‘I’ to be self-supporting substantially existent and an afflicted wisdom that observes ‘mine’ to be self-supporting substantially existent. ‘Mine’ covers many objects such as my head, my computer, etc. Can the observed object of the view of the transitory collection observing mine be any object? The answer is no. So what is the observed object of the view of the transitory collection observing mine? The principal observed object is the mere I. This can be discussed at length but in short the observed object of the view of the transitory collection observing mine is the mere I. What is the subtle view of the transitory collection according to the Svatantrika Madhyamikas? It is the above.

According to the Prasangika Madhyamikas the view of the transitory collection conceiving I and mine to be self-supporting substantially existent is not a subtle view of the transitory collection but a gross view of the transitory collection in the sense that it is intellectually acquired. So what do they posit as the real view of the transitory collection? It is an afflicted wisdom observing I or mine that conceives the I or mine to exist by its own character or to exist inherently. The assertion that the view of the transitory collection is an afflicted wisdom is common to both the Svatantrikas and Prasangikas.

What is an intellectually acquired view of the transitory collection? There are twenty types (see *Ocean Playground* page 25). Chokyi Gyeltsen says that these are very strong and explains them in terms of strong mountains that surround us forming a dark valley, which is likened to ignorance. Within this there are many wrong views which completely obscure the way to liberation; these are likened to dense creeping vines that obstruct us from walking along a path. In addition, there are the poisonous trees of the afflictions which only give painful results. These afflictions refer mainly to attachment. In addition, we are completely surrounded by the huge river of existence. ‘Existence’ refers to cyclic existence. We are in an isolated desert. We need to become free from this situation and pledge ourselves to the supreme result. The Bhagavan gave teachings in accordance with those to be subdued. He taught different methods to relieve the many types of suffering. Among all the methods taught by Buddha the supreme is the teachings on the perfection of wisdom.

To return to the twenty intellectually acquired views of the transitory collection. These views are like high mountains closing us in. These twenty views of the transitory collection are mentioned in *Madhyamakavatara*. Four of them are related to the form aggregate:

1) viewing the form aggregate as a self supporting substantially existent I
2) viewing a self supporting substantially existent I as a possessor of the form aggregate
3) viewing the form aggregate as a support of a self supporting substantially existent I
4) viewing a self supporting substantially existent I as supported on the form aggregate

There are also four similar views related to the remaining four aggregates: the feeling aggregate, discrimination aggregate, compositional factors aggregate, and consciousness aggregate, making a total of twenty intellectually acquired views of the transitory collection.

Is the intellectually acquired view of the transitory collection a view of the transitory collection? The twenty intellectually acquired views of the transitory collection are designated intellectually acquired in the sense of giving a name to a basis due to a particular resemblance; for example giving the name ‘Lion Cub’ to a dog whose face resembles that of a lion. In sutra it is said that there are twenty views of the transitory collection, while Nagarjuna in his text *Fundamental Wisdom* lists twenty-five. The five additional views are the twenty plus the views that:

1) view the self and the form aggregate as different entities
2) view the self and the feeling aggregate as different entities
3) view the self and the discrimination aggregate as different entities
4) view self and the compositional factors aggregate as different entities
5) view the self and the consciousness aggregate as different entities

Sutra only mentions twenty views of the transitory collection in order to guide Buddhist practitioners because among Buddhist schools there are none who view the I and the aggregates as being different entities. Nagarjuna added five extra views in order to guide non-Buddhists who view the I and the aggregates as different entities. Among the different Indian schools, the Samkya and so forth, there are many assertions regarding the attributes of the self. In a text by Acharya Shantarakshita called A Compendium of the Reality of a Valid Cognizer, which was composed to refute those assertions concerning the self, of its thirty or thirty-two chapters five are devoted to negating the views of non-Buddhists. The first chapter refutes a principal agent, the second chapter refutes Ishvara as creator of all, and so forth. Altogether four of the five chapters were taught to refute the assertions concerning a self as presented by non-Buddhists. The subject of selflessness frightens followers of non-Buddhists schools. Such scholars do not differentiate as the Buddhists do by asserting a conventionally existent self but not an ultimately existent self, or asserting a self that is to be negated and a self that is not to be negated.

Extreme view can be divided into two: the extreme of eternalism and the extreme of nihilism. The extreme of eternalism is an afflicted wisdom that takes the I that is the observed object of the view of the transitory collection and conceives it to exist truly. The extreme of nihilism is an afflicted wisdom that takes the I that is the observed object of the view of the transitory collection and conceives it to not exist.

All these afflictions are to be abandoned by the path of meditation.

2B2C-1B3 Summarizing the section

From The Ornament for Clear Realization: A Treatise of Oral Instructions on the Perfection of Wisdom, the commentary of the second chapter.

Gyeltsab says that this is the explanation of the commentary in the Ornament of Essential Explanation on the second chapter of the commentary called The Ornament for Clear Realization: A Treatise of Oral Instructions on the Perfection of Wisdom. Perfection of Wisdom is mentioned because the meaning of the perfection of wisdom is explained within The Ornament for Clear Realization. It is called Oral Instruction because it is a means to easily understand the Perfection of Wisdom Sutras. It is called a Treatise because it is a scripture that protects us from the fear of cyclic existence and cures us of the sickness of the afflictions. This text is called Clear Realization because in dependence on its subject matter one will realize all the levels of the path. It is called Ornament because this text is one of the four ornaments, a clarifying ornament, while the perfection of wisdom is a natural ornament, the eight categories and seventy topics are a beautifying ornament, and the delightful ornament is the fact of reading the Ornament and becoming happy that everything is clear in it. This is likened to a woman with a beautiful body, a natural ornament, who makes herself more beautiful with earrings and so forth, the beautifying ornament, and looks in a mirror, a clarifying ornament, and delights in her beauty, a delightful ornament.

REVIEW

During the past week we have discussed the last two of the eleven topics related to a knower of paths - the path of meditation of achieving and the completely pure path of med. The eleven topics were presented in the following lines from the root text:
Eclipsing and so forth, those paths of disciples (hearers) and rhinoceroses, path of seeing - great benefit of qualities of this and other lives, activity, belief, praise, veneration, and admiration, dedication, rejoicing, unsurpassed attention, achieving, and the so-called extremely pure is the path of meditation; the wise bodhisattva’s knower of paths is explained like that.

1. “Eclipsing and so forth” indicates the five branches of a knower of paths.
2. “Those paths of disciples (hearers)” indicates the knower of paths knowing the paths of hearers.
3. “Rhinoceroses” indicates the knower of paths knowing the paths of solitary realizers.
4. “Path of seeing - great benefit of qualities of this and other lives” indicates the knower of paths knowing the paths of bodhisattvas, the Mahayana path of seeing.
5. “Activity” indicates the function/activity of the Mahayana path of meditation.
6. “Belief” indicates the path of meditation of belief/appreciation.
7. “Praise, veneration, and admiration/laudation” indicates the beneficial qualities/benefits of the path of meditation of appreciation.
8. “Dedication” indicates the path of meditation of dedication.
9. “Rejoicing, unsurpassed attention” indicates the path of meditation of rejoicing/admiration.
10. “Achieving” indicates the path of meditation of achieving.
11. “The so-called extremely pure” indicates the completely pure path of meditation.

Regarding the tenth and eleventh topics, the tenth, the path of meditation of achieving, has five divisions:

1. The path of meditation of achieving qualified by entity
   The path of meditation of achieving has the entity of being an uncontaminated path because it is a path that is free from the conception which apprehends a sound generality and a meaning generality as suitable to be mixed. The entity can also be said to be a Mahayana path of meditation that directly and correctly realizes the meaning of the reality of form and so forth.

2. The path of meditation of achieving qualified by supreme result
   “Qualified by a supreme result” means that when one practices the perfection of generosity and so forth sustained by special method one can attain buddhahood, otherwise one cannot.

3. The path of meditation of achieving qualified by activity
   The Mahayana path of meditation does not strongly grasp at phenomena as truly existent.

4. The path of meditation of achieving qualified by temporary qualities
   By meditating on the path of meditation one will achieve a temporary result. In other words, through the Mahayana path of meditation the bodhisattva focuses on the harmonies to enlightenment as unobservable, i.e., as not truly existent.

5. The path of meditation of achieving qualified by great aim
   The final quality is to achieve the great aim, buddhahood. The final quality is the main object sought by bodhisattvas, therefore, in the first chapter one of the ten topics is ‘special aim.’ This is defined as the final result for which one engages. There are three final results, great heroic mind, great abandonment, and great realization.
This concludes the five divisions of the path of meditation of achieving.

The eleventh topic of the knower of paths, the completely pure path of meditation, is qualified by four attributes:
(1) cause
(2) object
(3) result
(4) entity

These four were explained yesterday. Being qualified by cause means that certain causes are necessary for the generation of the completely pure path of meditation such as pleasing the buddhas, completing the practice of generosity and so forth, and being skilled in the union of calm abiding and special insight. The last of these was discussed in the context of the concentrations and formless absorptions. To achieve calm abiding one needs six circumstances (note: this topic was clarified with Geshe-la after the teachings):
(1) an appropriate place having five characteristics:
   - a place where necessities, such as food and drink, are easily obtainable
   - a good place that is not only comfortable but free from the risks of bandits and thieves
   - a healthy place free of dampness and so forth which could make the meditator become sick
   - helpful companions, including Dharma friends and teachers, staying nearby who share one’s morality and view
   - a place where many people do not gather during the day and where there is no noise at night
(2) little desire
(3) satisfaction
(4) the abandonment of activities, such as managing a business
(5) pure morality - one achieves a great collection of merit on the basis of perfectly safeguarding morality by restraining oneself from committing the ten non-virtues. In this way mandala offerings, etc. will have a firm basis. This also involves confession through applying the four opponent powers.
(6) the abandonment of many desirous conceptions

These are the conditions necessary for the development of calm abiding. There are five obstacles to the development of calm abiding:
(1) laziness
(2) forgetting the instructions regarding calm abiding
(3) laxity and excitement
(4) under application of the antidote
(5) over application of the antidote

There are eight antidotes to the five obstacles, the first four of which are antidotes to laziness:
(1) faith in calm abiding
(2) aspiration to achieve calm abiding
(3) effort to achieve calm abiding
(4) pliancy

When one does any activity one first checks whether one can actually achieve the result. When one has done this faith and aspiration arise and one will put effort into it. Having put effort into some activity, we will achieve it; in this context effort results in pliancy. These antidotes overcome laziness with regard to the development of calm abiding.
(5) mindfulness - this is the antidote to forgetting the instructions. Those who have difficulty retaining advice concerning calm abiding face problems when meditating. Forgetting the
instructions can also mean that having focused the mind on the object of meditation one loses the object.

6) introspection
Laxity refers to a loosening of one’s concentration which can be gross or subtle. Gross laxity is when one continues to meditate but there is no intensity although the mind is not distracted or disturbed. Subtle laxity can be confused with actual concentration.

Excitement is when one is focused on an object of meditation but then the mind becomes excited or disturbed and leaves the object of meditation and goes to an object of attachment. This is because the mind already had a pleasant feeling related to this object of attachment and recalls it.

These two, laxity and excitement, are a great obstacle to calm abiding; the antidote is introspection. Introspection, which is type of mental alertness, can be compared to someone who guards the door of a bank.

7) intention/application
The third obstacle, that of not applying the antidote when laxity or excitement arise, is countered by intention. Intention is a mental factor that has the function of moving the mind toward an object.

8) naturally abiding equanimity
The fourth obstacle of over applying the antidotes means to apply an antidote when there is no laxity or excitement arising in the mind; it is countered by equanimity.

These are taught in the text Uttara Namche.

Atisha in his text Lamp of the Path of Enlightenment says that the object that one chooses to develop calm abiding can be anything at all. In Ornament for Sutra the nine stages leading up to calm abiding are set out:

(1) setting the mind on the object of meditation
(2) continuous setting
(3) setting with interruption/resetting
(4) close setting
(5) disciplining
(6) pacifying
(7) thorough pacifying
(8) making single pointed
(9) setting in equipoise

The Tibetan word nyam shak (translated as meditation equipoise) literally means to place or to set equally. It has the meaning of setting the mind on one thing equanimously, that is, abiding on an object without any other mental activity.

Although the object of meditation of calm abiding can be anything, four objects are recommended in sutra while in the teachings on the stages of the path (lam-rim) it is recommended to use the image of Buddha. To attain calm abiding in the context of tantra one can focus the mind on the visualization of oneself as a deity. In tantra it is said that one can realize both calm abiding and special insight simultaneously. We need to meditate in order to achieve calm abiding. In the Great Exposition of the Stages of the Path (Lam-rim Chenmo) it sets out four objects of meditation for the development of calm abiding. We can also focus the mind when working on a computer! Indians, for example, take the flame of a lamp or the figure of a lingam (the symbol of Maha Ishvara) as an object of meditation. In India representations of the lingam and the bhaga are worshipped by Hindus in their temples. These terms are also mentioned in tantra where the lingam is said to represent the illusory body while the bhaga represents the clear light. According to the Sutra on the Great Seal one can also take the conventional nature of the mind as an object of meditation. This means to focus on the nature of the mind which is clear and knowing. Or one can focus on the ultimate nature of the mind, its emptiness of true existence. In Uttaratantra it says that the nature of the mind is clear light and that stains are incidental. In sutra it also says that the mind is not mind but its nature is clear light. The subject of clear light is very
profound, it can refer to both the object and the subject. Therefore, the conventional nature of the mind can be called clear light as can the ultimate nature of the mind. [In order to develop calm abiding] one can also choose to focus on a tiny light at the center of one’s forehead. It is said that as a result of this type of meditation one may feel some prickling and heat between the eyebrows and that the forehead may even become slightly swollen.

This talk has been related to the topic of calm abiding and may seem repetitive but according to a Chinese proverb repetition can eventually cause the object to appear to the mind, therefore it is not useless. In fact the Chinese used this method by repeating continuously to the Tibetans “The subjects are to be oppressed” and “The products are to be collected” until the Tibetans became convinced of it. Another repetition that they used is “The views you held in the past were wrong, the new view is right.”

QUESTIONS AND ANSWERS
Question: Many people take what Geshe-la says very literally, therefore I would like to know if it is really true that one can use a computer as an object of concentration. I find this is hard to do when it is open and on, perhaps when it is closed and off!
Reply: I was not joking. Any existent can be taken as an object of meditation on which to concentrate.

Question: Can Geshe-la say something about developing the buddha lineage in the context of lam-rim, the mind of enlightenment and death?
Reply: This is not an easy subject. What one can do to relate the topic of buddha lineage to meditation on the lam-rim is to first develop the motivation of the mind of enlightenment and then focus the mind, for example, on the subject of the precious human body. By doing the meditation with the mind of enlightenment this meditation becomes a cause to activate the buddha lineage. Or one can take the buddha lineage as an object of meditation upon which to develop calm abiding. In brief, whether one talks about buddha lineage or not, if one focuses on the mind, which has the nature of clear light free from stains, one is integrating the buddha lineage with meditation on lam-rim. The nature of the mind being clear light is itself the buddha lineage, therefore it is enough to meditate on this. The developmental lineage is to develop one’s realization; for example, one focuses the mind on the buddha lineage and as a result develops love, compassion, and so forth. This too is an integration of the buddha lineage. When one says “activation of the Mahayana lineage” it means to develop compassion.

Question: Could Geshe-la make a connection between buddha lineage and the four noble truths?
Reply: To make a connection with all of the four truths is not possible, it can only be done with true paths. The naturally abiding lineage is that within us which will transform into a buddha’s body. The path within us is composed of the higher trainings in morality, concentration, and wisdom. We can use the higher training in concentration to set our mind on the buddha lineage. Anything that makes us ignorant is true origins because there are nine obscurations which can be considered to be true origins. Due to having these obscurations we experience the result of suffering, true sufferings. The elimination of these obscurations is true cessations. True paths is to concentrate on the buddha lineage. This meditation is an analytical meditation because one looks at how the mind is obscured, how the obscurations can be eliminated, and what result will be attained. This is a way to connect the buddha lineage and the four noble truths.

One can also talk about the four noble truths in the context of the four close placements of mindfulness which take the four noble truths as the main object of meditation. The four close placements of mindfulness are the close placement of mindfulness on the body, the close placement of mindfulness on the feelings, the close placement of mindfulness on the mind, and the close placement of mindfulness on phenomena. One places the mind on the body in order to understand true sufferings, one places the mind on the feelings in order to understand true origins, one places the mind on the mind in order to understand true paths, and one places the
mind on phenomena in order to understand true cessations. When placing the mind on the body one comes to realize that the body is pervaded by suffering. When placing the mind on feelings one realizes that attachment, hatred, and ignorance, [true origins], cause the generation of other afflictions which result in true sufferings. True paths are the means to eliminate the afflictions and achieve true cessations.

Therefore, a bridge can be made between the buddha lineage and the four noble truths. Meditating on the mind one can come to understand the nine obscurations which are true origins that result in true sufferings. Meditating on these is the true path which eliminates true origins and brings about true cessations.

The nature of the mind can be said to be divided into two; one part that has the potential to become a buddha’s body and another part that does not become a buddha’s body. The part of the mind that becomes a buddha’s body can be transformed into the path: the path of accumulation, path of preparation, and so forth. The nature of the mind that enters the path of accumulation is not a true path; it only becomes a true path on the path of seeing. From then on this part of the mind is a true path. By the fact of possessing true paths one will achieve true cessations because one will eliminate the obscurations. Or we can say that the true paths and true cessations existing in the continua of learners, not only those on the bodhisattva vehicle but also learners following other vehicles, are the buddha lineage. We can think in this way because all sentient beings will eventually become buddhas.

Question: Is there a difference between lineage and tathagata essence?
Reply: “Tathagata essence” refers to the naturally abiding lineage. Because a buddha lineage is not necessarily a naturally abiding lineage, a buddha lineage is not necessarily a tathagata essence. Therefore, the tathagata essence and the buddha lineage are not the same. This is in the context of the tathagata essence being the naturally abiding lineage. One can debate asking if something is a buddha lineage is it necessarily a naturally abiding lineage or a developmental lineage? Is the buddha lineage in the continuum of a bodhisattva on the learner path one of these two lineages? Yes. Then which one? The naturally abiding lineage. If it is the naturally abiding lineage is it an emptiness? Yes. Are not true cessations conventional truths? The Svatantrika Madhyamikas assert that true cessations are conventional truths. However, if on the other hand one says that the buddha lineage in the continuum of a bodhisattva on the learner path is a developmental lineage the question comes is it a lineage that will transform into a buddha’s compounded body? One cannot say yes because true cessations are not compounded phenomena but are uncompounded phenomena. Yet these true cessations will become a nature truth body. There are two nature truth bodies, one that is the entity of being pure by nature and one that is pure of incidental stains. This debate can go on. That which is a naturally abiding lineage is an emptiness of a mind that is together with stains which transforms into a buddha’s nature truth body. To summarize, our minds are polluted by obscurations yet the dharmata of our mind exists. This mind that is stained will slowly become a buddha’s wisdom truth body when all stains have been eliminated. At that moment the emptiness that existed with this mind will transform into a buddha’s nature truth body. This is according to the sutra path. According to the tantra vehicle the naturally abiding lineage is not necessarily an emptiness, therefore it is not necessarily an ultimate truth. This will be taught later on.

END
CHAPTER THREE
THE KNOWER OF BASES

The third chapter is about the third type of exalted knowers, the knower of bases. There are reasons why the knower of bases is explained now. In the first chapter the knower of all aspects, omniscient mind, was explained in order to make disciples delight in hearing about the result and to generate interest in achieving it. In order to attain that omniscient mind one needs a path, therefore in the second chapter the knower of paths is explained. In order to complete the knower of paths one needs a knower of bases which perfects the knower of paths. This means that the knower of paths must be preceded by the practices of a middling being which are related to the knower of bases.

The three chapters can also be looked at in terms of their relationship to lam-rim. In the offering of worship Maitreya sets out the knower of bases as a first step, then the knower of paths which fulfills the aims of migrating beings, and then the perfect possession of the buddhas’ omniscient mind. These three steps follow one another. The knower of bases is a practice common to small and middling beings, the knower of paths is a practice of bodhisattvas, and the knower of all aspects is the result of the knower of bases and the knower of paths.

Without fully knowing all bases, there is no fully knowing the paths well: the very knower of all (is explained).

"Bases" refers to the four noble truths, while “all bases” refers to the sixteen attributes of the truths, impermanence and so forth. Without fully knowing all bases there cannot be a perfect knower of paths. In other words, a knower of paths is necessarily preceded by a knower of bases. “Fully knowing the paths” shows that a knower of paths knows the paths of hearers, the paths of solitary realizers, and the paths of bodhisattvas. Here “paths” includes the paths of the three vehicles which can each be further sub-divided into five paths, the path of accumulation, the path of preparation, the path of seeing, the path of meditation, and the path of no-more-learning. A bodhisattva needs to know all these fifteen paths.

The third chapter begins with the outline “Explaining the knower of bases” which perfects a knower of paths. Gyeltsab says that after finishing the explanation of a knower of paths there is a reason for explaining the knower of all. It is because without thoroughly knowing the bases, impermanence and so forth, one will not have a thorough understanding of the paths of the three vehicles. Therefore, the knower of all is explained as a branch of the knower of paths. If it is asked, what is the main knower of bases that is the object to be explained in the third chapter? Is this knower of bases the knower of bases that has the sixteen attributes, impermanence and so forth, which are to be meditated on by bodhisattvas? Or is it the knower of bases which is presented in order to understand that which is opposite to the causes of omniscient mind which is explained by Acharya Buddhajñana and so forth? Or is this knower of bases a term given by some to the realization of the lack of inherent existence of the bases? That the latter is not right will be explained later on. The knower of bases which is presented is not in order to understand that which is opposite to the causes of omniscient mind, the knower of all aspects. In order to understanding the opposite position of the knower of paths one could explain the knower of bases that is a discordant class, but here the object to be explained is a knower of bases that has the sixteen attributes, impermanence and so forth, which are to be meditated on by bodhisattvas.
When a bodhisattva’s path of seeing and a bodhisattva’s path of meditation are presented as complete purity, what is it that acts to leave the latencies to eliminate the two extremes? In the Ornament it says: “Not abiding in cyclic existence by knowledge, not abiding in solitary peace due to compassion.” Thus, the exalted wisdom realizing impermanence and so forth is said to be that which eliminates the extreme of cyclic existence. This point is going to be explained here. In the Great Commentary it says: “In the case of a knower of paths the paths of hearers and so forth were explained. Therefore, is it not the case that the knower of bases has already been covered? Why then is the knower of bases explained here separately once again? This is to be clarified again. In the second chapter of the Ornament in the second stanza, it says: “Regarding the mode of the knower of paths itself...one should know this path of hearers.” To meditate on these bases as unobservable, the paths of hearers and so forth are to be meditated on sequentially by bodhisattvas. Therefore, in order for us to know [that the knower of bases of] the attributes, such as impermanence, knows all bases without exception the knower of all is explained here. Thus, when a path of bodhisattvas having the attributes of impermanence and so forth is posited as a knower of paths, it is to be understood that this path is to be known as being sustained by the three attributes. In other words, a knower of paths must be preceded by mind generation, which in turn is preceded by the development of great compassion. A knower of paths is developed in dependence on the practices of a middling being, such as meditating on suffering, impermanence, and so forth. For this reason, it is said that a knower of paths is preceded by a knower of bases. As a branch that perfects the knower of paths there are certain chapters mentioned, such as the chapter on Special Conduct in the Twenty Thousand Stanza Perfection of Wisdom. Furthermore, it says in sutra that when the nature of a knower of paths of hearers was explained previously one should have reflected on the impermanence of forms. This implies the meaning presented here, the knower of bases.

In brief, a bodhisattva should meditate on the sixteen attributes of the four noble truths. He should do so with the support of the three attributes: mind generation, the dedication of one’s virtue to enlightenment for the sake of all sentient beings, and the wisdom realizing emptiness. Before the knower of paths can be supported on these three attributes, one must develop the mind of enlightenment. Before the cultivation of such a mind one needs to develop great compassion, wishing all sentient beings to be free from suffering. Prior to the development of great compassion one must train well in the practices of middling beings which include meditation on the attributes of the four truths, impermanence, suffering, and so forth. In order to understand that a knower of paths depends on training in the practices of a middling being the knower of bases is explained here in the third chapter. This means that the knower of bases that is to be principally explained here belongs to the class of antidotes.
“Not on the extreme of this shore (or) the further shore,” describes cyclic existence and nirvana; “this shore” referring to cyclic existence and “the further shore” referring to solitary peace. “Not abiding between them” literally means not abiding between the extreme of cyclic existence and the extreme of solitary peace but here it means that all phenomena found between these two do not exist truly. That all these phenomena are realized to not exist truly is because a knower of bases realizes that all phenomena are equal in being free from true existence.

Gyeltsab says that the commentary explains the words of the root text in the context of the two paths, a close path and a distant path. The remaining lines are taken as an explanation to prove that very reason (outline Proving that very reason). The perfection of wisdom of a knower of bases (subject) is asserted to be close to the continua of buddhas and bodhisattvas because it is an exalted wisdom that directly knows that all phenomena of the three times are equal in not having the nature of true existence. This indirectly says that hearers and solitary realizers do not possess that sign, [i.e., that the exalted wisdom directly knowing that the phenomena of the three times are equal in not having the nature of true existence] for the reason of which the perfection of wisdom of a knower of bases is presented to be far from the hearers and solitary realizers.

The perfection of wisdom of a knower of bases does not abide on either this shore or the further shore because it is that which eliminates these two extremes. The perfection of wisdom of a knower of bases does not abide ultimately between these two extremes because it realizes emptiness. Conventionally there could be an abiding between the extreme of cyclic existence and the extreme of solitary peace, but here the perfection of wisdom of a knower of bases negates all phenomena as existing ultimately between them. In sutra it says: “Bhagavan, the perfection of wisdom of great bodhisattvas is not of this shore, is not of the further shore, they also do not abide between them.” This quotation presents the fact that a perfection of wisdom of a knower of bases does not abide on this shore, on the further shore, or between these two shores. This is said in terms of ultimate existence but conventionally there is an extreme of cyclic existence and an extreme of solitary peace between which there are many phenomena including the perfection of wisdom of a knower of bases. Such a perfection of wisdom of a knower of bases does not abide in the extreme of cyclic existence nor does it abide in the extreme of nirvana, rather it is an antidote that eliminates these two extremes.

It can be asked: what is it that eliminates the extreme of cyclic existence and the extreme of solitary peace? The extreme of cyclic existence refers to cyclic existence. Cyclic existence is the fact of continuously taking rebirth, or, more literally and more correctly, continuously joining, due to the power of karma and afflictions. There is a difference between taking rebirth and continuously joining as this body itself is said to be cyclic existence. If the body is cyclic existence it is not correct to define cyclic existence as “continuously taking rebirth.” Is there a difference between the one who takes rebirth and the rebirth that has been taken? We need to understand what it is that eliminates the extreme of cyclic existence; it must be something that sees cyclic existence as faulty. If it were something that saw cyclic existence as beneficial it could not eliminate it. A debate comes here regarding the wisdom realizing that all phenomena are empty of true existence asking is it this wisdom that eliminates the extreme of cyclic existence? If one answers yes then it is asked does that wisdom see the faults of cyclic existence? If again one answers yes, then it is asked whether the faults of cyclic existence appear to a wisdom realizing emptiness. Then one can ask whether this exalted wisdom is also an eliminator of the extreme of solitary peace? The answer is no, only great compassion is that which eliminates the extreme of solitary peace. This is so because when someone has compassion for sentient beings he does not remain in solitary peace but seeks to achieve the ability to help them. The conclusion is that the exalted wisdom realizing all phenomena of the three times as equal in being empty of true existence is that which eliminates the extreme of cyclic existence. This must be a wisdom realizing the selflessness of persons. Can this wisdom see the faults of cyclic existence? When it is said that the wisdom realizing the
selflessness of persons is eliminates the extreme of cyclic existence, we say it in the sense that this wisdom sees the faults of grasping at a self of persons and abandons it. In this way according to the Svatantrika Madhyamikas it can be said that this wisdom sees the faults of cyclic existence. In another text, The Commentary on the Paths, Gyeltsab explains this in more detail.

Gyeltsab sets out a syllogism: the perfection of wisdom of a knower of bases (subject) is asserted to be close to the continua of buddhas and bodhisattvas because it is a clear realization realizing all phenomena as equal in not having any truly existent generation. The path perfection of wisdom deposits certain latencies because it has many realizations: the wisdom realizing impermanence and so forth, great compassion, the realization of emptiness and so forth. If the path perfection of wisdom individually deposits different latencies, such as the realization of emptiness, does the wisdom that exists in the continuum of a bodhisattva directly realizing impermanence eliminate the extreme of eternalism in which one continuously joins due to the power of karma and afflictions, which is included in cyclic existence, this shore, because this path perfection of wisdom destroys the root of cyclic existence? Great compassion in the continuum of a bodhisattva eliminates the further shore, solitary peace, which is characterized by the attainment of the cessation of taking rebirth in cyclic existence, because it is a path with which one achieves the non-abiding nirvana of taking rebirth again and again in cyclic existence due to great compassion. Great compassion is a tool with which one takes rebirth in cyclic existence to help sentient beings according to their particular situation.

That which eliminates the extreme of cyclic existence is that which sees the faults of cyclic existence; the fault is the grasping at self of persons which gives rise to many afflictions and keeps us wandering in the extreme of cyclic existence.

Both Acharya Haribhadra and Arya Vimuktisena say that that which eliminates the extreme of cyclic existence is wisdom, but they do not say that it is the wisdom realizing emptiness. Gyeltsab continues with a syllogism: the perfection of wisdom of a knower of bases (subject) does not abide in the extreme of cyclic existence and the extreme of peace, and it does not ultimately abide between them. This negates the conventional extreme of cyclic existence and the conventional extreme of peace. By realizing that existence and peace do not truly exist [the perfection of wisdom of a knower of bases] does not ultimately abide between them. This negates the conventional extreme of cyclic existence and the wisdom realizing emptiness clearly shows the aspect of not realizing in detail the ways of engaging the mind in the different levels of the path. Both Haribhadra and Arya Vimuktisena say that a wisdom does realize the faults of cyclic existence. However, the faults of cyclic existence are not found by a logical knowledge that sees the ultimate. In other words, a mind realizing ultimate truth does not see the faults of cyclic existence. This is an answer to the assertion that there is a
wisdom that sees the faults of cyclic existence. Haribhadra and Vimuktisena agree with this but say that it is not a wisdom realizing ultimate truth.

Gyeltsab says “this shore” refers to ordinary beings who are on this shore, within cyclic existence. Ordinary beings are not found on the further shore, that is, outside cyclic existence. The term ‘extreme of eternalism’ is used in the sense that those in cyclic existence live a long time due to constantly joining from life to life due to karma and afflictions. Because they remain for a long time, eternally, this is what is known as the ‘extreme of eternalism.’ The Tibetan word ‘tag tha’, literally the ‘extreme of permanence,’ is not to be understood in the context of an extreme of permanent phenomena or an extreme of functioning things. The extreme of nihilism is posited here to be nirvana, in which not only the constant joining due to karma and afflictions stops but also rebirth by the power of compassion and prayer.

The Great Translator says: “The main practitioners of a knower of bases are hearers and solitary realizers. The main practitioners of the perfection of wisdom are the bodhisattvas. Therefore, the knower of bases that is like a reflection of the knower of bases in the continua of bodhisattvas is the main subject to be explained here. This reflection-like knower of bases is generated on the eighth ground, it is explained here as a branch of a knower of paths knowing the three paths. This is explained in terms of the fact that a knower of the three paths arises in oneself effortlessly. In the previous context of the path of seeing the explanation of impermanence and so forth was presented as an object of the knower of paths.” This passage presents the particularities of compassion. In terms of an uncommon knower it is correct, but in terms of the occasion of the generation of the knower of bases and so forth being on the eighth ground is not correct. This is because a knower of bases can be generated right from the first ground. Without need to mention the knower of bases of this context, even the knower of bases belonging to the class of antidotes is generated from the first ground onward.

To summarize, the extreme of cyclic existence is of two types, the conventional and the ultimate. The extreme of peace is also of two types, the conventional and the ultimate. The conventional extreme of cyclic existence refers to the constant joining from life to life due to karma and afflictions. The ultimate extreme of cyclic existence is truly existent cyclic existence. The conventional extreme of peace is nirvana in which the constant joining due to karma and afflictions has stopped. The ultimate extreme of peace is truly existent nirvana. Therefore there is no ultimate extreme of cyclic existence and no ultimate extreme of peace. However, there do exist a conventional extreme of cyclic existence and a conventional extreme of peace. This is because conventionally cyclic existence and nirvana do exist. That which eliminates the conventional extreme of cyclic existence must be a wisdom seeing the faults of cyclic existence. What is this wisdom? This wisdom is for example a wisdom realizing the selflessness of persons or a wisdom realizing the sixteen attributes of the four noble truths, impermanence and so forth. The conventional extreme of peace is a nirvana in which rebirth in cyclic existence has ceased. That which eliminates abiding in the extreme of peace is great compassion. In short, that which eliminates the conventional extreme of peace is great compassion. The ultimate extreme of cyclic existence and the ultimate extreme of peace are eliminated by the wisdom realizing ultimate truth. This is a wisdom realizing that cyclic existence and nirvana are empty of true existence.

Since the opposite is taught in the case of the very knower of all, because the knowledge of the three times as equal does not exist within the hearers and so forth, and (they) far away from the perfect perfection of wisdom. Because the perfection of wisdom which is realized by them lacks loving kindness and wisdom, due to the very observation of things and non-things, they are known as abiding in samsara and nirvana.
There is no fault in the fact that there is no presentation of the knower of bases of hearers and solitary realizers because in this context by explicitly presenting the knower of all that exists in the continua of bodhisattvas this very presentation implicitly presents [the knower of bases of hearers and solitary realizers]. In some of the coming chapters the knower of bases of hearers and solitary realizers are presented explicitly. In the Great Commentary it says: “Some are presented by the opposite, some are explained as a path that is to be followed.” Arya hearers and arya solitary realizers (subject) abide distant from the perfection of wisdom because they do not have the knowledge of the phenomena of the three times being equal due to grasping at the true existence of the extreme of cyclic existence and the extreme of peace.

The hearers who for the time being abide in the reflection-like knower of bases that knows the perfection of wisdom with their mere realization (subject) abide in the extreme of cyclic existence (predicate) because they apprehend the mere existence of rebirth in cyclic existence as an object to be completely discarded completely in a fixed way. They apprehend cyclic existence as an object to be completely discarded because they have not only finished their life in cyclic existence but they also want to negate rebirth by compassion and prayer in cyclic existence, therefore they are separated from the cause, great compassion, to be in cyclic existence.

[Hearers and solitary realizers] (subject) abide in the extreme of peace (predicate) because they observe the stopping of mere rebirth in cyclic existence, the non-existence of rebirth in cyclic existence, as an object to be adopted. They observe the stopping of mere rebirth in cyclic existence, the non-existence of rebirth in cyclic existence as an object to be adopted because they assert the attainment of the cessation of rebirth in cyclic existence and they have stopped rebirth due to karma and afflictions and they are separated from the wisdom that knows the method of achieving nirvana. Using the two, the first sign for the second syllogism and the second sign for the first syllogism, oppositely does not give the right meaning of the text. This is also said by Lama Tsongkhapa. If the two signs are used oppositely the predicate does not make sense because it would follow that hearers and solitary realizers abide in the extreme of cyclic existence because they are apart from the wisdom knowing the method, and hearers and solitary realizers abide in the extreme of peace because they are apart from the cause, compassion. Haribhadra says: “By mere reference to things and non-things they should be known as abiding in cyclic existence and nirvana.” This means that these two cannot be interchanged.

In general, the reason that should be set up is to say that hearers and solitary realizers abide in cyclic existence because they observe things and hearers and solitary realizers abide in peace because they observe non-things. Then, it is said that this should not be changed to say that hearers and solitary realizers abide in cyclic existence because they observe non-things, and hearers and solitary realizers abide in nirvana because they observe things. This is not right.

2B2C-1C2A-1B Proving that very reasoning
1 Dispute
2 Reply

2B2C-1C2A-1B1 Dispute

(Someone) may say, “Because it occurs in the tradition that ‘whatever arises dependently, that itself is accepted as empty,’ the knowledge of the three times as merely equal is only the realization of bases. Furthermore, does not it exist for all? If so, how do the hearers and the bodhisattvas become distant and otherwise from the perfect perfection of wisdom?”

This is the dispute which is answered in next verse of the root text. There are two classes of beings, the first class is that of the hearers and solitary realizers and the second that of the bodhisattvas. The first are said to be distant from the perfection of wisdom, whereas arya bodhisattvas are said to be close to the perfection of wisdom. Hearers and solitary realizers are distant from the perfection of wisdom because they do not have the knowledge that the phenomena of the three times are equal in being empty of true existence. Only arya bodhisattvas know that the phenomena of the three times are equal in being empty of true existence. Here
someone argues that hearers and solitary realizers also know that the phenomena of the three times are equal in being empty of true existence. The argument continues saying that hearers and solitary realizers have this knowledge because the knowledge knowing the three times as equal is a realization of the reality of bases which exists in all aryas, does it not? They have the realization of the reality of bases because it is said in the text *Praises to the Supermundane* by the great charioteer, Nagarjuna: “Whatever is dependently arising is accepted as the very fact of being empty.” The meaning of this is that emptiness means dependent arising. Therefore, even hearers and solitary realizers have the realization of the reality of dependent arising. The main idea here is that hearers and solitary realizers must also have the realization of emptiness.
